I laid the pair in the trail and sat down to see how the snake would get out. Then came the curious part of it. The snake would apparently extend its ribs straight and level from the backbone and try to back out. In doing this he would shorten about one-fourth in length and "widen" to about three or four times his proper gauge; and every time he did this the clam would shut down a little. Then the snake would try his former tactics and try to get a "tail hold" on something. I finally cut the muscles of the clam and released the snake, but had to kill him too, for the shells of the bivalve had broken his back before I got him loose.

While watching this performance I very clearly saw an explanation of how snakes get through seemingly solid stone walls and in other apparently impossible places, through this power of expansion and contraction. This snake was about 14 in. long and probably an inch wide when he flattened, but was only the thickness of his spinal column, perhaps a quarter of an inch, so he could get through a pretty small crack if he traveled "edge-ways."

I had forgotten the circumstance until lately, and then I didn't care much about telling it, for, like the genial O. O. S., I thought maybe the "time wasn't ripe," but this snake dance in FOREST AND STREAM brings all things snaky to the fore,

EL COMANCHO.

An Unique Kingfisher.

A REGISTERED parcel, bearing several kinds of stamps so curious as to attract the attention of the postmaster, arrived at Sandusky yesterday addressed to Prof. Moseley. It contained a specimen which has traveled far enough at one time and another to have gone quite around the world. But its chief interest lies in the fact that no person or institution in the world has another specimen of the same kind. It is a beautiful kingfisher which was shot by Prof. Moseley in the Island of Negros, Philippines, one thousand miles southeast of China. It is not as large as our American kingfisher, but has a greater variety of colors, the breast being buff and white with bars of black, and the back green, blue, buff, black and brown, arranged in such an intricate pattern that a full description would occupy a column. It was shot at dusk from a bamboo on the bank of a little stream about a mile from the ocean. It was alone and none like it was seen during the remainder of the expedition; nor did Bourne and Worcester, who have since spent two years collecting in the islands, obtain a specimen. Prof. Steere, the leader of the first expedition, on arriving in this country and comparing the specimen with other kingfishers from the East Indies and the descriptions in works on ornithology, decided it to be a new species and named it *Halecyon moseleyi*. But Prof. Moseley, not feeling sure that it was really distinct from other species of *Halecyon* already known, took it to the British Museum, which contains the largest collection of birds in the world. The chief ornithologist of this museum, Mr. R. B. Sharpe, has made a special study of the kingfishers and is the author of a book devoted to them, and illustrated with colored plates. Mr. Sharpe pronounced the bird distinct from any previously described and tried to induce Mr. Moseley to let the British Museum have it, offering liberal exchange. Not succeeding in this he obtained consent to keep it long enough to have an engraving made of it. After this it was in some way lost until a few weeks ago one of the ornithologists of the museum in overhauling some cases ran across it and sent it on. It will be kept at the high school building, and Sandusky may well be proud of having a bird which is unique in the true sense of the word.—*Sandusky Register*.

A Tame Snow Goose.

*Editor Forest and Stream:*

I have read with no little interest the article by Wm. W. Hart in your issue of 14th inst., "A Bewildered Wild Swan," as I once had an experience nearly the same. Some twelve years ago I came from the West to visit my old home at Glens Falls, N. Y. It was in the woodcock season, and one day my brother-in-law and I went to Lake George, where I have often had a good day's sport. We followed up one of the little streams that come running down the mountain side, and finally concluded to climb the mountain. As we were nearing the top, I was looking up the stream and saw on a sheet of water where the stream widened out so as to form quite a little pond. Something snow-white was floating there. At first I thought it a bunch of foam, but immediately discovered that it was alive. Being so far from any habitation, I concluded that it must be wild, and cocking both barrels of my hammerless, I started to walk directly toward it, expecting to see it rise and fly. It did not do so. I got within 20 ft. of it. I then saw that it was a genuine snow goose. I actually walked up to and picked it up. It seemed to be in perfect health, but very tame. Then of course I thought it was some one's pet. We took it down the mountain into the town of Caldwell and tried to find an owner. But no one knew or had ever heard of it. We put it under our buckboard seat and took it home. My father-in-law, Mr. J. L. Kenworthy, had a nice lawn with a large fountain and basin. He put it in the water, and they kept it there for a year or two. It lived on the lawn and in the fountain, and was a beautiful specimen of the genuine snow goose. The very strange thing about it was its being so very tame and where it could have come from. I have never seen any common goose so tame and such a pet. The only version I could ever have was that it was entirely void of any brain or sense.

A. M. DECKER.

Camp-Fire Flickerings.

"That reminds me."

She was Grateful for the Venison.

LEBANON, N. H.—Last September I was in Errol on one of my yearly fishing and hunting trips, and while there I discovered a new kind of venison which I would like to have some of your learned contributors classify. I was awakened about 3 o'clock one morning by a racket in the office directly under my room. Going down to investigate, I found six sportsmen, who had driven over from Colebrook for a day's hunt. We let them take our guide and they secured another and started for the woods. Along in the afternoon one dog drove a buck in at the head of the pond. There was hurrying to and fro; two boats were manned and then the fun began. One of them was armed with a .45-90 and when the cannon spoke you would think the guns were bombarding old Sumpter. The sportsman in the forward boat shot four times and then the rifle went click; in the hurry he had forgotten to fill his magazine. Well, they shot eight times at the game, and then it swam ashore within 4 rods of them, and, I presume, is still happy in its native wilds. When they got back to the house their blood was up and something must be done, so they sent the guide to me to try and buy the deer that we had killed the day before. (I believe in that platform plank, no game for sale). Being refused that, the guide came back and wanted to buy the hide. I told him that they were welcome to that. The old guide had a farm and on it some very large sheep and lambs. So they gave the old gentleman \$3 to go up and shoot one of his sheep and to take the pelt off, so that there would be no "give-away." Then they started for Colebrook. But the best of the joke was when the genial lady editor of the Colebrook News came out in a card of thanks to the boys for their generous slice of venison.

MASCOMY.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

## Game Bag and Gun.

### THE SOUTH JERSEY DEER DRIVE.

A Belated Rejoinder.

Editor Forest and Stream:

Returning from a winter's wandering in the West Indies, Mexico, Yucatan and Florida, I find upon my return to my home in South Jersey a bundle of FOREST AND STREAMS, beginning with the issue of Jan. 20. Before leaving home I had induced my friend Col. J. Howard Willets, of my county, to contribute to the journal an account of his most extraordinary deer chase of last autumn, when by superior strategy and management he was enabled to kill a deer by means of his pack of hounds without the use of firearms. In my ignorance, I thought this feat of sportsmanship, taking into consideration the nature of the country and the inexperience of the dogs, unique. I have known the neighboring deer country for more than thirty years, and never before heard of an instance of dogs killing an unwounded, full-grown deer, as this was. This deer was fifty times during the chase within a hundred yards of freedom, for had she recrossed the railroad she would have been free; but the management of the Colonel, who directed the hunt, in each instance headed her off and turned her course back into the river meadows and swamps. If the chase produced no other valuable result, it at least converted a pack of green rabbit and fox-pursuing dogs into experienced deer-hounds.

The mild criticism of O. H. Hampton is that of a gentleman, and is the sole occasion of this notice of the controversy. I induced my friend to furnish the narration, although not at all in sympathy myself with deer hunting. The Colonel was a brave and distinguished soldier in the war, and carries about his person some seven souvenirs of rebel lead. At the same time, all little children love him, and the disinterested dog's tail wags ever a welcome to him. Cruelty is as foreign to his nature as truth and considerate speech is to that of some contributors to respectable journals. He cannot take exception, however, to the comment of O. H. H., with which I sympathize, for personally I do not like killing deer in States like New Jersey at all; they are too pretty and rare to be molested. For the past nine years I have had many opportunities to kill deer in Florida, and have never availed myself of one of them. But I can understand that others enjoy the pursuit by hounds of foxes, jack rabbits or deer, and in amusing themselves in this way, I do not presume to criticise them, even amiably—certainly not with virulence.

It must be borne in mind, too, that still-hunting is impossible in South Jersey, owing to the nature of the country; the only method of killing a deer is by having hounds chase it to the hunter; if the deer passes the stand, it, and the hounds as well, are lost for the day.

The assumption of all the critics, agreeable or otherwise, on this subject, seems to be that a small doe was turned into a barnyard, with a pack of ferocious blood-hounds to pull her down. They are absolutely ignorant of the topography of this region. Dogs, except in this unique instance, never have taken an unwounded deer, and that alone is sufficient *raison d'être* for the contribution.

There is no ground for the assertion that the chase in this instance was "a little deer," for it was distinctly stated that its weight was 90lbs., dressed, which would be that of a full grown buck in Florida, a region with whose deer I am most familiar. Nor is it fair to assert, as did one of the violent critics, that the doe was in an improper condition for slaughter; this was untrue, and would impugn the wisdom of the Legislature of New Jersey, which has prescribed the six weeks' open season in which the chase occurred.

Hasty and inconsiderate attacks like the most which this narrative has elicited, proceed from sportsmen of limited experience who belong to the mugwumps of the guild, a class defined in politics by a prominent politician as those who "never vote for any one, but always against some one." They have the power to wound the sensitive, and in this case, without justification, have, I doubt not, annoyed a gentleman and thorough sportsman.

F. S. J. C.

### DR. COOK'S EXPEDITION TO THE NORTH

WILLIE and Clara, son and daughter of the frozen North, whose Eskimo names are not so readily pronounceable as the familiar English ones, by which they have become acquainted in Brooklyn, will bid farewell to American friends and American habits next June, and return to their Labrador homes on the ship that carries the summer excursion party to northern Greenland. They do not say very much about their impressions of America, its peoples, its institutions, because they are able to talk only in broken English, but their expressive looks when something new or odd comes within range, denotes the curiosity, pleasure or admiration they feel. The brother and sister have got along amazingly well since landing in New York last autumn, have accustomed themselves to civilized clothes and modes of living, and do not grieve for the snow and ice, the seals and the black bear of their Northern home. But I promised to return them, and they will be restored to their parents' awaiting arms, before the year is much older. Occasionally the boy and girl experience fits of home sickness, but these never continue long enough to be worth considering. Gentle Clara, with her lovable manners, who has learned to follow American ways even more rapidly than her brother, will not return eagerly to the Eskimo attire, however glad she may be to find herself really at home. She is extremely fond of her new style of dress, and when on occasions I have desired her to don the old habit and appear in her skin suit before an audience listening to a lecture, it has been with much reluctance that she consented. She has acquired the art of housekeeping fairly well; and strange to say has made firm resolutions to hereafter wash herself at least once a day, so fortunate indeed will be the Eskimo gallant who wins the accomplished Clara for a wife. Willie, besides finding out how to beat the neighboring boys at their favorite games, has become a useful individual about the house, and in taking care of my pack of Eskimo wolf dogs. A number of the latter have been lost by death, but this was not Willie's fault. The boy, who is yet only sixteen, will take back

to his native heath a fund of juvenile information calculated to astonish the younger element, and the old ones too, of his tribe, and he will have enough tales of wonderful happenings and strange sights to entertain them for at least several of their four months long seasons of constant night. Willie and Clara, Mikok and Kahlahkatak,

MISS KAHLAHKATAK.

as they are known at home, in years to come may cease to think of friends who have gone before, but they are not likely to tire of reverting to their American experiences and the sciences which to them were nothing less than marvellous.

The story of how this interesting couple were "captured," is easily told. I merely "borrowed" them from their parents, and am soon to return them their loan. Both were anxious to come, and I am rather pleased to be able to say they are not so anxious to go back. The girl, who is two years older than her brother, has by her quickness in learning proved herself the brighter of the two, though I have never seen smarter or more active Eskimos in either Labrador or Greenland, than Clara and Willie. During my two previous visits to the far North, I made a special study of these odd people, and I intend this summer to continue the work, which has proved extremely interesting and instructive. I may not have another opportunity to carry off the contents of an isolated Eskimo graveyard to add to my present collection of decaying homes, but there is ample material among the living representatives of a most curious race to occupy the entire attention of a diligent student.

This summer's trip, though, is not to be wholly given up to scientific pursuits. The excursion party to sail from New York late in June for Labrador and northern Greenland, will include a number of men and perhaps a few ladies, who would not join the expedition were it not for the facilities, exceptional facilities too, it will afford for

MIKOK AND THE DOG CHIMO.

hunting and fishing. They are going to enjoy the pleasures that ardent sportsmen can extract from the chase for big game, in which the countries to be visited abound. Superb indeed is the sport to be found among the drifting Arctic ice-floes, and our hunters when they return will have tales of rare adventures to unfold. Ice that moves slowly along the Greenland coast, is the home of the bear and walrus, and I have been an eager participant in a score of hunting excursions after these immense brutes. They are quite easy prey, but there is plenty of fun and excitement for a bear-killing or walrus-spearing party, and those who go North this year, say they intend to secure as much of it as possible. Mr. Walter S. Sinn proposes to decorate his theater office next winter with trophies, and I have no doubt he will be able to satisfy his hopes. The wooded wilderness of Labrador and the snowy wastes of Greenland, are ideal regions for the enthusiastic sportsmen. In the former we find the black

bear, caribou, timber wolf, lynx, the red, blue and gray fox, otter, mink and other fur-bearing animals, the snow-goose, eider duck, guillemot, great northern diver, auk and partridge. In Greenland or on its ice-bound northern coast, besides the polar bear, walrus, whale, narwhal and seal, are found reindeer in great numbers, and many of the varieties of animals and birds with which Labrador abounds. The Labrador streams and Greenland fjords teem with salmon and trout, those to be caught in southern Greenland being of rare size. Northwestern Canada and Alaska are described as possessing strong attractions for the hunters and fishers, but the inducement they hold forth to the sportsmen cannot rival those possessed by Greenland and Labrador.

The excursionists will be away from the United States something less than three months. Starting before the end of June, we go first to Labrador, where a scientific party of ten from the University of Pennsylvania are to be landed. After spending as long a time as is worth while, on this coast, we cross to southern Greenland, and then proceed leisurely northward, making numerous stoppages, until Ingfield Gulf is reached. Some of the party will land at different points, to be picked up on the return trip. These will be provisioned and equipped for hunting, fishing and journeys over land. At Ingfield Gulf, we will meet Peary and his party of observers. Here I will take charge of a sledge trip to the interior, which is intended to occupy two or three days, those who accompany me being given a realistic taste of the experiences of Arctic explorers, in traveling over snow and ice, sleeping in skinbags in the open air and cooking our pemican by the heat of an oil stove, just as the Arctic explorer does it. If possible, we are going a little further north to Verhoeff Glacier, but time or the weather or ice may prevent this.

The plans laid out, and here briefly outlined, are calculated to make the expedition as interesting to the summer tourist as it will be attractive to the knowledge-seeking scientist, or adventurous and exciting to the bloodthirsty huntsmen. The coast and inland scenery is incomparable in its unique beauty, the marvelous glacial phenomena is worth journeying thousands of miles to gaze upon, and the majestic icebergs as they sweep grandly by in the Arctic currents, give us an impressive lesson of the wondrous mysteries of Northern nature. Those who accompany the steamer to the northernmost point, will be within a few hundred miles of the long sought Pole, and almost as close to it as man has ever penetrated. But they will not be as far away from New York as they would be in San Francisco, and the clothing they would wear at home in the months of spring will most times be quite sufficient for comfort within the Arctic circle. For the season of constant day in the North, the time we are to visit it, is a season of warmth and balmy breezes without malaria or mosquitoes. **FREDERICK A. COOK, M.D.**

15 HART STREET, Brooklyn, N. Y.

### MOOSE IN NORTHERN MAINE.

EVERY sportsman enjoys a description of a successful hunt, especially if it contains information that will enable him to go to the same locality and have the same success. Sportsmen are the subject of so much slander in respect to their reputation for truth and veracity that amateurs hardly dare to let their friends know they are going on a hunt. If on their return they have been unsuccessful, they are grieved, and life is made a burden. If they bring home big game they are always accused of having bought it or hired some one to shoot it. A truthful story of how two amateurs shot moose, with only such assistance from the guides as any sportsman can accept with honor, may be of interest.

On Dec. 9 last the writer and another amateur, both of Caribou, started out on a hunt for large game. It was moose we wanted, and it was moose we intended to get; and in the face of jeers and derogatory remarks from interested friends we started. Our destination was some point on the headwaters of the Aroostook River. Our first day's journey took us to Oxbow Plantation, which is situated on the Aroostook River, and on the border of the immense wilderness of northern Maine, forty miles from Caribou. Here we engaged Clarence Peavy and Miles Arbo as guides, they having been recommended to us by an old hunter. Just here a little advice to amateur sportsmen about guides. If you are going into a strange country, place yourself unreservedly in the hands of your guides. Tell them what you want and trust them. Some are dishonest and will take advantage of you; but these are the exceptions. A good guide has a reputation to sustain; and if put on his honor will seldom go back on you. Don't blame him for what he cannot help; be considerate, especially when disappointed, and you will get good service, and game, if it is in his power to find it. We told our guides that we wanted moose, and left them to make all arrangements, select the locality to be visited and take us to it. They selected Smith Brook Camp, a small branch of the Mooselick stream, which is a branch of the Aroostook River. It is thirty miles from Oxbow, and we arrived at the camp the second morning from home.

The next morning we started at daylight, taking different directions. The snow was about a foot deep and traveling was tiresome. We gave out before noon and returned to camp, much to the disgust of the guides.

We traveled about eight miles that day, and at no time were we over 3½ miles from camp. We held a consultation in camp that night and decided to send the guides out to find moose signs while we rested. The guides started at daylight the next day, taking different directions. Arbo got back about 3 o'clock. He had found two bull moose, but had frightened them, and it was no use to chase them. Peavy got in about 5 o'clock. He had found three bull moose and had not disturbed them; they were about five miles from camp and were feeding. He had taken a circle of about eighteen miles before he found them.

The next morning we started at daylight all together. The guides broke down the snow, and we followed. On we tramped. We saw deer and caribou on the way. The thermometer marked 10° below zero. The wind blew a gale. It was a perfect day for still-hunting. There was no crust to make a noise, and the cracking of the trees by the wind drowned all noise we made. Suddenly, directly in front of us an enormous cow moose and two calves got up from the snow, not 50 yds. away. "Don't shoot," cried Peavy, "you want horns, don't you?" It was a trying time, to let this enormous animal, weighing at least 1,500 lbs., go away unharmed. This cow was

larger than the bulls we afterward shot. The calves were odd-looking beasts, the most ungainly animals that travel, all head, body and legs. A camel is a beauty compared with them. The cow was not handsome, but she was so large that she looked imposing and respectable. We were impatient that the guides had not allowed us to shoot her, but after they told us that if we shot her we should probably lose the bulls, which were not a mile away, we felt better. "The bulls were in the next valley," said Peavy. "They were feeding down the wind. We will go round this mountain and meet them. It is no use to follow them down the wind. They have the finest scent of any animal living, and will smell us a mile."

So we started round the mountain. We had gone less than three-fourths of a mile from where we saw the cow and calves when suddenly our guides halted. We were on the side of a mountain in an open beech and birch growth. The wind blew a gale right in our faces and the air was thick with snow from the trees. We could not see five rods, but the guides could. "I see them," he said, "they are lying down." His keen eye had seen the head of a moose 300 yds. away. Even after he had pointed it out to us we could not for a long time tell what it was. When at last we had located it we prepared to shoot; off came our gloves, we melted the snow from our eyes and warmed our hands—forgotten were our tired legs and cold fingers.

"If they start, shoot; if not, don't shoot till I give the word," said Peavy. Slowly we moved toward them. Soon we could see two immense heads. Nearer and nearer we came till we were less than 100 yds. from them. We stopped. "Take good aim at the neck, near the top. Can you hit it?" asked the guide. "All right, fire!" The two rifles made but one report. The mark looked as big as the side of a barn; both heads dropped. So sure had been the aim that neither of the moose got up, but from behind a small fir about 10 ft. away an enormous animal sprang to his feet. Crack, crack, and he plunged headlong. Both guides had fired. We rushed forward, and a sight which will rarely be seen greeted us. Three bull moose weighing over 1,000 lbs. each lay dead in a space not 20 ft. square, each with magnificent antlers, all perfect. The smallest set spread 4 ft. lin., and had nine prongs on one side and ten prongs on the other; the largest set spread 4 ft. 6 in. and had ten and twelve prongs.

To get these immense carcasses out of the woods whole was the next question. We were five miles from camp and thirty miles from Oxbow; but our guides were equal to the emergency. Arbo walked to Oxbow the next day, and came back on the following day with a big pair of horses. While he was gone we swamped a road from camp to where the moose lay, and the next day we loaded our moose and started for home at Oxbow. The load was so heavy we were obliged to put on four horses, and we arrived home in just ten days from the time we started, bringing with us the two moose which we had shot, all whole. Although these moose had been exposed to a temperature of over 10° below zero the whole of five days, and part of the time to a temperature of 20° and 25° below, so great was the animal heat in them and so thick the skin and hair, they were not frozen when we got home.

We want sportsmen to know what can be done in northern Maine in the way of large game, and if this account will encourage any one to try his luck we shall be satisfied, for we belong to that great body of sportsmen who are all friends and hail fellows well met everywhere. Let them try northern Maine for big game, and with only reasonable effort they can be assured of success.

CARIBOU, MAINE. C. G. L.

**IN NORTH CAROLINA SWAMPS.**

"SAMMY'S a nice boy." Yes, I quite agree with you Pappy, Sammy is a nice boy; we all like Sammy, yet there were two things I had "agin him," one his mania for quail hunting, the other his capacity for smoking "blow-outs." We cured him of the first, by giving him a deer hunt, but the other we couldn't check. In other respects he was all right. "As trim a little feller as I ever saw, gentlemen," says Pappy. And who is Pappy? Well, Pappy is a bred and born hunter, living in the Dismal Swamps of North Carolina, and with whom we spent the last week in October and the first week in November. He has killed more deer and bear than any man in the State, so he says, but Pim says he don't believe he ever saw a bear outside of a zoölogical garden. Anyway he is a capital hunter; in theory. Pim is an authority on bear hunting, though Sammy says he has but one specialty, and that is skinning deer, he invariably sends head and feet on the hide to have them all tanned together, and has been known to pay as much as \$7.50 for the tanning of one skin. On that one skin hangs a tale, and for the benefit of his feelings I won't make it public.

The ten days we spent with Pappy hunting, were certainly full of excitement, though the weather was really too warm to do much tramping, but as we went for pleasure and health, and not for slaughter, we were well satisfied. We found an abundance of game, and could have killed a dozen deer had we wanted "simply to kill." We were satisfied with one apiece.

I shall never forget our first and only night in camp. We had planned a big time bear hunting by moonlight, and in lieu of this sailed six miles down the river and made camp. We were late starting in the afternoon, consequently it was night when we arrived at the place selected by Pappy for camp. When we landed we found water all over the swamp, so we had to fall to and pitch our shack in the driest wet place we could find. After cutting pine boughs enough for bedding, and using our sail for shelter, we pitched in and got supper. The wind was blowing a gale and kept us moving around the corners, as it were, to avoid the smoke. This was a new experience to Pim and Sammy, and how we enjoyed it. Supper over and pipes finished, we concluded there was too much wind to hunt bear successfully, so we turned in, after fighting for outside places. About 3 A. M. I awoke, and was wedged in so tight between Tommy and Sammy I could scarcely breathe. Sammy was also "breathin' hard" and awake. I don't know whether we had all swollen during the night from being water-logged or from eating the cold wet sweet potatoes they grow there, I only know we had to crawl out and take a breath. We were cold and hungry, so grabbing the coffee pot I made for the water, while Sammy hunted the flask; in a few minutes we had a pot of boiling water and soon a hot punch. The perfume of this aroused Pim, and in an instant he had a nervous chill, but he couldn't work on our sympathy that way.

He begged for "just one drop," finally he said, "Let me smell it." We didn't. He turned over, muttering something about "bumps on a log" and went to sleep. We sat up keeping the fire warm until time for breakfast, and I assure you it was a welcome time. After feeding men and dogs we started on a deer hunt, but there was too much water in the swamps. I got one shot at a fine deer but scored a clean miss, though three weeks after Pappy informed me they had found a nice deer about 300 yds. from where I shot, with a hole through him. I believe he was only trying to make me feel better over my decidedly poor shooting. That night saw us safely back at the house and with good, dry beds.

The next day a little buck ran plump over Pim. He says he aimed at the place the heart should have been, though later on we discovered he had hit it on the foot; that was a pretty good shot, though, for him. The little buck then ran to Sammy, who brought him down. This was Sammy's first deer; it made a convert of him.

The next day Tommy shot and killed a nice doe. I had almost forgotten to introduce you to Tommy; he is the son of Pappy, and a fine, healthy, strong, honest and industrious young man, with any amount of "go" in him, which is more than I can say for many in that country. He is an excellent hunter also, and one I could recommend a friend to who wanted sport. Never too tired "to tramp up another" if you say so. The next day Pim went to the "stompin' ground" and the dogs ran another fine buck to him, which he got in some way, though Sammy swears he couldn't find where the ball struck him. We came near losing Sammy while on this trip. Pappy's "wife's cousin's daughter was the girl for him." Pim and I thought it was settled. Pappy told him "there was no better stock in the country, and that her father was well off. "Why," said he, "I reckon he's worth as much as \$1,500." He also informed the young lady that "Sammy had a good job, and was makin' nigh on to \$1,000 a year, and his daddy was rich."

The section of country we visited is a paradise of game. Deer, bear, quail, woodcock, duck, geese and swan can be had in quantities in season, and for that matter, they are had out of season, too, as little or no attention is paid to game laws. The people in most parts are very hospitable, at least I have found them so the past two seasons I have hunted there. Should we not make the Northwest next fall we certainly will pull out for North Carolina and Pappy's. In the mean time we shall do our utmost to marry Sammy in order to head Pappy off, for there will be no escape for him another time should he gaze on her with "those nice blue eyes of his'n." May we all be spared health and wealth enough to visit Pappy and his interesting family for many years to come.

J. R. P.  
PHILADELPHIA.

**An Indian Turkey Call.**

OUR contributor "Brian the Still-Hunter" sends us from Michigan the interesting turkey call illustrated. "It was made," he writes, "by an Indian and used by him several years; then he gave it to an old hunter and trapper, who used it as occasion offered for twenty-three years. He in turn gave it to me some seven years ago. In the hands of one who knows how, a splendid call can be given with it

TURKEY CALL.

in several different tones. But one has to use both hands, and in that it is behind the calls now in use."

The call consists of a segment of cow's horn, 2½ in. deep, in the base of which is fitted a thin wooden bottom piece. From the center of the bottom rises a wooden pin 4-10 in. in diameter, with a rounded end. A bit of slate completes the outfit. The call is produced by scraping the face of the slate across the top of the peg, when the sound given out is so marvelously like the note of the turkey, that when it was first made in this office every man-jack within hearing grabbed his gun and lay low for the gobler. The call has a place in the FOREST AND STREAM museum.

**That Connecticut Deer.**

CONNECTICUT has two novelties, an occasional deer and a law on occasion to protect it. Last winter near Darien a deer was come upon, hounded and killed by Ira C. Petty. A recent issue of the Stamford Advocate says: "The first prosecution in this county under the new game law which went into effect the first of last October, was conducted on Saturday before Justice Scheldnecht, of Darien. Game Warden Toomey appeared for the county and charged Ira C. Petty with having willfully and maliciously killed a deer, which was wandering around Darien last winter. The accused was found guilty and fined \$100 and costs. He took an appeal. The law reads: 'Any person who shall hunt, kill, attempt to kill, chase, or take any deer, buck, doe, or fawn in this State, during the ten years succeeding Oct. 1, 1893, shall be fined not less than \$100.' Few people were aware that there were deer in this part of the State. But there appears to be a few in some of the towns."

**Will Give the Game a Rest.**

HAMPTON, Va.—Editor Forest and Stream: Our Legislature has given us a law for Elizabeth City county, which prohibits the killing of partridges, woodcock and rabbits, until November 15, 1895, with a penalty of from \$10 to \$50 for every violation of same. The sportsmen of the county are very much in earnest about the matter and will prosecute offenders to the full extent of the law.

SEGAR WHITING.

**THAT TEXAS DUCKING SCORE.**

SAN ANTONIO, Texas.—Editor Forest and Stream: The only truth contained in the clipping sent you from the Corpus Christi Caller about our duck shooting is the fact that Mr. Critzer and myself visited Corpus Christi and shot ducks at that time, but there were no such number of ducks killed—nothing near it. The killing existed only in the diseased imagination of the reporter of the Corpus Christi paper. Of course we know that there was no intention of doing harm as far as the Caller man was concerned. He simply noted that some prominent gentlemen were visiting his town and thought to please them by printing the exaggerated report of the duck killing, which is frequently done in other cases. They like to print these exaggerated killings in the hope that it may induce sportsmen to visit them. That is perfectly natural.

Furthermore, Mr. Critzer had but 210 shells, and shot a 24-gauge gun. We went to Corpus on a telegram which we received from Mr. Max Luther of that place, and had just a half-hour to load shells, etc. Having but a few on hand, Mr. A. W. Adams, who is visiting here from Chicago, volunteered to load 100 shells for me. They were 20-gauge, so we two criminals went on that duck hunt armed with 20 and 24-gauge guns and 200 shells apiece.

That we struck good shooting we don't deny. We also shot our shells away before dinner, when we returned to town. Guns and ammunition were offered us to shoot out the rest of the day; we refused both.

If men are to be condemned from a sportsman's standpoint of having killed too much game by shooting under the above circumstances, and all very stiff wing-shooting at that, to the tune of a bitter northern, then Mr. Critzer and the writer plead guilty. We might have carried some shells back with us, but the ducks flew in our faces, and any man who can keep from shooting a pop-gun under such circumstances, through fear of violating the laws of propriety, I don't think exists in Texas.

Undoubtedly Mr. Simpson is a great game protector—much better than the pair he accuses and criticises; but then he never goes hunting—except in his office with a villainous pencil. If he should go, the game is perfectly safe, for he can't hit anything if he does shoot. Generally when an attack is made on reputable citizens there is a motive. So there is in this case. It is revenge.

In May, 1891, Mr. Simpson was secretary of the local gun club, who "entertained" the State Association on the occasion of the fourteenth annual tournament. Mr. Critzer and the writer were appointed a committee to solicit merchandise and funds to be used as prizes and added moneys in the tournament. The result of a hard two weeks' canvass of the city netted a lot of merchandise prizes and over \$500 in cash, which was clearly understood to go to the shooters.

During the shoot and preceding a certain event the sum of \$100 was announced to be added to that event by an agent of the club. He distinctly said "added." When the shoot came off the management refused to add the money, and virtually kept every cent of that which had been given by the citizens for that purpose. I characterized the action of the management as infamous and indecent. Simpson was not on the side of honesty, and ever since that time he has been attacking me in the press.

I do not desire to extend the blame contained in these lines to the present membership of the San Antonio Gun Club, which has materially changed. In fact the entire personnel of the organization is metamorphosed and I only refer to this fact to show that the attack by Simpson is not made purely for the love of protection, but for the purpose of harassing me and placing me in a false position before my sportsmen brethren.

As a matter of fact, Mr. Simpson is anything but the sportsman's friend. He never at any time took the initiative in prosecuting violators of the game law, or in endeavoring to secure proper legislation for the protection of game. Per contra: I have individually engineered all the prosecutions in cases of game law violations, securing the help of friendly lawyers, spent my own funds in securing witnesses, and generally attending to all matters of that kind. I have written pounds upon pounds of "stuff" for publications of all kinds in the advocacy of game laws and their enforcement.

O. C. GUESSAZ.

**Bullets for the .45cal.**

LAST year after shooting deer for a long time with a .38-40-180 Winchester repeater, I bought a .45-90 single shot. I have had little opportunity to test this gun except at the target. I am a good deal interested in the question of loads and bullets. The African hunter, Mr. Selous, is quoted in a recent number of FOREST AND STREAM, as saying that for really big game the light hollow pointed ball is not satisfactory. As your readers know that, for the cartridge above mentioned weighs 300 grs., and has a very deep hollow with thin walls around it, can some one who has shot moose, bear, etc., give us some light here? In that most entertaining and instructive article on American bears which you recently published, the writer speaks of using a .45-125, in which this same 300 grs. ball is employed. Does he consider it a sufficiently heavy missile for grizzly bear?

I was surprised when I received my .45-90 at the very slow twist and shallow grooves of the barrel. The question with me is how heavy and long a ball such a barrel will hold end on. The manufacturers make a cartridge for this rifle loaded with 82 grs. of powder and the .45-405 bullet, but I am so far from civilization that I have never had an opportunity of trying it. The point with me is to find out just how I had best load my shells for an interview with the jaguar or Mexican tiger, an occasion to which I am looking forward with much interest. Have any of your readers had experience with a ball such as Mr. Selous describes—"one weighing 360 grs. with a small hollow at the point, thick walls around the hollow part and a heavy solid end?" Is such a bullet on the market? It seems to me that his reasons for recommending it are eminently sound. Meantime here is the Winchester Co., with an advertisement on the cover of the "only" FOREST AND STREAM, telling how with this rifle of theirs (.45-90), a mighty hunter killed rhinoceros, giraffe and other large beasts. Could they enlighten us as to what bullet did all this remarkable work? AZTEC.

[It was probably the metal patched bullet weighin 295 grs.]

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable

## IN DIXIE LAND.—VIII.

[From a Staff Correspondent.]

## Do Bob Whites Pack?

If one should ask 100 experienced sportsmen the question, Do Bob White quail ever band up in numbers larger than bevy numbers, *i. e.*, do several families ever unite and take wing together, after the fashion of the mountain quail or the blue quail, or as the pinnated grouse do in autumn? it is very likely that 99 out of the 100 would say No. Among those who would say "Yes," would be Mr. A. C. Paris, of San Antonio, Mr. R. Merrill of Milwaukee and myself. Mr. O. C. Guessaz of San Antonio, who saw the same instance perhaps less perfectly than we did, would say "No," and would ridicule the idea that it could be possible. Yet Mr. Paris, Mr. Merrill and myself fully believe that we saw one flock, bunch, or aggregation of Bob White quail which numbered between 75 and 100, which all took wing together in one body, and which lit as one body, no more scattered than such a number naturally would be. Mr. Guessaz was a little further back and did not see the birds at the instant they rose to the dogs. He saw them on the wing and thought they were meadow-larks, though he does not claim that he saw the white tail of the larks, and I think only offers the lark theory as the best explanation of the phenomenon. Mr. Paris, Mr. Merrill and myself thought the manner of flight was that of the Bob White. We marked the birds down upon the top of a cottonfield knoll. Some of them, nearly one-third, I saw go into the thicket, which larks would not do and which quail would. Moreover, where we marked the birds down on the cotton, we began to put up quail, and found them scattered and running all over that field all the rest of the evening. Yet we did not put up any larks there. Mr. Guessaz thought the birds were larks, and that they ran off, and that the birds we found were a bevy which had not been started, but which we found right where we marked down the mysterious birds. And there the question rests. I have not yet met a sportsman who would admit that our birds were quail. Yet I am myself altogether satisfied that they were. The impossible thing often happens.

It may seem still stranger to readers how there could be any question about this, since it was simply a matter of eyesight in which all should have agreed, if all were hunters enough to know quail at all when seen. Yet how this could very easily happen will be understood at once by any one who has shot over Texas cotton field country on a very cloudy and rainy day. We were having just such a day, and we found it very hard to distinguish the birds against the reddish brown and gray of the cover over which they flew, and it was hard to mark them down well at any great distance. Often we pulled down on larks that sprang near us, thinking they were quail. The country was full of larks, which were often in great flocks. At 200 yds. it would have been hard to distinguish a lark from a quail at first sight. We were 60 or 75 yds. behind this big flock of birds when the dogs put them up, and we saw them the whole of their flight. I think they were quail. It is possible that several bevies may have been feeding near together, and have gone up together for the once. We saw no more such large bodies of quail, though of distinct bevies we found a remarkable abundance, and they were all very large bevies, some with 25 or 30 birds apparently.

We found that the Texas Bob Whites run a great deal more after they alight than the Northern birds do. Very often the dogs would road hundreds of yards from where the birds were marked before they would get them fairly stopped and pointed, and often it seemed that the birds would rather run than fly. Evil associations corrupt good manners, and I suppose this trait is caught from a too close juxtaposition to the racehorse blue quail of the Southwest.

The Texas Bob White seemed to me smaller than the Northern birds, of an ashier cast of plumage, and of a flight hardly so strong or long. The apparent swiftness of a bird is much diminished when you have it out in the open, and most of our shooting was done in the open fields.

## Details.

But I suppose a great many people will be most anxious to learn how many birds we saw, where they were and how many we killed. To these let me patiently reply that I don't know how many we killed. The rain stopped our shooting, and we were able to keep afield for only a few hours; but I think we had about sixty birds to the four guns. We could have killed a great many more if we had had any pressing necessity to do so. As it was, we found it much drier over at the Mexican house where our team was put up, and much cleaner in the Mexican's dooryard than it was in the cotton fields during the rain. No matter how tumble-down a Mexican's house is, or how poor the owner, you will always find the dooryard swept scrupulously clean for some distance about the house. This is a sort of insect-like habit the Mexican women have.

How many birds we saw in all I could not say, but probably as many as 400, nearly all on a place not much over three-quarters of a mile square. The locality was about twenty miles out from San Antonio. Our friends apologized for not showing us any more birds. No shooter in the North has any idea of the numbers of birds even now in these Southern States. It seemed to me that Dick Merrill and I were singularly fortunate in always landing right where the birds were the thickest. Certainly no one could ask a country any fuller of game than that on which we shot that day in January. The face of the field was continually animated. Doves, larks and quail were flying, one or the other, and the cottontail rabbits were unflagging in their efforts to get shot—in which many of them were successful. Our Texas friends shoot quail so much that this was an old story to them, and they gracefully left most of the shooting to Dick and myself. This deficit of valuable guns was valuable to the quail, but not to the rabbits, for both Mr. Guessaz and Mr. Paris were seeking for cottontails with an unappeasable eagerness. They said they knew a great way of making *Hasenpfeffer* out of these cottontails, the which was a dish a great deal better than broiled quail, baked quail, or any other kind of quail. The cactus thickets and chaparral were full of the cottontails, and every once in a while the crack of a gun would be followed by a wild yell of "*Hasenpfeffer!*"

## The Last Shoot in Texas.

This was our last shoot in Texas, and it was very clever of our friends to give us the benefit of it, when the cir-

cumstances are considered. Both of them had been late with us the evening previous, talking as shooters will over all the themes of interest, and had then found business to keep them up still later. Mr. Guessaz came to our hotel, so that we could all get an early start together, as we had to drive about 20 miles out in the country. Our scheme of all occupying one room, so as to wake up together, resulted in a talking bee, prolonged till past midnight, so that I can vouch for it none of us had slept over an hour when the porter rapped on the door and assured us on his personal honor that it was after 8 o'clock. Then we hustled out, got our team and looked up Mr. Paris, who looked as though he had never been asleep at all, but wanted to be. A late and early café gave us our breakfast, and we were miles on our way before the day broke. Then followed rain squalls all day long, so that at the middle of the afternoon we started back to escape another which was heralded—and escape it we just barely did, for things were freezing when we got to town, and that night the hardest storm of the winter set in, the thermometer going down to 18° above zero. The quality of a norther is such that a man will nearly freeze to death in one when the thermometer registers only 32° above zero.

We were a sleepy but still a merry party that rainy day in Texas, and as I have shown, we had good sport and a pleasant time in spite of the weather. Poor Guessaz went to sleep once while he was driving the team. Once we left Mr. Paris with the team while the rest of us beat out a field by the roadside, and when we came back we found him stretched out on the seat, fast asleep, with one long leg stuck through the front wheel. The team, unhitched, was standing patiently in the middle of the road. "I don't see what you fellows are laughing at," said Mr. Paris: "I put that leg through the wheel on purpose. If the horses had started up, I reckon I'd have known it, wouldn't I?"

Mr. Paris, at present a well-to-do photographer, and a good one, too, was at one stage of his still young life a member of the Texas Rangers, and there acquired a very low opinion of horses in general, hitched or unhitched, "bronco" or not. He came near having a circus with one that same day, however. As we approached our Mexican's house, driving across the fields, we came up to a team of Texas horses which the Mexican, in greaser fashion, had left standing fastened to the plow, out in the middle of the field. As we came up the horses took fright, and one of them, a wild, unbroken thing, started to plunge and run. We looked to see both the creatures cut to pieces by the plowshare, but Paris got to the handles and the lines, and by dint of good horsemanship kept their heels away from the share. Plunging and pitching, both horses started off at a great gait. Paris sunk the share deep into the loose soil, and away they went full tear for the house, with Paris holding on bravely, though hustled hard to keep his furrow straight. After him came the greaser, calmly smoking a cigarette, and seemingly unconscious of the fact that he had nearly lost his team, as he would have done but for the slim ranger, for had the horses ever started running with the plow out of the ground they would have kicked and cut themselves to pieces.

Paris was lightly dressed, and the ground was wet as it could well be, but whenever we stopped for rest he would lie down full length and take his rest that way—enough to horrify a physician and terrify a tenderfoot.

Both our friends were prime field shots, as indeed nearly all the San Antonio shooters are. In so good a game country they have much practice, of course, and that is something. I noticed one little device that Mr. Paris had which I never saw before—a small, pointed ivory sight let into the rib of his shotgun about three-fourths of the way back from the muzzle. He thought this helped him to line up more accurately, and perhaps the eye would learn to catch it swiftly, if one were deliberate, though I am afraid I could never see it or the front sight in quail shooting.

## Plenty of Deer.

The place where we shot quail that day is near the edge of a great wilderness, mostly covered with mesquite and other wood, which stretches away for some thirty miles or more. There are no roads and no houses in these, and one could easily get lost in that monotonous, rolling, closely covered country. In this timber there are many deer and turkey, with wild cats and some *javalinas* (peccaries). We longed to explore this region a little, but had not time.

Of deer there surely must be a great abundance even along the edge of this timber belt, for I am confident I saw the fresh sign of 30 or 40 different deer that day. Most of this was in the fields where they crossed at night. We did not hunt in the thickets.

"I would rather hunt quail than deer," said Mr. Guessaz, who has had a wide experience with all the game of the State. "You see a deer standing off a way in the woods, and you plank him, and there you are. You go hang him up and get all bloody up to your elbows, and have to carry your deer may be a mile, and then your fun is done. One shot ends it. In quail shooting you can walk along and enjoy yourself, be a good deal cleaner and less tired, and don't need feel that you've killed a great big animal you don't want anyhow."

## A Little One For a Cent.

Mr. Paris had along his young setter, a lashing, wide-ranging fellow, and Mr. Guessaz had his famous heavy-weight pointer. This dog weighs, I should think, about 250 lbs., or maybe 350 lbs.; anyhow, he's bigger than a man. He's a good dog, a thoughtful dog at times, but when he goes over a cotton field he leaves dents in it like prehistoric rhinoceros tracks. I wouldn't have that dog step on me again for a thousand dollars. One time we noticed the old fellow stopping and sort of pausing and thinking, and we thought maybe he was going to point a bevy. He wouldn't come away, and at length we went up to him. He was snuffing and digging at a little hole in the ground, and we saw that he was haling from their fur-lined nest a whole hatching of tiny little cottontail rabbits, which he was eating, and apparently enjoying, much as one does Blue Points on the deep shell. He had all the little fellows eaten but one, a blind and fuzzy being about as large as a mouse. This one our slim ranger man rescued and held tenderly in his hands. Finally, not daring to leave it in the nest, he carefully put it in his pocket till we got to the buggy, when he put it in among the dead quail under the buggy seat. The long ride to town was cold for the little fellow, and when Mr. Paris took him out at the hotel he fell over in his hand, apparently at the verge of death. A little warmth revived him,

however, and the next day Mr. Paris was carrying him around town in his coat pocket, and said he had taught the infant to eat milk famously.

## Cactus and the Greasers.

In all this part of Texas there is more or less cactus, and the Northern dog or the Northern shooter is quite apt to grow more or less informally but satisfactorily acquainted with it about a hundred times a day. The cactus is a thriving plant, but I don't like it as well as a watermelon vine. The residents of the country, horses, dogs and all, have a better understanding with the cactus, and never get stuck with it. There is no getting rid of it, so the population is resigned.

The odd ways the greasers have of doing things makes one think they must have a streak of Chinese in them. At El Paso there is a church, where the good father once upon a time wanted to put a bell up in the belfry (They had carried the bell, which weighs a ton or so, from the sea coast on the shoulders of the Christianized Indians.) They didn't have any block and tackle, but they had plenty of time; so they built a sloping mound of dirt as high as the belfry and about a quarter of a mile long, and found no difficulty at all in carrying the bell up along the incline.

Speaking of cactus, you know, if you burn the thorns off the leaves, the cattle will eat the leaves. In fact, a great many cattle had nothing better part of the time this winter, and the thorns weren't all burnt off, either. Well, not long ago the devout greasers of a certain little Mexican town were annoyed, so the story goes, by a lot of cactus, which persisted in growing on top of their church. They thought over it, and even prayed the patron saint to remove it, but it wasn't removed, and they concluded to take desperate measures. They knew that cows would eat singed cactus, so they sent a man up who spent a week and got about all the thorns burnt off. Then they roped a cow and hoisted her up on top of the flat earthen church roof. In about a week the cow had eaten all the cactus. Then they let her down, and gave thanks that they had got rid of the cactus on the church. If a Mexican thinks anything is wrong about his church he gets uneasy and is driven to mental activity.

## The Old Missions.

He who thinks America has no ruins has not studied America, and he who thinks all the Spanish missions and all the mission climate are located in southern California is again evident in his ignorance. No more interesting ruins exist on the earth than those of the old San Antonio missions, and no chain of missions possesses more interest than these, provided one qualifies both the above statements with a reference to the conditions under which the buildings were erected. They were great church builders, those early Spanish fathers. Why did they overrun all the desert country of the dry southwest, spreading all over New Mexico, Arizona, California, even all over the State of Texas? What drove them on, and what magic had they in their tongues, or their arms, to compel the savage natives to do those incredible feats of labor? One must remember that this was a wilderness and that building of any sort must have been accomplished only under difficulties, which we can only imagine. Yet the old fathers, hundreds of years ago ventured out into the wilderness, spied out the little streams of water, compelled their savage subjects to labor as slaves in the unusual task, built great irrigating ditches which compel admiration even to-day with the astonishment they create, and made the land bloom and bear perennially. Not only this, but they, who must have been a mere handful, with the rude assistance of these wild savages—hereabouts some of the most warlike and savage of all the American tribes—built churches, so long ago that their stone walls are crumbling, but so well that even to-day their ornamentation imperishably defies our best skill of to-day. You will travel long before you see cold stone fretted into more lovely detail than you will find in the carvings of one of Huica's windows in the ruined "Second Mission." You stand and look at it, and wonder and dream and sigh over it all—the nobleness of the artistic thought, the energy of the purpose, the carefulness of the executive mind which here wrought so well the work which is at last fading away and gradually being reclaimed by nature. Always man is piercing the ears of nature, to put in jewels. And every century nature looks to it that the conventional wounds shall need reboring.

On our way in from our quail hunt our friends drove us around by two of the old missions. One of these, the Mission of Nuestra Señora de la Concepcion la Purissima de Acuna, usually known as the "Second Mission," is about three or four miles from town. This was once the most beautiful of all the missions, and it is now the most in ruins. It was here we saw the carvings of Huica, the Spanish artist and sculptor, whom the early fathers brought hither from old Spain for the purpose of making beautiful their temple in the wilderness. This mission was a fortress as well as a church, and was well built for the warfare of those days. Half its walls are down, the vaults and subterranean passages lie bare, and in a smoky remnant of the larger wing live in squalor a greaser family who are supposed to be caretakers for the spot. They pray and dream, and though they do not understand the ruins about them, no doubt cross themselves to the same saints worshipped by the men who laid their broad foundations, who had built the great acequias which even yet scar deep the earth, and who laid out fields and gardens which can still be faintly traced. So let the roses take the ruins and kiss them finally to sleep, and well rest the fathers and the artist Huica who wrote so well in stone.

## Sadie, the Chile Queen.

But we are forgetting something which should not be forgotten, an attraction of San Antonio which to some minds would no doubt rival the old missions in interest—Sadie, the present reigning *chile* queen, under whose *régime* Dick ate his first and his last *chile* suppers in San Antonio as well as a great many between.

There are a few who know what a *chile* queen is. As a type she is the one new thing under the sun. No novellist has discovered her (though some day I am going to get Sadie to tell me her story, which will be pretty near a novel) and no newspaper writer has exploited her so far as I know. She remains a type.

The *chile* queen is a result of evolution. Originally all *chile* girls were born free and equal, and engaged in the sale of tortillas and the pursuit of happiness all about alike. They sold their peppery wares at night out of doors because they lived in a summer country and be-

JAMES MAYES

## YELLOWSTONE PARK GAME.

A FEW items of interest about the Yellowstone Park have come to us this week, and are given in advance of the full report which we expect soon to receive from Mr. Hough, of the FOREST AND STREAM Game Expedition. After reaching the Mammoth Hot Springs on its return from the Hayden Valley, the expedition made a trip up the Yellowstone River some distance beyond Yancey's, in order to be able to say whether this winter the game gathered, as it has always done, in the valleys of the Yellowstone, Soda Butte and Lamar rivers. It was found there as usual in great abundance, and thus the statements of those persons who declare that segregation or a railway line would not interfere with a great winter range for game are again proved false. Our correspondent writes: "You may say positively and without reservation that the whole country of the proposed segregation—all the region around Yancey's, the East Fork (Lamar River), Slough Creek, Hell Roaring Creek and all that bare country clear over to Soda Butte—is absolutely full of elk. I saw 500 in one band, 1,500 at one sight, 30 bands in one day's travel and 3,500 total at least count in two days. That section is the very best wintering ground of the whole Park."

It is evident, then, that there has been no change in the situation; that, notwithstanding the statements that have been made, this country maintains to-day what it has always been, a great winter range for large game. This we knew, but in view of the extreme importance to the public of this matter, it seemed to us worth while to expend some time, energy and money to bring forward additional testimony, carried down to date and incontrovertible in its character.

The fiendish malignity of the butcher Howell, who was recently captured in his buffalo shambles, is shown by an examination of such of the animals slain by him as were brought to the fort. Only 9 out of the 11 animals killed at this particular place were saved and transported to the fort, the other hides having spoiled through lack of care. Of these 9 buffalo 7 were cows heavy with calf, while only 2 were bulls, one a yearling and the other an old one. It would almost seem as if Howell's buffalo slaughtering expedition into the Park had been inspired by malice rather than by the hope of gain—as if he had gone there for the sole purpose of doing as much harm as possible. Here he was killing cows about to drop their young, and even young calves, when big bulls, which would be more salable, were readily accessible.

One of Captain Anderson's men named Matthews, who was stationed at Riverside in the Yellowstone Park, left that station March 11 to go for mail to a neighboring station. A sergeant accompanied him for some miles and then turned back, and Matthews has not been seen since. It is thought that, overtaken by a snowstorm, he may have become bewildered, lost his way, wandered off and perished.

## "Benny to May."

[Southern papers please copy.]

## Editor Forest and Stream:

A Dallas City, Ill., duck hunter last week killed a mallard drake in the gizzard of which was found a plain gold ring, evidently solid, and valued at between five and six dollars. On the inside of the ring is engraved the words "Benny to May." The question that is puzzling the people is how the ring came in the duck's gizzard, and where and who are Benny and May? As FOREST AND STREAM circulates all over the whole country, let us see if we can't find out who Benny and May are. Evidently the duck was on its way from the South to the Red River country in the Northwest. May might have lost this ring while fishing in some of the Southern lakes. There may be one chance in a half a million for May to get her ring back again. W. O. B.

## On the Principle of Life Insurance.

WITH the restocking that is now being attended to in some of the States, and if measures are taken to stop the sale of game, shooting will be as good twenty years from now as it has been in the past. Every man should do what little he can to keep the game from becoming scarce if not extinct. A man will have his life insured so as to provide for the comfort of his family after he is gone. Now, why not let him provide for their amusement and recreation, by doing his best in behalf of the preservation of the game, so that they can reap the benefits of the most healthful and invigorating sport God has given us? E. C. K.

## The "First Close Season."

In the *Game Laws in Brief* is given a reproduction of a sixteenth century picture of Noah's Ark, with Noah and the animals coming out upon Mount Ararat. The *Brief* calls this the ending of the first close time on all species of game, and the inquiry was made in these columns, How long was Noah in the Ark? We offered a copy of the *Brief* for the correct answer. Here are some of the replies; are they correct?

In "Hartford's" comments on the *Brief*, and his claiming the reward for errors in the duration of the "first close season" only being forty days, he is mistaken. But the exact days are hard to give, and my figuring would make it about 240 days. If this is correct enough I am open for a copy of the *Brief*. T. J. CUTLER.

According to my reckoning it was one year and ten days before Noah left the Ark. If I am right please send me the *Brief*. SUMNER P. ROSEBROOK.

Noah was in the Ark one year and ten days. J. F. STODDARD.

The "close season" referred to by "Hartford" lasted one year and ten days. For the beginning see Genesis VII., 11-12-13; for the ending see Genesis VIII., 14-15-16. The first reads: "In the 600th year of Noah's life in the second month and seventeenth day of the same month Noah entered the Ark. In the 601st year of Noah's life in the second month and twenty-seventh day Noah went forth out of the Ark." Therefore it lasted one year and ten days. If I am right send me the *Game Laws in Brief*. JAMES N. DUFFY.

[Have these reckonings been by the Gregorian calendar or by the Jewish calendar? and should not the Jewish be employed?]

## A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (advertised on another page, price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van F. (and) handsome work, "Bird Portraits for the Young" (the price of which is \$3).

## Sea and River Fishing.

## ON THE NORTH SHORE OF LAKE SUPERIOR.

(Continued from Page 339.)

BREAKFAST was prepared and over in a twinkling almost, and then the tents and provisions were as quickly aboard the Mackinac, and with a stroke or two we shot into the broad lake that was tossing in wavelets of silver. The breeze was a mild one, but it filled our sails and sent the boat along with graceful ripples and tinkling sounds. I was in delight with the prospect as we gently moved o'er the waters and studied the high receding shore with admiring eyes. The rocks for some distance ran very confusedly and wildly. Here we saw a huge split in the flinty bulwarks, which formed a lovely cove; then would come great frowning buttresses with their scarred faces, telling of the fury of the elements which had for ages battled fiercely against them; anon, a sloping hill in woodland green would gracefully reveal itself, to be soon retired by some savage cliff, the beauty of which was in its rough sculpturing and its variety of dint and dimple, now enriched with the flashes of the advancing sun.

A range of glittering mountains, chiseled into lines of grim expression, suddenly comes in view as we clear a jutting point. There they stood, looking down upon us with a majestic sublimity, as if they were "the great cathedrals of the earth with their gates of rock, pavements of cloud and choirs of stream and stone, altars of snow and vaults of purple," fit subject for the genius of a Turner. These ran to the perpendicular bulwarks and the adjacent islands of Aguawa harbor, which glistened like emeralds on the green sea. Turning a point at right angles, we slip along the deep channels in this picturesque harbor, doubly fortified by beetling cliffs in aged gray and beautiful beyond expression with their tops draped in delicate mosses, rare lichens and a few wild flowers in blue and gold that had sprung into life from the narrow crevices.

The fierce sun, as we reach these wave-worn shores, is now fast beating the wind into mere whispers, indicative of hard toil for our men. They had been expecting this calm, and when it fully realized, lowered the sails and sprang to their oars with commendable activity, sending the boat along with increased speed o'er the dying ripples and by shores that were fast losing their precipitous grandeur.

Ned said, as we emerged into the more open lake, that we were now reaching fine trolling waters for "shore Mackinacs," and with an eye to greedy sport got out his trolling line and sent the silver spoon spinning on its treacherous pot-hunting mission. I informed him that there were already a dozen trout in the boat and that more would be wanton waste, but he smilingly replied, "We'll make it a baker's dozen, and then wind up."

Many a mile he trolled before he had his first strike, and that he lamentably missed. Just about a mile from our destination he felt another savage snap at the spoon, and this time he had his victim in his toils. I inwardly prayed that the unfortunate fish might escape, in hopes of having a little fun at his expense, but he safely landed it, thus completely turning the tables on me. It was about a four-pounder and in prime condition, and the half-breeds said it would prove almost as rare a tid-bit as the toothsome trout. An accomplished chef, when he serves the latter fish, gives you a dish of "choicest sort and savor." Ned, satisfied with his victory, drew in his trolling line and consigned it to his tackle box with the remark that it is a more deadly lure than the most attractive fly, for an impaled fish has not even the ghost of a chance to flop his tail till he is in the bottom of the boat.

"And yet," said I, "you practice the trick."  
"Only on rare occasions."  
"And why then?"  
"Simply because I am impelled by the demon desire to destroy."

"A frank admission of the savage nature of a barbarian."

"Here, here; call off your satirical bulldogs."  
"Off it is then," and the subject of the questionable was relegated to oblivion.

We were now in sight of Jackson's Cove and the old familiar grounds where we had time and again taken unlimited trout, and it impressively recalled the pleasant memories of that sport.

"Yonder," says Ned, pointing to some ponderous rocks that rose up from the lake with smooth rounded tops, "is where we murdered many a tinted innocent with the illusive fly, and just beyond where the sunbeams are chasing away the dark shadows of the sombrous pines is where you made your notable double catch."

"And don't forget, Ned, that it is the exact locality where the big trout got away with your big fly and caused a lamentation on your part that was perfectly heart-rending."

"Yes, but the loss of such a monster would make any angler weep and wail."

"Here we are at the point where one muggy morning we spoilt a whole day's sport by catching enough in half an hour to last the camp a couple of days or more. Do you remember?"

"Yes, but I'm positive those halcyon days will never recur again."

And so we continued with the delightful reminiscences of other days, so full of subtle pleasure, so fragrant with tender memories, so sweet with the charm of the gentle craft, until we struck the sandy beach at Jackson's Cove and commenced the work of unloading preparatory to the establishment of our quarters. It was a wild and lonely place, grand and picturesque in its rugged mountains and sublimely beautiful in its valleys of pine and hemlock. In our immediate front reposed the Lizard Islands with their unviolated forests; to the east, Sand River, a notable stream that forces its way through walls of solid rock, leaving in its wake pellucid pools, tossing rapids and torrents of foam; to the west, Blind River, a dimpling little wandering ribbon of water, the very ideal of a trout brook, tumbles into the lake with scarcely a ripple; further along, Gravel River, a more pretentious stream, winds its serpentine course through shady dells and over rims of rocks with a delightful gushing sound truly suggestive of fairy haunts. Follow the crescent line of the stern and rugged shore beyond this, and Gargantua with its islands and precipitous cliffs are standing out like giants to sentinel this enchanted land, and then the

ragged coast disappears in a receding angle, leaving nought but the great shimmering sheet stretching into the dim distance like burnished gold. Such was the prospect ever in view from this place, and no grander or more impressive landscape of bold beauty could be found along this great basin.

Here we expected to remain for weeks, if we found the lake at all populous with the fish that radiate in the robes of the three-fold tints. With a view of just feeling the pulse of the waters, I at once put my rod together and after reel and line were in position with my two favorite flies, a silver-doctor and a gray-hackle, dangling from the leader, I started for the outside of the gigantic granite, where there were magnificent ledges of rock and where we never failed to capture a trout at the first or second cast.

"If you hear me yell, you know what it means," I said as I tramped to the outer rim of the massive masonry.

"All right," says Ned, who had concluded not to fish until everything was in complete order around the camp.

As the water rippled but slightly, I carefully approached the spot, and when within about 30ft. of it let my flies sail out and drop with a delightful softness; then a flutter followed by an upward rise of the deceits, and with a curve forward they light again in the desired place. This time there was a gleam of silver, a vigorous snap for the lure, and racing ripples and nothing more. I had missed and keenly felt the disappointment. Once more the flies drop and again the trout springs with tiger-like bound for the feathery deceits, but alas! he tempts his fate once too often, for the angler behind the rod is on the *qui vive* for just such a desperate dash, and sinks the cruel steel into his snapping jaws, and then the fight is on.

Away and away dashes the infuriated and bewildered fish with the rod bending and the bright reel singing until the braided thread is many yards distant. A slight pressure sends him to the top, when upward he vaults and shakes the diamond drops from his scarlet coat. Once more, as he enters his element, he is off, cleaving the silent water and straining the tireless thread as it rolls again from the silver spool under another gentle pressure. This frets him beyond endurance, and then as if gathering his remaining strength for some grand coup, checks his onward speed, hesitates a moment—a fatal error, resulting in the recovery of much line and the further bewilderment of the red-coated captive. I could almost feel his strength waning as he came along to the click of the reel, but he was far from being conquered, for with a sudden and fierce plunge he started once more for deep water, making dashes right and left in his onward move. Satisfied that his strength and savageness were well worn, I test the strength of the little Chubb rod with satisfying results in bringing him to a halt, and then inch by inch I reel him close to the rock, where I have the pleasure of seeing his evanescent tints as they gleam through the translucent waters. I feel that I now have the battle nearly won, and desiring the services of a netter I shout the promised hallo, and then the pattering footsteps of Peter fall pleasantly upon my ears. Reaching my side, I instruct the intrepid half-breed to take position on a flat rock at the water's edge and there await until I had the impaled trout completely killed. A few more feeble dashes, a splash or two, a tremble and a quiver, and then his spangled sides meet my admiring gaze. Carefully and patiently I draw him along and when he is within a few feet of my trusty aid I signal for the sweep of the fatal net, and instantly it drops with an unerring aim and skillfully closes around the enameled beauty of the icy lake. Proud of his skill, the tawny boatman with a triumphant smile springs up the inclined rock and then holds aloft for admiration as lovely a specimen of a jeweled beauty as ever rivaled the colors that outblush the rose or dim the crimson of the clouds.

"Just out of the swirl of the veering stream,  
In niches and caverns 'neath moss-fringed shelves;  
Like gossamer floating in idle dream,  
In wildest haunts hewn by the river elves,  
In castles of crystal whose turrets old  
And battlements rugged like networks rise,  
In vestures of silver and azure and gold,  
The indolent king of the river lies."

"His weight?"

"Three pounds to a dot."

Ned, who had been in at the death of the glittering prize, was so delighted with the prospect of our old time sport that his rejoicing took place in an impromptu warble reciting that:

An angler stood on a moss grown rock,  
And sang till his throat was sore;  
For all day long he sang this song,  
"We'll meet 'em on this lonely shore."

"Shall I arouse another beauty?" said I, after Ned had finished his amusing aria.

"No, no; let the preserve alone for an adverse day." I saw the wisdom of his advice, and then taking up the trophy we all returned over the rounded rocks to our quarters and busied ourselves making the camp complete for our comfort.

About 3 o'clock in the afternoon, having our quarters in good shape, we took the boat and skirted around the east arm of a small bay, intent only on ascertaining whether the trout had all been gill-netted here the same as below. We were, however, very agreeably surprised at our investigation with the lures, for on the second cast made by Ned, he hung a lovely darling that gave him a world of pleasure in an exciting battle. It was a full two-pounder and as "pretty as a pink" in its bright colors of silver, orange and gold.

Reaching a sloping granite wall a few yards in advance that ran into the lake in ragged seams, and just where a dreamy sunshine was idling with weird shadows, I let my flies, a Henshall and scarlet-ibis, gently drop o'er the fissured lines, and ere I commenced the flutter, a trout with savage fury took in the Henshall, and after a vigorous struggle, with all the accompaniments incidental thereto, I landed him as a companion for Ned's peerless idol. This satisfied us that the ruthless barbarians had left these waters untouched and that we would here have weeks of delightful sport. Coming to the big rocks which had always been a favorite spot with us, we went ashore to fish them from their rounded tops. Ned, as soon as he landed, ran to the upper end, the choice place, where he made a pre-emption claim which ruled me out according to the ethics of the guild, and so having the cream eliminated, I contented myself for a while with "starvation point," the adverse end, though I fully determined when

opportunity offered, to give greedy Ned a "Roland for an Oliver." I smiled, though with a sickly cast pale o'er it, at the cunning tactics that here gave me no chance for the flimsy brood whatever.

There I was, flogging away at the rippling waters without a rise, while Ned hung one at the first cast, which he soon duplicated a moment after. Now, I am not an envious angler at all, but you can wager your wealth that I love to keep my record somewhere near the head of the list, and I knew it could not be done at my end of the rocks, so I concluded to change base and commenced a tramp along the rough and ragged shore in hopes of bettering my fortune, which I soon did in making a double catch from some overhanging rocks about 15ft. above the water. I sang lustily for Peter to bring the landing net when I had the trout in play, and by the time he arrived had the twin so completely exhausted that it required neither skill nor care to land them. This satisfied my angling aspirations for the afternoon, and in a great measure reconciled me to Ned's cunning coup. I, however, kept in view the balancing of the account with him, simply as a remedial, not in revenge; for no better camp companion than dear old Ned ever fluttered a fly in wandering brook or along the rugged shores of the great lake.

On reaching Ned, after arduous climbing over the sharp edged rocks, I suggested a return to camp, as the object of our outing had been satisfactorily accomplished. He acquiesced, and we at once embarked and headed for our quarters with the sun sinking among clouds gleaming in gold and crimson, and amid the infinite freshness of nature in all her grand and impressive beauty. Here

"The trees to every crevice clung,  
And o'er the dell their branches hung;  
And there, all splintered and uneven,  
The shivered rocks ascend to heaven."

We had a royal supper that evening, it being reinforced by a couple of partridges one of the half-breeds had killed while gathering balsam at noon in the forest. I informed the boys that it was a close season for the toothsome birds, but they replied that there was no close season upon the North Shore for the Indians, and that they killed whatever they desired for their own use.

"But you are not Indians, nor are we," I responded to his explanation.

"Half Indian anyhow, and that makes it go," Peter answered.

Ned, who was somewhat of an epicure and had an unbounded stomach, insisted in not splitting hairs on the subject. It was, I thought, a slight encouragement for more of the prohibited game, and so Peter and Kenosh both concluded, for there was an inquiry shortly after from the twin as to the number of cartridges in camp. If this kind of freebooting on the forbidden game was to be done under the rose, a serious question arose within me, viz., whether I was to partake of it if spread before me, or whether I should hand the red-handed violators over to the minions of the law when we returned. I, however, concluded to settle that important question when the law was again fractured, but Ned said it never would be and so I bothered no more about it. One day I did think I was eating something that tickled my palate like unto the toothsome partridge. On inquiry, Ned said it was a jobberwink, a bird I had never heard of before; but then my education in ornithology had been sadly neglected in my early days. I was simply an example of dense ignorance on the subject, I assure you, though I was a dear lover of the jobberwink. While on the subject let me here state that I have never seen them quoted in our market reports of game, and think they must be a *rara avis* indeed, yet the boys declared the woods were full of them.

We arose the next morning with a southwest wind and a sombre sky greeting us. It being exceedingly favorable for trouting, we immediately after breakfast started with the boat along the shore, casting as we went. Ned was rewarded with a noble rise and hung and killed the *fontinalis*. Shortly after, I received a rise from one of the juvenile class that had doubtlessly strayed away from parental eyes and happily missed it. Securing no more responses here we went to the "big rocks," but failed to tempt with our clever deceits after a full half hour's earnest endeavor.

The storm which had been threatening all morning now gave evidence of a sudden and terrible visitation by vivid lightning and loud thunder. It was the signal of a hasty retreat to camp and as there was no standing on the order of going, we hustled into the boat more rapidly than gracefully. The wind, as if it desired to take a prominent part in the elemental outbreak, came bounding o'er the waters in spiteful violence, and in a few minutes had the greatlake in curving clouds of foam. As we had about a mile to go, the boys looked upon the angry sea as a mere *bagatelle*, one of them saying:

"We will make camp all right, and with dry jackets too."

Manfully they pulled the ash-blades, scattering the pearly spray from the bow as if going through a roaring cataract. The half-breeds seemed to enjoy the wildness of the waters and laughed and sang as if on pleasure bent. Around the jutting point we swiftly swept, and then having the wind at our heels went into our snug harbor with the snow-like froth fairly flying from the head of our little craft. Away out by the Lizards we saw the Mackinac of the Kentucky angler pitching and tossing at a great rate and evidently making for Gravel River, the only harbor of retreat this side of Gargantua. We waved our handkerchiefs as a salute and the response duly came with a lively fluttering of the white linen.

We had been in camp but a few minutes when the rain poured down bounteously, but as the surcharged clouds of inky darkness moved to the east of us, we escaped the worst of the storm. The atmosphere was now perceptibly cooled by the shower, but the leaden sky still prevailed, and it looked as if we would have to pass the remainder of the day in camp.

Ned sought enjoyment in overhauling his tackle; his flies, however, being his especial delight, for many of them were pleasant reminders of his outings on the famous Nipigon.

"There," said he, as he held aloft a favorite fly he had taken from his spacious book, "is the most taking lure I ever cast."

It was a gray-hackle on a 1-0 sprot hook and made by Mrs. McBride.

"And here," he continued, "is another, a black-spider; and still another, a red-bis, all made by the same party."

But here is the famous red-wing-coachman with which I caught a 7lb. trout, the largest I ever killed," and then a pleasant smile radiated over his bronzed face, as if the sight of that particular fly refreshed his memory with the exciting events of the grand battle, which gave him the grand prize.

"See what a stout sprot upon which they are mounted. I tell you they are dandies and double discount the pretty playthings they now make."

And so he went on until he had about gone over his entire fly-book, and then he closed it and put it away as carefully as if it were a treasure beyond purchase. The opening of the book had so filled him with the early recollections of the gentle art that he commenced a discourse on the subject, which, if not sustained by authorities, was one that led to a long discussion between us.

Referring to the antiquity of the gentle art, he affirmed that Adam was the first angler and taught the art to his own Seth. Job was also well up in angling, and the prophet Amos alludes to fish hooks. So you see, angling comes with the first creation of man. Even the old serpent was an angler, but he landed his game, to the grievous lament of the human family, with the historic apple. Sir Walton, honored above all, has beautified the art and "sings its beatific praises" in his pastoral production. He has really "made fishing the type of the gentle mind that finds, even in the midst of hot and angry tumults, a refuge for quiet hours, a haunt of peace by happy river sides."

"That is all perfectly delicious of the 'Immortal Master,' Ned, but how would he rank with our accomplished anglers of the present day? Is not his theory of a different fly for each month a fallacy? Take even the authorities of the present day, and see how they antagonize on the subject as to the best-taking flies for our game fish. I

FLORIDA TARPON.

Taken by Miss Bertha Woodward, near Fort Myers, Fla., March 17, 1894. Length, 6ft. 1in. Weight 125lbs. Time 50 minutes.

will give you a few quotations which I have here at hand from well-known professionals on the subject:

"The idea that each month has its own killing flies is sheer nonsense; a fly that is good on a bright day in spring is good on any other bright day."—*Fred Mather.*

"It is well to have in your fly-books a little of everything, but of gray and brown-hackles, coachman and professors an abundance."—*L. B. France.*

"The kind of flies to be used vary with the locality, stream, state and stage of the water, weather, etc. \* \* \* The only way is to keep trying until the one is found that does please."—*Chas. F. Orvis.*

"A brilliantly-colored imitation of a fly will lure them, and herein largely consists the science of a fisherman in judging what style of fly is appropriate to a peculiar state of the atmosphere or locality."—*T. Robinson Warren.*

"The aim of the angler ought to be to have his artificial fly, by its form and colors, to attract the notice of the fish; in which case he has a much greater chance of success than by making the greatest efforts to imitate any particular species of fly."—*Prof. Rennie.*

"I esteem the color of the fly's body of far greater importance than that of the wings."—*Hewitt Wheatley.*

"I would advise all experts to keep a well-filled fly-book."—*George Dawson.*

"My favorites, on the whole, are all the red, brown, orange and yellow hackles, and the blue and yellow duns."—*Frank Forrester.*

"The palmer hackle is never totally out of season."—*Alfred Ronalds.*

"Good flies for black bass trolling are Montreal, scarlet-bis, brown-hackle, Cheney and grizzly-king."—*M. M. Backus.*

"The trout fly is a conventionalized creation, as we say of ornamentation. The theory is that fly-fishing, being a high art, the fly must not be a tame imitation of nature, but an artistic suggestion of it."—*Charles Dudley Warner.*

"To load yourself with swarms of flies is folly. \* \* \* Use a dark fly for dark waters and a bright fly for bright

waters, notwithstanding the most reasonable arguments to be adduced *per contra*."—*F. F. Manley.*

"As a general thing it is a waste of time to be forever changing your flies. If the fish are not rising it is entirely useless to fling an assortment of flies at them."—*T. S. Up de Graff, M. D.*

"Of winged flies I use only the brown-hen and the coachman; of hackles, only a brown, a black and a ginger."—*Thaddeus Norris.*

"The flies used in lake fishing are larger than those for rivers, and I have frequently observed that the winged flies answer better than palmers."—*T. C. Hoftland.*

"Imitate ever so closely the form and general character of the fly at which the fish are rising—if the color be wanting you will have no sport."—*Hewitt Wheatley.*

"The angler, on making a lengthy tour for sport, cannot have too great a number or variety of artificial flies."—*Genio C. Scott.*

"There are times when the sorriest conglomerate tied on a hook in the most barbarous manner, will take trout as fast as presented, and why this is so no one has yet solved; when they will take a "chunk of old horse," or anything else, and that thrown at them with a splash loud enough to wake the dead; and then again, the choicest specimen of the fly-tyer's art, the very darling of his imagination, cast with the practice of years and as light as a thistle-down, will cause *S. fontinalis* to scurry to his friend in the next county and cause all thinking anglers to argue, "why is this thusly."—*D. S. Kimball.*

*Salvelinus fontinalis* is the most "curious cuss" that poor tired humanity has ever been called upon to tackle and he who gets the art of fly-fishing "down fine" deserves to wear a No. 9 hat, have a soft, soft cushion in his every-day chair, be buried beside some babbling brook of his choice and have upon his tombstone, "When this man walked the earth *Salvelinus fontinalis*'s name was Dennis." May he never have wet feet any more; may he always be warm, not too warm, but just warm enough; may he have a little cloud for his very own, and may he "among the angels stand," a creel upon his shoulder and a fly-rod in his hand. *Requiescat in pace.*

And so we might indefinitely continue to the utter confusion of the guild. "Now, your own experience tells you that the varying moods of the trout are a thing 'no feller' can find out, and that if he won't take a fly of one construction, give him another, and so on, till you finally have him down fine."

"Your authorities are worthy of great consideration," replies Ned, "but, at the same time, I beg to have an opinion of my own on the subject, and that is that the cast, the flutter and size of fly are just as important as the construction, combination of feathers, tinsel, etc., and I sometimes think decidedly more important."

"That is all O. K. and I hope you will practice what you preach; drop your fly with airy lightness, and flutter it as if the thing were about to take wing and fly away."

Ned looked up a little surprised at my critical remarks and then quite pertinently said:

"There are some anglers who, in casting, dwell so long between the recovery and the delivery of the fly, that there is apparent danger some day of a trout being taken in the rear and lifted over the shoulders."

"All of which means that I am not on exact time in my return cast."

"Nearly so; quite so, sometimes."

"Thanks for the information, and as I am a candidate for a premium at the World's Fair Casting Tournament, will at once endeavor to make the correct time."

With this the fly talk and good-natured badinage ended, and then on Ned putting away his tackle we strolled out on the gray rocks in our immediate front and made a favorable forecast of the weather. A bright sun was showing up on the rim of the western horizon and a few birds in the thickets along the shore were making the air melodious with their sweet notes, all of which confirmed our diagnosis of the atmospheric elements.

ALEX. STARBUCK.

[TO BE CONTINUED.]

#### Trouting at Parkside, Pa.

PARKSIDE, Pa., April 16.—Though 13in. of snow had fallen it had almost disappeared by opening day. There was still a little left in the woods, but the trouting was excellent.

At the Park House a number of fishermen from New York and Philadelphia, among whom were Mr. J. Steele, Mr. Wm. H. Ziegler and wife, Mr. and Mrs. J. R. Reichert, Mr. Geo. E. Fleming, Mr. C. A. Bragg, Mr. A. Marble, Mr. D. A. Keyes, Mr. J. A. Seeley. The day was perfect, and toward evening the fishermen came in. Mr. Keyes and Stimson had thirty-seven nice fish, Mr. Ziegler took twenty-seven. Mr. Bragg and Marble also made good catches.

Of those stopping at other houses, Mr. C. A. Boyan made a splendid catch of half a hundred. He is a crack fly-fisherman. Mr. R. Coleman made a good catch on the second day. He has been fishing the West Broadhead for over thirty years, and knows just how to get them. He uses the fly so cleverly that it is a treat to watch him. There were a number of others who passed who had well-filled baskets.

The flies in use are on Nos. 10 and 12 Sprot hooks, and of dark color; no bright flies are used.

The streams have been clear and the very moderate winter has left them unusually full of trout. Fishermen are passing all the time, and the farmers, who charge a quarter for fishing their part of the streams, must be doing a thriving business.

W. T. MORRISON.

#### A One-Armed Angler in Clover.

MR. SAMUEL COLLYER sends us this note from the Tacoma (Wash.) Union:

"W. S. O'Brien, the well known one-armed enthusiastic disciple of Izaak Walton, went trouting on Wednesday up Clover Creek and brought home a large basket of fine speckled beauties, the largest of which measured over 14in. in length. Mr. O'Brien says he lost more fish that day than any day in his whole fishing experience. Just as he would get a fish nearly to hand, it would drop back into the water. He will use larger hooks next time. He caught all the fish after 3 o'clock and came in from Brookdale on the 6 o'clock motor. Mr. O'Brien says the best trouting place in the State is Round Top Lake, in Succotash Valley, this side of Mt. Tacoma."

## ANGLING NOTES.

## New Hampshire Hatcheries.

THE Fish Commissioners of New Hampshire have adopted the plans of the New York Fish Commissioners, and placed certain hatcheries belonging to the State in charge of certain commissioners. New Hampshire has nine hatcheries, two more than New York will have when the two under process of construction are completed. The nine hatcheries are divided as follows: Commissioner Shurtleff has charge of those at Meredith, Ashland and Colebrook; Commissioner Griffin those at Manchester, Laconia and Bristol; Commissioner Wentworth those at Keene, Sunapee and Plymouth.

New Hampshire is keenly interested in her wealth of fish and game, for she recognizes its value to the people, but it seems a mistaken policy to erect a swarm of little fish hatcheries all over the State, where a less number of well equipped stations properly located will do the better work at less expense for operating. I mention this, as I understand that appropriations have been made to add to the present number of hatching stations in the State.

## Death of Judge Ferriss.

On Wednesday morning, April 11, at his residence in Glens Falls, N. Y., Judge Orange Ferriss died suddenly. He was nearly 80 years of age and up to the day of his death was as active as a man of half his years. Judge Ferriss, a lineal descendant of John Alden, four times removed, possessed the upright, honest and sturdy characteristics of his Puritan and Quaker ancestors. Much of his life was spent as a public man, as judge of his native county for twelve years, four years in Congress, six years as Commissioner of the Court of Southern Claims, and six years as auditor of the U. S. Treasury. A few years ago Judge Ferriss and I were stormbound for an entire day on an island in Lake George while trolling for trout in May, and he said that during fifty odd years he had spent a part of each season at Lake George, fishing in its waters and shooting on its shores. He recalled that he was once similarly stormbound with my father when they were camping together, probably before I was born.

Judge Ferriss was president of the Glen Club at the time of his death, an organization that has occupied an island in Lake George with permanent cottage for a camp for nearly thirty years, and it is to Judge Ferriss and another member of the club, Mr. Frank Lapham, that we are indebted for the largest small-mouth black bass in the world. In 1886 these two men, as they were breaking camp at Glen Island, caught a number of little black bass from Lake George and put them in a bait bucket and later in the day planted thirteen of the fish that were alive and active, in the inlet to Long Pond, now called Glen Lake. The thirteen little bass stocked the pond and from it have since been taken small-mouthed black bass weighing 10lbs.

To his out of door life as a sportsman Judge Ferriss ascribed his rugged health for four score years. Within ten days of his death he said to a fellow director of the Glens Falls Insurance Company that he had never been sick, and he never would be but once, and then it would be a brief illness; and his life came to a close, full of years and honors, as he had predicted.

## An Angling Sir Bountiful.

In several notes in this column I have mentioned an English gentleman who was in this country for the fishing—Mr. Alfred C. Harmsworth, of London.

Before he left the other side I told Mr. Harmsworth that the only fishing I could recommend in this country between Jan. 1 and April 1 was in Florida; and to Florida he went, and was from the first so enthusiastic about what he found there in the way of sport that I should not be surprised if the citizens presented him with the freedom of the State in a gold box. After catching a single tarpon, Mr. Harmsworth was suddenly called home, and the London *Times* takes a column and a half to explain why he was called.

Mr. Frederick G. Jackson, an Arctic explorer, was apparently consuming with a desire to have another try at reaching the North Pole, and all that was lacking was a hatful of money to procure a steamer and other things necessary for the expedition. Mr. Harmsworth, quietly fishing for tarpon down in Florida, apparently hears of it, and he reels up his lines, hurries to New York and then across the Atlantic, and as the *Times* says: "Owing to the munificent offer of Mr. Alfred C. Harmsworth to bear the entire cost of a fully equipped scientific expedition to Franz Josef Land, with a view to advancing as far as possible toward the Pole," the thing is done, the way is prepared, and the expedition will start early in the summer to be gone three years. Altogether, "the Jackson-Harmsworth expedition to Franz Josef Land" may be called rapid transit from Florida to the North Pole.

In a personal letter from Mr. Harmsworth, dated at his place in Kent on March 31, he says, with the modesty of an angler of high degree: "I had to come back from Florida more rapidly than I expected, owing to a polar expedition which I am fitting out. My expedition is entertaining the American expedition (Wellman's) tomorrow. Wellman is a particularly fine fellow. \* \* \* I have not had time to tackle the fishing articles yet. I had hoped to have written them on the return voyage, but we had rough weather, and writing was almost impossible. The advice you sent me regarding Florida fishing proved most useful and accurate. It is a pity that there is no reliable book, in fact, no book at all, on Florida fishing. An impartial work, run in the interests of sportsmen and not hotel keepers, would sell, of that I am confident. I estimate that between 5,000 and 10,000 people take rods to Florida every season. This year, although the fishing was very good, the number of people was poor on account of the depression. All those to whom I spoke agreed that there was great need of such a work as I refer to. The hotel advertisements are most misleading, that of — being particularly ridiculous, as there is no fishing there.

"I did not, unfortunately, get another tarpon. Had I stayed a fortnight longer, as I intended, I should probably have landed three or four. I had a big fellow on and am now impatient for 1896 to arrive, when I propose going to Florida again.

"It was rather surprising to me that so few people from the North go to Florida for sport. Most of the Northerners we met there sat in the hotels all day. To go to Florida and not to fish for tarpon is criminal.

"I met some people in New York who had been to Florida

for fishing and came away disappointed. The reason was simple. They had gone to the wrong place and at the wrong time. Except perhaps in the very best salmon rivers in Scotland or some parts of Norway or Lapland, I do not imagine there is such good fishing in the world as can be found in Florida, if one goes to the right place.

"I had my first fishing here to-day. Twenty-three trout in an hour is certainly my record. I never had so many before and do not expect to again in so short a time. They took any kind of fly. By the way, I ought to say that the tackle dealer you sent me to for tarpon tackle, treated me extremely well. His tackle was of the very best and he would not let me take any more than I really wanted.

"I hope to send over crowds of sportsmen for the tarpon fishing presently. A good many go already via Havana, but if the fishing were better known here thousands who spend a great deal more money in going to outlandish places like Lapland (for salmon and trout) and India (for masheer) would run over to Florida, which, after all, is only an easy nine days from London. \* \* \* I am off to London early to-morrow morning to meet your compatriots."

The fishing articles referred to are some that are promised to me about Mr. Harmsworth's experience in Florida the past winter. When he returns to America he will find another fish, the ocananiche, waiting to give him first-class sport, and with which I feel sure he will fall in love.

As Mr. Harmsworth owns a newspaper in London he may have something to say about Florida fishing on his own account, which surely will benefit the country in view of his high opinion of it. A. N. CHENEY.

## FLORIDA TARPON.

WOODWARD, Ala., April 11.—*Editor Forest and Stream:* I send you inclosed a photograph which I thought might interest you. I may say that I was a witness to this catch and that no assistance whatever was rendered in taking the tarpon, except when the fish was drawn up to the boat he was gaffed by the guide, which is the usual way of taking him.

Fort Myers, Fla., afforded excellent tarpon fishing during part of the month of March. I was there with my family for two weeks, and all of us captured six tarpon, three being credited to me, two taken by my son, a 17-year-old boy, and one by my daughter, of which the inclosed is a photograph. J. H. WOODWARD.

PUNTA GORDA, Fla., April 12.—*Editor Forest and Stream:* I think you have had reports from this place as to the tarpon fishing this spring, but I don't recall having seen anything in your paper as to the fishing at Fort Myers. W. R. Washburn has kindly supplied me with a list of those who have caught tarpon and the weight and length of the fish, as hereafter given.

The best two days' fishing so far was on the 8th and 9th inst. (about four miles below Fort Myers), when twenty-six tarpon were caught. Mr. N. M. George on last-named date had ten strikes and landed three fish. Mr. W. Ashley Jones, of Richmond, Va., succeeded in landing a fish which weighed 168 lbs.; and that, too, on a broken rod.

Mr. Wm. W. Jacobus, of East Orange, N. J., who has been stopping at the Tarpon House at Punta Rassa, told me that he had been trolling lately for tarpon in Estero Bay, using a drumfish belly to troll with, and he said that he had twenty-eight strikes and caught four tarpon, all of which averaged over 90lbs each. Here is the record of tarpon so far caught at Fort Myers:

## Neversink Trout.

FALLSBURG, N. Y., April 21.—A party of two gentlemen from New York city, stopping at H. W. Dean's Hotel, at Neversink, caught out of the Neversink on April 16 and 17 eighty very fine trout. On April 20 and 21 Col. Niffey and three friends from Goshen caught 293 fine trout from the Neversink. WILLIE DEAN.

## NOTES FROM MOOSEHEAD LAKE.

## The Winter Fishing.

THE winter fishing is over. Take it all in all, the catch has not been remarkable either in point of size or numbers, though several fine togs have been taken in the vicinity of the Deer Island House, which, by the way, is the most convenient place for winter fishing, as well as one of the neatest, quietest, prettiest stretches in the world for the summer angler.

Although large catches have not been made in Moosehead itself, many heavy hauls have been made from small lakes and ponds in the vicinity.

## The Ice Going out Early.

There is now every prospect that the ice will go out much earlier than usual. Recent advices from Willimantic state that the ice will certainly leave Sebec Lake about April 26-28. The spring salmon fishing will of course come on immediately after the going out of the ice. There will probably be a larger number of anglers at the head of Sebec this year than ever before, and there are some reasons for expecting that the fishing too will be better than usual.

The ice usually leaves Moosehead within a week after Sebec is open, so that it may be confidently predicted that Moosehead will be clear about May 5, or possibly a day or two earlier.

## The Salmon Pool.

Fishing began rather brilliantly at the salmon pool at Bangor, but for the past ten days high and roily water have made the fishing a failure. The snow is now nearly gone, however, and it is likely that the water will clear this week.

## Maine Sportsmen's Fish and Game Association.

In a recent letter, Mr. E. C. Farrington, the secretary of the Association, says: "Considering the times, we are getting on finely. One satisfactory feature of membership is the class of men who join. I doubt if there can be found in Maine an association of any kind with men of more note and ability.

"Our work is not for personal benefit. We have no club house. What we put out is for the good of the State. We are constantly pushing and sustaining the State Commissioners, and our programme now is to get up and keep a general public interest in our game and its increase. We shall have the present laws thoroughly revised by a board of good and able men, then brought before the Association, and when we are agreed as to law and appropriations, go before the Legislature and secure it. A wholesome public opinion is what we want.

"I hope that a little later on we may have a reservation and association building, a place where any member can go cheaply and have all needed opportunity for rest."

May Mr. Farrington stand firmly on the FOREST AND STREAM "plank" when he secures the needed legislation. That plank alone would be a good enough law for protecting our fish and game. F. S. BUNKER.

## Ice-Bound Canadian Waters.

QUEBEC, April 19.—The spring weather that was expected so early this year has tarried long in the coming, and as a consequence almost all the lakes in northern Canada are still in the fetters of the ice king and in the Lake St. John country snow still lies deep in the woods. Not until the early days of May is the ice likely to leave Lake Edward and Lake St. John, but there will be excellent trout fishing in Lake Beaufort, Lake St. Charles, Lake St. Joseph and Lake Edward within a couple of days after the disappearance of the ice. The 10th or 12th of May will be none too early for the large *fontinalis* of Lake Edward, and as summer is likely to come in with a rush after such a late spell of cold in the spring as we are now having, the weather in the middle of May will probably be very pleasant for camping out, though the distances are not so great but that anglers may return each night to the hotel at the station.

From American friends who are members of the Metabetchouan and Springfield clubs, I learn that we may expect a number of American anglers up here from the 15th to the 25th of May, most of them bound to the Kiskisink and Lower Metabetchouan waters. For spring fishing in these waters anglers should be well supplied with fairly large-sized flies of the Parmachene-belle, junglecock and professor varieties, with a sprinkling of Jock-Scots or silver-doctors.

Fishermen in the habit of crossing to the Grand Discharge of Lake St. John or to the large tributaries of the inland sea, will be pleased to learn that a new steamboat is rapidly approaching completion at Roberval, which will make the fourth steamer to navigate the waters of the lake. The Canadian Government is also constructing a suitable wharf at Roberval.

I would not recommend crossing to the Grand Discharge for ouananiche fishing before June 10, though May 18, as described in my last letter, will not be too early to take them in the mouths of the Ouiaichouan or Metabetchouan rivers. E. T. D. CHAMBERS.

## Point Senasqua Rod and Reel Club.

SING SING, N. Y.—*Editor Forest and Stream:* We have here the finest striped bass fishing ground on the Hudson River and there are many enthusiastic fishermen. We have an angling club, the Point Senasqua Rod and Reel Association, Senasqua being the Indian name of Croton Point. As an incentive to make the sport interesting, the club has prepared a handsome gold badge which will be awarded the member landing the heaviest fish during the season beginning April 1 and ending Dec. 1. The fish to win the prize must be either a striped bass, weakfish or salmon, and must be caught in the Hudson River between Tarrytown and Verplanck. The club members also have a button badge. W. S. S.

## Chemung County Association.

WELLSBURG, N. Y., April 12.—*Editor Forest and Stream:* We have organized a club of thirty members called the Chemung County Fish and Game Protective Association. The officers are: W. H. Wagnier, President; Aaron Seafuse, Treasurer; Dr. F. G. Dean, Secretary; Willmot E. Knapp, Attorney; Louis Balch and Chas. Wheeler, Wardens. F. G. DEAN, Sec'y.

## READY FOR OPENING DAY.

BOSTON, April 21.—Still the preparations go on for one of the liveliest angling seasons that the trout and salmon waters have ever known. But up to within a few days the weather has been very cold for April and but little real fishing has been done. At the preserves on the Cape and the South Shore owners and invited guests have had some fishing, but it has not been as satisfactory as good April weather would have made. In the tackle stores the report says a good trade is in progress—much better than a year ago. Orders for fishing tackle and repairs are numerous. Trout fishermen mean to be ready for the clearing of the ice from the Maine lakes. Hundreds of rods and reels are in the tackle stores and the repair shops. It is curious to note the interest the genuine trout fishermen takes in being sure that his tackle is ready. But reports from the Maine ice are not encouraging now for a very early season, notwithstanding the very warm weather in March. I have letters from several guides and camp and hotel keepers right in the trout centers, and the entire report summed up makes the date of the Rangeleys clearing of ice about May 15, with Moosehead a day or two earlier. Each one of the reports mention more engagements than usual. Rooms, boats and guides are being engaged in a manner that ought to be pleasing to those reaping the most pecuniary benefit.

The chances of a night train to Farmington, Me., over the Maine Central, for the accommodation of the fishermen who would like to reach the Rangeleys in one night from Boston, are yet uncertain. The railroad companies are slow to wake up to the main chance. There will be a great many fishing parties to the Maine waters this season, but after all a great many changes have taken place. Some of the old parties are entirely broken up, and others nearly so. The Eugene Clapp party is a thing of the past, the members being nearly all dead. Mr. G. W. Wadsworth is left, and he thinks strongly of joining one of the younger clubs. The Hobart and Reed party is broken up. Mr. Reed is ill, and Mr. Hobart is probably going to Grand Lake Stream for landlocked salmon. Doubtless the Magee party will be a full one this season. Mr. Tuttle and his friends will early be at Lake Point Cottage, Rangeley Lake. This is always one of the first parties of the season. Mr. Tuttle rather expected, during the warm weather in March, that he should hardly be on the grounds as soon as the ice was out this year, but later reports indicate good sledding on the ice on the same lake. The Powers party will be one of the foremost of the season. This party has its steamer already engaged. The Inglewood Club members are preparing for a splendid fishing trip this spring, though some of the members will wait till warmer weather and fly-fishing rather than rush off for early trolling. This club has received several valuable accessions to its membership the past year; among the best the entire Harry Moore party. This party, made up of almost the same persons, has visited various fishing resorts year after year, till at last it is anchored with the Inglewood Club. The Megantic Club is starting in for a prosperous season. Its membership has been increased, and the best of management is looked for this season.

A special to the daily papers say that Supt. McGlinn, of the New Hampshire State hatching house, was to ship on Monday, April 26, 75,000 brook trout fry, as the season's allotment of the Fisheries Commission to the Merrimack County Fish and Game League. The fish are to be planted in the waters of that county.

SPECIAL.

## It Did Not Pay.

THREE weeks ago several enthusiastic sportsmen of this city, including Chief of Police McCabe, and officers McDonald and Leroy, went fishing in Morgan Lake. They were not satisfied with the inglorious worm or the frisky fly, but decided to try their luck with nets. This was against the law, but the party included the Chief of Police, and of course if he thought it all right, why the others thought so too. Then the Morgan boys were along, and as the lake is for the most part the property of their aunt, they, too, thought it all right. They fished in broad daylight, using a big river seine, and caught a nice mess, some of the bass being as big as shad. Coming in town, the party felt so generous that they presented a few of the surplus fish to their friends, who pronounced them most excellent eating. The sequel of the story was that Game Protector Kennedy got hold of the matter and placed it in the hands of Game Constable Mase, of Matewan, and on Friday the Chief of Police and his friends settled the matter out of court by paying \$135 in fines and \$7 costs, which made about \$23.66 a piece—rather expensive, even for the splendid haul of fish they made. Others who had the fish in their possession and enjoyed eating them are equally liable before the law, but the game constable decided not to go outside of the circle of sportsmen. The matter is considered a huge joke by the friends of the sportsmen, but they can't see it in that light, in view of the present lightness of their pocket-books.—*Poughkeepsie (N. Y.) Eagle.*

## New Hampshire Trout.

LEBANON, N. H., April 8.—The past winter has been favorable for trout, but I think the season will be late. One week from to-day is open season and it has snowed hard about all day. The 15th comes on Sunday, so if the drifts are not too deep I shall try to find some brook early Monday morning. I would like to meet my old friend "Von W." once more before we pass the Grand Divide, and to enjoy another as perfect a day as I did with him three years ago in Acworth. I hope that he will live many years to enjoy nature as she is.

MASCORRY.

## New York Game Legislation.

ALBANY, N. Y., April 24.—Special to *Forest and Stream*: The Committee made its report on game law amendments to-day. By its terms no changes are recommended as to deer or woodcock, except that the season for deer in Sullivan county is made to comprise October only. Mongolian pheasants are protected at all times. The wild fowl season for the Hudson River below Troy and for Long Island waters ends May 1; in the rest of the State ending March 1. Striped bass are protected. Fishing through the ice is allowed in waters not inhabited by trout or by landlocked salmon. The trout season is made to open in the Adirondacks on April 15 and elsewhere on April 1.

The above are recommendations. The bill incorporating them has not yet been adopted.

## The Kennel.

## FIXTURES.

## DOG SHOWS.

May 1 to 4.—Special show of St. Bernard, Collie, Spaniel and Fox-Terrier clubs, in connection with the Hempstead Farm show, Madison Square Garden.

May 9 to 12.—Louisville Kennel Club, at Louisville, Ky. St. Marc M. Munday, Sec'y.

May 30 to June 2.—Alameda County Sportsmen's Association, at Oakland, California.

Sept. 10 to 14.—Toronto Industrial Exhibition Association, at Toronto. C. A. Stone, Sec'y.

Sept. 18 to 21.—Rhode Island State Fair Association, at Cranston, R. I. W. W. Dexter, Sec'y.

## FIELD TRIALS.

Sept. 5.—Manitoba Field Trials Club, at Morris, Man. R. J. Gallaugher, Winnipeg, Sec'y.

Nov. 6.—International Field Trials, at Chatham, Ont. W. B. Wells, Sec'y.

## BOSTON SHOW.

April 17 to 20. Entries 888, Dogs Benched \$61.

THE tenth annual dog show of the New England Kennel Club, marks an era of good feeling and prosperity for the club that reminds one of its early shows. No club, with the exception of the W. K. C., has held to its purpose with greater tenacity through fair weather and foul than the N. E. K. C., and now with the open handed management at present, in control its future looks bright indeed. The economic policy is past and a feeling of democracy and the greatest good to the greatest number reigns in place of it. The entry accorded the club this year was well in advance of late years, though not up to that of 1888, when the total of 1,053 was reached.

The following table will show each year's entry: 1885, 619; 1886, 622; 1887, 1,039; 1888, 1,053; 1889, 701; 1890, 737; 1891, 627; 1892, 700; 1893, 807; 1894, 888.

This year the coming specialty show had a decided effect upon the entry in several breeds, notably collies, and if, like other large shows, novice classes had been provided, no doubt the thousand mark would have been reached again. Elsewhere will be found items of interest connected with the show, and we turn at once to a criticism of the classes.

## Mastiffs.

James Mortimer, Judge.

The three principal kennels in the East were represented by their best dogs, so that though the entries were not large, quality was well represented. Beaufort's Black Prince and Lady Diana, both well shown, took the challenge prizes without competition. In open dogs (8), Ingleside Minting again proved equal to the occasion and scored well over Emperor William in eye, body and hind legs, his coat might be better. Emperor Maximilian took third, he is much smaller than the others and not so well ribbed. Beaufort's Prince, reserve, is slack in back and only just recovering from eczema, skull too domy. Brutus, c., a light-eyed, sour-faced dog, back on pasterns and light in body, got all the sympathy in such company. Bitches (4), saw Gerda II., that wonderfully good matron, an easy winner over Eider, whose light bone and rather plain flat head and lack of massiveness were offset by good body and hind parts. Nellie, third, was shown much too fat, a light eye detracts from her expression, stands on good legs and has a much better skull than muzzle, the latter not deep nor square enough. Brampton Beauty was absent, being heavy in whelp to Beaufort's Black Prince. The dog puppy Druid was absent and Campana, a lucky one, represented bitch puppies, as at other shows this season.

## St. Bernards.

James Mortimer, Judge.

One cannot extol the quality on the whole, on the contrary, outside of the old winners there was little to commend. A Boston show with no challenge rough dogs is something unusual; in the corresponding bitch class (2), Lady Livingston scored once more, beating Miss Anna in size, bone and general massiveness; in type and quality both are superior specimens. Her Ladyship was not in such good coat as we have seen her. Open dogs proved a large class (22), and the winner, Altoneer, whom we never saw looking better, was well placed ahead of Ardmore, beating him in skull and muzzle, quality and body, which has filled out nicely. The well known Jim Blaine came next, he is a useful sort, well made all round if we except a dip behind the shoulders, he was never shown better. Gov. Russell, vhc., has a very nice typical head, deep and square with excellent markings and stands on good legs, he was rather thin and looked tucked up in body. Prince Hector, hc., carries great bone and is of sufficient stop and a too short face are very much against him, good coat but curly in places. Sir Albert Victor, hc., scarcely deserved his letters; his head is long, narrow and snipy in muzzle, and to this we must add a shelly light body. The commended dogs were distinctly poor specimens comparatively, their heads being principally at fault. Bennington, whose disposition was not of the best, has good legs and coat to commend, he has a half white head. The bitch class was very meagerly supported with but two entries, one of which was our old friend Lady Snerwell, who, however, did not look at her best, her skin seemed out of order and coat was short, she was too fat as well. Second was withheld from Bonny and that is all that need be said. In dog pups (16), Lord Ripon deserved his win for a good head, great bone and the quality he shows. Columbus, second, loses quite considerably to him in head, stop and muzzle especially. Jim Blaine, Jr., I could not find. Madam B., second, again scored in the corresponding class, second being withheld from Junis II.

In smooth challenge dogs, Melrose King, beautifully shown, was alone; but competition was keen in the next class when Empress of Contoocook and Miss Alton came together. The former looked very well and excels in muzzle and carriage of ears, quality and expression, and depth of body. Miss Alton is a cleaner built bitch, but lack of face shadings is a distinct detractor compared with the other; she excels in bone and feet and carriage of stern. Open dogs (4) proved a "snap" for Alton, Jr., who stood head and shoulders above the others in quality and general make up; he was put down in faultless condition and has improved in body; he is a hard one to beat in any company. Rex Bedivere, second, has a well-shaped head, if too much peak he excepted, and stands on good legs. Cato, third, while plain in muzzle, has a very good skull; stop should be more defined, good legs, well-ribbed, white body and shows but moderate quality. Judith, the well-known matron, was placed over Lady Alton in bitches (4). The latter beats in bone but loses in squareness of muzzle and in eye; both are good in body and legs, and Miss Alton scores a little in type and quality. Judith's Ruth, a bitch of nice type and color, shows too much coat; more depth of stop would improve her, and she is a bit straight behind. A noteworthy fact regarding this class is that the three others are daughters of the winner, Judith, who evidently intends to keep her position as the head of the family. Clara Barton was absent. In smooth dog pups (5) first went to Crouch, a nice all-round dog; ears lay back a little, good bone and body for his age, well marked, faulty in carriage of stern. Cyclone, second, is a little long and narrow in head, good bone, a son of Altoneer and Judith. His

brother, Snow King, reserve, is rather plain-faced, good bone and legs. Puppy bitches did not fill.

## Great Danes.

James Mortimer, Judge.

The showing here was a disappointment to lovers of this coming fancy. Entries were poor and quality by no means conspicuous. Challenge dogs did not fill, and Minerva's Pawn was the only entry in the corresponding class, she is now owned by Mr. White, of Worcester; her snipy head is her worst fault and she was shown too fat. Open dogs had but two, Stanley and Molke; the latter is a plain, coarse headed dog with little type, fair body and legs, and Stanley, well known now, had no difficulty in scoring first. Owl's Nest Topsy was the only entry in bitches; she is short headed, good in neck, body and legs, a dark brindle with a light eye.

## Bloodhounds.

James Mortimer, Judge.

Here was quality in abundance and one new face, Belhus took another challenge prize. Alchymist filled his engagement in open dogs (4) for the first time since his importation, and though not in the best of skin condition he scored well; his grand body, legs, earage and wrinkle make one overlook his rather light head; it would be improved with more depth, but shows intense type and quality; he is a distinct acquisition to the breed on this side. Brough, second, is beaten in body, length of leather and quarters, but has a deeper and better head. Berry's Bradshaw is plain beside these two; he is well known. Bruno, reserve, is leggy and rather plain in head compared to winners, good body and condition. In bitches (2) Kaween, repeatedly shown lately, was too fat, but had nothing to beat but the sweet-headed, undeveloped Vigilant, who is improving in condition at every show.

## Foxhounds.

John Davidson, Judge.

At no show held in the North have we seen such a large entry, and nowhere do we remember seeing such a good lot of hounds, taking them all round. At the same time never did it appear more apparent that a standard is necessary for the American hound. Legs and feet were uniformly good, which is something unusual, but heads, ears and bodies were of all shapes and lengths. In English hounds (3) the well known winner Rosemary scored over another bitch, Winsome, a rather plain-headed little bitch with good body and legs, losing to the winner very much in muzzle and thighs. I liked Denmark, third, better for the place.

In American hounds Elite was the only challenge entry present, Commodore not showing up. Elite was shown rather gross. The open dog class (17), White Oak Kennels' four being not for competition, must have been a puzzle for the judge. For the blue he selected Argonaut, the Chicago winner; barring a fineness in muzzle he has a capital head and is well put up all round and looks like going, being a light English type to some extent. Second went to the well known trial winner Logan, a little pinched in muzzle and should be better ribbed up; body a little long. Rock, another good one in the field, came in third; this is a very well built hound all round, well ribbed, short-coupled body, excellent front with just enough bone, head rather on English type with short ears, good neck and shoulders, in fact, considering his condition, style and everything, one need not have looked further for the winner, and should fill the eye as a type for the standard; he is perhaps a trifle leggy, but such a dog should be able to stand any amount of work, rough or smooth. Rover, reserve, is rather heavy in head, especially in skull, excellent legs and body, ears flat. Billy, Ned, Pooler and Brave's Boy were vhc. Billy is faulty in loin, not chest enough, flat-faced, nice legs and leather. Ned I did not see. Pooler is a well-shaped hound with a rather good head, little short in neck. Brave's Boy was in very poor shape, dirty and did not deserve his letters, though a pretty good hound when in shape. Dave Crockett, hc., was hardly treated, for he is a well-made dog, though a little long in loin, and more rib would improve him; good legs and feet, and plenty of substance. Sport is another that might have scored over some of the vhc. dogs, for combined with a nice head and true foxhound expression he is well ribbed and conforms to American requirements; he is a mottle. White Oak Kennels showed a very nice level pack, but did not compete. In bitches (11) another hard lot to judge came forward and the prize again went to Kentucky through the medium of Bow-sprit, another of the same type as Argonaut—same breeder; she might be better in feet, but has good legs, body and a sweet hound head. Judy, second, first last year, is a fair-headed one, and if she had more rib would do. Katie, third, seemed in whelp, is throaty and in spite of her good legs was rather lucky under the circumstances. Aggie, reserve, is another worker in the trials, well-shaped head, her lower eyelid has been torn open and she wore a shield over it, good legs and feet. Norah, vhc., is a well-known winner, with quite a nice head and good legs, but was a bit light in loin. Lilly Dale is another known to fame; her sweet head, combined with good legs and fair body and shoulders, show that she well deserved her letters; she might be shorter coupled if anything. Fancy, hc., is light in muzzle and should be deeper ribbed up; legs and feet will do. The puppy class was divided, five dogs and four bitches, and three from White Oak Kennels N.F.C. Driver won in dogs, a very promising, well-made pup; in fact, most of the pups were well formed. Tam O'Shanter was a good second; there is little between them. Dancer took the blue in bitches, but was removed before I came around, as were most of the youngsters.

## Deerhounds.

J. Otis Fellows, Judge.

Not a very numerous entry, but quality made up for any deficiency in that respect. Alfred Heald, Mr. Thayer's kennel manager, just brought the dogs in as fast as he could and pocketed the ribbons and didn't care what happened, as they all came from the Hillside Kennels. H. Warrior and H. Romola furnished the winner in each challenge class and were shown in good form. In open dogs (3) it was Raven, McGregor, and Argyle. Raven, in excellent coat, beats McGregor in body, loin, bone, length and strength of head and feel of coat. Argyle loses in muzzle and length of head, but beats the second winner in body and coat. Three well known ones came forward in the bitch class. Sylvia scored in head, bone and quarters, but Heather, third, excels Ruth in ribs and thighs, heads about equal. There were no puppies.

## Greyhounds.

J. Otis Fellows, Judge.

There is generally a good lot of this breed shown here, and though a good entry was benched, somehow the cracks failed to show up this year, which left the moderate, short-bodied Imperator a bloodless victory as the only challenge representative. He was well shown. The judge could not go back on his namesake, Uncle Dick, in open dogs (9), so gave him the blue; he is wide in skull, with big, flat, down-hanging ears, heavy shoulders, fair legs and feet and nice swell of ribs. Baltic, second, is a better dog all round, excepting in rib; a deeper and stronger loin would improve him. Dakota, third, is making up nicely, and was looking well. Vigilant, reserve, is a plain sort, flat in loin, snipy headed, but stands on good legs. Lord Torrington, vhc., should have more bone, but his legs are well formed and body well ribbed up, shoulders nicely placed. Duke, hc.,

scarcely deserved his position, heavy shoulders, light ribs, poor feet, short head and big ears are not to be commended or desired; he is good behind, however. Pedro, c., is fat, and heavy in shoulders and not clean enough in neck.

One can scarcely agree with the decision in bitches (6). Hattie, another of the Gem of the Season—Rose breeding, which Joe Lewis has been fortunate enough to produce, is a very promising sort, but not yet furnished. Marguerite is too small, faulty in front, well ribbed; she should not have divided Hattie and the new importation, Southern Belle. The latter, just off the ship, looked sleek and too fat, but still her beautiful outline from head back should please the eye of every greyhound man, well ribbed, strong, deep loin, beautiful quarters and long, broad thighs, strong hocks and good front and neck, sloping shoulders, though at present a little heavy there owing to fatness, makes one pass over a slightly plain head—little round and full in skull, which her peculiar marking does not enhance. She is a bitch that will be hard to beat in any company when in proper fettle. She should have won with Hattie second and Miss Dollar III. reserve, between whom and Marguerite there is little comparison, should have been at least third. It was scarcely fair to score Belle so hard for her sleek appearance. Catchfly II, hc, is weedy and snipy headed compared to the others. Hattie rightly beat Dakota in puppies, betterribbed, and in loin and head. The others were a poor lot.

#### Wolfhounds.

J. Otis Fellows, Judge.

The same old faces again, but the rest since Philadelphia has done them all some good. The owners of the two principal kennels deserve every credit for the way they have supported the shows this season and they should reap a goodly harvest from their efforts to push this handsome breed to the front. Argoss and Leekhol once more faced each other in challenge dogs and both were well shown. Argoss has improved very much since Philadelphia and was again able to hold his position, while Leekhol repeated her former victory over Svodka, who was also well shown. Poor Vinga, with her bent leg, should not have been shown; the fractured part has knit together well but the joint is quite enlarged. In open dogs (4) the order was again Colonel Dietz and Odrooski and Sorvanets, latter better shown than at Philadelphia, not so cloddy-looking, and Leekhol II. reserve. All have been repeatedly commented upon in these columns. In bitches Irmina won, followed by Ymeika, who is a good all round bitch barring her straight hocks, good body, loin and front, feet could be closer, excellent coat and feather. Riga, third, same stamp as the winner, is well known; loses in depth and breadth to Ymeika, also in quarters and thighs. Ylobellis, reserve, was hardly treated, I thought; a nice type of bitch, good loin and body, better ribbed than the winner, excellent front; she only loses in head, and no great mistake would have been made if she had won, that is if the dog class winner's type was followed. Olivia, the Philadelphia winner, could do no better than vhc.; her poor front is against her. Lady Dietz was the only puppy shown.

#### Newfoundlands.

John Davidson, Judge.

A poor lot as usual nowadays. Ponto, the winner in dogs (4) is too long in head and it is not deep enough; light eye, big ear, rather good coat. Cinders has a better shaped head but a lighter eye and is cloddy in body. Jumbo, vhc., is a curly-coated fellow with a lemon eye, fat and snipy head; it is no use giving letters to such dogs; they are not Newfoundlands.

#### Chesapeake Bay Dogs.

John Davidson, Judge.

Dr. Bigelow made a brave showing in this breed, and with one exception retrieved all the ribbons. Mr. E. Brooks's dogs were benched N. F. C. Cleveland and Bigelow's Rose accounted for the challenge classes. In open dogs (2), Rough beat Deacon, though I should think the latter's better head and harder coat should have pulled him through. In bitches, Tivoli, the Saratoga winner, scored over the puppy Tuckerman's Favorite, beating her in closeness of coat and slightly in head, but types are so diversified in this breed at present that it is risky work venturing a decided opinion on any of them, though there is one thing certain, they should have a crisp, vet-resisting coat and jaws long and strong enough to grasp a refractory duck or goose. In puppies, Favorite won over a pretty little one in Otter Girl, that shows much promise.

#### Pointers.

James Mortimer, Judge.

The breed was well represented, and, while quality was a little mixed, it was a representative collection, especially of New England stock. The classes were well handled. Challenge dogs brought out Tempest, Duke of Kent II. and Duke of Dexter; Pontiac N. F. C. Tempest won; a trifle better in head, but loses in front to Duke of Kent. Lady Tammany was alone in her class and was put down in good style. Open dogs (13), heavy weights, brought out several well-known winners. First went to Prince Regent, whose good ribs, neck, shoulders and skull are noticeable; he should be truer in front and not so much cut out before the eye; nice bone. Ridgeview Panic and Hylas of Naso were second and third; these are names familiar to pointer men by this time. Budd D. took the reserve card; he should stand stronger on pasterns, skull be a little finer and body deeper ribbed; muzzle and hindparts good, and was well shown. King of Lynn, vhc., should be longer in head, not so cut out before the eye, which is light and stary; other parts good. Lord Bracket, hc., would do with more rib and should be flatter in skull, good bone, shoulders a trifle heavy. Robert S., hc., has a nice head and body, but is a bit coarse in shoulders. Ponsat, vhc., has a rather coarse head, brow too prominent, well ribbed, but shoulders should be cleaner. Dare Go keeps up well and is an old winner in this part of the world; heavy in shoulders and throws out a little in front now. In bitches (11), Kent's Belle took the blue; she is a nice, well-formed bitch, might be a bit stronger in muzzle, and falls away a bit behind. Kathleen Kent, second, has a clean, well-shaped head, a little more back rib would improve an otherwise good body. Bloome II., well known as a good one, came next, and Tempest Queen, reserve, is faulty in expression and throaty, head fairly well shaped, nice body, feet could be better, and is heavy in shoulders. Emblem, vhc., has a fair head, but ears are not well hung; a rather plain bitch, faulty in front. Belle Vernon, hc., was out when I called.

In lightweight challenge dogs (3), Rush of Lad took the honors from Arthur, who has gone off from his youthful form, though he beats the winner in head considerably, Lad's being flat and plain, and a prominent eye does not improve it, otherwise he is well made. Arthur is getting strong in skull and is not right in front of stop, and pasterns should be stronger. In challenge bitches (2), Wild Lily, a smart stylish bitch, though losing considerable in substance and body to Fan N., was in much better condition, the latter being shown too fat. Open dogs had eleven entries and the winner was not far to seek in Ridgeview Tenny, well known. Ridgeview Donald from the same kennel coming second; faulty in bone and muzzle. Chancellor, third, is rather plain in head, though fairly well shaped, good legs, shoulders and body. Roderick, reserve, is a little flat in face and should be better ribbed up, otherwise he will do. The vhc. dogs were Zack, Prince of Pontiac and Flintlock. Zack has lumps on muzzle near the eye and a rather poor head, good legs, fair body. Prince Pontiac has been described before and deserved his letters. Flintlock not very well shown, throaty and muzzle should be stronger, beyond this, little fault can be found.

Advance I could not find. Bitches had sixteen entries and proved a hard class to judge. The well known winner Springside Nell was again to the front, followed by Devonshire Pearl, a nicely made lemon and white, elbows set a little too close. Westminster Zoe, third, should be better in feet, face a little flat, more stop and more rib would improve her, otherwise well formed. Fan Fan II. is well known and deserved her position. Jingle Belle is too prominent in brow, a nicely fronted bitch with a good body. The hc.'s were Belle and Sarah, the latter is leggy, but they deserved their letters. Two good dog puppies were shown by the Springside Kennels, Faust and Tory, and placed as named; the winner should be deeper in muzzle and a light eye detracts from his appearance, but he beats the other in skull and general formation of body. In bitches (8), Uradia Kent was placed over Daisy; winner is a well ribbed pup with a rather nice head, beating Daisy in these respects. Springside Juno, reserve, is a little one with a poor muzzle and light eye, others not mentioned, not a good class. Tempest beat Duke of Kent II. again in the field trial class.

#### English Setters.

John Davidson, Judge.

These classes were well filled, and here and there a good deal of quality was to be found. This year the N. E. F. T. Club did not make a special display, but most of their dogs were there just the same. Challenge dogs had two entries, Monk of Furness and Kent II., placed as written; Kent has the better head, stop more defined, and was in better coat and condition, but loses behind somewhat. It was close work between Blue Nell and Princess Beatrice in the next class; Nell has the better shaped head, especially muzzle, but loses considerably to Beatrice from loin back; the latter's gross condition probably accounted for her defeat. In open dogs (25) there was lots of work for the judge, first going finally to Cactus, a well-known dog with whom little fault can be found, a strongly built one with a good head. Harry L., second, is another good-headed dog, standing on nice legs, would do with more rib and be stronger in hocks. Dad Monarch, third, was a bit too fat, short neck, good otherwise. Albert's Ranger was shown light in flesh, a well-formed dog if better ribbed up, good shoulders, legs and feet and coat. There were five vhc. dogs; Count Noble's Boy well deserved his letters and so did the well-known Robin Goch. Norma has a fair head, is a bit plain behind and ribs should be better sprung. The Earl is well known. Gasseau Orange Belton should have a deeper stop, was too fat and is faulty in set on of stern, good legs and coat. Albert's Garry, hc., has a rather plain head, feet out a bit, with more rib body would be good, deserved his letters. Berkshire, also hc., is not flat enough in coat, a little strong in skull, but good muzzle, bone and legs and body. Druid Noble I could not find. Critic should certainly have had more than c, as he is nicely put up all round; he is a brother of the winner.

The bitch class (16) was another strong lot and here Countess Zoe was shown a little above herself, but in fairly hard condition; a little more stop would improve an otherwise good head, good body, legs and coat. Albert's Moll, second, has a fairly good head, beaten in coat, body and legs by the winner. Toledo Queen, third, was at Philadelphia. Monk's Mina is filling out nicely and shows lots of quality, muzzle should be stronger. Countess Berkshire, vhc., is faulty in muzzle, but otherwise nicely made. Blue Jenny, vhc., is light in loin, in poor shape, good head. Madge M., in the same lot, should have a better defined stop, plain in muzzle. Among the hc. division I liked Flight of River-view, who was hardly treated with but two letters. The Duchess, hc., is light in body, while Idol is too fat altogether, good head, but throaty. Our Pet shows lots of quality, a little heavy in shoulder, as she was shown too fat; excellent head, legs and coat; deserved another letter. Harry L. won in dog pups (12), with Sir Winford second; fair head and a bit out in front. In bitches (12) Lilly L. scored, a very promising sort when body is filled out, nice head, legs and coat. Reverdy's Leah is another good-headed one and so is Monk's Lill, all the way from Hoboken. In the field trial class Cincinnati and Toledo Blade were absent, and this left Our Pet the ribbon without a run.

#### Irish Setters.

John Davidson, Judge.

The classes were fairly well filled and the quality good. Challenge dogs brought out Kildare, Inchiquin, Duke Elcho, Kildare Glenmore and Seminole—a galaxy of Irish quality. Inchiquin, reserve, was beaten by Kildare in head and front; both were put down in rare fettle, and I never saw Inchiquin looking better. In bitches Edna H. had a walk over, Queen Vic and Norma competing for specials only; they were well shown, as were all of Jos. Lewis's dogs. Open dogs (7) saw Bob J. take the blue, his excellent color, good body and legs scoring palpably, though head should have the occipital bone better developed. Pemberton, second, rather plain in head and feet should be truer, otherwise well built. Principal, third, is too flat-faced and should be better ribbed up. Ruffdan, reserve, is light in loin, Roman nosed, should be deeper in body, more stop, in poor flesh. King Grue, vhc., is coarse-headed, and so is Phormio, hc., and also light in rib. Shandon Belle, the winner last year, repeated her victory in open bitches (6), a most meritorious triumph, as all the others have taken ribbons one time or another. She is of a rich color, feet turn out a bit and neck could be longer to advance; nice head, and was in beautiful condition. Second went to Ruby Glenmore II., repeatedly described, and third to Maid of Borstal, another well-known animal, who loses in head to the others. Alice Kent, reserve, would do better if her head were more typical, a little plain. Rosamond, vhc., I have spoken of before, nicely shown. Jessequin deserved two letters. Puppy dogs had two entries, but Kildare Odin was the only one to catch the judge's eye, and he took first; ears set on high, rather good head, feet not truly set on, a promising sort. Kildare Neville, from the same kennel, took first in bitches, only entry; she is not up to much. Finglas, looking well, took the field trial class prize on a walk over.

#### Gordon Setters.

J. Otis Fellows, Judge.

Quality here was fair and entry good, but surprises were in order all round and the old standbys had few collar decorations of the usual color. To begin with Count Noble, shown in faultless condition, threw down Leo B., who was masquerading under the name of Duke of Wellington. This will be explained elsewhere. The charming Janet scored in the next class (5) beating Fan, her kennel mate, and the old winner, Duchess of Waverley and Lady Gordon. In open dogs (7), the big ones went down again, but a little dog was the order and this was found in Trim B., whose wide, round skull and rather straight stifle are against him, nice body but too small and light. Prince, second, is light in loin, turns his feet out, flat plain head, light in rib, a small dog. Homer S., third, in spite of a rather plain head should have won, as he scores so in bone, body and legs especially; type and general good build must not be sacrificed to size. A Gordon is a heavier built dog than an English setter, and the winners were smaller than is usually met with in the latter breed; there is danger in rushing to either extreme. Heather Dash, reserve, is slack in body, light in tan, fair head. Bitches (9), Fenmont won; is rather markedly on legs, poor in head compared to Lady Maud, second, losing in stop and muzzle. Jessie Noble, third, has little character, is mixed in tan and was shown too fat. Belle C., vhc., body well made though light, fair head, should have more stop, small sized; Pocahontas, vhc., with a little more stop has a good head, rich tan and

good legs and feet, shoulders and body; should have been higher up. Maid of Waverley was left in the cold. Belle of Waverley gets her feet too close and elbows scarcely true, good body and coat, fair tan. Jolly G.'s time will come in the fall. Lady Noble is not very good in front, and tan should be warmer. Bobolink won in dog pups (3). Belle of Waverley rightly won in puppies; the others I did not see—gone home. Mr. Fellows stuck to his little ones all through, and as he remarked in his dry style, "I'm not judging lumber piles this time," he must be praised for consistency at least. Count Noble won in the field trial class. A petition was signed by the New England breeders for Mr. Fellows to judge Gordons.

#### Spaniels.

J. Otis Fellows, Judge.

The entry was a good one, and many familiar faces were to be seen, in fact, we were surprised at their presence, considering the pronounced views of the judge in certain directions. Whatever one may say about the correctness of the awards, one must admit that with few exceptions the judge did his best to get what he wanted. The ball opened with challenge field dogs, Newton Abbott Torso having a walk over, and so did Rosedale Bess in her class. Open dogs had two, Echo and King Cassius, the former winning easily, Cassius high in leg and curly-coated. Maid was the only entry in bitches and took the blue; light in body, nice head, but rather on the leg. In livers first was withheld from Lord Kew, just a common sort. In any other color Romeo could do no better than second, though he had the class to himself. Then came the fun and the long faces. It started when Middy and Jay Kay went down before Othello. This latter is a bigger dog than the others, and though a trifle long, is a well-built one. He is said to be blind in one eye, and the other is none too good. Miss Waggles again beat I Say in their class, the good-headed Black Duchess being left in the cold. Thirteen trooped into the black open dog class and three were absent. They took some sorting, and when the smoke cleared away Adam and Woodland Prince were counted equal for first place. This was wrong. First should have been solely the Prince's property, for in addition to filling the requirements of good length of leg and good body, his head is so far superior to Adam's in type and quality that it more than offsets any little advantage Adam may have in the former respects. Third went to Jumie IV., the very antithesis of the other two, a little long in body and light in flesh, fair head; a candidate for distemper. King Raven, Jr., well known, took reserve. Jersey Nebo, vhc., has a poor front and coarse head, nice, flat coat, a bit faulty behind, droops in quarters. King Nebo, vhc., has a nice front, full in skull, and more rib would even up a slightly long body. King Cole has a crooked front, and is too round in skull. Wyoming Obo is faulty in front and too high in skull, otherwise all right. In bitches (12) the rather long-bodied Fashion won, fair front, but should be more on the leg to get so high up. Lisa, second, I liked better; although scarcely made up, well formed all round, and shown in faultless condition. Cricket, third, has a pretty good front, too prominent in brow, and loses in skull. Flossie Butler I must have missed in the excitement; she won at Providence last December. Topsy S. should have been higher up; she is a well formed bitch, though a trifle shorter body would improve her. Rideau Reine should fill the new conditions if she had a better front; she has the type, too, and can beat the winner. Cleo W., hc., a nice-fronted one, a little full in skull, good body, and should have had at least another letter. Dart, the Chicago winner, in better shape, had to be content with hc. Sunderland Ber, hc., has white on feet and chest. Engenie, hc., seemed in whelp, stands on good legs, nice head, and was well shown. Bin scored nicely in any other color dogs (6), second going to Neda, not flat enough in coat, nice head, feet come together, nice height. Brantford Rufus, which should have been placed here, got third; he has been out all the season. Red Obo, reserve, is a nice little red, a good deal smaller than the winner. Brownie, vhc., was out of his stall. Daisy Atkins, quite a small one, proved the winner in bitches (10), losing in body and front to Hamilton Beauty, a sweet-headed one, a bit faulty in muzzle. Gypsy Queen, third, had been taken away when I came round, in fact all this kennel went home early. Ruin, reserve, stands well in front, and if cobbler and better ribbed and not pinched in muzzle, would be a good one. Red Niobe, vhc., was in Philadelphia, a coarse-headed one, poor in front. In Clumbers, Mr. Little had a glorious time, scoring everything without competition. There were no challenge entries, and the open class introduced us to Friar Boss, a good-headed one if its base were higher, not quite true in front and should be shown deeper in body, all round a good dog. Albert, second, is light in body and muzzle, not deep or square enough, good legs and coat. Prince Karl, reserve, is rather snipy, fairly good on his pins and should be deeper in body. Rover was absent. In bitches (2) Meta scored over Friar White; she is excellent behind the head, which is not strong enough in muzzle and too full and high in skull; was very well shown. Friar White has fair head and front, length of body and good coat; ran the winner close.

Irish water spaniels only numbered three. Musha won over Dan Rice but both had gone away to Canada before I got round. Kitty Cork, reserve, we have seen a good deal of lately. The kennel prize went to the Clumbers, whereat there was much wailing and gnashing of teeth. We were glad to see Mr. Little win for it saved a lot of kicking and pleased a good fancier.

#### Beagles.

W. S. Clarke, Judge.

Mr. Clarke must have been pleased with the large entry accorded him on his first public appearance, and on the whole he acquitted himself well. Forest Hunter and Twintwo furnished the only challenge entries; the latter I have not seen looking better for some time. The Philadelphia winner, Bowman, scored again in the large-size dogs (18), and as stated, barring his front—and he seemed better in this respect—he is a hard one to beat, and should do a good deal of good for type crossed with some of those long-headed and bodied ones. Diamond Forest, a large-sized one, is a good sturdy hound, a trifle long, head well shaped, soft coat. Fuzzle, third, was the same last year, looked leggy, good front, should be cobbler in body. Piper has improved a little since Craton show, is still leggy, and should be shorter in body. Spartacus, vhc., is a good fronted one, long in head and body, coarse in skull; flat ear and coarse in texture. Rambler II, hc., is not straight in front. In bitches (10) the winner proved to be Mollie L., a bitch showing lots of quality, nice front and bone, head and body. Dorsey's Wanda, second, has a long, narrow head, and body should be cobbler, nice earage and well ribbed, good shoulders. Gypsy A., third, is well known. Flash, reserve, is a well-made bitch showing quality, trifle long in body. Blossom, vhc., should have more substance and be deeper and shorter in body. Oracle and Lufra have nothing against their names.

Dogs under 13in. saw a well put up little dog in Sport, the winner, good front, nice head, but the same fault as most of them in body. Dorsey's Buck is not a show dog, too long and light in body, muzzle should be squarer and forelegs are not straight, he has a small flat ear and is too fine in coat; he likes rabbit hunting though. Dandie, third, is full in eye, nice skull, but weak muzzle, light in body, good front. Clyde, well known, took reserve, his worst faults are in head, stop too prominent, body and legs good. Joe H. is light in body, too much stop, good front and brush, could be improved in leather. Little Lee, hc., might have been better treated. Though a bit light in loin, he is well ribbed up, fair front and head shows lots of quality. In the bitch

Jass (8) several well known faces appeared; nothing could touch the sweet headed Topsy S., she is nice type throughout and sturdy withal. Maida, second, occupied the same position last year; not quite true at elbows, but a nice all round bitch with a good head. Lady of Denmark, third, is too much out before the eye, nice skull and ear, more rib would improve her body. Diamond Krueger, reserve; her too prominent eye and brow detract from an otherwise good head, well built behind that. Glenrose Topsy was harshly treated; she deserved something. In puppy dogs (6) first went to Zeno, long cast yet, fair head and ear. Silverena, second, and Richard I., reserve, too long in head and body. In bitches (6) Cloister, the winning New York puppy, scored for his owner at last. Speed Forest, an appropriate name to be sure, has little type. Daisy S., reserve, is flat in back, but has plenty of substance, head too long. In the field trial class Lee II., Gypsey and Gypsey Forest was the order.

#### Dachshunds.

John Davidson, Judge.

Don Quixote, well shown, supplied the challenge winner. In open dogs (6) Pretzel, a son of Jay and Sister, scored nicely, though he seemed weak in pasterns and feet, nice clean long head, and fair length of body. Zigzag, second, has good ears and rather good head, though too prominent in eye; loose skin, fair bone and muscle behind. Grief II., vhc., good length, nice chest and crook, elbows throw out a little. Bismarck, hc., has a round full skull, with too pronounced a stop, and not well crooked, chest should be deeper. Polly Finders, scored once more in a hot class, and afterward won the Manice Dachshund cup. Lovely K. must have pressed her close, a sweet-headed bitch, losing a little to the other in length, with good skin, length of ear, body and crook; both were well shown. Jane Shore, reserve, nice che-t and crook, long body and loose skin, head bit plain. Daughter well deserved her vhc. card, as her head is good, shows lots of quality, chest well let down, and good length of body; she must have pressed Jane Shore very closely. Frou, vhc., is not so good, deficient in crook, too pronounced in stop, and muzzle should be longer; hc. in this class would have been enough. Daisy B., hc., is too full in skull and eye.

#### Bassets.

John Davidson, Judge.

Only two were on hand, the winner, Bey, beats the other, Turk, very much in front, depth of chest, and make and shape of head, the winner was shown light in flesh, good earage. Turk is too high and straight on legs.

#### Collies.

Thos. H. Terry, Judge.

But for the Specialty show, no doubt there would have been a much better entry out of compliment to this well known and popular fancier; as it was, quality and numbers were not what they should be. There were no challenge dogs and the bitch contained but one, Highland Floss, who was out of coat. In open dogs, first went to one of Mr. Jarrett's Saratoga purchases, Douglas, a sturdily built active looking dog with good sensible head, ears a bit heavy but well carried, coat dense and nice texture; he had quite a good time among the specials. Trump, second, has a rather long head and thick coat, ears down hung; the others were coarse headed and need no mention. In bitches (7), first went to Gilderoy's Daisy, who has too prominent a stop, but fairly correct expression, head should be longer and ears carried not close to head, but semi erect and outward from the head. Lady Royal, second, has big ears, fair head, was out of coat. The class was poor; Douglas won in dog puppies and Ruby Proctor in the corresponding class; big down carried ears, fair head, dense coat but soft. Maybrook Pansy, second, ears faulty, but better head than the winner and much better coat and bone, a sister of the dog pup winner.

#### Poodles.

James Mortimer, Judge.

One of the largest entries we ever remember seeing, and quality was very strong. Milo beat Diamant in challenge curlies; both were well shown and Chloe won the corresponding prize; shown in excellent curl. Duke, the Philadelphia winner, was the only corded one in the show. In open dogs Sidi won once more, looking none the worse for his travels. Second went to Ibel, a very good curled one, beaten in head by the winner. Girofle, reserve, was looking in better shape. Zola took vhc., faulty in curl and muzzle. In black bitches Bess won again, followed by Snowball and Girofla, who reversed their Philadelphia positions. Both fail to the winner in muzzle and curl, Girofla especially. Cybelle, vhc., is well known and so is the youngest Juno. The Meadowmere Kennels, as usual, made a most creditable display. In any other color curlies Poobah was the winner, beating Hill Hurst Taffy in body and head; should be better in curl. Plon Plon is too long in coat. In bitches (4) Vivette and Bellone were the winners, followed by Hill Hurst Dinah, a daughter of Bellone's, faulty in muzzle and down behind. Zola took the dog puppy prize for blacks and Juno and Triga were the corresponding winners. In any other color Targo won, good curl and nice head, a little faulty behind. Hill Hurst Taffy and Nap have been commented on. Hill Hurst Dinah and Posey won in bitches; both have been spoken of before. Hill Hurst Kennels' display of browns was quite an attraction, as pleasing as it is rare.

#### Bulldogs.

John E. Thayer, Judge.

This popular fancier was well supported on his second appearance, and the Boston terriers claimed no attention from the Bulldog Club this time, and all was serene. In challenge dogs King Lud, Wal Hampton and Leonidas were the entries, and the former won handily. He was put down in good shape. In bitches (3) Saleni had little difficulty in taking the blue from Dolly Tester, scoring considerable in head; both were very fit. In open heavy-weight dogs (3) Rustic Sovereign, who should be better out in front, claimed the blue from Dr. Rush, a rather coarse-headed one, straight in front, great skull and muzzle, but not deep enough in stop. Crown Prince vhc., is down-eared, plain long body, and not out at shoulder, fine head. In the next class Katisha, a bit light in muzzle, good skull and ear, not out enough in shoulder, scored over Lady Nan, plain in head. Nadjy, third, fair muzzle and skull, but not broken up enough, front passable. In light-weight dogs (6) Heathen, a rather coarse dog all through, won from the well-known African Monarch, beating in make and shape of head; the latter is better at shoulder. Heathen II. has a fox-terrier ear, fair head, fairly well out at shoulder, but crooked forelegs. Rustic King II. is making up nicely. Ned, hc., was decidedly lucky, a frog-faced bull-terrier; Jack Horner, is plain in head. In bitches (3) first went to Juno, nicely shown, ears not so good as they were. Cromer's Vic, second, I did not see. Rustic King II. won in puppies (5).

#### Bull-Terriers.

T. S. Bellin, Judge.

Some of the classes were well filled and there was quite a good deal of quality on hand, but many of the winners do not need comment. In challenge dogs (4) Cordona had an easy win, as just before the judging, owing to carelessness on the part of the attendants, Streatham Monarch and he got together, and Monarch came out with a badly bitten foreleg, so, of course, could do little in the ring. Cordona was in excellent shape; Carney is getting cheeky, nicely shown, and Sir Rudolph is not up to this quality. In bitches

competition was keen, Attraction, Edgewood Fancy, Grove Duchess and Lady Dinah facing the judge. Dinah won, though beaten in eye and body and head by Attraction; she had a suspiciously fine tail and was afterward disqualified on protest—the judge should have detected this. Edgewood Fancy did not show herself; getting thick in neck. In open heavy dogs (3) Topsparkle won nicely from Prince III., a bit fine in muzzle and cheeky, good legs and body. Harborne King, third, is full in eye and flat in loin. In bitches (3) Lady Carrabrook, the winner, looked fat; she was second at New York. Castle's Pride, second, is well known; good ear and too much stop. Marjoram seemed in whelp, is heavy in shoulders, a bit slack in back.

In light-weight dogs (5) Rookery Boy, well known, scored, followed by Billy Plimmer, pinched in muzzle, shown fat, cheeky, good body and legs. Jack of Clubs, third, is a bit out in front. Sir Rudolph was transferred to challenge. Lady Rochester won neatly in bitches from Jeanne D'Arc, commented on before. White Queen, third, is cheeky, round in skull, good body and front. Mermaid is all off now. Jack Frost and young Miss Giddy were the puppy winners; the winner has a coarse head, good legs and feet.

#### Boston Terriers.

John P. Barnard, Judge.

The turnout here in this breed is peculiar and inseparable with Boston now, and we must say that the efforts of the Boston Terrier Club to secure more uniformity of type, is meeting with unqualified success. There was a big difference in this respect since 1892. Heads are getting flatter and muzzles squarer, and there is not so much of the bulldog front as seen then. In dogs over 20lbs. Prince Walnut, the New York winner scored again; somebody remarked with all earnestness, etc., that the sire of this dog was a fox-terrier and his mother a bull bitch. This shows that there is considerable feeling in Boston terrier circles. Jem Mace, second, is a bit bulky in shoulders, good fat skull. Ross, third, has a rather pointed muzzle, good skull and front. Sir William, reserve, has rather a nice head and fair front, well ribbed. The others were just ordinary. In bitches (8), first to Nankin as at N. Y., and second to Diana, fairly good front and head. Peggy, third, is another nice headed one with straight front. Miss Thora, reserve, is heavy in shoulders and not true in front, nice head. Nellie, hc., was too fat. Famous, c., was the winner in 1892, too bulky. In light weight dogs (4), Dandy, the winner, beats Commissioner in flatness of skull. Dixie, third, was at New York. In bitches (10), Evadne scored nicely, though a bit scooped out before the eye, second going to Tansy, who has been described before. Bessie third, is a nice headed one, fair front. Judy, reserve, is a bit too full in skull. Dolly was left this time. Some fair pups were shown.

#### Fox-Terriers.

T. S. Bellin, Judge.

Quite a good collection, with the Thayer, Rutherford, Smith and Hill Hurst kennels out in force. In smooth challenge dogs Starden's King, looking well, scored without competition, Dusky Trap being absent. In bitches Warren Captious's victorious career was stopped for once by Miss Dollar and Dona, though the latter loses in muzzle to Captious, and also coat; all were in excellent form. In open dogs (13) Warren Safeguard added another win to his score; he keeps in good form. Second went to Beverwyck Royalist, the New York puppy; Warren Tip Top, not so clean in front and skull, coming next. Reserve went to Arrondale Mixture. Kenneyette Punch, vhc., a bit coarse in skull and short in muzzle, good bone. Hillside Domo, vhc., was second at New York. Rochdale Spark's ears should be carried closer, looked heavy in front and fat, nice head. Hillside Royal is too full and high in skull and light in loin; fair bone and front. Seacroft Avenger I did not see. In bitches (5) Warren Beauty won, though the class was poor comparatively. The winner is not good in head, too much stop and weak muzzle, soft coat, nice ears and legs. Seacroft Empress, second, nice ears, well carried, good length of head, good front, eye and shoulders, might have been first. Beverwyck Twilight has been out before, and so has B. Moonbeam. A smart terrier, Warren Tony won in dog pups (7), with the well known puppy Seacroft King second and Tim third. Many of these went home the first night. Hill Hurst Diana, a real smart little one won in bitches (6), good bone and coat. Seacroft Snipe is well named, pinched and fine in muzzle. Hillside Lena third.

A nice lot of the coming fancy—wires—was on hand. Oakleigh Bruiser had a bloodless victory in challenge dogs; he was well put down, and so was the handsome Sister Pattern in her class. Open dogs saw St. Cribbage an easy winner. Brittle, scarcely looking as lusty as at New York, came second, and Brittle next, beating his friend Mister Great Snap in condition and body. In bitches (3) Sister Janet scored easily over Hillhurst Pansy, so much longer and stronger in head; the latter has good ears, fair front, coat and body. Rose, from the same kennel, is big in ear, but has a nice long head; better than second's but is a bit wide in front; fair coat. Brittle Beant and Mister Great Snap were the puppy dog (7) winners, followed by Hillhurst Piper; good legs and bone, but soft in coat and round in skull yet, ears big. A good little sort won in bitch puppies (5); excellent coat, fairly good head, needs time, front will improve probably. Mistress Betsy, second, loses in substance to the others.

Th. Dandie Dinmonts were all from Mr. Ed. Brooks, the president's kennels, but not for competition; he believing, with a good many others, that the principal officers of a club should not exhibit at their own shows.

#### Bedlingtons.

T. S. Bellin, Judge.

Mt. Vernon Tibbie won again over Professor, beating in substance, head and coat. Ted, vhc., is not up to form by any means.

#### Scotch Terriers.

T. S. Bellin, Judge.

Never has there been such a display of Scotch terriers in this country, and it is questionable if a more sorry lot could be shown anywhere than those put down by Messrs. Brooks & Ames. The challenge class saw Kilroy take the blue, his kennel companions Tires, Rhudaman and Culbeane, competing for specials only. They all looked in good fettle. In open dogs (8) Kilcree won, followed by Wankie Tam, both well known. Wankie Caddie is a new home bred one, a little out in front at present, splendid head, ears a trifle large; a very promising sort. Wankie Masher is a little coarse in head, nice otherwise. Wankie Ted is another nice one, hardly so good in head as Caddie. Claverhouse, vhc., is coarse in skull and a little long in body. In bitches (5) Wankie Diana, Vorda and Wankie Freda was the order. Vorda is the dam of the good puppies shown; a little long cast and short of coat, excellent straight front, an exception. Wankie Freda is a nice-headed one, not so strong in muzzle as some. Wankie Daisy is well known. Rosie, also vhc., is snipy in muzzle but excellent coat and fair front. Wankie Tam and Wankie Caddie and Wankie Ted, followed by Wankie Masher and Tedler, was the order in American bred dogs, and made a warm team of youngsters. Gypsey John, also vhc., is short in muzzle, good front. In the corresponding bitch class Wankie Diana and Freda were the winners, followed by Wankie Cambria, whose nice front and good, strong head offset a rather lengthy body. Hazlecroft Norma, first at Providence, 1893, came next, with the rather short-faced Wankie Gorda next, hc. The puppy winners were a repetition of other classes. Newcastle Allen, third in dogs, has a fairly good head, while Woodside Charlie is a bit coarse in

head, though well shaped, and big in ear. The classes were well handled.

#### Irish Terriers.

T. S. Bellin, Judge.

Boxer IV. and Crib were the challenge dogs; Crib's front knocks him out, he is equal in other parts. In bitches, Candor beat Dunmurray, the former is a little better in stop, but not so good in skull. In open dogs (7), Merle Grady scored again, followed by His Honor, another well known face, both well shown. Jack Desmond has filled out into a fairish dog, good head and ear, a little full in eye and soft in coat. Hanover Boy got only c.; his head is against him, but he should have had more; the others are not deserving of hc. if he is not. Timothy is too heavy in shoulders and has too much stop. Memento is too big, fair head, big ears and soft coat. Blue Ribbon, vhc., was lucky and so was Fritz. In bitches, Crate was closely pressed by Romp, a capital headed one; Crate beating only in body, substance and coat. Hill Top Surprise, well known, was third; Mr. Brooks took two N.F.C. In puppy dogs, Shamus is a promising sort. Romp scored easily from a fair class in bitches; this bitch will make a name for herself if she goes on all right. Hill Top Fly has a capital head and is a good sort all round.

#### Black and Tan Terriers.

T. S. Bellin, Judge.

Broomfield Sultan won, in Glenwood's absence, without a struggle. He is in better shape now. Meersbrook Maiden succumbed to Gypsey Girl, who is having a lucky time of it this circuit; both were well shown. Rochelle Rush, through Perfection's non-appearance, he having joined other good terriers that have gone before, had a bloodless victory. In bitches (2) the coarse-headed Lady Prudence beat a toyish specimen in Lilla.

#### Skye Terriers.

T. S. Bellin, Judge.

The entries here—Endcliffe Maggie and Barnaby Rudge in challenge class, and Islay and Prairie Flower in open bitenes, are all well known and recently described.

#### Yorkshire Terriers.

T. S. Bellin, Judge.

No challenge entries. In open dogs first went to Tatters, mixed in color, and large-sized. Teddy, first last year, was second, and Jocko, the silver, reserve. The bitch entry was absent.

#### Schipperkes.

T. S. Bellin, Judge.

Mickie, first, is better in frill than Cople Sophia, a well-known winner. Skipper, third, too smooth around shoulders and neck.

#### Toy Terriers.

T. S. Bellin, Judge.

There was nothing in the dog class here to call for particular mention; the usual goggle-eyed sort. In bitches two smart little bull-terriers were shown.

#### Pugs.

James Mortimer, Judge.

Many of them have been seen this circuit. Bob Ivy scored in Robin Hood's absence, and Haughty Madge took her first challenge prize without turning a hair. In open dogs Drummer, in spite of a bent foreleg, was placed over Finsbury Duke, who excels him in color and front. Pomona Fritz, third, loses in skull and muzzle and curl. Ivy Boy I preferred for place, though a bit leggy. Bob-a-la-Bob, vhc., has nice ears, head and body, but is not good in front. In bitches (5) first went to the smart little bitch Pansy G., Miss Decima coming second, and Otterburn Pearl, light in body, but fairish head, third. Pet, shown too fat, as usual, could not get her ears close enough, nice head and wrinkle. No puppies.

#### Toy Spaniels.

James Mortimer, Judge.

King of the Charlies was absent in challenge dogs. Royal Roy scored decisively in skull and muzzle over Romeo, who was not in the best of shape. Cockney Charlie, with his curly coat, could expect no more than vhc. Bitches had three entries. First to Dora, whose good skull and muzzle and coat could not be denied. Titania, second, excellent ear, coat and in head fair, skull the best part.

In Blenheims the new one Chiselhurst Hero, still gross looking and very curly, was alone in open dogs, while first was withheld from Daisy in the next class; a rather poor headed one, too long faced and stop not deep enough.

A very fair Ruby in Rubin was shown in open dogs, face a little long, good body, legs and coat. In bitches Princess Nevias scores over Rena in muzzle, volume of skull and coat.

The "Jap" Tootsie was absent and Oota represented the breed; he is leggy, but has an excellent skull, muzzle should be shorter, and is light in body.

#### Italian Greyhounds.

James Mortimer, Judge.

Spright and Spring won again in order named, while Brownie took third; I could not find her. Nikoli, vhc., is a well made one, set back on account of color no doubt, blue and white, ears not correctly carried.

Dalmatians, only one and prize withheld from it; spots not clear enough.

#### Miscellaneous.

John Davidson, Judge.

In heavy weights Blue Belle, the smooth collie, scored; then Aleck and Pau, Esquimos, came second and reserve. In the light weights the money was equally divided between Dewr the Welshman and Too Too—a chinese chow-chow.

H. W. Lacy.

#### LIST OF AWARDS.

MASTIFFS.—CHALLENGE—Dogs: 1st, J. L. Winchell's Beaufort's Black Prince. Bitches: 1st, Dr. C. A. Lougest's Lady Diana.—OPEN—Dogs: 1st, G. W. Glazier's Ingleside Minting; 2d, 3d and reserve, Dr. C. A. Lougest's Emperor William. Emperor Maximilian and Beaufort's Prince. Com., H. W. Castner's Brutus. Bitches: 1st and 2d, Dr. C. A. Lougest's Gerda II. and Elder; 3d, M. Holzman's Nellie.—PUPPIES—Bitches: 1st, Dr. C. A. Lougest's Campana.

ST. BERNARDS.—ROUGH-COATED—CHALLENGE—Bitches: 1st, E. H. Moore's Lady Livingston. Reserve, J. J. Ruppert, Jr.'s Miss Anna.—OPEN—Dogs: 1st, E. H. Moore's Altoona; 2d, Hall & Burgess's Ardmore; 3d, E. B. Sears's Jim Blaine. Very high com., J. W. Comey's Gov. Russel. High com., A. Jones's Sir Albert Victor, G. M. Harmon's Prince Hector. Com., H. C. Hathaway's Hathaway's Monk, Merry Mount Kennels' Prince Karl, H. Belmeister's Duke B. and J. Donelly's Bennington. Bitches: 1st, E. H. Moore's Lady Sneerwell; 2d withheld.—PUPPIES—Dogs: 1st, Bayard Kennels' Lord Ripon; 2d, F. Belchard's Columbus. Very high com., J. W. Comey's Jim Blaine, Jr. Com., P. H. Reeder's Woton II. Bitches: 1st, A. Burgess's Madam B.; 2d withheld.

ST. BERNARDS.—SMOOTH-COATED—CHALLENGE—Dogs: 1st, E. H. Moore's Melrose King. Bitches: 1st, J. Ruppert, Jr.'s Empress of Contocook. Reserve, E. H. Moore's Miss Alton.—OPEN—Dogs: 1st, E. H. Moore's Alton; 2d, E. Hamel's Rex Badivere; 3d, J. A. Walsh's Cato. Bitches: 1st and 3d, G. P. Wiggin's Judith and Judith's Ruth; 2d, E. H. Moore's Lady Alton.—PUPPIES—Dogs: 1st, E. A. Perry's Couch; 2d and reserve, G. P. Wiggin's Cyclone and Snow King. Very high com., J. A. Dupuis's Grover Cleveland. High com., H. K. Langdon's Melrose King, Jr.

GREAT DANES.—CHALLENGE—Bitches: 1st, C. B. White's Minerva's Fawn.—OPEN—Dogs: 1st, F. Clagstone's Stanley; 2d, Mrs. M. Classen's Molke. Bitches: 1st, R. F. Perkins's Owl's Nest Topsy.

BLOODHOUNDS.—CHALLENGE—1st, Dr. C. A. Lougest's Belhus.—OPEN—Dogs: 1st and 3d, Dr. C. A. Lougest's Alchymist and Berry's Bradshaw; 2d, W. L. Winchell's Brough. Reserve, C. H. Innes's Bruno. Bitches: 1st and 2d, Dr. C. A. Lougest's Kaveen and Vigilant.

Davidson and C. W. Lougest as judges.

### Away "Up North."

FRINGING the St. Lawrence, the Ottawa and the Great Lakes to the north, and extending from Labrador to the Arctic Ocean in a belt from 200 to 500 miles in width, lies the great Laurentian Wilderness, one spur of which, crossing the Ottawa, extends south across the St. Lawrence, appearing above water as the Thousand Islands and thence into the State of New York, where it is known as the Adirondacks. Throughout its whole extent this country is rocky and broken, intersected by innumerable lakes and streams, and nearly everywhere it is covered with a dense forest. Here and there are belts of excellent land, and settlements are springing up in a great number of places; but these areas are always limited in extent, and the everlasting hills and rocks are always in sight.

The greater part of the area must ever remain as it is now—a picturesque wooded wilderness—and serve perhaps the noblest of all uses, that of a breathing ground and park for the great, restless, overworked population of the vast plains to the south and west of it, and a nursery for some of the greatest rivers of the continent. The writer was born in sight of this wilderness at Quebec, and has spent a considerable portion of his life wandering through it, and he never leaves it without a sigh of regret, and never sights it again without keen pleasure.

This past summer of 1893, it fell to his lot to conduct an exploring party through a portion hitherto almost unknown and wonderfully picturesque; and as this particular corner is not difficult of access, nor very remote from railway connection, he thinks that the readers of the *FOREST AND STREAM* may possibly care for a brief description of the trip, and that perhaps that young man of Erie who was lately looking for a companion, may turn the bow of his canoe in that direction, if he wants pure air and water, cool nights, good fishing, and pretty scenery, with an occasional dash at a rushing rapid and a tussle with a head wind. In short, to accumulate health and strength, nerve and decision, he cannot do much better.

On the morning of July 12 a small party was gathered on the little makeshift dock at Mattawa, bidding adieu to their friends, the Hudson's Bay Co.'s factor and his charming family, departing for the Upper Ottawa. The tug whistles, the last straggler jumps aboard and the nose of the scow swings out into the stream. These are the writer, two assistants, three young gentlemen supernumeraries, five axmen and canoe-men, and last, and most important, the cook, a good-tempered, stout-built, middle-aged French Canadian lumberman, who has settled down with his wife and family as a baker in this frontier village, but who, like many others of us, felt as if things were not quite right with him unless he had a run in the woods now and again.

Of the men, two were young Scotchmen who had been in the lumber woods for some years, and had long since rubbed off all vestiges of the tenderfoot; they were bold, quiet, hard-working and self-respecting young fellows, but rather too independent and impatient of control. Henri and Terrine were pure French Canadians, active, splendid axmen, good canoe-men, civil and obliging. Lastly, Gus Pilon was a French Canadian with a considerable dash of Indian blood, quick as a flash with rifle and paddle, with a great deal of French industry coupled with an Indian taciturnity and sullenness; a useful man but a little difficult to handle.

Of the young gentlemen, Frank was a rolling stone who had wandered across the continent and then to China and back, and who, although young in years and heart, had lived and seen much; he was frank, generous, hard-working and very quick-tempered; a lovable character but a trifle unstable. Allan was a half-breed but of a nobler race than Pilon, being descended from the once warlike Mohawks, now settled peaceably in the Grand River Valley.

The Indian side of his character was the dominant one, and showed itself constantly in his love of wandering, and his rooted dislike to fixed work, and his pertinacity in hunting game of any kind.

For myself, I am simply a weatherbeaten old stager of some forty summers, who has knocked about too much for his own good, and who gets occasionally restive under the constraints and narrowness of modern civilization and longs for the wilderness with an intensity of longing which is almost uncontrollable. I was almost invariably known among the party as the "Chief." This will probably meet the eye of my two assistants, L. and B., so perhaps it will be safer not to describe them too minutely, and to say no more than that they were loyal and trustworthy and well up to their work.

The transport service in the upper Ottawa is a somewhat peculiar one. Portages are close together and are crossed by light tramways,

OUTLET OF RABBIT LAKE.

on which run cars capable of carrying seven or eight tons of stuff. In order to avoid the constant trans-shipment from boat to railway and back again, a wide scow is built and the track laid on her deck, and the car is run on board with its load and off again at each break in the navigation. The scows are towed by small screw tugs or steam launches.

Having waved our adieux, we seated ourselves comfortably in the bow of the scow, and lighting our pipes resigned ourselves to *doce far niente* and the enjoyment of the delightful July morning and the wild scenery. On either side were bold mountains, sometimes descending sheer into the water, sometimes with a fringe of alluvial flat at their bases. Sometimes a tributary stream came in through a gloomy-looking gorge, but more commonly they tumbled tumultuously over the bluff, often forming most beautiful cascades. In front was always the great, strong river; here, though over 800 miles from its mouth, still from a quarter to half a mile in width, and flowing at a rate which sometimes bothered our little tug, albeit she made a good five or six miles an hour to stem. Working the eddies for all they were worth, however, she brought us up the first two-mile reach of the river, and rounding a point, we sighted the tumultuous, seething rapid known as the "Clave"; and, pushing our way through a multitude of tossing sawlogs which had been caught in the eddy at its foot, we reached the landing. The cars were run off, a veteran horse was hitched to them, and in fifteen minutes we were at the upper end of the half-mile portage and soon speeding over another navigable reach.

Another three miles brought us to "Les Arabes," and to dinner in a shanty at its upper end, whence there was a four mile stretch to the Mountain Rapid. The tug had broken down on this reach and was unable to take us; but after some little delay, two large flatbottomed rowboats were procured, and with these and our own canoes we transported ourselves and our two tons of provisions and outfit, together with the other passengers, to the upper end of the smooth reach.

The mountain portage is a short one, about one-quarter of a mile,

and we were soon re-embarked and spinning along over the smooth surface of the Seven League Lake, so called because it is about five leagues long. The sun began to sink in the west and the shadows to lengthen before we came in sight of the Long Sault Rapids. This, as its name implies, is a rapid, or rather a series of rapids, extending for a long distance, some seven miles in all, and is overcome by a tramway as usual, but in this case, a tiny steam locomotive does the work of the ancient horse, and hauls a miniature train over a very rough track and across some very crazy looking trestles at the rate of fifteen to twenty miles per hour.

Just as the sun was setting we were landed at the foot of Lake Temiscaming; and, having made arrangements for a passage next morning on the steamer Meteor, we looked for a resting place for the night. The evening was settling, and the wooden shanty which served as a hotel did not look attractive. So spreading the tents out on the ground alongside the track, four of us laid down on them while the remainder made themselves comfortable on the hurricane deck of the Meteor. The sandflies were somewhat troublesome, but on the whole we passed a comfortable night, and after a hearty breakfast we were quite ready to enjoy the lovely sail of forty miles before us.

The Meteor is a staunch, seaworthy steamer of about 80 tons, with powerful compound engines and a modern equipment. At 7 A. M. sharp she cast off her lines and was soon ploughing through the blue waters of the great Lake Temiscaming. This is an expansion of the Ottawa some 70 miles long by a width gradually increasing from half a mile to 5 miles near its head. Mile after mile we swept along, high mountains to the west, mountains again not quite so high, but extremely precipitous on the east. At the Opemican Narrows the width strictly speaking there are two lakes.

About 20 miles up the Keepawa River enters from the east in a wild seething cascade. It is the outlet of the lake of the same name, an extraordinary labyrinth of bays and points, furnishing many miles of navigation. The Ottawa in this neighborhood is said to be of immense depth and looks it; and with its barren, rocky, precipitous shores and dark water extending miles and miles ahead in an almost unbroken straight line, one is irresistibly reminded of the world-famous Saguenay, which it strongly resembles in every respect.

All too soon, a huge mountain, standing up bold and solitary on the left hand shore to a height of 800 ft., is pointed out to us as overlooking the mouth of the Montreal river; and at 11 A. M. the Meteor's bow grazes the sand and the first stage of our journey is over. We have left steam locomotion behind us, and our progress must henceforth be by dint of our own muscles.

Flour bags, tents, blankets and impedimenta of all kinds are bundled ashore. We shook hands hastily with the captain and in a few minutes the Meteor had backed off again and was ploughing her way on again to the north. While the cook was getting a lunch for us, the canoes were loaded, and after a hasty meal we shoved off, the club's canoe, the Nora, leading the way. Entering the mouth of the Montreal, we crossed it and proceeded to ascend the Metabetchouan, which enters it a few yards up. The Montreal is a strong river, coming from 150 miles or more in the interior; and, like the Keepawa and nearly all the other rivers falling into this lake, it descends very abruptly in the rocks, it comes roaring and tumbling over a boulder bed almost into the lake itself.

Crossing at the foot of these rapids was somewhat nervous work with our overloaded canoes, but was accomplished without accident; and entering the mouth of the Metabetchouan we had practically dead water almost to the first portage, two miles up. Landing the loads on the bank the canoes turned back for a second trip with a crew of two men each, while the remaining four started packing over the portage. This proved a most arduous undertaking, involving an ascent of 300 ft. in about a quarter of a mile; and for the first 100 ft. the slope must have been at least 1 in 2, and clay at that. The afternoon was very warm, and the labor told severely on the boys, none of whom had done any such work for several months. The Chief, thinking to set a good example, swung upon his back a bundle of dunnage, 40 lbs. or so, and got one of the men to throw a side of bacon on top; but after several months of city life he found he was not equal to it, and after a brief struggle was fain to leave the bacon and proceed with the bundle alone.

All the afternoon we tramped backward and forward over that half mile portage, and by 8 P. M. we had everything over except a few odds and ends. Hastily launching the Nora after supper, we put out a troll and within 20 yds. of the shore struck a fine bass. The hook was no sooner out again than we got another and in a few minutes a third, when as it was getting dark, we were fain to come ashore and camp under the stars on the little grassy flat at the end of the portage.

At gray dawn the cook was up and getting breakfast, and a final trip was made over the portage, from the summit of which a magnificent view is to be had, the valley of the Metabetchouan beneath, the

STEAM YACHT "SEMIRAMIS."—OWNED BY MR. ANTHONY J. DREXEL, PHILADELPHIA.

river, hidden by the early morning mists, beyond the broad expanse of Lake Temiscaming, shimmering in the morning dew, and beyond that again, a sea of hills rising one beyond the other into the blue distance. Almost at our feet as it seemed, though really more than a mile away, was the last vestige of civilization which some of the boys saw for some months, a clearing and farmhouse on the tableland above the river, which farmhouse was also the Montreal River Post-office.

The portage cuts directly across a mountain ridge to a lake formed by an expansion of the river which finds its way around the ridge by a somewhat circuitous route in a series of wild rapids and falls, aggregating 250ft. of descent. The lake is one of a chain of four, named the Bass Lakes, extending inland some four miles; between them are small rapids and swift current. No portaging was necessary but some wading and tacking had to be done.

The morning was still young when the little fleet set out, the Nora headed to the gunwales, and her birchen satellites, designated for the sake of alliteration the Dora, Cora and Flora, following in her wake. Shortly after noon each canoe had made her two trips, and the Nora, as the faster, three, and packing began again. For the next five miles, to Rabbit Lake, the river is a series of rapids and falls with short pools between. Some of these had to be carried round, past others we tracked the canoes with a half load, the crews working up to their waists in water. Some of the scenery is grand, and the uppermost fall, at the outlet of Rabbit Lake, is especially beautiful.

On Friday at noon, three days after leaving Montreal River, the last oad was dumped at the upper end of the last portage, with a sigh of relief to think that for a time at any rate the odious pack strap would no more gall our foreheads, and in high spirits the boys set out for Rabbit Point, seven miles up the lake, with the camp impediments, leaving some of the heavier stuff *en cache* on the portage. Just before leaving we met an Indian descending with letters from Temagami Post with a fine bark canoe, and after some parley we persuaded him to exchange it for one of our smaller ones, enabling us to get on much faster.

Three o'clock found us out on the broad lake, breasting a strong head wind which forced us to hug the shore to avoid the heavy sea. Sweeping down the center, in two hours' hard work we were ashore, and soon had a splendid site selected for the camp, which was to be our home for a couple of weeks and a permanent base of supplies. The tents were soon rigged up, and while the cook was getting supper all hands turned into the water and enjoyed a glorious swim.

THE CHIEF.

[TO BE CONTINUED.]

**Bucket Wells in Canoe Yawls.**

ALTHOUGH an American invention, one of the many for which canoeing is indebted to the ingenuity of Mr. Paul Butler, the bucket well has come into more general use in England than in this country; being not only used exclusively to racing canoes, while abroad it is extensively used, in one form or another, in canoe yawls which, though used for racing, also aspire to the possession of cruising qualities. One side of the question is brought out in the following letter to the *Field*:

"I quite agree with your remarks in the last two issues of the *Field*, that the idea that a bucket well, when applied to a shallow and easily capsizable type of canoe-yawl, makes a safe seagoing craft of it is a notion as dangerous as it is unfounded. It is also quite true that any seaworthy type of canoe-yawl, of which all but the 7ft. middle compartment is shut off by watertight bulkheads, requires no such contrivance. But it appears to have been overlooked that there is a third case, apart from either of these, in which the use of a bucket well may be most valuable. I allude to what, in my opinion, is by far the most comfortable and efficient boat for all-round purposes, an otherwise seaworthy canoe-yawl that has no compartments. In this case it is easy to demonstrate that the objections to the bucket well, well founded as they are as applied to other kinds of craft, entirely disappear. Firstly, when the well lining is in use the crew need not sit on deck. The lining may be shaped to the form of the well over the two seats and fitting close to its bottom and sides, the cushions, which, of course, are also life-buoys, being inside the lining, and the seats being as comfortable as ever.

"Secondly, what charts and food are required for a few hours, with glasses, etc., can undoubtedly be conveniently carried in the two waterproof pockets, and as to this arrangement being considered 'a nice jumble for single-handed night work at sea,' I do not know that the position would be materially improved by access to the whole of one's stores, the fact being that the navigator of so small a craft as even the most seaworthy canoe-yawl, who finds himself single-handed at night in so high a sea as to risk filling his well, is in a somewhat false position, whether he relies on bulkheads or canvas.

"Thirdly, as to the point not mentioned by Mr. Brand, as to the possibility of getting at oars, anchor, etc., I, at any rate, have never had any difficulty on this head, for the simple reason that I always carry them on deck when at sea or in a midway, whether the canvas lining is in use or not, the oars fitting into chocks along the waterways, where, though perfectly firm, they are immediately available, the cable passing through the fairlead at the bows, and being stopped along the outside of the gunwale, and is coiled and secured on deck aft of the well, the anchor being either secured in the same place or brought down into the well. This, I think, meets all the objections that have been brought against the use of bucket wells at sea, and disposes of the argument that they cannot be called 'sea going' because no yawl requiring one can be itself fit to go to sea, the fact being that every yawl, to be safe at sea, must have either a bucket well or watertight bulkheads, and that the former, properly fitted, is by no means an inefficient substitute for the latter.

"So much for work at sea, but it is when we come to consider the yawl as an inland cruiser, and as a home, that the advantages of having no compartments becomes overwhelming. The capabilities of the

canoe-yawl on these points is the merit and the attraction of the type, apart from which, for sea work alone, it would be easy to design an altogether safer and more commodious kind of craft. It is impossible to overestimate the advantage, for living and sheltering in, of having a craft of which the whole interior is available for all purposes, or to question the superior comfort, say after a wet day and during a rainy and squally night, of being able to sleep under a solid deck or hatch in a spot that has been dry all day, instead of having to lie under the shelter of a tent in a well that has been open to a whole day's rain. And, though I am alluding now to inland work, I can remember at least one occasion when this arrangement has scored even more heavily at sea, both for comfort and safety. A rainy night coming on on a coast where dangers are many and tides strong, where it became necessary to anchor till dawn, is not a position one would willingly choose, and yet I remember that, lying dry under decks, with sails and all gear ready for an immediate start should the wind rise, we slept by turns the sleep of the just and the tolerably secure, and I fancy were far ahead of the man of compartments, who, unless he ventured to hamper himself with a tent—and there was an occasional heavy puff off the land—would have had to spend his night in the open. But, for inland work at least, the advantage of an undivided interior is obvious—we never capsize, remember—and considering how often one profits by the comfort and stowage capacity of one's craft, and how comparatively seldom even the most seagoing of yawls is in danger of filling her well at sea, I think we may fairly claim that a temporary contrivance like the bucket well is more in accordance with the spirit of such an all-round type of craft than are permanent bulkheads. W."

**Mahnabzeze.**  
(THE WHITE SWAN.)

On the Massachusetts holiday, April 19—Patriot's Day—the Puritan C. C.'s new war canoe was christened. The crew leaving Boston at an early hour reached the Robertson factory at Riverside in good season. The canoe was launched on the river without formality, as the Puritans deigned not to christen their canoe in the fresh water of Charles

River. The trip down the Charles was without incident, and the fifteen miles to the harbor was covered in two hours and a half. When the canoe felt the crisp salt water of Boston Harbor all felt at home, and the commodore spilled a bottle of "bock" (which had accidentally broken in his bag) down his throat and gurgled "I dub thee Mahnabzeze, the swan." The commodore having set the pace and a bottle of bock beside each of the crew every one gurgled "Mahnabzeze," and the formality having been finished, the paddles were resumed and the Great White Swan (which is painted green by the way) swept proudly over the wrinkled face of the bay until City Point and the house of the Puritan C. C. was reached. About fifteen men will practice a bit for the final crew, and it is hoped that a fair crew may appear at Springfield on May 30. The canoe is precisely similar to those of the Hartford and Springfield clubs and a pretty race should result.

The past week has produced three or four items of news of more or less interest which tend to shape more definitely the prospects of the approaching racing season. In the first place the negotiations on the part of James Gordon Bennett for the purchase of *Vigilant* are positively at an end, the yacht having been sold on April 18 to George J. and Howard Gould. The price paid was \$25,000.

The reason assigned for the failure of Mr. Bennett to purchase the yacht is that no satisfactory arrangement as to courses could be made with the owner of *Britannia*. This sort of cock and bull story is absurd on its face, while in any club races which she might enter abroad, *Vigilant* would have to take her chances over the regular courses on the Thames, the Solent and the Clyde, there is no reason to believe that she would be limited to the same courses in any special matches with *Britannia*; and in any event she would have the certainty of fair and open courses in the races for the Royal Victoria and Cape May cups.

Another reason given that is much nearer the truth, is that Mr. William B. Douglas, who made the offer of \$30,000 on behalf of Mr. Bennett, had the yacht surveyed and then declined to accept her on account of the condition disclosed by the survey.

The exact intentions of the new owners of *Vigilant* are as yet unknown, but it is certain that the yacht will be fitted out and raced, and there is a possibility that she may be sent abroad.

One important item of news is the positive statement of Gen. Paine that *Jubilee* will not fit out this season, Gen. Paine intending to accompany his family to Europe in June to remain until September. Such a visit would of itself seem to offer a special opportunity for sending the yacht across and taking part in the British races. The deficiency in rig which resulted in her poor performance last year might be remedied in time by a month's racing on this side, with

Capt. Haff and young Mr. Paine to work her up, giving time to reach Cowes in May.

AS MATTERS now stand, there will be three of the large yachts in the racing—*Vigilant*, *Navahoe* and *Volunteer*. The first two will probably start in the spring regattas, but *Volunteer* will not be seen with the fleet until the August cruise.

THE last bit of news is to the effect that Mr. Tankerville Chamberlayne, owner of *Arrow*, has again offered the Queen's Cup wcn by the yacht in 1893. In view of Mr. Chamberlayne's peculiar action in the same matter in 1887, American yachtsmen are not likely to fit out at once for Cowes in order to race for this cup.

On April 21 the schooner *Lasca*, Mr. John E. Brooks, left New York for Glasgow, her owner and two friends being on board and Capt. Urias Rhodes in command, with Capt. Mackintosh as navigator. The racing gear and other fittings have been already sent by steamer. Just what opportunities for racing may be met with is a matter of doubt, as there are no longer any racing schooners in British waters; but there is no fear that the yacht will not do credit to her designer and owner, whether racing or merely sailing with the fleet.

It is reported that *Decima*, ten-rater, is soon to sail from Southampton for New York; a very risky experiment in view of the fact that the yacht is smaller than any racing craft which has made the Atlantic passage, and that she is of comparatively light construction, intended for home racing, and not, like *Minerva*, *Uvira* and *Jessica*, for the ocean voyage.

**Union des Yachts Francais.**

We have just received a copy of the handsome year book of the Union des Yachts Francais (the Union of French Yachts), containing the rules, list of members and yachts, and other particulars of this flourishing organization. The new rule, recently adopted after much discussion, is as follows:  $T = \frac{(L - \frac{1}{4}P) \times \sqrt{S}}{130}$  T is the measurement, P the perimeter of the hull, measured by running a chain from planksheer to planksheer, wherever the greatest measurement can be found, to which is added the extreme beam wherever found, L representing the load waterline and S the sail area, both being measured as in Y. R. A. rules. The Union now includes 50 clubs.

## Semiramis.

SEMIRAMIS, steam yacht, recently purchased by Anthony J. Drexel, of Philadelphia, arrived at Delaware Breakwater on April 18, after a stormy passage of 14 days from Madeira. After telegraphing to Mr. Drexel, the yacht proceeded up the river to Philadelphia, where she was docked the following day at Neale & Levy's yard. She will be overhauled and some alterations will be made to suit her new owner before she goes into commission under his flag.

Semiramis was designed by Mr. Alfred H. Brown, N. A., of London, who has made a specialty of steam yacht designing, among his larger yachts being Eros, of 737 tons, length 219ft., beam 27ft.; Star of the Sea, a composite vessel of 983 tons; Merrie England, also composite, 411 tons; and the present vessel, of 703 tons. Her dimensions are as follows:

Length between perpendiculars.....	206ft. 4in.
Length L.W.L.....	191ft.
Beam extreme.....	27ft. 1in.
Least forebread.....	8ft.
Depth moulded.....	16ft.
Depth hold.....	14ft. 6in.
Draft extreme.....	14ft. 6in.

The yacht is of steel throughout, and was built by Ramage & Ferguson, Ltd., in 1889. She is classed 100 A1 at Lloyds and marked "Lloyds M.C." in red, her machinery having been surveyed by Lloyds while building. Her engines are triple expansion, cylinders 18, 22 and 47in by 39in. stroke, indicating 730 H.P. Her bunker capacity is 150 tons, the consumption at 10 knots being 8 tons; while on 12 knots she has made a steady speed of 13 knots. It was intended that on long cruises she should be able to steam 4,000 miles at 10 knots on her bunker coal. The total space given to the machinery is 47ft. 6in.; engines 15ft., boiler, double ended, of steel, 160lbs. pressure, 27ft., and thwartship bunker 5ft. 6in.

The space below, as shown in the cabin plan, is very large and excellently arranged. The main saloon is 15ft. long and 22ft. wide, finished in fumed mahogany, and is fitted throughout, even to the dining room, with a large table with two smaller ones, a writing desk, corner cupboards, a sofa and a large semicircular divan, two sideboards, a piano and large revolving arm chairs at the table. Aft the saloon is the owner's private room, also finished in fumed mahogany, with large bedstead, writing desk and sofa, a bath and toilet room adjoining. This room, with two smaller rooms for guests, finished in birdseye maple, opens on the main passage at the foot of the companion, there being at the after end a dumb waiter to the deck and hold, and a press and drawers for linen. Forward of the saloon is a second passage, leading to a bath room and pantry, on which open four more staterooms, two of them quite large. These, as well as the five after staterooms, are finished in white enamel, with polished black walnut fronts to sofas, bed berths, etc.

Immediately aft the engines is a smoking saloon, 16x9ft., finished in polished American oak, with large table and sofa. From this room open five staterooms, finished in enamel, as described, and a large bath room. The mess room is 18x9ft., with six staterooms for petty officers, in addition to large rooms for the captain and engineer.

On deck there are two teak deck houses, a bridge and a teak steering house on the latter, not shown in the drawings, as it was subsequently added. The forward house is 19x9ft. 6in. inside, forming the deck saloon. The after house is 3ft. shorter and fitted up as a chart room. The galley is in the fore end of the boiler house, on the main deck. The plumbing of the yacht is very complete, each of the three baths being heated by steam. Electric lights are carried in the mainmast, to the stoke holds, the engine and dynamo being located, as shown, on the starboard side of the main engine room. The steering gear and captain are both operated by steam. The rig is a schooner, with yards on the foremast. The Semiramis was built for Mr. John Lysaght, during whose ownership the yacht did a good deal of cruising, visiting Norway and the Mediterranean.

The accompanying picture is from a photograph taken at Stockholm. The story of the sale of the yacht to Mme. Leboucq, of Paris, and of the projected cruise for the benefit of her son, has been recently told in our columns. After the return of the yacht from the cruise to the East Indies, she was purchased by her new owner. As will be seen from the picture and plan, she is both handsome and commodious, and will prove a fitting companion to May, Conqueror and others of the same class.

## Rochester Y. C.

SCENES of the greatest activity are witnessed daily in and about the Rochester Y. C. house. A wave of enthusiasm has swept over us, inoculating every one with an insatiable desire to open the season as soon as possible. The Electric Light Club has attended a meeting since they joined are coming at every communication, and a season of unalloyed success is assuredly guaranteed.

Commodore Mackie is seeing mature a golden harvest as the fruits of his springtime husbandry in formulating and carrying into successful execution plans for the general improvement and benefit of the club. Never has there been so widespread a popularity been given to yachting as at present, and it is safe to predict that the Rochester Y. C. will be the center of the yachting world for many years to come. Charlotte will be added by white-winged craft never before equalled as to numbers or beauty.

At no very distant day the club will be called upon to attend the raising of its 120-foot flagstaff, with its outspreading crossbeams 60ft. wide, which, when it shall have reared its head heavenward and finally settled itself on its historic base, with Old Glory floating majestically at its peak, will endow itself to the hearts of all and become "A thing of beauty and a joy forever."

For this we have to be thankful to the untiring efforts of our indefatigable associate E. J. Burroughs, who secured the gift of the pole from the Telephone Company, and for a foundation the immense base of one of the historic columns from the now rapidly disappearing court house.

If the same young man is as successful in consummating his plans for the purchase of a site on which the club may erect its own house as he has been in all his past projects, we will see a positive reality what to us now appears but as a dreamy vision of the future. The general disposition of the members to appear uniformed on all occasions is a step in the right direction, and the club pennant to the embellishment of the cap has proven very gratifying to all, and on the whole the club uniform appears to be about the neatest ever donned by a fresh-water tar. The regatta committee is hard at work arranging for the sports of the coming season. If there be any truth in the old sayings, "Coming out of the clouds before," or "Straws show which way the wind blows," the Rochester Y. C. may prepare for the liveliest season of its existence.

## Clyde Yacht Building.

A BURST of splendid weather has been hastening on preparations for the Clyde yachting season. Carpenters and crews have their hands full, and in the yachting ports the sound of the scraper is heard on all sides. Such a spell of fitting out weather has not been enjoyed for many years, and the yachting season is rapidly being forgotten. At Gourock, Fairlie, and other Clyde harbors, the prospects of a stirring summer are bright. The interest in the new yachts building centers in the cutters being built in Messrs. Henderson's yard at Meadowside, Glasgow, where the 40-rater for Admiral Victor Montagu, the 60-ton cruiser for Mr. Paget, and the 10-rater for Messrs. Allan, all from the designs of Mr. Watson, are being built. Admiral Montagu's cutter is to be named the Carina, is a keel composite cutter, with no extreme feature about her. As may be guessed, she approaches the Britannia more than any previous design of Mr. Watson, with, possibly, some more beam in proportion, and some more hollow in the floor. She is planked up, has her decks laid, and is being coppered, and has a look of Britannia about both the bow and stern. She will have some sea draught, but might have been expected, and carries her depth a trifle further forward. Mr. Watson's more recent cutters. She will be launched in a few days. Her cabins are being rapidly fitted up in a handsome style, but not with the lumberance of much weight. The cutter, of course, embodies Mr. Watson's most recent experience, and it will be discovered in good time that she may have an early meeting with Laïs. Capt. Sycamore, who has sailed Admiral Montagu's forties, will be in charge of the Carina.

The 60-ton cruiser building alongside the Carina, is for Mr. W. B. Paget, of Loughborough, who previously owned the 60-rater Columbia. The new cutter is built for a fast cruiser, is composite, and is substantially enough built to be classed for 21 years. She is already decked, and will be shortly launched. In look, she will much resemble Britannia's fashionable model. It is intended to race her in the handicap matches, and, with a powerful bow, she will carry her sail in all weathers.

The 10-rater building alongside these two cutters for Messrs. Allan, a keel cutter, and not a centerboarded cutter, is she is altogether built of wood, is well forward, and will be launched in time to have her canvas stretched before the opening cruises. This new cutter will have to meet the new 10-rater building by the Herreshoffs for Mr. Allan, of Glasgow, the new 10-rater building by Messrs. Camper and Nicholson for Mr. Allan, of Glasgow. The Parnam, built by Messrs. Five two seasons since, is the only one of last year's tons—since the Yeuil was sold to France—that will have a look in alongside of these new tons. The Parnam has been in the yard of Mr. Robertson, of Sandbank, Holy Loch, during the winter, and has undergone various alterations. She has had her fin or centerboard removed, and added

tional lead bolted on her keel and her draught increased. This means that she is up to date as far as ballasting is concerned, and with new and larger canvas may be able to hold her place among the novelties. The Parnam will be launched at once, and it will be curious to note how her improvements will place her alongside the centerboarded Dora, which, for a time, threatened to abolish keel cutters.

For Mr. Balfour Neil, Mr. G. L. Watson has designed a 5-rater, also building in Messrs. Henderson's yard, at Meadowside. This racing cutter is built of wood, with a bulb keel, and in model partakes of Mr. Watson's most recent convictions.

But these are, perhaps, most explicitly illustrated in Mr. Watson's design for a new 21ft. racing boat for Mr. George Coats, of Paisley. This rater is building for Mr. Coats by Mr. Robertson, of Sandbank, in Clyde, and some years ago would have created quite a storm of protests among Clyde yachtsmen. She belongs to the same class as the 23ft. Pike, Mr. Coats got built last season, but the new boat is a wide departure. She looks to have more beam than the Pike, carried right aft to the stern-board, which is rather broad. The class is limited to 20ft. waterline, with 20ft. over all, and will have been taken of the measurement to give the counter considerable overhang, and which, from its form, will add to the body of the boat when laid over in a breeze quite 4ft. The bow is drawn to a very fine point, and lifted well out of the water. From the stem head the curve of the bow and the keel is continuous in a flat curve to the stern-post, which has the rake.

But the notable feature of this yacht, is the high bilge and extremely hollow floor she is built with, and which reminds one of the midship section of an American centerboard yacht, without the centerboard. With her deep lead keel she will draw about 7ft. by the heel. The performance of this yacht, which is to be cutter-rigged, will be watched with the keenest interest, and with her success will follow quite a revolution in building the small racing yachts, which, in the wide, beamy shallow bodies will become the fashion, and big displacement deep-bodied vessels be neglected.

Besides these sailing yachts, Mr. Watson's time is occupied with the supervision of several steam yachts, some of which are of long tonnage. For Mr. A. S. Wood, he has designed a steam yacht of 1,000 tons, building in Messrs. Henderson's yard. The owner of this fine vessel is proprietor of the island of Rassy, and she will have her berth in snug anchorage at the southern end of the island. For Lord Algernon Lennox, Mr. Watson has designed a 700 ton steam yacht, which will be built by Messrs. Ramage and Ferguson, of Leith.—*The Field.*

## South Boston Mosquito Fleet.

OPENING RACE APRIL 19—BOSTON HARBOR.

The South Boston Mosquito Fleet as usual opened the season in the North on the holiday "Patriot's Day" April 19, which this year for the first time takes place of the old New England "Fast Day." The wind was S.W. strong and squally, and before the race Katydid lost her mast, and Transit, after taking off Katydid's crew, capsized. Both also capsized and Cutty Sark lost her centerboard. The start was made at 11 A. M., after Transit had been righted and bailed out. The times were:

	Length.	Elapsed.	Corrected.
Tantrum, F. D. Perkins.....	14.11	1 12 40	1 12 40
Transit, S. N. Small.....	14.09	1 14 10	1 14 00
Marion, H. Yerra.....	14.11	1 14 11	1 14 11
Leureux, Walsh Bros.....	14.11	1 16 09	1 16 09
Tuxedo, E. B. Greenlaw.....	14.05	1 15 58	1 21 28
Kismet, W. J. Landis.....	14.09	1 20 06	1 28 01

Winning prizes: Tantrum \$10, Transit \$5, Marion \$3.

## YACHT NEWS NOTES.

The new catalogue of the Gas Engine and Power Co. is the finest work of the kind that has come under our notice, and is in every way most creditable to the concern. The cover is of cream cardboard, heavily embossed, the design being very artistic as well as appropriate. The letterpress is in light brown ink, while the illustrations, of which there are many, are printed in a different tint. The book as a whole bears testimony to the artistic instincts and business enterprise of the company. It is a valuable addition to the growing library of the yachtsman, carrying it beyond the field originally intended, of naphtha launch building, and the works are now turning out the highest class of naphtha, steam and electric launches. A look at the frontispiece—a general view of the shops, yards and basin—will show in detail the various operations which produce the completed launch. The many varieties of launches are shown by the illustrations; from the small tender to the large cabin launch with one or two engines, and driven by naphtha, steam or electricity.

At a meeting of the Seward Land and Water Club, held on April 18, Messrs. C. W. Boynton, C. W. Ballard and D. G. Whitlock were appointed as a building committee for the new club house. Mr. L. Bruce Fulton was elected secretary, Mr. F. A. Sollace, treasurer, and Messrs. C. M. Cooper, H. Hartshorn and W. H. H. Smith, committee on measurements and time allowance. The following new members were also elected: Mr. J. V. Landis, Mr. C. W. Connor, Mr. J. V. Whitlock, Charles Badgley, Wm. M. Martin. By-laws were also adopted increasing the dues and initiation fee. Ethilda, cabin naphtha yacht, Wm. M. and C. W. Ballard, has been overhauled for the season and is now in commission as the flagship of the club. Conchita, Naifa, Kiku and Emily will go into commission during the week.

Lovers of yacht sailing will be glad to hear that Mr. James Gordon Bennett, owner of the Namouna, steam yacht, has expressed his intention of competing against Britannia and Valkyrie on the Solent next season. This will be infinitely more in touch with the popular idea of yacht racing than the steam yacht competitions Mr. Gordon Bennett recently promoted in the Mediterranean. His connection with yacht racing has been of the most adventurous character, and he has never ceased his fondness for the sport since he took to yachting in 1860. In 1861-4 he was with the American cruiser in the war of the Americas, and in 1865-6 he was with Henrietta, and in this yacht, in the month of December, 1866, he raced across the Atlantic against the Vesta and Fleetwing, and won. The American yachtsmen, although it was in the depth of a most inclement winter, had a very great reception at Cowes, the members of the Royal Yacht Squadron mustering in great force to welcome the American cruiser. In a very graceful letter, offered the trophy to Prince Alfred (Duke of Edinburgh and Saxe-Coburg and Gotha), but His Royal Highness, according to the rule of the constitution, was unable to accept the present. In 1868 Mr. Gordon Bennett purchased the schooner Dauntless, and in 1870 matched her against Mr. James Ashbury's schooner Cambria to race from Queenstown to New York. The Cambria won, but by one hour and three-quarters only. Mr. Gordon Bennett then sailed in America after this, and in 1882 he took to steam yachting and built the schooner Sappho, with Mr. P. Douglas (once owner of the schooner Sappho), built in 1886 the large sloop Priscilla, as an America Cup defender against Genesta, but she was not the vessel selected for the purpose.—*Field.*

The Cape Cod Y. C. has arranged the following fixtures for the coming season: In Cape Cod Bay—June 9, first race, off East Dennis; June 23, second race, off East Dennis; July 7, third race, off Nobscook Point; August 11, fourth race, off East Dennis; August 18, fifth race, second race; August 18, third race. The officers for 1894 are: Com. J. H. Cummings; Vice-Com. H. H. Sears; First Capt. E. Pennell; Sec'y-Treas. D. W. Dean; Meas. A. O. Hind and J. Crowell; Regatta Committee, D. L. Young, H. Osborne, P. Sears and L. Hall.

The Galveston Y. C., which has just dropped the word "Corinthian" from its name, is discussing an interstate yacht race for boats from New Orleans, Mobile and other Gulf and Mississippi ports.

The California Y. C., organized last February, is now erecting a commodious club house on the Alameda shore of Oakland Creek. Com. E. A. von Schultz; Vice-Com. H. C. Duff; Sec'y, J. E. Edwards; Walter; Sec'y, Bruce Palmer; Port Capt. John Sherer. Board of Directors—J. C. Wilson, William Wallace, W. H. Ducombe and Louis McMurry.

The Citizens' Yachting Association, of Detroit, has elected the following officers: Com. John J. Ackerman; Vice-Com. Harry C. Kendall; Rear-Com. William H. Reid; Rec. Sec. John A. McDonald; Fin. Sec. Charles M. Schuren; Treas. Frank Schaldenbrand; Fleet Capt. Dr. W. G. Best; Fleet Surgeon, Dr. H. Duff; Fleet Purveyor, Regatta Committee, Geo. Newberry, Wm. R. Dobson, Ed. Bidigare, Herman Bowman, Capt. James Skiffington; Board of Directors, Jacob F. Youngblood, Louis Newberry, John F. Stuart, Fred D. Sheil; Historian, Edward Blanchard.

Formosa, steam yacht, built by the Atlantic Works, East Boston, for Geo. P. Fabany, of New York, was launched on April 18, being christened by Miss Polman. The yacht is of steel, 157ft. over all, 132ft. l.wl., 22ft. beam and 11ft. 6in. draft, schooner rigged with 4 bulkheads. Capt. Rich will be in command.

Isolene, steam yacht, Com. J. H. Flagler, American Y. C., has been a most unfortunate vessel, being burned and sunk on the night of April 20, while laid up at moorings in Northport Harbor. She was designed and built by the Herreshoffs in 1880, for T. H. Garrett, of Baltimore, and under the name of Glean attracted much attention to her builder. The yacht came into prominence in steam yacht construction. On June 1, 1888, while bound up the Patuxent River, she was in collision with the steamer Joppa, and was sunk. Mr. Garrett was drowned, though all others on board were saved. Her captain

was deprived of his papers by the U. S. Inspectors, for negligence and disregard of signals. The wreck was raised and sold to J. H. Flagler, who rebuilt her under the new name Isolene. On Nov. 19, 1893, the yacht caught fire in Northport Harbor, from the explosion of two cans of naphtha, and the engineer was badly burned, while the hull was damaged to the extent of \$3,000 to \$3,000.

The last mishap is attributed to lightning in the severe thunder storm of Wednesday night, the yacht being discovered on fire about 3 A. M., but as the tide was out no boats could reach her with the fire apparatus, and in spite of work with buckets she burned until she sank.

Rex, steam yacht, formerly Dandy, has been sold by Boyer Bros. to a Boston yachtman. She made the cruise from New York to Chicago and back last year.

On April 14 an adjourned meeting of the American Y. C. was held at Delmonico's, with Com. J. H. Flagler in the chair; the principal business being the election of a treasurer, the vote at the annual meeting being a tie between two candidates, Geo. W. Hall, who has held the office for some years, and Wm. L. Quintard. On this occasion each received 40 votes, but in the second election Mr. Hall received 62 votes and his opponent but 39.

On April 8 a new yacht was launched by Fourchey & Fourchey, at New Orleans, and christened Meteor. She is 48ft. over all, 36ft. 6in. l.wl., 13ft. 6in. beam and has an iron keel of 3,700lbs., a steel centerboard of 1,000lbs. and 2,300lbs. iron in it.

The purchaser of Avenel, steam yacht, is Frank E. Simpson of Boston, a member of the Eastern Y. C. Capt. Sherlock, late of Pilgrim will probably be in command.

Walter Cary Tuckerman, owner of Liris and rear-commander of the Seawanhaka Corinthian Y. C., died at his residence in New York on April 18 after a brief illness, a cold resulting in pneumonia.

Arcthusa, schr., has been sold by F. de Funiaek to Chas. Vanu, of Brooklyn.

Princess, schr., has been rebuilt for Mr. Geo. H. Seely by Jesse Carll at Northport, and rechristened Ivanhoe. She was built in 1876, and was originally named Alice. The expense of rebuilding is stated at \$10,000.

## Naphtha Launch For Sale.

THIRTY-FOOT, Second hand, at Chicago. C. N. FAY, 63 Dearborn street, Chicago.—*Adv.*

## Rifle Range and Gallery.

## Rifle at San Antonio.

The regular practice shoot of the San Antonio Rifle Club took place on the 15th. The day was clear and bright, and the breeze from the southeast made the rifleman pay close attention to his wind gauge. Scores, 200yds., muzzle rest, 10 shots per score, range No. 2:

G Giesecke.....	10	9	12	9	10	10	10	10	10	—	99

## Chicago Rifle Notes.

(From our Special Correspondent.)

CHICAGO, April 21.—Two new rifle clubs were organized recently in Chicago, the Central Rifle Club and the Columbia Rifle Club. The former has a list of officers and members as follows: Pres., Jos. A. Weber; Vice-Pres., George J. Schmaus; Sec'y, John F. Roeder; Treas., Julius Brieske; Capt., Math Vellman. Members—Robert Brieske, C. T. Croesen, Joseph Ocsulski, Charles H. Weber and Paul Meyer. This club meets every Monday evening corner Southport and George streets. The officers of the Columbia Rifle Club are: Pres., Henry Zom; Vice-Pres., William Nieman; Treas., John Gatz; Sec'y, Otto Meinholz; Capt., William Meinholz. The other members are John Gehrand and John Hohse. This club meets every Friday evening corner Southport and George streets. In the recent tournament of the Central Rifle Club Master Alfred Bisson, whose name figured in a rifle contest recently in these columns, won first prize, a rifle. His score was 49 out of a possible 50, 55ft., open sights. The following named gentlemen won in the order mentioned: J. W. Christman, Peter Patchler, Henry Zom, H. Leitensdorfer, J. Hundriser, William Meinholz, A. Daumitz and Nic Wagner. B. WATERS.

## Zettler Rifle Club.

The Zettler Club held its second practice shoot at Wissel's Cypress Hills Park on April 23. The weather conditions in the early part of the day were unfavorable for making fine scores, but notwithstanding the poor conditions there were some fine scores made, Ross, in particular, in a match with Plaisted made the best 50-shot score ever made in this range, a total of 132. With a handicap of 25 points Plaisted made a great effort to dislodge his man, but he was not in it. A 10-shot match with that old veteran Max Engel gave our promoter a little satisfaction. Gus Zimmerman was out for the first time this season, his score of 226 demonstrating the fact that he is at home among the experts. Henry Holges was experimenting with an aperture; he made some good scores, but he says he feels a little odd in Southport. The Kraus score of 221 gave him much satisfaction. Busse, Harman, Schmidt and E. Zettler put up some good scores during the day.

## Wilmerding Rifle Club.

The regular shoot of the Wilmerding (Pa.) Rifle Club, took place on its range, April 6. The following scores were made; conditions 100yds., off-hand, American standard target; scores:

J Dias.....	73	47	62	63	J McWilliams.....	43	36	62	58
J W Harrison.....	55	66	70	52	Jas Barrett.....	80	74	67	25
J Walsh.....	65	53	69	69					

In the 25-bird race for club members the following scores were made at known angles: E. T. Kirschbaum 19, C. M. Williams 23, C. A. Hanson 16, H. B. Long 14, G. S. Davis 14, M. E. Stanton 13, C. E. Fay 9. Several swanslake events followed.

## THE INTERSTATE AT PITTSBURGH.

PITTSBURGH, Pa.—The Interstate Manufacturers' and Dealers' Association's target tournaments for the season of 1894 were formally opened at Pittsburgh, Pa., April 11 and 12, by a tournament given under the auspices of the Pittsburgh Gun Club and the Iroquois Rifle Club. This was the Interstate's second tournament of the season, the first being the grand American handicap at live birds, at Dexter Park, New York. A little history of Pittsburgh will not be amiss:

Columbus discovered America. Washington discovered Pittsburgh. When he stood at the head of the Ohio river in 1753, if Washington could return to earth again, the transformation wrought between the head of the island that was opposite the ground now occupied by the Allegheny Arsenal (where he narrowly escaped drowning), and the old stockade that served as a peg to support the claims two great nations contested and around which the battles were fought that decided the future of the North American continent, is so great that he would probably exclaim, "What geni have accomplished this!"

Pittsburg is a great city; great by virtue of her geographical position, her inexhaustible resources in coal and minerals, her river and rail facilities, her central location and her proverbial industry.

More tonnage—railway and river traffic—originates in Pittsburgh than in any other city on the globe. In all that illustrates substantial growth and stability of Pittsburgh is far ahead of the times. She has distanced the Old World in steel working, glass making and other industries, and has earned the name of being the "Birmingham of America," perhaps better known as the "Smoky City."

Nature has done much for Pittsburgh; the picturesque view presented from Highland Park, embracing the river, the city, and the Allegheny River, is unequalled. Globe girdlers, charmed with the picture embracing cities knit together by bridges, uplands alternating in field and forest, and a noble river, assert that it is not surpassed in the world. Altogether unique are the night views of the twin cities, obtained from half dozen points on the rampart-like hills that environ Pittsburgh and Allegheny. The vast network of Pittsburgh's factories and mills lines her twenty-two miles of water front and extends back to the base of the hills on either side of the Monongahela River.

Exposition Park, where the tournament was held, was formerly known as Smoky Island, although it has long since been filled in and now it is not an island at all. Directly opposite the river from the shooting grounds the old block house, famous in history, was in plain view.

Manager Elmer E. Shaner had everything arranged on time for the opening of the tournament, the tents arranged back of the 18-yard mark in a semi-circle. Messrs. Justus von Lengerke and Noel E. Money, of the Board of Directors of the Interstate Association, were present during the entire tournament. The vast network of Kalamazoo, Mich., introduced his new electric automatic indicating trap-pull, which is a great invention, indeed. By means of one push button Mr. Bush's invention will spring targets under the Novelt rule, five unknown traps, and doubles, and in unknown traps or the novelty rule the puller himself does not know what trap is being pulled and cannot show any favoritism whatever. Mr. Bush has certainly invented a wonderful machine, indeed.

The opening day of the tournament, which was an extra day arranged by the local clubs, was devoted to the shooting of a handicap target race from 100 to 125 targets; that is, the "scratch" men shot at 100 targets each, while the "limit" men shot at 125 each, and the other handicaps ranged from 100 and 125. The handicapping was done by a committee of the from each club, and this race was arranged in the first place to give the local shooters a chance for preliminary practice under the Novelt rule prior to the opening of the Association tournament the following day.

Previous to the issuing of the Pittsburgh programme, the Pittsburgh and Iroquois Gun Clubs requested permission to give this handicap race as an extra day, which permission was granted, the local clubs taking the entire responsibility. The race being given on all resulted in a total of 41 entries, and proved to be one of the main attractions of the tournament; although some of the events had as high as 64 entries. Had as big an entry been anticipated, two sets of traps would have been placed in position in order to give contestants all the shooting they wanted.

Following are the scores:

## The First Day.

Handicap shoot at 100 targets, \$5 entry:	
W J Vance (115).....	95
Kochenderfer (117).....	93
C Hamilton (117).....	97
Nelson (118).....	94
J Skilman (125).....	75
Brown Bill (125).....	74
Greensinger (118).....	73
D Shaner (125).....	73
W M C Jones (100).....	91
A H King (105).....	75
J H Shaffer (118).....	54
Armstrong (125).....	58
Bessmer (107).....	80
L Corman (120).....	78
Sterling (115).....	88
Bluebird (118).....	68
J von Lengerke (110).....	90
Greener (100).....	77
Rummell (110).....	74
F Van Dyke (100).....	82
H B Mohler (118).....	50

## Onondaga County Sportsmen's Club.

MAPLE BAY, April 19—Practice shoot:	
A G Courtney.....	11
C Dugard.....	11
G C Luther.....	11
H Jones.....	11
G Mosher.....	11
A G Glaty.....	11
Prof. Gillette.....	11
H Arnold.....	11

The traps worked in perfect order; there are now ten traps (two close together), a bird breaking in one, call pull for the other, causing no delay, throwing the birds as fast as the marksmen may wish.

FALLSTAFF.

## Shooting at Willard's Park.

On April 17 half a dozen members of the Paterson Gun Club met for their monthly medal shoot at 25 Empire targets per man, from five traps. The scores:

Wright.....	11
Lenore.....	11
Morley.....	11
Hopper.....	11
B. Boyle.....	11
Morgan.....	11

About the above club shoot and the scores of Morley and Lenore hangs a tale. Away back in the early part of last November we were requested by these two gentlemen to act as stakeholder in a match at twenty-five targets each for \$10 a side. We were banded the whole amount of the stake and it was arranged that the match should be shot a fortnight later. On the appointed day serious illness in the family of Mr. Lenore caused a postponement, and try as we would we were unable to get the principals to come together and settle the question of superiority. Finally, however, they agreed upon April 17, and allowed the ownership of the stake to be decided by the scores in the club shoot. As these show, Morley was the winner by a score of 24 to Lenore's 20, and right glad were we to turn over the stake to the winner.

April 20.—The grounds were visited by a big crowd of sportsmen from Newark, Hackensack, Rutherford, Passaic and other places to see the match between Morley and J. H. Outwater at 50 birds each, Hurlingham rules, at \$50 a side. T. C. Wright was referee, Wm. Dutcher scorer and Hery Wolfe trap-puller.

The birds were a fairly good lot and both men in average form. At the close of the first half it looked like "anybody's game," each having lost five birds. On the windup, however, the Paterson expert pulled up, and with only one last bird crossed the wire a winner.

Both were credited with good work. Morley made a very long kill on his first round; his 2d was hit hard but got away; 10th, 10th; 11th, fine first barrel kill; 13th, fell a yard too far out to score; 17th, fell dead between fences; 21st, on grounder got another bird; 28th, good kill, fast bird; 34th, extra fast towering driver, pretty stop with second; 40th, long stop; 50th, fast bird, clean miss with both barrels. Kills, 44; dead out of bounds, 2.

Outwater's last twisted and turned its prettiest to get away, but had to come down when second reached it; 4th, fast just over the line; 13th, full of lead, fell dead in grand stand; 15th, fast, got both barrels, but decided not to shoot; 16th, dead on grounder; full of lead; 22d, extra mark, should have been killed; 23d, missed with first, killed on ground with second; 26th, extra fast driver, twisted and towered and got away, was hit hard; 32d went out with good share of lead, a tough one; 36th, mean twist, pretty stop with second; 37th, a game bird, long stop with second; 46th, caught both charges, but went out to 47th, same; 48th fell dead on shooter's platform; 49th got out with full quota of shot. Kills, 40; dead out of bounds, 5.

The detailed scores follow:

Trap score type—Copyright 1894, by Forest and Stream Publishing Co.	
5 4 1 4 4 5 4 2 4 3 3 3 2 2 3 3 3 5 3 1 5 4

1 2 2 2 2 1 2 1 2 1 2 1 2 1 2 1 2 1 2 1 2 1	

Outwater.....	21
Morley.....	20

Morley and Jack Ryan, of Hackensack, prepared to shoot off their 15 bird race for \$25 a side, under old Long Island rules, 21yds. rise. Wm. Bunn was trap-puller for Morley, Thos. Rogers performed a like service for Ryan; T. C. Wright was referee; Rodgers trapped for Morley; Boyle trapped for Ryan, and the scorer was Wm. Dutcher.

Only three shots were scored by each man when, our correspondent informs us, that the match was broken up by the crowd. The referee decided "no bird," as he had previously cautioned Ryan three times about holding his gun too high. Morley claimed the stakes, but we were not informed as to whether or not he received them. The score as far as shot follows:

Morley.....	010—1
Ryan.....	000—0

## OPEN SWEEPSTAKE SHOOTING.

filled in the rest of the afternoon, the events being at 5 birds per man, \$5 entry, Hurlingham rules to govern, all ties to be shot off, miss and out:

## Shooting at Dexter Park.

The following club shoots took place at Louis Miller's Dexter Park, Jamaica avenue and Enfield streets, last week:

April 16.—Waverly Gun Club, 10 birds per man, for club medal: J. Mohrman 1, G. Belmont 2, G. Grau 3, J. Fehleisen 4, C. Hauthorn 1. Sweep, 6 birds, \$1 entry: C. Hauthorn 3, G. Grau 3, J. Fehleisen 3, J. Mohrman 2, G. Belmont 2.

April 17.—Emerald Gun Club, 10 birds each, A. C. club handicap: E. Doenick 10, G. Nowak 6, E. Woelfel 7, Dr. G. V. Hudson 6, J. Hodge 4, P. Woelfel 5, Dr. Klein 3, J. H. Moore 9, J. Maesel 10, P. Butz 7, N. Maesel 7, J. H. Voss 10, F. W. Place 5, C. Stuetzel 5, H. Thau 8, Short 10, S. P. Pierson 10, R. Regan 10, H. P. Fessenden 9, L. H. Schortemeyer 7, M. Herrington 9, C. W. Floyd 7, F. Russell 8, T. Cody 7, F. Walters 4, C. Bowen 7.

Sweep, 5 birds, \$3.00 money: Russell 4, Regan 4, Hudson 3, Doenick 6, Herrington 5, Fessenden 4, Voss 4, Blake 2, Schortemeyer 4. Match at 15 birds each, \$10: H. P. Fessenden 10, C. W. Floyd 13, L. H. Schortemeyer 14.

April 18.—Down Town Gun Club, 8 live birds: H. Kohla 4, H. Zahn 3, J. Huft 4, W. Benger 5, H. Fajen 4, J. Muhs 5, H. Lang 3, D. Schimge 3, A. Goetz 6, H. Meiler 5, H. Joost 4, A. Wolf 6, J. Doscher 6.

April 19.—New York Gun Club, 10 birds each, for club medals, handicap: J. Steuernaegel 6, H. Noble 6, C. L. Kingsley 7, G. Winter 2, J. Schlicht 7, P. Gams, Sr. 6, G. H. Smith 5, W. Miller 6, D. Schrecke 2, F. Sauter 6, P. Gams, Jr. 6, H. Thormford 3, E. Stradtman 1, M. Borsden 2, J. H. Boesenecker 5, J. Frazer 7, J. Wellbrock 7, F. Huft 7, E. Radie 1, S. Edwards 8, A. Schmitt 4, A. Busch 5, E. Leibinger 7, J. G. J. Jr. 2, J. H. Boesenecker 5, S. Edwards 3, W. Muller 4, A. Schmitt 4, G. Smith 3, J. Steuernaegel 2, J. Frazer 1.

April 20.—Phenix Gun Club, 15 birds: D. Fraught 15, J. Smith 15, A. Bot 12, J. Chasmer 10, M. Chichester 14, R. Routhan 14, W. Hughes 13, J. Akhurst 12, C. Madison 14.

## Hoboken Gun Club.

Shot newly organized Hoboken Gun Club held its inaugural practice shoot at Secaucus on Thursday, April 19. Twelve members and several invited guests left headquarters, "Chris" Weitkamp's, First and Hudson streets, in a big tallyho at 1 P. M. The grounds were reached at 2:15. Shooting commenced immediately after, varying which several good scores were made. A majority of the members were new beginners at this sport. The first event was a sweepstake, 5 live birds a man. The scores were:

Capt Chris Weitkamp.....1001—4 J H Kruse.....1001—2  
Henry Englebrecht.....1101—4 Geo B Bergkamp.....1110—4  
H D Hencken.....1101—4 Ernest Finkelstedt.....0000—0  
L Jansen.....0000—0 Herman Luettich.....0000—0  
Frederick W Sina.....1001—2 Chris Weitkamp.....0001—1

Another sweepstake followed, 3 birds, resulting as follows:  
Capt Intemann.....11—3 Kruse.....001—1  
Englebrecht.....011—2 Bergkamp.....110—2  
Hencken.....000—0 Finkelstedt.....000—0  
Jansen.....101—2 Zoch.....100—2  
Ochs.....000—0 Luettich.....000—0  
Sina.....010—3 Weitkamp.....100—1

On the return of the muskies was met and were taken along. The monotony of the homeward journey was relieved with their melody. The officers of this promising organization are: Captain, Christian Intemann; Vice-President, Hugo Ochs; Secretary, J. H. Kruse, and Treasurer, Christian Weitkamp.

JAY H. KAY.

### Trap-Shooting at Ellicott City.

THE big two-days' tournament of the Baltimore Gun Club drew out a tall attendance of the members of the E. C. G. C., who, while they did not participate in the shooting, got a whole lot of points, and those whose business permitted made the smoke fly Saturday afternoon, April 10. Eight regular events were run off in great shape at 10 targets each, scores as follows:

1 2 3 4 5 6 7 8	Dr Fort.....	1 2 3 4 5 6 7 8
Jones.....	6 7 8 9 10	Dr Fort.....
Talbot.....	6 7 8 9 10	Dr Fort.....
Kirby.....	6 7 8 9 10	Dr Fort.....

ELlicott City, Md., April 18.—The third contest for the Democrat trophy took place on the grounds of the gun club this afternoon. The contestants were J. O. Jones and S. Hillsinger. These two men have been trying to come together for several days, something always preventing until today. The score was:

J. O. Jones.....	101110111011011001001110—15
S. Hillsinger.....	101110111011011001001110—15
The "Big Four" now took a hand at 25 targets for practice:	
Dr Fort.....	10111111111111111111—23
J. O. Jones.....	1010101010101010101011—16
T. Kirby.....	1010001101110101010110—16
E. A. Talbot.....	1001100010001101010001—13

Somehow the boys could not get on to the targets, and goose eggs were frequent. The next was a short one at 10 targets: Jones 5, Talbot 7, Dr. Fort 8, Hillsinger 6, R. Wilson 8.

The next at 15 targets: Dr. Fort 13, Kirby 10, Jones 9, Wilson 8, Talbot 8.

The next at 15 targets for a fine rosewood cleaning rod, presented by J. Purucker, a prominent gun dealer of Baltimore: Jones 11, Wilson 12, Kirby 10, Harding 10, Talbot 11, Dr. Fort 13, Hillsinger 9.

The wind up was at 20 targets: Dr. Fort 18, Kirby 16, Talbot 16, Jones 15, Hillsinger 11, Harding 12, Wilson 17.

### The Pansy Gun Club.

KINGSTON, N. Y., April 14.—The following scores were made to-day by members of the Pansy Gun Club. The weather was all that could be desired, but a strong wind made the shooting somewhat difficult. No. 1, 5 single blue rocks:

Van Anden.....	11110—4	Van Hovenberg.....	11110—4

DAN.

### Murphy vs. Miller.

PHILADELPHIA, April 16.—The long talked of match between Peter Murphy of the Neck and P. Miller of Paschalville, both suburbs of this city, came off to-day on the Gloucester race track at Gloucester City, N. J. For a long time before this match both the contestants were going to kill all their birds, and of course all that would have to be done at the end of the match would be to toss up a penny to see which would win, but what a change was there. Miller started the match with a miss, Murphy his share with a good kill of a straight driver, and it looked as if Murphy intended to make his threat good as he killed his first six in good style while Miller only killed two and then he seemed to lose sight of the birds altogether, missing five straight.

The match was one of the old-fashioned kind and a kind that no sportsman likes to see—Rhode Island rules modified, 28yds. rise, one trap, trap and handle for each other, and of course they were a good lot of birds, being the best each could find for his opponent.

The race was at 25 pigeons each for \$50, a side, and after Miller missed his nineteenth bird he gave up his race and proposed another. The scores of the first race were:

Trap Score Type—Copyright 1894 by Forest and Stream Publishing Co.	
Miller.....	0 1 1 0 0 0 0 1 0 0 1 0 0 0 1 0 0 0—5
Murphy.....	1 1 1 1 1 0 0 1 0 1 0 1 1 0 0 0 1—11

Mr. J. Frank Kleinz, the champion wing shot of Pennsylvania, was referee and gave satisfaction to all parties.

After the first five birds had been shot at of course there was no betting on the race as every one could see that Murphy was in much the best form, but the betting on the birds was very lively and the friends of each contestant did all in their power to get the opposing shooter rattled.

Miller immediately proposed to shoot a race of seven birds for \$10, which was just as promptly accepted by Murphy. This match was to be shot from two traps, 30yds. rise, 50yds. boundry, use both barrels, gun to be held as the shooter pleased. Miller pulled himself together and shot a splendid race; in fact they both shot well. Miller killed all his birds; used his second barrel three times, twice for safety. Murphy only used his second barrel once; he missed his sixth bird. The scores were:

Miller.....	121221—7
Murphy.....	121110—5

There were about 300 people on the grounds, and another match was proposed, but it will be a long time before it comes off.

### Rollo Heikes was in Form.

ONE of the greatest exhibitions of target shooting ever witnessed was given on Saturday, April 14, by Rollo O. Heikes at Bushwood Park, the residence of Col. P. G. Sanford, of the Winchester Arms Company, at Saugatuck, Conn. Mr. Heikes went to Bushwood Park on invitation of Mr. Sanford, in order to show to a number of his friends the possibilities of a gun in good hands.

Heikes used a new Winchester repeating shotgun, U. M. C. smokeless shells and 3drs. of American wood powder. His first performance was in shooting at 150 blue rock targets, known angles, of which he broke 146. He then shot at 10 targets, unknown traps, breaking 9; next, under expert rule, he broke 20 straight; shot at 10 pairs and broke them all and ended this phenomenal performance by having three traps sprung simultaneously and breaking the three targets. The total number shot at was 103, of which he broke 198.

Detailed scores of this wonderful work are here given:

Known angles.....	11111111111111111111—49
Unknown traps.....	11111111111111111111—49
Expert rules.....	11111111111111111111—48
10 pairs.....	11 11 11 11 11 11 11 11—20
Triple rise.....	111—3—108

### Wilmerding Gun Club Monthly.

WILMERDING, Pa., April 13.—Inclosed find scores made at the monthly shoot of the Wilmerding Gun Club to-day. The day was favorable for shooting, and was taken advantage of by a goodly number of shooters. The scores were the best made this season.

No. 4, 10 singles: Mason 9, Morgan 7, Carson 6, Burke 4, Wilson 3.	

J. W. WITHERS, Sec'y.

### Aberdeen Rod and Gun Club.

ABERDEEN, Wash., April 11.—A strong breeze was blowing from the coast, making it very unpleasant to shoot, but twice or three the members went to the club ground and held the fifth regular shoot of the Aberdeen Rod and Gun Club for the gold medal. Having just received the new Peoria blackbird, and they flying stronger than the old ones, the score was not up to the average shoots. Chas. Koehler won the medal for the third time, making 16 out of 20 birds, Sherman and Sherwood following with 13 each. Jake Kraber carried off the leather medal, making 20 straight goose eggs. Following is the score for the medal shoot, 20 singles, 3 unknown angles:

Pratsch.....	0011101001000100010—8
Johnson.....	0001010100000100000—5
Kraber.....	0000000000000000000—0

## Answers to Correspondents.

No notice taken of anonymous communications

J. L. C.—We would be happy to hear something from you or your friends about salt water fishing experiences.

OLD READER.—Will some correspondent give me through these columns information regarding the Rideau Lakes, near Kingston, Canada—quality of fishing, accommodations, etc.?

T. H. Jr., Washington, D. C.—When is the best time of the year to fish for black bass with the fly in the Shenandoah and Potomac rivers? Do black bass rise to the fly in April and May? Ans. We have had reports of good bass fishing in those waters in April and May, both with fly and minnow.

S. T. C., Elmwood, Conn.—Which will thrive in the highest temperature of water, and how high, brook, rainbow or brown trout? Ans. Rainbow trout will endure the highest temperature. They have been kept for a short time in water above 80° Fahrenheit, but they thrive in cooler water, say 60° to 65°. Brown trout prefer clear, cold, rapid streams.

R. S. K.—1. Is a .44-40 Winchester big enough for deer, or what caliber would you advise me to get? 2. Can I use nitro as well as black powder in a Winchester repeating shotgun, model of 1893? Ans. 1. The .44-40 is large enough for short range work. For long range shooting in the open, however, a rifle burning more powder and having a flatter trajectory is necessary. 2. Yes.

F. P. V., Greenwood Lake, Ohio.—Have you any knowledge of some place where I can get the young fry of the ring perch of our reservoirs, say about 2in. long, at any rate, large enough to take care of themselves, by dumping them in the shallow water in the spring among the lilies and weeds. Would this be the best way to get a stock of this kind of fish? Where the black bass exist, if the parent fish were put into the lake they would be liable to be caught out with hook and line before the spawning season or the young large enough to care for themselves, as fishing is let during the entire fishing season. Ans. We cannot refer you to any one to supply the young fish; but if you start a few of the old ones there will be a plentiful stock in a year or two.

YALE MIXTURE

A GENTLEMAN'S SMOKE.

WE COULD NOT IMPROVE THE QUALITY if paid double the price. It is the choicest Smoking Tobacco that experience can produce or that money can buy.

MARBURG BROS., BALTIMORE, MD

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where we get back a good deal more of value than cost of catalogue and postage.

## ABBAY & IMBRE,

18 VESEY STREET, NEW YORK CITY

## Notice to Fishermen! Cut Prices for 1894.

I am with you again with lower prices for Fishing Tackle. I find by experience that putting down the prices and not decreasing the quality, it increases my business every year.

One lot of Split Bamboo Fly and Bass Rods will be sold at \$1.58 until all are sold. Rods are all nickel mounted, solid reel seats, silk wound, complete in wood form and will give satisfaction.

Length and weight of the Fly Rods are: 9ft., 6oz.; 9ft. 6oz.; 10ft., 7oz.; 10ft. 7oz.; 11ft., 8oz. Reel seats below hand.

Length and weight of the bass rods are: 8ft., 9oz.; 9ft., 10oz.; 9ft. 11oz.; 10ft., 12oz.; 10ft. 13oz.; 11ft., 14oz. Reel seats above hand.

A special lot of Hard Rubber and Nickel, Raised Pillar, Multiplying Reels with Balance Handle and Side Spring Click, 40yds., 90 cts.; 60yds., \$1.00; 80yds., \$1.10; 100yds., \$1.20.

Any of the above reels sent by mail for price and 10 cts. extra for postage.

Brass Click Reels, 40, 60, 80 or 100yds., 28 cts. each; 5 cts. extra for postage.

One lot of Multiplying Raised Pillar Reels with Balance Handles and Lifting Drag: 40yds., 38 cts.; 60yds., 48 cts.; 80yds., 58 cts.; 100yds., 68 cts.; 150 yds., 78 cts.

A special lot of Trout Flies at 30 cents per dozen assorted, sent by mail 1 cent per dozen extra for postage.

A special lot of Bass and Pickerel Spoons at 5 cents each sent by mail, 1 cent extra for postage.

All kinds of Hollow Point best quality Hooks snelled to single gut 10 cts. doz.; double gut, 1 cts. doz.; treble, 20 cts. doz.; four ply, 25 cts. doz. 1 cent extra per dozen for postage.

300ft. Braided Linen Reel Line on Block, 41 cts.; 300ft. of Hand-Made Linen Reel Lines on Block, 9 thread, 38 cts., sent by mail 8 cts. extra for postage.

Brass Box Swivels, all sizes No. 1 to No. 12, 15 cts. per dozen, sent by mail 1 cent per dozen extra for postage.

Single Gut Leaders, 3ft., 4 cts., 45 cts. per dozen. Double Gut Leaders, 40in., 5 cts. each. Treble Gut Leaders, 32in., 7 cts. each. Four-ply Leaders, 32in., 8 cts.

Special lot of best quality 100ft. Linen Reel Lines, 8 cts., 200ft., 15 cts.; 300ft., 22 cts.; 3 cts. extra for postage.

Send 2-cent stamp for Illustrated Catalogue.

Open Evenings until 8 o'clock. Saturday Evenings 11 o'clock.

J. F. MARSTERS, 51, 53 and 55 Court Street, Brooklyn, N. Y.

## OUR PARK GAME EXPLORATION.

WE announced in our issue of April 14 the FOREST AND STREAM's enterprise of sending a staff expedition into the Yellowstone National Park. It was an enterprise with a purpose. This purpose was actual, definite and important, and its occasion pressing. It was nothing less than to make real to the sixty-five million people of this country and to their agents in Congress the Yellowstone Park of to-day; to awaken them to the perils which threaten it; to arouse them to the necessity of immediate action to rescue it from these perils.

This was the undertaking, and it was one which might well challenge the enthusiasm and high endeavor of those to whom it was intrusted. To explore the Park in winter was an achievement of woodcraft; who shall say that it was not also a work of patriotism?

The event has proved that the enterprise was well timed. The course of events has been what we foresaw. The results of the expedition have been secured at a moment when they are certain to be of the highest possible utility.

The first chapter of the report is given to-day. It is a story of big-game destruction, an illicit, selfish, brutal raid on the remnant of a rare species—the very choicest, most highly prized game of the Park. To tell the story, as it is told by FOREST AND STREAM to-day at first hand, is to perform a service which rarely comes within the province of a sportsman's paper. It is an achievement of journalism, and a worthy achievement because done in the public interest.

But this recounting of the work of a buffalo butcher is not the sole end of the Yellowstone Park Game Exploration. To give this dark tale was necessary. But pleasanter relations are to come—the story of the winter enchantments of the wonderland. To demonstrate the danger which imperils the Park, to show the need of immediate action, this is only the one result of the expedition. It yet remains to picture the Park with so graphic a pen that they who read shall be incited to a more jealous regard for these priceless possessions and to providing a more adequate preservation of them.

The account of the capture of Howell, the buffalo butcher, is given in full on another page and proves a story of far more than common interest. In the fullness of its detail, in the faithfulness with which it pictures the wintry solitudes where the butcher was plying his bloody trade, and in the statements made by all who took any part in the capture, the story is complete and will hold the attention of every reader. It is full of interest, but in nothing more so than in the emphasis which it puts on the lack of law in the National Park, and it is this point which is the most remarkable feature of the whole affair.

Congress had enacted that the Secretary of the Interior should make regulations for the protection of the Park, and such regulations had been published; troops had been stationed in the Park to enforce these regulations, and for a time the regulations and the troops acted as a scarecrow and prevented anything like general violation of the rules. Every now and then, however, a man was

caught killing elk or beaver, was taken to the Fort, shut up in the guard house for a few weeks and then set free, his horses, guns and other property being confiscated. There was no punishment for an offender.

Whatever may be said of those who invade the Park—however bad they may be—they are not fools. It took them only a few years to realize that the regulations were a dead letter, that the scarecrow was powerless to harm them, that however earnest and sincere the officers of the Government might be in their efforts to protect the treasures that had been given in charge to them, they could do nothing, for their hands were tied by the inaction of Congress. When these men fairly realized this, it was inevitable that they should do just what Howell did. The great reward which success promised justified them in taking the small risk of capture, to be followed by a short confinement, and in order that, if captured, they might lose little, they took into the Park the lightest outfit possible. Howell boasted that his captured property was worth only \$26.75, while if he succeeded in getting his spoils beyond the reservation lines he stood to make \$2,000. He was perfectly frank about it, and evidently thought it a fair business risk. He knew as well as any one how entirely powerless his captors were to punish him, and talked about the matter with a cynical boldness which showed clearly enough that he was well aware that he had violated no law—that he had merely infringed a regulation, which was only a form of words, useful enough, perhaps, for the purpose of scaring tourists into good behavior, but hopelessly ineffective actually to accomplish anything against a determined man who knows what his rights are.

Howell was taken to the guard house and confined there, to be released at some future day and then no doubt—unless some law shall be enacted for the Park—to recommence his work of slaughter.

The orders from Washington are that offenders shall be held and their arrest reported to the Department of the Interior. But a man in the guard house for a few weeks must eat, and yet there is no fund from which he can be supported. He is not a soldier and cannot be rationed, and so some one must pay his board or he must starve. So it has often happened in the past that the commanding officer has had to pay out of his own private pocket for weeks at a time for the food consumed by the prisoners that he had taken and was holding by the order of the Government. Could anything be more absurd?

Owing to the failure of Congress to enact the necessary laws and to provide the necessary moneys for the administration of the National Park, this great reservation, this unequalled possession of the people, has been managed in a way that is contemptible and disgraceful. With every disposition on the part of the Secretary of the Interior and the Superintendent to guard and cherish it as it should be guarded and cherished, it has been and is still managed in a way that must make each man who knows what it is and what it ought to be, blush for Congress, which in the past has been so careless of the best interests of the public. Happily there is now a prospect that the blunders of the past may be remedied by the bill which is now under consideration. The fate of this measure will depend on the action of a conference committee, whose members it is believed will be Messrs. Vest, Carey and White (of California) from the Senate, and Messrs. Lacey, Hoar and McRae from the House.

## COMMERCIAL FISHERMEN UNITE.

AN outcome of the coast fishery conference held in this city last December is the formation of a Commercial Fisheries Association. The movement has been put through chiefly by the activity of Mr. C. H. Augur, of the American Net and Twine Co. The membership is drawn from the menhaden fishermen, pound fishermen, fish dealers, net manufacturers and other allied interests of the Atlantic coast. The officers are: President, Capt. Joseph W. Collins, editor of the *Fishing Gazette*; Secretary, Stephen A. Coombs, of Brooklyn; Treasurer, A. A. Adams, of the American Net and Twine Co. The objects of the association are declared to be "to collect from all portions of the Atlantic coast complete and reliable statistics, and general information concerning the movements and abundance of the ocean fishes, and to disseminate such information; to defend the commercial fisheries in every proper way against unjust interference by those who erroneously assume that the methods of cap-

ture now employed tend to decrease the fish food supply; and generally to advance the interests of all the commercial fisheries."

## RACING PROSPECTS ABROAD AND AT HOME.

THERE are now on the Atlantic three racing yachts, all bound from New York to Glasgow, with a good chance that a fourth will soon follow. On April 19 Dacotah, the new Herreshoff 10-rater, left on board a steamer for the Clyde, where she will meet half a dozen of her class, including several new cracks; on April 21 the 90ft. schooner Lasca sailed, also for Glasgow, for a season in British waters, with some racing, if any be possible, and by the time this is read Valkyrie will be under way in her wake. If all reports be true, Vigilant is likely to follow in a few weeks, or in time, if her new owners desire, to take part in the Clyde regattas early in July.

All of this is very promising for the British season—and correspondingly depressing for the sport at home. On the other side there will be some good racing between Britannia, Valkyrie, Satanita and very probably Vigilant. The 20-rating class will also furnish plenty of sport, with half a dozen new boats. And the effort to beat Dacotah will keep the 10s busy on the Clyde; while a good season in small craft is promised in the south.

On this side of the ocean a very different prospect presents itself; the absence of Lasca will be felt in the schooner class, further weakened by the loss of Volunteer; the 90ft. class is likely to muster only Volunteer and Navahoe, neither Jubilee nor Colonia fitting out; and the smaller classes, 70, 53, 46, 40, 30 and 21, are practically extinct so far as racing goes. There is a chance of a little racing of the 46 or 40-footers, but that is all. Of new boats, or of live racing classes, there is nothing but the new limited class of the Larchmont Y. C., and this, with the racing boats of about 25ft. l.w.l., will have to provide the most of the racing in the Sound.

Such a sequel as this to the activity of last year is anything but gratifying, and forcibly suggests the necessity for determining if possible the cause and cure for a state of depression which is in every way bad for American yachting. The immediate need, in our opinion, is for more racing, no matter in what size or type of yachts or under what conditions, so long as a keen interest in the sport can be maintained at a cost that is not prohibitive. The efforts of the leading clubs have always been directed mainly if not entirely to the maintenance of racing in the larger sizes of yachts, with what results is now evident. From present appearances, if there is to be a steady continuance of yacht racing, with building from year to year, it must be in sizes which have thus far had little aid or encouragement from other than the smaller clubs.

## SNAP SHOTS.

THERE is in this town a man named Byrnes who keeps an oyster saloon and restaurant on Sixth avenue near Forty-sixth street. At this establishment something over a year ago they were in the way of serving woodcock and quail out of season, and they did it so openly and so vociferously that Game Protector Kidd found not the slightest difficulty in catching them at it. The Protector got his evidence and undertook to bring Byrnes to book by instituting suit through the District Attorney's office in this county. More than a year has gone by and the case is yet untried. Dr. Kidd and his witnesses have been made to dance attendance time and again, only to be dismissed by the postponement of the case. Now it is high time that this Byrnes case should be disposed of. District Attorney Fellows has been known to procrastinate, in years gone by, in the prosecution of close-time game dealers, and perhaps it would be asking too much of the New York District Attorney's office to look for dispatch in such affairs. But what does Byrnes expect to gain by the delay? If he has a foolish notion that he can give Dr. Kidd a tired feeling, he would do well to study up the history of the Delmonico case.

The New York Legislature adjourned last week. It did not do all that it might have done toward wrecking the game and fish laws, but it went far enough. It left things in a snarl. The Senate committee has been authorized to make an inquiry as to what fish and game legislation may be required, and to report next February. Now if Gen. Bruce, the president of the State Association, will instruct his committee on legislation to present the facts to the Senate committee, the opportunity may prove a valuable one.

## The Sportsman Conquist.

### WATCHING THE BRANT GROW BIG.

THE raw east wind is shiver-laden. Fine grains of sand skurrying along the beach rattle into the ghastly open mouth and out through the ragged bones of the breeze-dried gurnard. A song sparrow flips for a moment into a thrummed marsh elder and then falls into the salty desiccated grass again and hides himself away from a wind that askews his tail and parts his soft feathers almost to the place where his cheery song is concealed. It is not time for him. He helps make spring time but cannot do it all alone. Wait little one, we give you credit. A herring gull essays to give life to the March morning by hovering in low circles over the ruffling black channel water, and then finds it more in keeping to stop and merge his color into that of a stranded ice floe in the distance. The leaden heaven moves slowly over us, unbroken save for the slanting missiles of sleet that peck against the cabin window and then bound full tilt to their grandmother the good old South Bay. Captain Jack finishing his early cup of hot coffee down below comes up out of the companion way on deck in his woolen shirt, hitches up one suspender, runs his hands through his grizzled unwilling hair, hawks and expectorates over the rail. "Golly! Tide runs like a boss, don't it?" says he, as a tangle of submerged eel grass scratches alongside in the swift ebb, and the bowsprit of the sloop sidling in the inlet current bunts a periwinkle shell out of the hard marsh bank that protected us at anchor during the night. Captain Jack does not produce much effect in the landscape about the marshes, because he looks so much like any natural object—excepting when he comes to town. He has stout muscles and a good heart. 'Tis only his head that fails when he comes in contact with civilization.

The sea air smells. It is growing richer with the exhalations from looming flats as the tide shrinks, and with ozone from the growling, muttering surf on the outer beach. I, eagerly inhaling, find in distending lungfuls of it the peace of the infusoria of the flats and the power of the grand, swinging ocean. Every breath soiled by me is carried onward and away to the westward and replaced by a new one. How long, clean east wind, before I am translucent within? For last night we left the city where men call air the emanations from percolating swill and cast-off things, and where the tarnishing atmosphere, laden with entities of death, reeks in the nostrils and dulls the eyes of that poor mammal whose brain hangs dependent over figures and fads, amid the walls and corridors and walls again, that keep from him the sight of this sweet world. Is any other love like love for nature? Is any joy like the joy of the sportsman? I have seen the mother with eyes suffused with tears of love for the chubby boy in her arms. I have heard the maiden pray for power to love her lover more. But these loves are uncertain. The boy grows wicked and brings gray hairs and tears of sorrow. The lover is better pleased with another. But nature is steadfast. In the city the slinking street cur brings forth her mongrel whelps beneath the wharf, not knowing whence shall come the food to turn to milk, and the pampered pug, bonbon-fed, has not the strength to propagate her kind. But here all life multiplies, and in abundance, and forever.

The bars of sand that divide currents into currents and that direct the apportionment of bay waters, are shining yellow here and there, and the white froth rolls up and blows across them. Hark! From out the west a merry, flying rabble appears, buffeting the winds, caring naught for the cold. A rabble of warm birds that on even line head down the bay with hurrying wings and outstretched necks, chanting as they go, and in good company. Hark to the sound of their voices as they pass. Did ever crowd of students seem more hilarious? Did ever more careless thing play easy with the elements? One sings, and then another. Hear then all throats together. Here a cluck and there a tremolo, then back and forth the slogan goes till the disappearing huddle leaves in its wake vibrations that have softened the winds and set the waves to tune. To-night when all is still in the cabin you may hear those voices of the morning when no birds are near. When you are at home in the city, a strange, weird music will come as you sit before the grate fire in the twilight. The chimney winds have caught the cadence of the voices of the brant, and looking into the gloom of the room you will see again the moving wings that float adown the ceiling. 'Tis the shadow of vibrations that have come from the far off bay. No others can hear the sound or see the motion. 'Tis for you alone, this delight of wandering impression that comes through miles of shadow, to you sympathetic.

Upon a narrow sand bar lapped by the receding waves, Captain Jack and I step out, to be saluted by the jets of forty clams. We will not forget this recognition on their part when it is time to return the boat. In the sand bar there is a sunken box just big enough for me to hide in. Its edges are level with the surface of the sand, excepting where the last high tide wanted out some of the sand to make little wavy ridges with. Captain spades up fresh sand to hide the box with, and while this is being done I walk to a higher part of the bar that has not been under water for three or four tides. The wind has thrown the light sand into waves and ridges just as the water would have done it. So wind and water are good chums off on the Bay. Here is a bunch of old wrack that pulled a scollop shell from its quiet bed, and came to grief on the bar. Here is a dried bit of leathery devil's apron that was torn from an ocean meadow perhaps by some derelict hull roving in the faintly lighted depths without commission. Here is a cork that once was young and tender bark in Spain, growing under the Southern Cross until men bargained for it with money. Then it perhaps saw one carousal after traveling to foreign shores, and it will be buried on this cold bar by shifting sands. Here is a feather that was shaken from the wing of a goose yesterday, when I was not as near as this to the goose. All about in the sand are tracks of plebeian gulls, but here is something better; here is the patrician track made by the pretty black foot of a brant.

I lie down flat upon my back in the box. The brant decoys are standing all about so naturally that only the Captain and I would suspect them to be such false things. I am waiting. The box is cold and wet. The spray flies into my eyes. The surf roars in the distance. One eye

peers over the edge of the box and scans the horizon. What a jingle of wings was that as a beautiful whistler and his homely mate passed overhead. They have finished the preliminary love experience early in the year, and are now constant and true to each other long before the spring zephyrs have felt into love the vagarious fancies of other water fowl. How strange that the male should be the most beautiful among almost all living things excepting the people. And yet the male whistler, superb as he is, had to seek his mate and go through a lot of nonsense just as though she were a beautiful girl.

I did not shoot at that pair of whistlers. They would have made an excellent stew, with pork and potatoes in the same pot; but they were so happy with each other that I allowed them to pass. It makes my mouth water now to think of them for dinner, but the treason is all in my stomach and not a bit of it in my heart. Flocks of brant are moving down the bay in straggling bunches or in even lines. Some oysterman has stirred them up, or perhaps they think that the eel grass is more tender further on, and they will enjoy it until it seems to be not quite so good as the grass that they left. Few people know why the brant move back and forth in this way, but I know just how they feel, because I have many times camped on one end of a pond and always found the fishing best away up at the other end, no matter which end I camped on. Thus the eel grass in the distance is always green for the brant.

Four brant are coming this way. Are they coming this way or will they choose some other bar? They are winnowing along low over the water and apparently looking for companions. I throw up one foot to attract their attention. They see it. They slacken speed and "lift" for a better view. Yes! They see the decoys. Look out now! On they come and bigger they grow. At first they were no larger than pigeons, now they are as big as ducks, and in a moment more they will look as big as rocs, before my very eyes, and right here with me—all of us active—in a few cubic feet of the world. They have ability to be elsewhere, but they won't use their resources in time. They will be right here in the midst of the trouble. They call to the decoys. I answer. How fine and black their shapely heads and necks. What strong brown wings. They are coming. Now they swerve to the northward. There they circle back, showing white flanks as they wheel into line. They are not coming. They are going toward the middle of the bay. See that persistent one. He wants to come to me and the others do not, but that one is so determined that the others weaken in their good judgment and follow him. Now they stop fluttering. One sets his wings, another sets his wings, all four set their wings, and come slanting down an easy incline of air right toward the decoys. Neck and neck, wing and wing, tail and tail, on they come. Up I jump and breed confusion. "Ronk!" says one, and down through the smoke he tumbles with a mighty splash. "Kruk! Kruk!" says another, and then he makes the spray fly ten feet into the air at the edge of the bar, and causes the clams to squirt for rods around. "B-r-a-n-t! B-r-a-n-t! B-r-r-r-a-n-t!" say the other two, swishing themselves right up into high air. Yes, brant they are, and beauties, too.

The March wind is piercing, the box is damp, the flying sleet rattles on my coat. I lie upon my back listening to the lapping of the waves, the crepitation of shifting sand, the rustle of the moving tide and the voices of distant brant and gulls. The cold clouds overhead have no comfort in them. My teeth chatter and a tear runs down my right cheek. Wet sand sticks to the skin between my red fingers. One small mouthful of just the right thing suffices to start in my innermost depths a dull cherry red glow that gradually diffuses itself in grateful warmth to the middle of every bone and to the ends of my wet sandy fingers. Who would object to that, I'd like to know? Now then for another brant. There comes one from away up the bay. Is he going or coming? Coming! No—going! Well, it all depends on which end his head is placed, and I cannot tell from here. He is coming! Bigger he grows and rounder he appears, and being alone will seek company. He sees the decoys and comes straight toward them without regard to the direction of the wind. Now he stops flying and comes tilting along unsteadily on curved set wings, balancing, sidling, balancing, coming, growing bigger and bigger as he skims the foamy, splattering waves without quite touching them. I'll let him alight. There, now! Right on the bar between me and the decoys. How trim his outlines are, and how gracefully he walks for one of the goose family. Why do those bright dark eyes fail to perceive me? He is young, as his wing coverts show by their ash tipped feathers, and knowing that age is to be respected he puts confidence in the old decoys, unwilling to believe that I am terrible. He scoops up a billful of sand here and there where it looks particularly tempting and asks the decoys something in a low voice. Now, I must take him into the box, for other brant will be coming. He jumps almost like a woodcock as I show him a great jack-in-a-box, and—Holloa! Right barrel snapped; left one shot a little under as the wind slanted him to one side. There he goes as fast as ever he can, away, away, away. I never saw that brant before in all my life and never shall see him again.

Out of the west horizon a corps of twenty brant comes marching along through the air, as orderly as soldiers. I throw up a hand to attract their attention. They swerve. They wanted to come to this bar in the first place, but they have somewhere seen some one else thrown up a hand to them, and the old ganders are suspicious. There are too many eyes in that flock. Some of the younger birds start toward the bar again and the wary ones follow. Good judgment don't count among friends. On they come with a great clamor, some rising, some settling, some hoarse, some clear voiced, some curving their wings to sail in, some fluttering and wavering and giving cries of warning. The whole flock huddles and separates, and huddles and rises, and wheels to go away. Then they turn and head for the decoys again, but the old birds have mounted high enough to peer over into my box and they cry "Look! Look!" with such vigor that the whole drove again whirls into a broadside for final departure nearly twenty rods away. The shot slaps and cracks against their feathers, but only one bird shells out of the flock and drops perpendicularly into the water, while the rest choose a horizontal trajectory. Too many eyes. Too far away.

It is almost noon. The tide has fallen so far away that there is no water near the bar, and no more birds will come until another tide has risen. There is plenty of

humble game within reach for the larder, though. Razor clams first! The edges of their shells are just on a level with the soft sand of the flat, but they must be approached gently, for they are sensitive in the company of strangers, and the fingers of a hungry enemy will grasp only a little maelstrom of roily water unless he is careful. I seize one of the razors, but how hard he pulls! Working him back and forth rapidly in his hole causes the water to loosen the sand all about him, and up comes a long, fat fellow, twisting his white foot in efforts to escape. When we work a razor back and forth in his hole the sand around him becomes mushy, according to a definite plan of nature, which turns the chances immediately against the clam in favor of the one who ought to have him. It will not do to be greedy and pull too quickly, for nature has decreed that in such case the bacteria are to have the nice separated foot, while man is to content himself with the pretty shell containing only liver and gills and other organic bric-a-brac. It does not take long to gather a handful of razor clams, but that is not enough, and I cannot lay them down while gathering more because they would walk off and poke themselves endwise into the sand while I was looking the other way. It makes one feel like a cannibal to eat such lively animals, but if men are half as good as razor clams, we must be cautious about criticising the habits of the Sandwich Islanders of the old school. I cannot lay this handful down, so my cap must answer for a basket. A fine panful of razors we finally have on the deck of the sloop. Capt. Jack sets up serried ranks of them in the dripping pan and puts small pieces of bacon in odd nooks and corners. When they are done a delicious steaming morsel lies upon a gaping shell, all ready for a little lump of butter and a plunge for the good of those chosen ones who know how to catch razor clams.

We pull the boat up out of the main channel and spear a few eels. Over miles of this bottom one can strike a spear blindly into the mud with fair probability of hitting an eel that has stored himself up for the winter a few inches below the surface, and in choice spots two eels sometimes come up at once in the tines of the spear. It is taking unfair advantage to spear the half-torpid things, but they are delectable and that makes a difference. Then again we can get revenge on behalf of the crabs, for nothing is more relentless than an eel that has set out to remove one by one the legs of a confused and most uncomfortable soft crab. We can spare the denizens of the bottom many such sights by incarcerating a bucketful of the offenders. When there are eels enough in the pail we push the boat over quahog ground, and no matter how hard it blows or how fiercely the sleet drives a lot of plump quahogs are soon rolling into the scuppers and wedging themselves into the rake just as our fingers get warm and dry. We have to be a little cautious in walking about, because it is a well known fact that the quahog will turn when trodden upon.

Now for the soft-shelled clams that fired a salute when we alighted upon their bar in the morning. The shooting box spade turns them out of their compact moulds in the sand half a dozen at a time. Tender and luscious they are, and so corpulent that they cannot draw their necks into the shell and close the shell at the same time. Just one thing more and the larder is complete for the day. We anchor in deep water between the submerged flats and crack open a quahog, putting a sweet clean piece upon the hook and casting the line astern. In a minute the sinker has a convulsion; I give a quick jerk and then bring up hand over fist a fish as flat as a flounder and weighing about a pound, made of just the right shape to fit the bottom of a frying pan and become nicely browned on both sides when the fins curl up in a crisp. Five or six flappy flounders are pulled up on deck, and away we go again to our safe anchorage. Who would ever go hungry on the Great South Bay? There within a radius of half a mile we have helped ourselves abundantly to brant, razor clams, quahogs, soft clams, eels and flounders, and have had such fun in doing it that we want the man who is prepared for suicide to come down here for one day's sport before he decides that life is really too much of a bother. Our hands are cold, our clothes are wet, especially at vital points. Our noses and ears would do yeoman service in a summer refrigerator. But the cabin stove has a red hot lid, and the change to dry warm woolen clothing with a cup of hot coffee will pay for a month of discomfort. I am sorry for the man who does not know how well off he is with his every-day clothes on.

ROBERT T. MORRIS.

### Fox Hunting on First Day.

LINCOLN, Neb.—A daily press dispatch from St. Paul, Neb., in this morning's paper says: "Frank Adams, of the Union Pacific bridge gang, was fishing with dynamite in the river here yesterday when a fuse, which was attached to a piece of dynamite which he held in his hand, burned too quickly and the charge was exploded before he could throw it. He was frightfully mangled, one hand being blown entirely off and the other nearly so, his face being lacerated terribly and his eyesight destroyed. It is thought he will live."

This reminds me of my early boyhood days in Ohio, when my good Quaker parents taught me that if I disobeyed the laws of the land and of God I surely would meet my punishment. But one "First Day" morning when the snow was lying about six inches deep all over the land, the air soft and balmy—just such a day as one in which I would like to give reynard a chase—I was on my way to "First Day" school when I heard the melodious music of Sounder and Cap and a half dozen of the lesser lights of the neighborhood across the woods. I could not stand that so I took the shortest cut for the scene of the chase. To head them off where I knew they would cross I started down a long hill as fast as I could run, and undertook to jump a ravine at the bottom of it. I alighted on my heel on a snag and broke the small bone in my left leg. It was some time before I could find any one to send home for a horse, but finally father came, riding one horse and leading the old bay mare for me to ride. All he said was, "I guess thee won't go fox hunting soon again on 'First Day.'" I didn't, for I hobbled around on crutches for four months. But I am inclined to think that if every one were punished in this State as this man was for disobeying the game and fish laws, hundreds of cripples would be found here.

We endorse FOREST AND STREAM's plank, "Prohibit the sale of game at all seasons," E. E.

# “Forest and Stream’s” Yellowstone Park Game Exploration.

## THE ACCOUNT OF HOWELL’S CAPTURE.

### The First News.

CHICAGO, Ills., April 27.—The FOREST AND STREAM Winter Exploration of the National Park, now just concluded, was a venture singularly fortunate in every respect. Not devoid of certain hardships, and not free from possible dangers of more sorts than one, it was nevertheless brought to a close without illness or accident to any of the party other than of the most trifling sort, and from start till close progressed with the smoothness and merriness, if not the ease and indolence, of a summer picnic. Fortune was kind and raised no obstacle too hard to be overcome. Thus the FOREST AND STREAM may truthfully say that it is the first and only paper ever to send a staff man through the Park during the winter time. Schwatka once made 20 miles of this 200 miles winter journey in the interests of the New York World. Overcome by his failing, and perhaps discouraged or disgusted by the amount of unavoidable hard work ahead (for the only possible method of locomotion in those high, rough and snowy regions, is by one’s own snowshoes), he allowed his undertaking to come to failure, and returned to his starting point with no results to show. Since him one or two other men have gone to the gates of the Park, looked at the big snow land, and resolved that it was easier to write about the winter scenery of the Park from imagination than from fact. The only man ever successful enough to go through the Park in winter, and intelligent enough to make a newspaper account of it, was Mr. Elwood Hofer, whose stories of his two trips, simply and clearly written, appeared in FOREST AND STREAM. Mr. F. Jay Haynes, the able St. Paul photographer who has done so much to make public the beauties of this wonderful region, went through the Park after the collapse of the Schwatka expedition, but never wrote of it, so far as I know. His party was lost on Mount Washburn for three days, and they all came near perishing.

The effort to learn of the winter life of this tremendous and fateful region had hitherto been, let us then say, severely frowned upon by Fortune. When FOREST AND STREAM, always rather a favorite of the fickle dame, made the attempt, Fortune relented, and all became possible and plain. To this end, FOREST AND STREAM was in the first place highly fortunate in having Mr. Hofer as a member of the party. His guidance, counsel and assistance constituted the difference between success and failure. Without him the trip could not have been what it was, and it is to him, very much more than to its staff representative, that this journal is indebted for the success of the undertaking just completed. What were the obstacles to be overcome before success could be reached, and what were the trials, the pleasures and the incidents of the winter journey through the mountains of the Great Divide, it will be a pleasure to recount later, but the first duty is to tell at first hand, and exclusively, the story of the capture of the man Howell, who was caught in the act of butchering the Park buffalo. This story, taken from FOREST AND STREAM’s first and exclusive report, has appeared in various forms and in some inaccurate shapes, in the press all over the country, and such is the importance of the occurrence that it has driven Congress to an action delayed years too long. This is undoubtedly the most dramatic and sensational, as well as the most notable and important piece of sporting news which has come up in recent years. It is news which will be historic. The

ited means at his disposal, to protect the vast tract of land which lies within the bounds of this peerless reserve of wilderness. How difficult a task this would be with many times the troops and many times the money no one can understand perfectly who does not know the Park, and who does not know what winter in the mountains means. A part of the system of the winter patrol consists of little details, usually a sergeant and two privates, stationed at remote parts of the Park. Thus there is a sub-station of this sort on the east part of the Park, on Soda Butte Creek; one on the west side, known as Riverside Station; one twenty miles from the Post, at Norris Basin; one forty miles from the Post, and near the center of the Park, at the Lower Geyser or Firehole Basin; and one at the extreme south end of the Park, known as Shoshone Station. Communication with these stations can only be made by snowshoe parties. The winter’s supplies are car-

THE BUTCHER’S WORK.

ried into the stations by pack trains early in the fall, before the impassable snows have covered all the trails. Under such conditions news would naturally travel slowly. Yet we knew of Howell’s capture, some seventy miles from the Post, the very day he was caught in the act of his crime, the news coming by telephone from the Lake Hotel. The Park Association keeps attendants at three hotels within the upper Park, not counting the one at the Mammoth Hot Springs (Fort Yellowstone), on the entrance side of the Park. There is one attendant, or winter keeper, at the Cañon Hotel, one at the Lower Basin Hotel, and a man and his wife at the Lake Hotel. All these hotels are connected by telephone with the Post, otherwise the loneliness and danger of the life of the solitary men thus cut off from the world through the long months of an almost Arctic winter would deter even such hardy spirits from undertaking a service worse than that on a lighthouse tower at sea. When the telephone line fails to work, as naturally in such a wintry country of mountain and forest it often does, old Snowshoe Pete, the line-man, is sent over the line to locate and repair the damage. He is the only man allowed to go alone through the Park in winter, and he has had some rough and dangerous experiences. When the soldiers of the out-stations wish to report to the Post they go to the nearest hotel, perhaps fifteen, perhaps forty miles, and telephone in, if the telephone happens to

from the Post, and as I was the guest of Capt. Anderson at the Post, of course I learned the news at once, and at once put it on the wire for FOREST AND STREAM, which had the information within twelve hours of the capture, which later had occurred 2,000 miles away in the roughest part of the Rocky Mountains, and four days’ journey from the nearest telegraph station, by the only possible means of travel. The next day FOREST AND STREAM was represented in Washington. Within thirty days the Lacey bill had passed the House. To FOREST AND STREAM, born under a lucky, as well as an energetic, star, will be due more than to any other one agency the thanks of the public for the ultimate preservation of one of the public’s most valuable heritages. No other paper has made the fight for the Park that this one has, and it deserves the utmost success which now seems certain to attend it. When the people finally come to look upon an undivided National Park, and one tenanted once more with some specimens at least of its grand though vanishing animals, they may thank all the men who nobly and fearlessly worked for that and so carried out the actual will of the people—they may thank all these friends of intelligence and justice and public honor and decency; but they will have only one newspaper on earth to thank, and that one will be FOREST AND STREAM.

### Capt. Anderson’s Story.

When Capt. Anderson came in after hearing the news of this capture, he was positively jubilant through every inch of his 6ft. 3in. of muscular and military humanity. He couldn’t sit still, he was so glad.

It was some time before I could get from him the story of the plans leading up to the capture.

“I knew that Howell had been in the Park,” said he, “and had an idea that he was over on Pelican Valley somewhere. I sent Burgess in after sign once before this winter, but Burgess broke his axe and had to come back. I told Burgess this time that I wanted him to come back this time with a whole axe and a whole prisoner, if possible. I knew that Howell had come out of the Park for supplies, not long ago. He came out from Cooke City, where he hails from. He brought out his toboggan, and took back a load of supplies with him. I knew he must leave a broad trail, and knew that if Burgess could strike his trail and follow it into the Park, not out of it, he could catch him sure. Burgess has been scouting on Pelican, as directed. He says, by telephone, that he found the trail early in the morning, and followed it till he found a cache of six buffalo heads, hung up in the trees. Then he followed the trail a good distance till he found Howell’s tepee. While he was there he heard shots. Approaching carefully, he saw Howell skinning out the head of one of five buffalo he had just killed. Making a careful run over the 400yds. of open ground between Howell and the timber he got the drop on Howell. Burgess had with him no one whatever but one private, Troike, who was not armed and who stayed back in the timber. Capt. Scott, Lieut. Forsyth and party were at the Lake Hotel not engaged in this scout at all. I must say that Burgess’s action has been in every way highly courageous and commendable, and I shall be glad to commend him publicly. He made his arrest alone and brought his man into the Lake Hotel to report for orders. I have ordered him to bring his prisoner on in to the Post as quickly as he can. To-morrow I start out a party on snowshoes from here to bring in all the heads and hides of the buffalo killed. I have ordered Howell’s tepee and supplies burned. His arms and outfit will be confiscated, and I will sock him just as far and as deep into the guard-house as I know how when I get him, and he won’t get fat there, either. That is all I can do under the regulations. I shall report to the Secretary of the Interior and in due course the Secretary of the Interior will order me to set the prisoner free. There is no law governing this Park except the military regulations. There is no punishment that can be inflicted on this low-

THE BUTCHER’S WORK.

THE BUTCHER’S WORK.

Howell buffalo slaughter marks an epoch, the turning point, let us hope, in the long course of a cruelly wasteful indifference on the part of the United States Government in the matter of one of the most valuable possessions of the American people—a possession growing yearly less and less through this indifference, and which as it has grown less has increased in value, since when once destroyed, it can never by any human power be replaced. Had not FOREST AND STREAM been born under a lucky as well as an energetic star, it could not have enjoyed the journalistic good fortune of having a man right on the spot—and a most remote and improbable spot, too—to obtain exclusively for its service this most important piece of news. Now that we are out of the mountains, the first opportunity offers to give the story in accurate detail.

### The Telephone Carries It.

Capt. Anderson, the best superintendent the Park ever had, and one good enough to be retained there for an indefinite term, is a thoroughly fearless and energetic man, and disposed to do all that lies in his power, with the lim-

be running. Burgess, the only scout whom the munificent U. S. Government provides for the protection of this peerless domain—a domain which any other power on earth would guard jealously as a treasure vault—makes scouts from time to time in all directions through the Park, traveling of course on snowshoes. He may sleep and get supplies at some one of the out-stations, or of one of the three winter keepers of the hotels, or it may be that he will hole up for the night in one of the several shacks built at certain secluded portions of the mountains for this purpose; still again, he may have to lie out in the snow, perhaps without a blanket, perhaps with nothing to eat. This all depends on circumstances. A poacher’s trail has to be followed hard and sharp, with no let-up and no returning. It was fortunate for Burgess that he caught his man within a day’s march of the Lake Hotel. He brought him in to the Lake Hotel that day and at once telephoned to Capt. Anderson, commanding officer at the Post, Mammoth Hot Springs. The message was received at the Post about 9:30 in the evening, Monday, March 12. This was just before Hofer and I started into the Park

down fellow. I only wish I had the making of the law and the devising of the penalty. I’ll bet you this man wouldn’t soon go at large if I did have.”

### Scout Burgess’s Story.

This was Capt. Anderson’s story of the plan that led to the capture, a plan evidently wise and well laid. But how wide a difference there remained between this plan and the actual arrest I never knew until I had seen the Park itself in all its immensity, its impenetrableness, its forbidding and awful regions of forest, precipice and crag, until I had traversed with weary feet some of those endless miles of bottomless snow; until I learned how utterly small, lonely and insignificant a man looks and feels in the midst of solitude so vast, so boundless, so tremendous and so appalling. Then I knew that the man Howell was in his brutal and misguided way a hero in self-reliance, and that Scout Burgess was also in courage and self-reliance a hero, nothing less. Howell, or any like him, I hate instinctively, but I salute him. To Burgess the salute will come more easily from any man who knows

the facts and knows what a winter trail in the Rockies means.

Burgess's story of the capture, as told by himself, simply and modestly, would make it out no great thing. This story I heard from Burgess himself at Norris Station, which point he had reached, coming out with his prisoner at the same time the FOREST AND STREAM party made it, going in. We spent the night there together.

"I expect probably I was pretty lucky," said he. "Everything seemed to work in my favor. I got out early and hit the trail not long after daybreak. After I had found the cache of heads and the tepee, over on Astringent Creek, in the Pelican Valley, I heard the shooting, six shots. The six shots killed five buffalo. Howell made his killing out in a little valley, and when I saw him he was about 400 yds. away from the cover of the timber. I knew I had to cross that open space before I could get him sure. I had no rifle, but only an army revolver, .38 cal., the new model. You know a revolver isn't lawfully able to hold the drop on a man as far as a rifle. I wouldn't have needed to get so close with a rifle before ordering him to throw up his hands. Howell's rifle was leaning against a dead buffalo, about 15 ft. away from him. His hat was sort of flapped down over his eyes, and his head was toward me. He was leaning over, skinning on the head of one of the buffalo. His dog, though I didn't know it at first, was curled up under the hindleg of the dead buffalo. The wind was so the dog didn't smell me, or that would have settled it. That was lucky, wasn't it? Howell was going to kill the dog, after I took him, because the dog didn't bark at me and warn him. I wouldn't let him kill it. That's the dog outside—a bob-tailed, curly, sort of half-shepherd. It can get along on a snowshoe trail the best of any dog I ever saw, and it had followed Howell all through the journey, and was his only companion.

"I thought I could maybe get across without Howell seeing or hearing me, for the wind was blowing very hard. So I started over from cover, going as fast as I could travel. Right square across the way I found a ditch about 10 ft. wide, and you know how hard it is to make a jump with snowshoes on level ground. I had to try it, anyhow, and some way I got over. I ran up to within 15 ft. of Howell, between him and his gun, before I called to him to throw up his hands, and that was the first he knew of any one but him being anywhere in that country. He kind of stopped and stood stupid like, and I told him to drop his knife. He did that and then I called Troike, and we got ready to come on over to the hotel. It was so late by the time I found Howell—you see he was a long way from his cache or his camp—that we didn't stop to open up any of the dead buffalo. We tried to bring in some heads, but we found we couldn't, so we left them.

"Howell had been in camp over there for a long time. I only found 6 heads cached. He wrapped them up in gunny sacks and then hoisted them up in trees so the wolves couldn't get at them. He had a block and tackle, so that he could run a heavy head up into a tree without much trouble. He was fixed for business.

"Howell said to me that if he had seen me first, I 'would never have taken him.' I asked him why, and he said, 'Oh, I'd have got on my shoes and run away, of course.' I don't know what he meant by that, but he'd have been in bad shape if he had, unless he had taken his rifle along, for I had already found his camp."

#### Howell's Story.

Howell was, we found, a most picturesquely ragged, dirty and unkempt looking citizen. His beard had been scissored off. His hair hung low on his neck, curling up like a drake's tail. His eye was blue, his complexion florid. In height he seemed about 5 ft. 10 in. His shoulders were broad, but sloping. His neck stooped forward. His carriage was slouchy, loose-jointed and stooping, but he seemed a powerful fellow. Thick, protruding lips and large teeth completed the unfavorable cast of an exterior by no means prepossessing. He was dressed in outer covering of dirty, greasy overalls and jumper. He had no shoes, and he had only a thin and worthless pair of socks. He wrapped his feet and legs up in gunny sacking, and put his feet when snowshoeing into a pair of meal sacks he had nailed on to the middle of his snowshoes. The whole bundle he tied with thongs. His snowshoes (*skis*) were a curiosity. They were 12 ft. long, narrow, made of pine (or spruce), Howell himself being the builder of them. The front of one had its curve supplemented by a bit of board, wired on. All sorts of curves existed in the bottoms of the shoes. He had them heavily covered with resin to keep the snow from sticking to them. To cap the climax he had broken one shoe while in the Park—a mishap often very serious indeed, as one must have two shoes to walk with, and otherwise cannot walk at all. With the ready resources of a perfect woodsman, Howell took his axe, went to a fir tree, hewed out a three-cornered splice about 5 ft. long, nailed it fast to the bottom of his broken shoe, picked out some pieces of resin, coated the shoe well with it, and went on his way as well as ever. He said he could travel as far in a day on those shoes as any man in the party could with any other pair, and I presume that is true. Moreover, Howell pulled a toboggan behind him all the way from Cooke City with a load of 180 lbs. None of us could pull a toboggan behind *skis*, and we would not wear web shoes. Howell's toboggan was 10 ft. long, and had wide runners, like *skis*. He said a flat-bottomed Canadian model toboggan was no good, as it pulled too heavy.

At the Cañon Hotel Howell ate twenty-four pancakes for breakfast. He seemed to enjoy the square meals of captivity. At Norris he was always last at table. He was very chipper and gay, and willing to talk to the officers, Capt. Scott and Lieut. Forsyth, on about any subject that came up, though the officers mostly looked over his head while he was talking. He was apparently little concerned about his capture, saying, as I have already mentioned, that he stood to make \$2,000, and could only lose \$26.75. He knew he could not be punished, and was only anxious lest he should be detained until after the spring sheep shearing in Arizona. He is an expert sheep shearer, sometimes making \$10 and \$15 a day. He has money always, and was not driven to poaching by want or hunger.

"Yes," Howell said, in reply to our questions, "I'm going to take a little walk up to the Post, but I don't think I'll be there long. About my plans? Well, I haven't arranged any plans yet for the future. I may go back into the Park again, later on, and I may not. No, I

will not say who it was contracted to buy the heads of me. I had been camped over on Pelican since September. It was pretty rough, of course. If you don't think it's a hard trail from Cooke City to Pelican Valley, you just try pulling a toboggan over Specimen Ridge.

"If I'd seen Burgess first, he'd never had arrested me. I'd have got away from him. It was so windy and stormy, I never heard him till he got right up against me and hollered for me to put up my hands. He was sort of blowin', and was nervous like. I see I was subject to the drop, so I let go my knife and came along."

#### Private Larsen's Story.

Larsen, one of the men Capt. Anderson sent in with our party, talked with Howell later in the day, when most of us were away, and Howell was freer with him. Larsen says that Howell told him he had been camped in the Park since September and that at first he had a partner, a man by name of Noble, but that they had a falling out and he run Noble out of the camp. Noble went out at the south end of the Park, not going back to Cooke City. Howell said there was nothing in being arrested, they couldn't do anything to him. Howell also said he "supposed them — fellers would want to get a photograph of him in the morning, but he wasn't going to let them." (Nevertheless, one had already been made of him and in the morning I got a shot at him without his consent, while he was stooping over and fastening his shoes. He tried to spoil the picture by rising and coming toward me. He had told me previously that he would not have any pictures taken and I was sorry to be so impolite about it. Capt. Scott, who had at that time gone on down the trail with Lieut. Forsyth, had said to me that if I preferred it he would give me the privilege of photographing Howell standing on his head. On the whole I believe that would have been nicer, if Howell could have been induced to look pleasant. The negative is not yet developed, but my impression is that he wasn't looking so very pleasant over the surreptitious FOREST AND STREAM shot at him.)

#### The Butcher's Work.

The party sent out by Capt. Anderson to bring in the heads and hides of the slaughtered buffalo consisted of Sergt. Kellner and two privates. They passed the incoming party between Norris and the Cañon, and pushed on down at a hot pace to the remote corner of the Park where the butchery took place. The second day out from Norris found them near the spot, but it was two days later before the animals were found, a fall of snow having covered them up, and Troike, the private who was with Burgess at the capture, having lost his head entirely about the localities. If it was so hard a spot to locate among the interminable mountains, even after a man had been there but a few days before, how much harder must it be to locate a poacher whose whereabouts is not known at all, but who has the whole great winter wilderness of the Park to surround him and his doings? The only wonder is that arrests can be made at all, where the country is so great and so difficult, and the special police of the Park limited to just one scout. The need of more scouts is too apparent to require comment.

When finally the butcher's work had been found again, it was learned that most of the robes and some of the heads were ruined for lack of proper care, Howell having been stopped too early in his work for this. The scene of the butchery was a sad sight enough for any one who has the least thoughtfulness in his make-up. The great animals lay slaughtered in the deep snow in which they had wallowed and plunged in their efforts to escape. To run up to them on the *skis* and to shoot them down one by one—only six shots to kill the five buffalo outright—was the work of the clumsiest butcher. In the snow these animals are absolutely defenseless. Howell could have killed more of the band, if there had been more, and he would not have stopped had there been more to kill. As I shall show later, I think he had killed far more than the eleven head discovered. I think his partner, Noble, left the camp of his own free will, and took out a load of heads at the lower end of the Park. I do not consider it impossible, from news I had after I left the Park, that Howell took out some heads with him when he went out to Cooke City after supplies. As FOREST AND STREAM has said, he was killing cows and calves in this last killing. He had been in camp since September, and he was killing cows and calves. I cannot evade the belief that he would kill any buffalo he could get to. He could prepare and hang up a good many in five months.

The heads and the available robes were brought first into the Lake Hotel. Capt. Anderson sent another party over the long trail from the Post, and the spoils were finally received at the Post the first week of April. The capture of Howell had required two trips by Burgess, aggregating 250 to 300 miles, one trip by the first detail of three men, nearly 150 miles, and a final trip of a little less than the latter distance by the detail who carried in the plunder. The heavy heads and hides all had to be packed in on the backs of the men. Every foot of the way had to be traveled on snowshoes. No men but just these hardy ones could do this work. For a time the Park had more men in it than it ever had in winter time before. The stir was all over this miserable specimen of humanity who was heartless enough to kill all he could of the few remaining buffalo left alive on earth to-day. These bare words convey no idea whatever of the hardships and dangers incurred in the winter patrolling of the Park. To criticize the military, or to say that Capt. Anderson should have caught the fellow sooner, is to display a total ignorance of the conditions, and to be absurdly unjust as well as ignorant. For such ignorance and injustice we must look first in just the quarters where it should not exist. Nowhere can we find an ignorance and indifference on this subject equal to that which has so long existed in the halls of Congress. It is time the change should come.

#### No Penalty.

Let us remember, then, first, that Howell was killing cows and yearlings; second, that the few buffalo left are helpless when pursued in the snow; third, that for a crime of this sort Congress provides no penalty! As this is written the word comes that the Secretary of the Interior has ordered the release of Howell from custody. On this old basis he can now go into the Park again and kill more buffalo, and have another hunt made after him by the U. S. Army. Let us hope that by the time this shall be in print there will have been a new basis established by Congress, so that such villainy as this shall ob-

tain a punishment, prompt, adequate and just. Kill a Government mule and try what the U. S. Government will do to you. Yet a mule can be replaced. A buffalo cannot be replaced. This is the end. But kill a Government buffalo, and what does the U. S. Government do? Nothing! Absolutely nothing! This is the old basis. Let us sincerely hope that the new basis will come soon and that it will be widely different. Gentlemen of Congress can surely only need to have the matter called to their attention, and this has been done in the various measures this year submitted by the members who know the facts.

In a later article I shall advance the facts on which I base the firm belief that half the buffalo of the Park have been killed, and that not over 200 now remain alive. The Howell killing above described has been only a part of the total. Nineteen head were killed by Indians southeast of the Park last fall. Seven heads were offered to a Bozeman taxidermist for sale (not of these 19 heads) from Idaho this winter. We found what we supposed to be 6 or 8 dead buffalo in the Hayden Valley. I have track of several other heads that have this year appeared in Montana towns. No one knows how many heads have been quietly bought by Sheard or another Livingston taxidermist. Certain it is, that the traceable total of buffalo killed this year in the Park is alarmingly, appallingly large. There are not very many more now left to kill.

#### The Snowshoe Trail.

The method of work in scouting for a poacher is simple if arduous. The scout must know the country and the course likely to be taken in the Park. He circles to cut the trail of the man he wants. The snowshoes leave a deep, plain trail on any ordinary snow (except crust), and this will remain for weeks. Even if covered by later snow, the trail will eventually become evident again. The trail packs the snow under the line of the shoes. In the spring when the snow begins to melt, a snowshoe trail will not melt and sink, but will show up in the form of a little ridge above the level of the snow, the other snow melting and sinking below it. The poacher can get in in no possible way but on snowshoes, and he cannot travel without leaving a trail which for the rest of the season will endure, though part of the time it may be invisible under new snow.

#### A Plucky Scout.

I can not leave this description of the Howell capture without mentioning one fact showing the indomitable grit of the scout Burgess who brought Howell in. We were all looking out over the trail when Burgess and his prisoner came in sight. Howell, of course, was ahead, but we noticed that Burgess was limping very badly. How he was able to travel at all was a wonder. When he got in by the fire he said nothing, but took off his heavy socks, showing a foot on which the great toe was inflamed and swollen to four times its natural size. The whole limb above was swollen and sore, with red streaks of inflammation extending up to the thigh. How the man ever walked I can not see. I noticed that Burgess had lost the two toes next to the great toe, and that the scar of the cut ran half way through the great toe. He told me, quietly, that the Crow Indians did that for him. They made him put his foot on a log, and amused themselves by cutting off his toes, taking two off clean and nearly cutting off the great toe. Since then the circulation had been bad in that member, and he had frozen it more than once. It had been frozen again on this trip, and was now in bad shape. Yet in spite of this injury, which would have disabled most men, Burgess passed the evening calmly playing whist, and the following morning again took the trail, making the twenty miles to the Post before evening, and delivering his prisoner safely. The post surgeon, Dr. Gandy, after making examination of Burgess's foot, at once amputated the great toe, thus finishing what the Indians had less skillfully begun some years before.

E. HOUGH.

609 SECURITY BUILDING, Chicago.

#### RAMBLING IN WYOMING.

[Concluded from page 354.]

WHEN Yellowstone Park was reached all guns were sealed and all fresh uncooked meat was taken from us before we were allowed to proceed. A spool of Uncle Sam's proverbial red tape was produced, several turns of which were passed around the stock and lever of each gun and securely tied, the knot being sealed and stamped. To use the gun without disturbing this seal was impossible. The seals were carefully examined at every military station we passed, and had any been found broken the gun would have been confiscated. The Park is of great interest to every hunter; it is a vast breeding ground for large numbers of deer and elk, and some 600 buffalo; thus the outlying country is continuously stocked and hunting will always be good.

It is entirely mountainous and densely timbered with pine and spruce; its mountains are not rough and precipitous, and but for the timber, traveling in any direction would be easy; so dense are the woodlands and so extensive and impassable are the "windfalls" that one finds it very difficult to travel even on horseback.

The Government has obviated this difficulty by building good roads throughout the Park; they are broad, of easy grade, and well kept. Every point of interest can be reached on these beautiful highways.

Fifteen miles north of Snake River station we reached Lewis Lake, the source of the Lewis Fork of Snake River, where were found a camp of twenty men building a Government road from West Thumb, on Yellowstone Lake, to the Park's southern limits, a distance of twenty-five miles.

Lewis Lake is a splendid body of water, nearly round, covering about four square miles, surrounded by a dense forest growing to its very edge and veing with the famous Blue Lakes of California in the blueness of its waters.

Ten miles northward Yellowstone Lake was sighted, a body of water fifteen by twenty miles, much resembling the human hand in shape, and about 8,000 ft. above the sea level. It is the largest body of water in America at such an altitude.

The point touched was an arm of the lake called "The Thumb." The hotel syndicate had erected here a large tent in which was a restaurant and sleeping apartments for the accommodation of travelers. Here was seen the genuine tourist; it was a common sight to see him with one optic carefully protected by a round glass and carrying a pair of opera glasses and a kodak. On one occasion

the amusing spectacle was presented of the timid tourist viewing at close range a harmless looking hot spring with his carefully-adjusted opera glasses and seeming fearful lest at any moment it might "bust."

The borders of the lake contain numerous hot springs, the temperature of whose waters ranges from 180 to 190°; several of these springs and paint-pots are located at "The Thumb," some have an intermittent overflow, their contents rising and falling like the bosom of a sleeping giant. Many of the springs are in the edge of the lake, the disturbance of the water indicating their presence. Within a few feet of the lake's edge is an immense hot spring 20ft. in diameter; its waters are placid but very hot; and its perpendicular walls are covered with sulphate of copper, giving to its contents a beautiful blue color and yet not marring its crystal clearness. Stepping to its edge and looking down one can see to the appalling depth of 60ft. and yet fail to see the bottom hid in its azure depths.

Four or five hundred feet from the edge of the lake is one of the most famous paint pot basins in the Park; by many it is considered the prettiest to be seen. This paint pot is a flat basin 50ft. in diameter, its edges being slightly raised and containing a seething mass of finely colored clay. Each boiling point is surrounded by a series of zones of many colors from cream white to red; every hue of the rainbow can be seen, the most attractive tints being the pink, red and pale blue.

Yellowstone Lake, as do most of the streams in the Park, contains speckled trout, and the reputation of the Park as a fine fishing ground is world-wide; but he who has not cast a fly in the famous waters of Kern River, California, or stood on the banks of the lovely, peaceful Ten Sleep and the joyous Paint Rock in the Big Horn Mountains, knows little of the pleasures of trout fishing. Fish in the lake are not plentiful and are nearly all diseased; split open the flesh along the spine and you find it infested by myriads of small worms. With the exception of a few of these parasites attached just behind the forward fins the fish appears healthy. The diseased condition of these fish may perhaps be accounted for by the presence in the water of large quantities of alum, lime, sulphur and copper.

Nineteen miles from the Thumb in a westerly direction lies the Upper Geyser Basin, and thither we proceeded, traveling over the beautiful highway recently constructed by the Government. Three miles this side of the Basin is to be seen the prettiest geyser in the Park, the Lone Star. The cone of this geyser is 12ft. across the base, tapering gradually toward the summit, which is 8ft. across. In the center of this cone's summit is the crater, an irregular oblong opening 2 by 3ft., and from which there issues every half hour a column of hot steam and water to a height of 60ft., the eruptions being accompanied by tremendous hissing, thundering sounds, which are heard at a great distance. The beauty of this geyser is in its attractive cone, bearing stripes of brown, yellow, lavender and red, and being thickly covered from summit to base with a variety of beautiful pearl-like beads.

A short distance from this geyser runs the pretty stream called Firehole River. In it Mr. Broder caught a number of the famous Loch Leven trout imported from Scotland. These fish deserve more than a passing mention. Their average length is 6 to 7in. The belly is a light gray, and the sides are dotted by a number of bright carmine spots upon a greenish background, each spot being encircled by a distinct zone of delicate blue, while the back of the fish is marked by a number of dark wavy lines, strongly resembling those seen in a "stub and twist" shotgun barrel. Holding the fish in the hand and occasionally changing its position, a number of rich colors are given; now it appears covered with a sheen of silver, then green; a slight change of position and it is all carmine or blue.

The Upper Geyser Basin has an area of three or four square miles and is drained by Firehole River. A large hotel provides accommodations for tourists. This basin contains twenty-six geysers and about 400 hot springs. Within this narrow domain are the grandest and mightiest geysers in the world.

Here are seen hundreds of pools of scalding water, whose varied tints of color, immense size and appalling depth make them universal wonders.

The Basin is almost devoid of vegetation; clouds of white vapor hang like a canopy above it; upon every hand columns of hissing steam shoot upward; the air is filled with sulphurous fumes; the earth trembles and is filled with weird, awful sounds. It is a realization of Dante's Inferno.

The most popular and one of the most remarkable geysers is Old Faithful. Once every sixty-five minutes, year after year, with unvarying regularity, this remarkable curiosity gives a free exhibition to all who lend their presence. About five minutes preceding an eruption a tremendous rumbling is heard, a quantity of water is thrown out and the geyser shows signs of great agitation; all seems quiet for a time. Suddenly, with the shock of a cannon, a column of water two feet in diameter is thrown to a height of 150ft., where it remains stationary for five minutes. A geyser is due to the presence of a large steam chamber at a considerable distance beneath the surface of the ground, whose outlet passes through a body of water; the steam accumulates in the chamber until its pressure is sufficient to force out the water.

Some other remarkable geysers of the Upper Basin are the Beehive, Giantess and Giant. The Giant plays every six days at intervals of two hours, its eruptions reaching a height of 250ft.

Lower Geyser Basin, eight miles away, was the next point of interest. We passed numerous hot springs and geysers, the most noteworthy being Excelsior. This geyser was discovered in 1871, but it was not until 1881 that it was found to be the powerful geyser that it is. Its crater is 400ft. long by 200ft. wide and filled with water of a deep blue color in a state of great agitation. The eruptions occur once every five to eight years, at intervals of one to two hours, during which water enough is thrown out to raise Firehole River several inches; columns of water are thrown 250ft. high and tons of rock are hurled into the air, some pieces falling 500ft. from the crater. Lower Geyser Basin is a large valley of thirty or forty square miles and containing over six hundred hot springs and seventeen geysers. They do not compare in size and interest to many of those already described.

The Yellowstone Park Association have erected a fine hotel here. Eighteen miles northeast we entered Norris

Geyser Basin, occupying an area of six square miles and containing numerous hot springs and geysers that bear trifling interest to one who has visited the upper basin.

From Norris Basin a side trip of 11 miles almost due east was taken to see the great falls and grand cañon of the Yellowstone, and though the journey was made in a storm of snow, rain and wind, each felt greatly compensated for his trouble. The falls are 18 miles below Yellowstone Lake. Here the Yellowstone, a stream the size of Big Kern River, plunges into a cañon 7 miles long and 1,500 to 2,000ft. deep. The river suddenly contracts from a width of 200ft. to 75ft., and makes an awful leap of 360ft. The solid sheet of water as it pours over the precipice bears a beautiful green color that is soon displaced by one of snowy whiteness as the mass in its descent breaks into fine spray, which, striking upon the boulders beneath, rises in fine mist high against the majestic walls of the cañon, where it condenses and returns in innumerable silvery streams. Beautiful and grand is the cañon below the falls, and upon this occasion it was seen under the most charming conditions. A light snow had just fallen and the highly colored walls were dappled with pure white, while far, far below ran the beautiful Yellowstone, now seeming but a tiny silvery ribbon and not the great river which a moment before rushed so madly over the precipice.

To the Californian the weather was now quite cold, the ground being covered with 4 to 6in. of snow. We began casting about for a more congenial climate; visions of sunny California rose up before us, and we determined to bid adieu to the Park.

A journey of 30 miles brought us to a small town called Cinnabar just outside of the northern boundary of the Park, it being the terminus of the Park branch of the Northern Pacific Railroad. And when near this point we effected a sale of our outfit, save personal effects, at a price slightly above cost, our joy knew no bounds. Four or five days' travel by rail brought us home, having made the entire journey in 90 days, 800 miles of which was accomplished on horseback. T. J. PATTERSON.

---

### "THE BIRDS OF ONTARIO."

In the recent bibliography of North American ornithology few local lists have more importance or are more frequently quoted than those of Mr. McIlwraith, of Hamilton, whose last contribution, "The Birds of Ontario," has just been published, brought up to date.

It was in 1860 that the author published his list of the birds of Hamilton, which half a dozen years later was printed in the "Bulletin of the Essex Institute," and then included 241 species. The list attracted much attention, and was at once valued at its true worth. As time went on the field of Mr. McIlwraith's observations was broadened, and in 1885 he read before the Hamilton Literary and Scientific Association an extended paper on the birds of Ontario, and this paper was published in book form the following year under the auspices of the Hamilton Association. The original volume was modest enough, but ornithologists were quick to recognize that it was full of valuable information. It has been long out of print, and to those who do not possess a copy is accessible only in libraries.

It is interesting to observe the growth of this list from its first modest beginning, covering the avifauna of a single town, to its present proportions—a book of more than 400 pages, covering the area of a great Province.

The recent announcement that a new edition of this useful work would soon appear was received with satisfaction by all ornithologists and collectors, and it is gratifying now to have the volume before us from the press of Wm. Briggs, of Toronto, Can.

The region where Mr. McIlwraith has conducted his investigations is on many accounts a most interesting one, for here species of the far north sojourn in winter, while many southern birds breed there in summer or occur as stragglers far away from their real homes. It possesses in a peculiar degree advantages for birds of the north and of the south at their proper seasons. We can well understand, therefore, that so keen an observer as Mr. McIlwraith, whose observations have been extended over many years, would give us a most interesting list of birds as well as one much larger than was to be expected. This we find to be the case; no less than 317 species being enumerated in this handsome volume of 426 pages.

Each species mentioned is described briefly but characteristically, its habitat is given, and the position and material of its nest, together with the number of eggs and their color. Then follow the author's notes on the species, sometimes brief, but at others extended through a length of three or four pages.

The classification and nomenclature used are of course the most modern, and correspond with the A. O. U. check list of North American birds. The notes on the different species are, as was to be expected, of very great interest, and will be read by every one who is interested in birds.

Many surprises will await the reader of these pages. Species like Cory's bittern, the black rail, the ruff, Richardson's grouse, rock ptarmigan, Audubon's caracara and the summer tanager seem quite out of place in Ontario, and some of these records greatly extend the limits of particular species. On the authority of a less experienced observer than Mr. McIlwraith we should hardly credit the occurrence of a form of the blue grouse from the neighborhood of the Sault Ste. Marie.

A very important though small fraction of the book is its introduction. The four or five pages which treat of our birds and their habits are very interestingly written and are full of suggestion to the student. The subsequent pages on collecting and preparing specimens and nests and eggs are also extremely interesting and cannot fail to be most useful.

The volume is quite fully illustrated, many of the engravings being drawn by Mr. E. E. Thompson, while some are from ornithological works with which we are all familiar. There is at the end of the volume a glossary of technical terms used in the description, together with a good index.

The volume has distinctly been brought down to date and contains the results of many observations on different species of birds from all parts of the country. Among the works especially to be mentioned are Mr. E. E. Thompson's "Birds of Manitoba," Mr. E. W. Nelson's "Observations on Birds of Alaska," Dr. Fischer's "Hawks and Owls of the

United States in Relation to Agriculture," Capt. Bendire's "Life Histories of North American Birds," Mr. Davies's "Nests and Eggs of North American Birds," and Mr. Chamberlain's "Catalogue of Canadian Birds." All these works are spoken of in his preface by the author. On the whole, it may be said that Mr. McIlwraith has given us a volume of northern birds which is of great value.

---

### JAGUARS AND DOGS.

(See "Jaguars in Honduras" in issue of April 7.)

JAGUARS are not really such bad neighbors as they might be; in fact, I am inclined to think that they are generally rather friendly, although one will sometimes act rather unpleasantly. As, for instance, when one lit on the back of one of our Waika lads as he was passing, with head bent low, beneath the branches which overhung the trail of the wares that he was hunting.

Jaguars—tigers they are called in tropical America—have a warm appreciation of the virtues of dogs; and if these had not keen noses, tongues ever ready to loudly voice objections to the near approach of the big felines, and wholesome respect for the sharp claws of their lithe foes, many if not most of the dogs of Central and South America would find snug quarters inside of the spotted skins. The dogs would not be safe even in the towns, for the tigers, like the mountain lions, travel far in a night, and do not greatly fear the near neighborhood of man.

He who was once Governor of a department of Honduras told me this story of an experience a dog of his had with a jaguar, as evidence that a tiger prefers dog to man:

"I left my canoe one day, when making a trip up the Rio Tinto, to cut across a narrow point while the crew paddled around the long bend, for a norther was blowing fresh and sitting in the pitpan was cold work. The trail across the point was pretty good, although it was walled by gamelote and by needle palms and other bushes much of the way."

The needle palms (*Bactris major*) are covered from root to extreme tip of midrib of every leaf by slender black thorns, their points as sharp as any needle. These enter the skin with perfect ease and break off quite as easily, therefore are things to be avoided. And gamelote is a grass which grows to a height of 6 to 8ft., so densely that iguanas often scurry away on the tops of the bending leaves and stalks. No man can make his way through a patch of this grass without cutting a path; but the thick-skinned tapir crushes through to his bath, and peccaries, tigers, pumas and other beasts of the forest follow the way thus opened, until in time it becomes worn into an established road which is only a leafy tunnel.

"A tiger suddenly jumped out of the grass into the trail before me," the Governor continued. "My heart struck the nails in my shoes, for the only deadly weapon nearer than the canoe was the penknife in my pocket."

"It's all up with you this time, my friend," said I to myself. But I needn't have been scared, for when she jumped, as she did before I could say "scat" to her, she merely brushed against my leg hard enough nearly to knock me down, and lit on my dog like a hawk on a June-bug. He gave just one little yelp as she swept on into the grass on the other side of the trail.

"I just tore along that trail back to the canoe—I knew that I would find it where I left it, and that the crew would be smoking, if they were not asleep. You may bet your life that I said things to myself about myself as I went, for being fool enough to go into the bush without gun or pistol, or even a machete to defend myself with."

"I got my revolver and went back with one of my Indians. The Paya stopped before we reached the place where the tiger had jumped the dog."

"Tigre there," said he, pointing to a big ceiba.

"We sneaked through the bushes perhaps thirty feet, then the Paya stopped and pointed ahead. There that tiger was, stretched on the ground, with her forepaws resting on the dog, growling to herself."

"Well, she never knew what hit her. She scarcely kicked once, but the .44 tore the skin on her head pretty badly." E. W. PERRY.

### The Baby Caribou on the Stage.

Editor Forest and Stream:

Last summer the FOREST AND STREAM published an account of the baby caribou which I had found and had taken home and given into the maternal charge of a cow, which had lost her calf. The little fellow sucked for a fortnight, until it got so strong and showed the caribou nature and pawed the cow's bag with his fore feet, that they feared it might get injured when striking so hard, as the cow would look surprised.

He drank the milk of the cow all summer and was as healthy and happy as any of the domestic animals.

In the autumn I started from Maine for Boston with the little caribou. It stood the journey well and met with friends everywhere on the way. I only feared they would kill it with kindness. Children especially were delighted with it.

Mr. Crabtree, of the Park Theater, Boston, had been writing for it to appear on the stage in the play called "Venus." The little fellow went through his part well, and for his reward I gave him an apple. He was not afraid of the music and people, but seemed right at home.

To make a long story short, he is alive and well to-day and has every promise of a long life. He is very quick to learn tricks, and will jump over a pole, when held before him, as many times as you want him. He loves to be petted and fondled, and shows jealousy if I caress another animal before him. Once a little dog strayed into his yard. I petted the dog and gave him milk. The caribou showed temper and struck at me, for the first time, much to the amusement of the men looking on. They asked me to pet the dog again, which I did, when he showed the same disposition. I then petted him; and he ran his head under my coat front and forgot the insult. He is kind and gentle to every one, but has a preference for me; he loves to swim in the Charles River and enjoys a run when taken out. I shall have him in a park this summer, if I do not sell him.

I noticed in FOREST AND STREAM that Mr. Vanderbilt had no success with his caribou. They must have been captured when quite old and pined for their freedom. This one knows nothing about the woods and freedom. He is acclimated here and I feel confident that he would thrive in the Middle States as well as in Massachusetts. He is the cutest pet I ever knew, and can be taught easily. E. L. CHASE.

### Lynx and Wolverine.

LAKE BARROWS, Wyo.—In looking over one of the March issues of FOREST AND STREAM, I notice two short articles in regard to the lynx. One was by "Kelpie" and one by "R. S. B." I was surprised to hear that the Canada lynx was such a dangerous animal. For the last eight years I have captured from twelve to fifteen each year and never had one attack me yet, unless cornered, and there is very little fight even then. And you seldom ever see them, although they may be all around you in the timber. The wildcat (sometimes called bob cat in this country) will show considerable fight if cornered or wounded. They look very much like a lynx, excepting the feet, which are shaped like those of a domestic house cat, while the lynx's foot is large for the size of the animal. It is very well adapted for the deep, soft snow they have to travel in winter and for catching the northern hare, which is their principal food.

And by the way, J. G. Rich, in giving in FOREST AND STREAM a short history of the hare (*Lepus americanus*) claimed that there were none in the Western States. In the Rocky Mountain States, where there is timber, they are very plentiful.

You all can tell about your fighting animals, but I will put a wolverine against the best of them for his size, or twice his size, when it comes down to business. I have one now in confinement, and I had quite a time getting him there.

A year ago last January I was passing along on snowshoes near my camp when I noticed a lone elk lying down in the snow. On my coming near, it attempted to get up, but could not raise its forequarters. I thought I would find out the trouble. The snow near the elk for about an acre of ground was all tracked up by the elk, with a lot of wolverine tracks mixed in. On examining the creature I found a hole dug in the back over the backbone, where I could put my fist in. The cords or sinews along the back were entirely severed. It was plain to see that a wolverine had sprung upon her back, and while tearing round through the snow had clung to her and entirely crippled her, and I have no doubt that it would have killed the elk in a short time but for my coming along, as I saw his tracks where he ran away. It was a full grown cow elk in good flesh. To think of an animal not weighing over 25 lbs. to undertake such a job is wonderful indeed.

I killed the elk to put her out of misery and went and got a steel trap and set it, and got the wolverine the next time I went to the trap. MOUNTAINEER.

[The hare referred to by our correspondent is, we presume, the snowshoe rabbit (*L. americanus bairdi*). The prairie hare of the Western plains is a different species (*L. campestris*). We believe that the crippling of the cow elk by a wolverine is unexampled; certainly nothing like it has ever been recorded.]

### Black-Tail Antlers.

SPOKANE, Wash., April 21.—Editor Forest and Stream: We see in your issue of April 14 a letter from Geo. Soule saying that he has the head of a black-tail buck with antlers that spread 33 in., which he thinks a record-breaker. We have mounted two heads with 33 in. spread, and last December we mounted one for Wm. Timberlake, Lewiston, Idaho, that spread 36 in. We have mounted some hundreds, but never before saw its equal.

He certainly beats us with the mountain sheep; the largest we have handled was 16 in. We have heard hunters say that they have killed them 24 in., but we doubt it.

We also mounted a moose head some years ago which spread 5 ft. 10 in., and had 20 points on one horn and 21 on the other. We should like to hear of better. WITHERS BROS.

### Who Belled the Eagle?

AVOCA, N. C., April 16.—There have been on this plantation for a great number of years bald eagles that have occupied identically the same haunts and lighting places ever since I can remember. Within the past few weeks there has appeared among them one wearing a small bell, that we can hear ring very distinctly as the bird flies about the fields. I suppose it has been released by some one at some distant point. I would be glad to learn some thing of him, and assuming this the best channel to reach his former owner, I have dropped you these lines.

The flock of wild turkeys in front of my house are nesting in a field partially grown up in pine bushes and straw not over three-quarters of a mile from the house. I saw forty-three in one day in three flocks. W. R. C.

## Camp-Fire Flickerings.

"That reminds me."

### Wooden Ducks.

A. AND I had made plans for our annual fall shooting and were waiting to hear from old Sile, a veteran duck-hunter. At last we got a letter saying that he would meet us at a station not many miles from camp, with the canoes to transport ourselves and paraphernalia. When we arrived Sile was there and it did not take long to get the things into the canoes and start for the place where we were to camp for the next three weeks. After we had paddled along for some time, Sile brought his canoe alongside of ours and yelled, "What's in them bags you got there?" "Decoys!" "What's them?" "Wooden ducks!" "Jee-rusalem! What are they for?"

I then had to go into a detailed explanation of the use of decoys and after I had explained all about them to his satisfaction, he said, "Let's see one!" I handed him one and after a careful examination of it he said, "Do you suppose that a duck wouldn't know what that was? Why I'd know that thing myself, half a mile away."

By this time we had reached the shanty, and by the time that we had got the canoes empty and everything ship shape it was bed time, so that when we had made a good fire and crawled into our blanket bags, it did not take us long to get to sleep.

A. could not have slept very well, for just at daybreak he woke up Sile and me and told us that there were five or six ducks just over the dike about 25 yds. out. Sile jumped up, grabbed his musket and started off, and I followed with my Parker. When we reached the dike he asked me if I didn't want the shot. I told him that I would rather take them on the rise and for him to fire now if he

would rather have a whack at them sitting. We crawled to the back of the dike, carefully parted the grass, and looked out. There they were—six of them. I saw the long barrel of Sile's musket move slowly forward and then stop. Bang! and I jumped up to see if there were any left. Those ducks had never moved; they were sitting there just as complacently as if there wasn't a gun within several miles. I turned and looked at Sile, and I never saw a more bewildered looking face in my life.

Then we heard A.'s voice from behind us: "Mortally wounded the whole lot of them, didn't you, Sile? Say! I thought you'd know those 'wooden ducks' half a mile away!" The bewilderment cleared away from Sile's face; he didn't say much, but he looked an awful lot and went back to camp to get breakfast ready.

When we got back he had regained his usual good temper, which had been rather upset by A.'s trick. He didn't talk much during breakfast, but after we were through he "lowed that those 'coys of ours might be some good after all."

PROFESSOR FUNDY.

## Game Bag and Gun.

### IN FLORIDA FLAT WOODS.

WE started in the early afternoon with our packs—blankets, ammunition and grub—each man carrying his own, besides gun, going out over the hickory ridge about due west.

Through the scrub it was hard traveling, and with our loads pretty warm work. The dogs, Rowdy, a half-breed pointer, and Fannie, the hound, were ranging free, now and then jumping up a bunch of quail. Soon we noticed Rowdy, just ahead, give one of those peculiar high jumps with a sideways look of quick alarm, which indicates a snake, and cautioning him back we approached carefully a clump of saw palmetto and heard the lively singing of a diamond rattler's warning. Peering in, we saw him coiled up, and a charge of No. 7 shot from my gun cut him in two. He was not large, about 5 ft. long. Keeping on, we crossed the east fork of the St. Sebastian which was nearly dry, and soon after forded the south fork at an old deserted otter camp.

The view across country here was almost tropical. Wide stretches of everglades, or so-called "wet prairie," skirted and dotted here and there with pine and palmetto, in the distance looking like far away oases. Near at hand, in the tall grass bordering the water holes, herons and other semi-tropical birds. A little beyond here we observed many nests of fish-hawks or osprey in the forks of scattered high trees, the parent bird often on the nest and its mate flying about near by. In the deeper hammock, as we forced our way through, we startled small flocks of bright green parakeets which wheeled in a body above the tops of the tallest trees screeching and calling in concert.

At one place, as we filed along, an unusually large water moccasin 10 or 12 in. in circumference barely drew his lazy length to one side as we passed.

Toward sundown, as we were trudging over a rather wide grass prairie, we noticed just this side of the skirt of timber, on the further edge, some dark objects walking along by the slough grass, which the glass disclosed to be wild turkeys—a flock of five. Dropping our packs and holding the dogs back, Forster with his rifle crawled up slowly while they were feeding, apparently unalarmed, and obtained three shots at a long 100 yds., knocking one over, a large handsome hen turkey. Another that he fired at flew, evidently wounded, and the rest ran off through the high grass like race horses, disappearing in the direction of a distant wooded knoll.

Bagging the game and resuming our packs, we made for the nearest timber—a strip of pine and cabbage palmetto with plenty of downy timber (lightwood) at hand, and slough water near—and made camp for the night. A hearty supper of fried wild turkey, a pipe around the blazing camp fire, then Ferguson and I took the bullseye lantern and started out for a couple of hours' fire hunting; did not succeed in "shining" any eyes however.

Returning to camp we all rolled in our blankets, and with a bundle of dry palmetto fans for a pillow, and the beautiful canopy of a subtropical, starry sky overhead, soon fell asleep, lulled by the hoots of answering owls and the song of an occasional mosquito.

It was pretty cool in the night, but by getting up and putting on quantities of lightwood, we kept up a crackling fire and comfortable warmth.

Next morning, after a hearty breakfast of turkey breast and coffee with Ferguson, I started westward toward Buck Branch, to see the country and hunt for deer. We were soon in the flat woods and pressed on for several miles, part of the way through a country as level and clean of undergrowth as a city park.

I got a couple of quail with right and left barrel, and blew the head off a horrible cotton-mouth moccasin snake. We saw no more turkeys. There were plenty of fresh deer signs, but came upon no deer until our return in the afternoon, when suddenly a large buck and half grown fawn jumped up from their lair in the saw-palmettoes and went sailing away through the woods and over the tops of the scrub, the buck showing his flag in fine style.

Ferguson tried two shots with his rifle, but evidently missed, and after following the trail a short distance and seeing no blood we soon gave them up and continued on our way toward camp.

Many strange tropical birds, egrets and other plumed birds were seen, but we did not attempt to bag any.

Coming to the Fort Drum wagon road, the old-time military trail of the Seminole war, we were a little in doubt whether our proper crossing was further north or south from the point at which we struck it; but as Ferguson seemed confident we ought to have crossed to the northward, we turned up the trail in that direction—soon, however finding by the unfamiliar appearance of the country about us, we were lost. Toward night we descried a cabin off to one side, and going to it found we were near the east-fork of the Sebastian at a home-stead claim, which we afterward learned had been some years before taken up by a cracker named Futch, and that we had been going in the wrong direction. No one was living there, but fortunately in the old barn we found a sack containing a little shelled corn. Filling our pockets with the corn, with which to keep our stomachs from getting faint and perhaps serve as our only article for supper, and getting a much needed rest

and refreshing drink from a spring near by, we retraced our steps, and after nightfall and a long weary tramp reached camp at last, where we found Forster somewhat anxious about us, keeping up a big fire and smoke to guide us back.

That night in camp it rained and we were quite wet, and as a consequence rather uncomfortable. But toward morning a generous fire soon made us all right.

In the morning Forster was anxious to go to the ground where we had seen the numerous deer tracks the day before, and so we broke camp, and all shouldering our packs, started out, Ferguson and I having pretty well recovered from the excessive fatigue of our tramp the day before.

After a long hot walk we again reached Buck Branch, near our stamping ground of the previous day, and in close view of what we had called the cypress mound.

As we were about to pick a spot for noon camp suddenly Rowdy jumped up a deer, and as he went bounding off we all dropped our packs and fired. But he kept right on with his mad career, apparently untouched.

The dogs and the other two men gave chase, but I stayed back, as my shotgun would stand no chance, and made camp, gathered together the scattered things which had been hastily dropped on sighting the quarry, built a fire for cooking dinner as quietly as I could, and then lay down to await their return with venison. Being very tired and warm, I stretched myself out on the needles under a big pine, and quickly dropped off into a nap. Meantime my companions had followed our deer a mile or so, and seeing no blood, were returning, and had approached me, just near enough, as they afterward said, to discern that my eyes were closed, when Rowdy, from the same spot where he started the other deer, jumped up a second, which had all this time quietly lain there in hiding.

I was aroused from my nap by Ferguson's shout in his West Virginia dialect, "Look yere! Thar's another one!" and sprang on to my feet, gun in hand, just in time to see the deer come out of the scrub bordering the creek. At the same instant Ferguson fired, and dropped him with a bullet through his neck. It was a fine young buck.

Then followed such a dinner as we enjoyed of venison, fried liver served hot, and sandhill crane's breast.

After noon it commenced to rain. Nevertheless, the other two started out for more deer in the direction they had fruitlessly gone at first.

Soon a very heavy shower, or succession of them, came up, and I was forced to build a shelter, a sort of shanty, using my rubber blanket about a frame of poles and palmetto leaves. Nevertheless that evening and night we were all well soaked. Next morning we started for Indian River, with the additional weight of deer meat to pack and the inconvenience of wading most all the way (about ten miles) through water from two inches to knee deep—the night's rainfall having flooded the flat woods, a characteristic feature of this section of Florida.

F. A. A.

### Was it Mr. Luther's Long Bow?

VICTORIA, Texas, April 23.—Editor Forest and Stream: Mr. Willard L. Simpson, Secretary of San Antonio Gun Club, jumps on to Mr. O. C. Guessaz, the San Antonio representative of FOREST AND STREAM, with both feet for alleged unsportsmanlike slaughter of ducks. Well, on the face of it 802 does look like a lot of ducks, and if the party killed that number it was too many, but there are several things that should be considered before passing judgment on the party. In the first place, there is the probability of inaccuracy in the published account of the trip. In all likelihood the reporter for the Corpus Christi Caller got his information from Max Luther, who was a member of the party, and anyone who knows Max's skill and ability with the long bow would be very likely to give the party credit for a good big discount off the published figures. But suppose they had killed all the 802 ducks as stated, it is but 100 per day to the gun, and there are few good shots who have hunted to any extent in the Texas Coast country, but have at some time equalled or surpassed that score. The writer will not attempt to enter any plea in extenuation for Mr. Guessaz, believing him to be amply able to take care of himself in the premises, but there is another phase of the subject on which I wish to touch. Several years ago there was a State shoot at Antonio, under the auspices of the San Antonio Gun Club. Mr. Guessaz was a member of this club and if I mistake not Mr. Willard L. Simpson was then, as now, its secretary. Some shady work was attempted by some of the officers of the club in the disposition of a large cash prize that had been donated by a business firm. Mr. Guessaz discovered this attempt and denounced it in open and unmeasured terms, with the result that the San Antonio Gun Club was held up to the scorn and contumely of the sportsmen of the State, who manifested their appreciation of Mr. Guessaz's action by electing him president of the State Sportsmen's Association. Since that time Mr. Guessaz and the S. A. Gun Club have not slept in the same bed. The club withdrew from the State association, and Mr. Guessaz left the club. No doubt the reader has ere this discovered the "nigger in the wood pile" of Mr. Simpson's article. Mr. Guessaz has done more for the benefit of sport, sportsmen and preservation in this State, than Mr. Simpson and the entire "large body of sportsmen" of which he claims to be a member. In fact, if the latter have ever done anything at all in that direction the sportsmen of other portions of the State have yet to hear of it. The columns of FOREST AND STREAM are the proper place for showing up alleged sportsmen for violations of the unwritten laws of the fraternity, but communications should be made with only that end in view, and not for the gratification of personal feelings which the writers have toward the subjects thereof. GUADALUPE.

### A Large Flight of Geese.

ORIENT POINT, L. I., April 21.—On Sunday, the 15th, there was the heaviest flight of geese I ever saw. Quite a number of them lit in the bay and a few in the sound. As there are very few Sunday shooters in this section, they were not molested; and Monday morning found them again on their way toward the land of ice and snow. The entire week previous the wind had blown strongly from the northeast, which accounts for the massing together of the flight on the first calm day.

Black ducks have been scarce, but in very fine condition the past winter. The last one I dressed had a number of eggs in her, so I swore off until next fall. The law should protect them sooner than the 1st of May. W. L. T.

ENGLISH PHEASANTS.

THE following communication from Mr. John Brett, manager of Spratts' Kennels, Closter, N. J., will prove interesting and instructive reading to those who are interested in adding to the variety of American game birds. From information received from different sources I believe that there is quite a widespread interest and effort toward increasing the kinds of game birds and protecting what is left of the once abundance of native birds.

B. WATERS.

Mr. Brett writes: "I am very pleased to answer any questions I can regarding the English pheasant and their habits. Of all pheasants the old English black-necked bird is the best and hardest for stocking purposes. They are larger than the Chinese or Japanese, so-called Mongolian, pheasants, and do not stray or ramble half so far away."

"The old English bird will live through the coldest and roughest winter. They will live where quail and partridge starve. They set and raise their young well in the wild state. They do not fight or disturb any other game bird or their nests, but will protect their young like an old barnyard fowl."

"I have known often the English partridge and the red-leg partridge both to lay in a pheasant's nest, and at the finish the red-leg take possession of the nest. They are very fond of young plantations with cultivated fields round about. The cocks will take from three to four hens each in the wild state; about six hens to a cock when confined. They will take possession of a certain place where the hens will lay their eggs and breed, and stay round that section the whole season. Wherever you hear a cock pheasant crowing in the spring of the year, there his hens are and round that section they intend to breed."

"I am certain pheasants would do as well, or better, than quail in the South, if left alone and protected from the pot-hunter and vermin. The hen bird will fight like a demon to protect her young. Even in the wild state I have often lifted them off their nests, when they would fight like a tiger and return to the nest. They will always find plenty of food for themselves and young. They will eat almost anything. Acorns they are very fond of in winter; berries and such like they will eat. Nothing comes a miss to a pheasant."

"I should be pleased to see these best of all game birds introduced into this country, for I am sure no game bird would do better. I have bred and handled thousands of all kinds."

PENNSYLVANIA ASSOCIATION.

To the Sportsmen of Pennsylvania:

The officers of the Pennsylvania State Sportsman's Association are very desirous of increasing their membership, and earnestly urge every shooting organization in the State to apply for membership at once.

A few of the reasons why every shooting organization in the State of Pennsylvania should become members of the Pennsylvania State Sportsmen's Association:

First—The organization is formed for the purpose of combining to secure proper legislation for the propagation and protection of game birds and animals.

Second—The consolidation of the shooters of the State means a power, and through it there is no reason why we should not receive an appropriation annually equal to that received by the State Fishery Commission for stocking our State with game.

Third—It makes every individual member of a club joining the Association a member of the organization, a game warden who will report to the officers of the Association any unlawful hunting or trapping. Thus it will be seen that the State will have thousands of men who will see that game is protected in accordance with the laws of this Commonwealth.

Fourth—It only costs, if you are a club or an association, \$5 to join, and your annual dues thereafter are \$1. If an individual, \$1, and annual dues 50 cents. The expense to a club is but a trifle, and the benefits to every true sportsman are incalculable. Send along the required fee, and let us by union of thought and action make the Association an honor to the State whose name it bears.

The committee on game laws are drafting an entire new set of game laws, and propose to send a copy of same to every club and association in the State, asking for their comments on the same; the matter will then come before the Association at their annual meeting, which will be held on Aug. 22, at Altoona, Pa., and a general discussion will be had on the subject and a regular bill will be adapted and placed before our next Legislature. In this manner it will be possible to draft a set of laws that will subserve the interests of the great majority of our sportsmen. The committee urgently ask the coöperation of every true sportsman in the State.

Application for membership should be made to Edward Banks, Sec'y, Altoona, Pa., or

N. A. HUGHES, Pres. (Williamsport, Pa.).

CARING FOR QUAIL.

MR. N. P. LEACH, of the Committee on Introduction of New Game, has issued to members of the Vermont Fish and Game League, the following instructions for those who propose to put out quail:

"The first thing to be considered is to secure strong, hardy birds from either West Virginia or Eastern Tennessee. Southern birds are smaller and much less hardy. The next to be considered, is your locality adapted for quail? The most desirable localities for quail in Vermont, are the pine plains in the lake towns, where there are thickets of white birch, sweet fern and briar, with low evergreens in the ravines and swamps. When you release your birds, select a warm day in May, and take them to some back road, or where the sand is exposed near a thicket. Take them out of their coops one by one, and thoroughly saturate them in a pail of lukewarm water; this will cause them to run and hide in the thicket, instead of starting for some distant locality. After the last bird has been released, retire with the coops as quickly and quietly as possible, and the birds will soon come out to the sand to dust and dry themselves, and thus become wonted and attached to the spot."

"The next thing is to provide shelter and food for your birds during the coldest stormy days of the coming winter. Get some farmer in the vicinity to put in a patch of buckwheat, and when ripe cut and stack it, with the tops

outward, in the edge of a thicket where the quail frequents. Drive down each side of the stack crotches; lay in poles and cover with brush to keep off the snow. This will furnish them food during the stormy days, when they cannot forage elsewhere. For shelter, they are best made beside a rail or brush fence by laying rails or poles side by side, one end on the ground and the other end raised 2ft. from the ground. Make this lean to 10 or 12ft. wide, put a layer of straw underneath, and cover with straw and brush. Also brush up the sides, excepting a hole about 2ft. square each side near the top end. If not built against a fence, also inclose the raised end with a wall of brush. If not convenient to make a buckwheat stack, feed for the birds should be placed every few days during the winter in the shelter that they most use. This food may consist of screenings, seeds of all kinds, corn, damaged wheat, etc. Their food should be placed in the shelters during the middle of the day so as to not disturb the birds in the morning or evening. With a moderate amount of food and shelter they will stand any amount of cold weather. Trap off all weasels and skunks, and shoot all prowling woods-cats found in the vicinity, and "Bob White" will flourish and be the merriest game bird in the country.

"To this it may be added that the planting of wild sun flower seed, which may be obtained in Colorado, furnishes an excellent food for quail."

Colorado State Association.

SALIDA, Col., April 26.—*Editor Forest and Stream:* In the convention call sent out by the Salida Gun Club for April 6 to 9 the committee say: "In organizing a State Sportsmen's Association the object in view is to combine to assist in the protection of the game and fish of our State, and also to bring the lovers of rod and gun more closely together for the mutual goodfellowship and enjoyment of its members, both at our streams and in our woods, as well as at the trap and target. This association is not to be a political association in any sense of the word. We will work with our State game wardens to procure an enforcement of our laws and assist him in prosecuting all market, skin and head hunters, who may persist in breaking the laws, regardless of any political party he may hold office under, and we earnestly request a full attendance of all interested at the convention."

To this end a literary programme has been arranged for the three evenings. The papers, addresses and discussions, which will be interlarded with music, are as follows:

Opening address, by President Salida Gun Club, Peter Mulvan. "Fish and Game," by W. R. Callicotte, State Fish Commissioner and Game Warden. Discussion, "The Game of N. W. Colorado," by C. M. White, of Grand Junction. "The Preservation of Our Game," by Wm. Cardnell, of Glenwood Springs. "Brook Trout," by J. M. Schaeffer, of Aspen. "Fish Culture," H. D. Dean, of U. S. Fish Hatchery, Leadville.

Subjects for discussion: Fish Planting in Colorado, The Preservation of Trout, Game Protection, Game Associations, Organization. The secretary is Mr. C. L. Hoagland.

New Jersey Coast Shooting.

TUCKERTON, N. J., April 20.—Samuel A. Jones, of this place, killed on Saturday four sheldrakes. Samuel Smith, of Port Republic, killed twenty-one black ducks and sheldrakes.

J. W. L.

Sea and River Fishing.

HUDSON RIVER SALMON.

Give the Salmon in the Hudson a fair chance.—FOREST AND STREAM, June 10, 1893.

THE Mohican Rod and Gun Club, of Glens Falls, N. Y., has sounded the tocsin and boldly flung its banner from the outer walls, resolved to accomplish a purpose that will add luster to its renown in the years to come, and cause every sportsman in the land to rise up and call the Mohican blessed.

The first note in the campaign was sounded in Glens Falls, on Thursday evening, when Mr. A. N. Cheney, the president of the organization, read a paper before an open meeting of the club in Ordway Hall, to an audience which largely comprised the solid and representative men of the community. The paper was entitled "Salmon in the Upper Hudson," and it was an exhaustive analysis of the material benefits that would accrue to the people of the State from the building of fishways along the river above Mechanicville. Mr. Cheney's wide knowledge of his subject was aptly displayed by the able manner in which he brought out the strong reasons that exist for taking immediate action in the matter, and even the dry statistics of the financial returns to be derived from the presence of salmon in the Hudson were so startling in their nature that they became intensely interesting to the thoughtful people present.

At the close of the meeting Mr. Cheney was heartily congratulated by his townsmen on the brilliant success of his effort. The statement was repeatedly made to him that a knowledge of this matter awakened an immediate interest, and that apathy heretofore was largely due to ignorance as to the benefits to be derived.

To dispel this ignorance and awaken an active interest all over the State is the immediate aim and object of the Mohican Rod and Gun Club. It will use every means in its power to arouse a popular sentiment that shall culminate in the passage of a bill through the next Legislature providing for the building of these fishways, and in the successful furtherance of this object no effort will be spared, and the aid of every friendly influence will be earnestly sought.

With this avowed object in view, the Mohican Club asks the hearty co-operation of every kindred organization in the country. This is a matter, aside from its relation to the food supply and financial return to the State, that is of paramount importance to every sportsman, and it should awaken an enthusiasm that could easily be made productive of great results in the future. All sections of the State are signally interested in the successful fruition of this plan to provide fishways, and our organization feels confident that its efforts to bring it to an issue will meet with the hearty approval and indorsement of every lover of the kingly salmon.

C. H. BAXTER, Sec'y.

NEWS NOTES FROM THE WATERS.

CANADENSIS, Monroe county, Pa., April 25.—Trout are taking the fly at Canadensis and good catches are reported.

J. B. B.

TUCKERTON, N. J., April 20.—Capt. Jos. Shourds, of Tuckerton, caught with hook and line 41lbs. of winter flounders on Tuesday.

J. W. L.

The Mechanicsville, Pa., *Journal* reports of the opening day on trout: "Some of our fishermen started out long before daybreak for the trout streams and commenced fishing by the light of the moon. One lone fisherman started at midnight, and at half past twelve o'clock had caught his first fish, a beauty of 12in., but it likewise proved his only one, and with him the early business was a failure. The great majority of our Waltonians contented themselves with the trout streams in this vicinity, but several, bent on larger game, went to Newville and cast the fly, but only with partial success. It is strange what queer stories the opening of a fishing season will bring to the surface. Yesterday afternoon a fond wife said to her husband: 'Do you remember, dear, how many trout you caught on your fishing trip Monday?' The husband, unsuspecting of danger, replied blandly, 'Just twelve, and all beauties. Why?' 'Oh!' the wife replied, 'the bill only calls for six,' and exhibited to his astonished gaze the fish dealer's bill. This is only one of the stories, but it is sufficient to illustrate the methods adopted to shine as an expert fisherman."

WALTHAM, Mass., April 25.—There is a fish and game warden in this city, if the *Tribune* is correctly informed, and in spite of that fact fishing with a dip net, and in fact a drag net, has been going on near the mouth of the brook which runs down past the Roberts Paper Mill during the past week. A gentleman who was boating on the Charles, Sunday, tells the *Tribune* that he saw parties using nets at that place, and when he came away they had captured more than half a bushel of perch.—*Tribune*.

NORWICH, Conn., April 28.—Some good catches have been made in trout streams in this section of the State.

L. W. B.

BEECH CREEK, Clinton Co., Pa., April 26.—When the trout season came in, the streams in this vicinity were bank full. But at the present writing a good many fish are caught, notwithstanding the weather is very cool. Yesterday the streams were lined with fishermen. This was due to the strike of the coal miners near the streams; many men, being idle, put in their time fishing. The Beech Creek Railroad touches all the runs and tributaries from one end of Beech Creek to the other. The runs are all good trout streams. There is no clear lands within miles of them. Twin Run is about five miles long. A mile beyond is the Monument Run, length about the same as Twin. Three miles further west we find the Big Run, which with main stream and tributaries will measure twenty miles or more. Further west about three miles is Hayes's Run, a splendid stream for trout, is about eight miles. Next comes Panther Run, some seven or eight miles in length. There are several others, all of pure, cold mountain water, without an acre of cleared land on any of them, and all within twenty-five miles of Lock Haven, the county seat of Clinton county. Parties from here caught several nice strings yesterday; one that John Wait brought home had over five dozen, all caught on the Monument Run in less than eight hours. Jos. MILLER.

CANADENSIS, Pa., April 25.—Companion and myself have fished five days at stream on Robert Lomax's place, Mountain Villa House, Canadensis, and caught 150 trout, running from 6 to 10in. long. Find fishing good, and accommodations all that can be expected.

J. E. K.

The Waters of Coos.

LANCASTER, N. H.—Coos county comes as near the sportsman's paradise as any locality east of the Mississippi. A day's ride from New York city will land you where excellent trout fishing can be indulged in. Leaving there in the morning, at 10 o'clock in the evening you take supper at Connecticut Lake, which is stocked with the square tailed brook trout, landlocked salmon, to say nothing about the original occupants—red-meated longe. The first are caught weighing 5lbs., salmon that will tip the scales all the way from 2 to 10lbs., while the longe are taken from 1 to 15lbs., one being caught a number of years ago that weighed 29lbs. Or one can go to the Diamond Ponds, kept fully stocked by the State Fish Commission, or up the Magalloway, where there is fine fishing not only in that river, but in the numerous large brooks that empty into it. June and September are the best months for angling. If one is out for a long outing he can take in the three Connecticut Lakes, then take a guide and follow a spotted path across the northern part of the county to Parmachene Lake in Maine, a distance of fifteen miles, where one will find a lodge. Here is excellent fishing and the finest of sport. Then take the Magalloway River home, the whole length of which is good fishing to Eroll Dam.

The Parmachene Camp will take sportsmen at so much per day. The camp was purchased by a club, but they control no part of the fishing. There is a law in Maine that no fires shall be built by parties fishing and hunting. This law the club enforces.

H. F. WHITCOMB.

Maine Ice Out—Salmon In.

GUILFORD, Me., April 28.—The ice left Sebec Lake Thursday, the 26th, and many large salmon, weighing as high as 7lbs. 7oz. are being caught.

The ice will certainly leave Moosehead within a week, and a heavy wind may take it out any time.

F. S. BUNKER.

CAMPBELLTON, N. B., April 28.—Ice left the Restigouche to-day. The bay is also open and clear. This is twelve days earlier than last season; and in all probability the salmon will arrive correspondingly early. No doubt the river will be in good angling trim by June 1, as snow has gone a great deal, and we will be looking for the finny beauties between the 1st and 8th.

JOHN MOWAT.

## ON THE NORTH SHORE OF LAKE SUPERIOR.

(Continued from Page 381.)

AFTER dinner the boys took the gun and went into the deep woods for a hunt. A suspicion dawned on me that Ned wanted a few more jobberwinks, and as I had become quite partial to the juicy and savory bird my mouth also watered for it. We were both doomed to disappointment, for about 4 o'clock they returned, bringing nothing but a single rabbit, that we vetoed as being unfit for the table, and so poor bunny was left hanging on a pliant limb for food for some famished wolf or other forest prowler. We emphatically warned the boys to kill no more rabbits, as it was criminal waste to slaughter them during the summer season.

The weather in the meantime having charmingly cleared, and the lake being in fine condition, we embarked in the boat for a skirmish along the shore with the spotted leopards of the deep. We admirably succeeded in convincing three of them of the folly of dallying too long with the bright tinsel and soft feathers that flutter so life-like upon the silvery ripples. We could doubtless have doubled the number, but our larder was too full of the delicious beauties to think of a further increase.

We made the return under skies gorgeously rich in drifting clouds of ruby and gold that took unto themselves those fanciful forms in which a lively imagination could picture almost any vision. The lake also partook of the delight of the heavens as it rippled in varying hues and murmured softly and sweetly as if it were singing to the sapphire-tinted skies a lullaby of sweet repose.

When the evenings were not too cool, we invariably, after supper, went to the high massive rock in front and there, as the deep purple shadows crept up the aspiring mountains, drank in the beauties of the sunset, the wide-reaching landscape and the over-arching sky. Occasionally we would make a cast in the "preserve," and after having captured one of the scarlet nobility cease the sport. There was one golden patriarch there that had one morning got away with Ned's leader and flies, and which we were very anxious to secure. That evening I prepared especially for him by putting on a single fly, a jungle-cock, with 1-0 sproat. It was glaring and fanciful, but it was highly attractive, for no sooner had it kissed the water than there was a tiger-like leap for it from a savage *fontinalis* of tremendous proportions which I was fortunate enough to hang with the big hook. Stung to desperation by his cruel reception, he made a Nancy Hanks start for the other side of the lake with the rhythm of the reel in his wake, and showing no inclination to slacken in his speed I gently put on the brakes. This checked his onward career, for he at once rose to the surface and

"Then all at once the slackened line  
Stretched outward through the waters deep;  
We saw a flash of silver shine,  
We saw a big trout leap;  
By Hercules! a gallant fly—  
One spring, and like dissolving spray  
The line and leader parted—'swish'—  
Click—broke away."

As I slowly and solemnly reeled in the slack, Ned pointed to where the monster had pirated my gaudy jungle-cock, and in a disappointed and exasperated tone exclaimed, "I'll bet that's the very identical trout that got away with my big fly. He's a gallant fighter, at any rate, and deserved his liberty, but if we leave this camp without his carmine scalp, we deserve to be bastinadoed or expelled from the membership of the craft. I'll now rig especially for this red demon of the deep, and hope to have his scarlet hide ere another sunset enriches the horizon."

"I'm with you heart and hand. You practice your gentle art in the morning and I in the evening, where this monster has his lurking place."

With this agreement for the capture, Ned's fertile imagination was at once drawn on for the design of the new fly that he hoped would prove successful. He was somewhat fastidious in his creations as well as original, and what manner of lure he would construct was not heralded in camp. I offered him the choice of any fly I had, but he would accept none; all he required was a salmon gut leader and that I gave him. The darling of his imagination would probably ripen in the dawn when the violets bathe in the gemmy dew and the sun blushes on the mountain tops. It would be humming and dropping like thistle-down o'er the haunts of the coveted fish long before I was up, for Ned was always the first riser in camp and never called me till the breakfast was about to be served. He doubtless expected to exhibit his wonderful creation to my astonished gaze, while I was yet in blanket, as a sort of a sunburst beauty of rare novelty and impressive magnitude. I hoped his dreams of conquest would be fully realized, for the capture of a remarkably heavy trout was to him a victory ever delightful, the prospects of which he eloquently narrated and melodiously sang till the theme was about threadbare.

The next morning, Ned, as I anticipated, was up with the lark and hard at work upon the ideal vision he had doubtless wrought out in his cunning mind during the quiet hours of the night. His assortment of feathers was from the four quarters of the globe and embraced all colors conceivable. The art was simply in the selection, construction and blending, and if he had any particular style of fly architecture in view it must have come from an unknown age. However, the fly was sure to be original and startling; either a flame of ruby red garnished with a sky-rocket dash, or the polka-dots of a peacock illumined with a sprinkle of golden foil or a strip of silver tinsel, or both, as the fancy struck him. As I looked upon his idol when completed I was overwhelmed with surprise, as it disclosed a form the like of which was never seen on earth, or I might also say, by way of elucidation, in the heavens. It was simply a heterogeneous bundle of feathers and tinsel, coiled around a 1-0 sproat hook, and so *outré* as to attract from its very novelty.

The fly being to his entire satisfaction, he attached it to his leader which was dangling from his line near by, and then, with rod in hand and hope in heart, sallied out like a panoplied knight to do or die.

I refrained from accompanying him, as I desired him to have a fair field for the introduction of his new creation, but simply suggested to him with as grave an aspect as I could assume, to yell when he had the monster well in

hand and we would all rush to assist in landing it. Ned halted a moment, and turning, looked at me seriously to see if I intended the remark in a Pickwickian sense, but as I moved not a facial muscle under his steady gaze, he took the advice literally and replied, "All right," and then marched onward to the ramparts of rock.

He had been gone but a few moments before a shout came from him that caused us all to start and cry out:

"He's got 'im."

On one of the boys snatching up the landing net we all raced over the huge and delictious rocks to be in, as we thought, at the capture of the coveted fish. Arriving there we were very much disappointed in seeing Ned's rod in such gentle play, for the indications were too palpable that it was not with the monster. It being a good occasion for a little pleasantry I excitedly shouted:

"For heaven's sake don't let him escape this time. Give him careful play and let him have plenty of line when he makes for deep water."

"It ain't the big fellow," he replied rather disappointedly and somewhat crestfallen.

"Oh, fiddlesticks; why did you make such an outcry? I really thought you had a whale."

"I only wanted one of the boys to net him, that's all."

"Next time temper your tone and don't shout as if you wanted to fracture the rocks around you when you have nothing but a baby trout to deal with."

Ned took the chaffing in good part, and when Peter had netted the pound trout we all retired, leaving Ned hard at work with his flaming fly.

The breakfast, which had been well under way when we raced over the rocks at Ned's signal, was again taken up and soon ready for serving. At the proper time Ned was summoned by a shout, and as he came slowly along, rod in hand, with bowed head and grave aspect, he looked decidedly demoralized, as the success he had expected from his feathery combination, on which he had spent so much time and talent, had entirely failed him.

Feeling mischievously inclined as he made his sad entrée, and thinking of the old unbalanced account I still held against him, recited in bombastic style:

"And day by day, along the lake he wandered to and fro,  
And day by day, the trout swam securely down below;  
'Til this little story ended as such little stories may,  
With the big trout swimming in the usual way."

Ned was so broken up over the failure of that grand creation of his that he had no heart for the humorous foil, and in silence allowed the versical conceit to pass unnoticed. Had he have captured that savage and gigantic *fontinalis* for which his very soul yearned, he would have come at me "horse, foot and dragoon" and so covered me with satirical wounds that I would have never again dared measure lances with him as *drolle de corps*.

He stated at the table that he had had another rise, a feeble one, while at the rock, and believed that it was from the escaped trout.

"Doubtless it was, Ned, but when he got near enough to fully realize your wonderful composition in feathery art he shied off, thinking it some paddling water fowl of an unknown species."

"Genius, when it soars in untrodden fields, is at first seldom appreciated; but there finally comes a day when it receives merited reward."

"All of which, in analysis, means that the particular fly in question will ere long obtain great and successful celebrity as a killer!"

"Precisely," and then quietly dismissing the annoying subject he took a second small trout on his plate, ran his knife along one of its sides, opened the slit, deftly lifted out the entire back bone and then went into the enjoyment of the now boneless fish as if it were a dish fit for the gods.

After we had satisfied our rapacious maws, it was decided to make a picnic affair at Gravel River, some three or four miles to the west of us. We could fish *en route*, for we would pass over some fine trouting waters which on our trip of last year yielded many a lovely trophy. I was not much in favor of taking the trip, for the morning was close and sultry, and it bade fair to soon give us a looking-glass lake. The half-breeds, however, having everything ready for the advance, and Ned being quite eager for the anticipated sport, I of course went along rather than enter any demur to the proceedings.

We had not gone more than two miles before we winced under the almost tropic sun and the lance-like glimmer from the now quiet lake. So far, we had not had a rise though we flogged the waters with increasing industry and with ardent hope in every cast and flutter. Finally a tiny nursing shot by, and on Peter pointing out two or three good sized trout in statuesque poise on the bottom, we were firmly convinced that no trout would rise to the quiet surface, and at once ordered the boys to head for our harbor with the picnic postponed for a more propitious day. We reached camp in a short time in a decidedly melting condition and with an infinitely deeper hue of brown upon our faces and hands than when we left. The grateful shade of our quarters, which were in a cluster of white cedars, was quite comforting, and there, in limited wardrobe, we remained and solaced ourselves with a few rubbers of "crib," games of solitaire and entertaining books, as well as a little chatter on the gentle art.

About four o'clock in the afternoon a slight breeze sprang up and a few clouds in delicate rose-pink began to appear and circle around the glowing orb, creating a soft and hazy condition of the atmosphere. Ned, at these favorable symptoms, suggested an immediate start for the "big rocks" in the bay. Being eager for breaking the monotony of camp, I immediately enlisted under his piscatorial banner.

The half-breeds were at once called to man the boats, and in a few minutes we were breaking through the little ripples that were momentarily curving higher and higher with little beads of froth dropping in a merry tinkle. It was an ideal condition of the elements, and I was positive the wail of lamentation would be heard among the dandy dotted tribe of the deep ere the twilight departed.

Just before we turned a jutting point into the bay, we reached a gigantic rock o'er which the rays of sunlight danced most delightfully. A shady line, the tell-tale home of some spotted beauty, ran near its bold and ragged face, and here we sent the fluttering flies. Ned lifted his from the water without a response, while a moment after a gleam of silver sprang into sight with arrowy swiftness that beads the water as if a tiny torpedo were speeding through it. My stretcher being the object of this savage plunge, I instantaneously vibrated the rod with

a sudden twitch, and then in turn the gentle cadence of the revolving reel rang out most sweetly. It was a spirited fight of a few minutes with the usual acrobatic exhibition, and at last the frenzied despondency of the victim whose departing vitality ebbed away with his broken heart. He came to the net a despairing dupe of the dropping feathers, with his golden sides rivaling the bright sunshine that fell from above. He was a good two-pounder and a gallant warrior withal. We went over every inch of this cozy cover, but not another of the cherry and orange-clouded princelings rose to the surface.

The blades are again in requisition, but so gently and silently glides the boat that its movement is hardly noticeable. Here and there whizz and hum, drop and flutter, the four flies, until at last we reach Mt. Horeb, as Ned styles the "big rocks," which has a shore line of some 200ft. Alighting, Ned speeds to his favorite spot, the upper end, while I remain and commence casting where I had stepped ashore, working cautiously along, covering every bit of water with exceeding care. Coming to a piece of rugged and shelving rock, which I thought might develop a *fontinalis*, I prudently kept back some 20ft. from the water and then let the flies sail out and drop o'er the dark lines of a deep and narrow channel. Instantly there was a violent splash and spreading circles, but nothing held to either fly. It was an unmistakable and unfortunate miss, but, not the least disconcerted, I again lifted high the flies and let them gently fall upon the disturbed waters.

"Then from the depths a silver gleam  
Quick flashes, like a jewel bright;  
Up through the waters of the stream—  
An instant visible to sight—  
As lightning cleaves the sombre sky,  
The *Salvelinus* rises to the fly."

This time his overweening confidence in his powers to rend and devour met with a sad reverse, for the cruel steel pierced his savage jaws, torturing him into a wild rage and a lightning-like speed that had to be checked ere the braided thread reached its last span on the reel aluminum. It would simply be repetition to describe the struggle; suffice it to say that he fought with a stubborn frenzy, indulging in the usual leaps, plunges, drives, etc., till he yielded to the triumphant victor.

During the battle Ned left his end of the rock and came to the scene of strife as a "mere looker on in Vienna," but, strange to say, no sooner was the prize landed than he at once commenced casting from whence the beauty had been taken. This was a sublimity of cheek I little expected from him, but as he had not scored a fish I entered no gentle protest, but simply smiled at the monumental audacity of the angler. "Singing and swishing" through the air went his flies, and not wishing to drop in the same place, for a while I sat and deeply admired my trophy, which was a four-pounder, and the handsomest trout I had ever deceived. He was simply a poem in the colors that beautify this peerless fish.

There was the flush of gold like sunset glow;  
Marvelous tints from the arched rainbow;  
Dashes of crimson ever bright and grand;  
Waves of silver from the shining sand;  
Spangles and stars from a far away land,  
And shades that Nature alone understand.

Having gratified my vision with the ever beautiful fish, I took up my rod and joining Ned requested him, in a bit of pleasantry, to step aside and let me demonstrate the superior attraction of an artistic fly. He instantly complied, and on the very first cast my stretcher was the objective point of some hungry trout. I missed as he broke the water, and then Ned deliberately marched down with evident intent of attracting the same fish. He sent his flies as near the objective spot as he possibly could, but failed to secure a response. I smiled; in fact, I felt like roaring at his great anxiety to capture the trout I had aroused and his utter disregard of the ethics of angling. Generally Ned was the most fastidious stickler in the observance of all rules that govern the genuine sportsman, but this time he was decidedly off his base; blind, as it were, to the gross infraction, so deeply intent was he to hang an iridescent idol of the "icy lake."

Once more my flies went out and dropped with unerring precision to the desired place, and again the *fontinalis* rose and greedily took my royal-coachman, the stretcher. This time the alluring coachman held him secure, and after he had exhausted his vitality and all the strategic resources of which he was master, reluctantly hauled down his colors with bold defiance still beaming in his shining eyes. He was a pound less in weight than the other, but equally as symmetrical and as rich in gorgeous colors.

Ned at once said his flies were not in favor and would therefore make a change from a catalogue which ran like that of "Ye Sunberye Fysher," who

"— has flies of all feathers

For all sorts of seasons, in all sorts of weathers;  
Flies when ye springtide is blusterie and showerie,  
Flies when ye summer is greenie and bowerie;  
Flies when ye autumn is golden and granie;  
For hot weather, cold weather, mistie or ranie;  
Red spinner, palmer, black peacock and gray;  
Yellow dun, golden dun, March brown and May;  
Sand fly, and stone fly, and alder and gnat,  
Black midge and Marlow bug—all round his hat."

After a thorough overhauling of his fly-book he concluded to discard his own pet creations and carefully selected two of most artistic make, a Lord-Baltimore and a gray-hackle. Having affixed these to his leader he starts for the upper end of the granite mass, his first choice, and begins to skillfully lay them upon the musical ripples. As I had as many trout as I desired without glutting the larder, I reeled up and sat down with the half-breeds upon the rock at a convenient distance from Ned, and watched his earnest work. He was decidedly anxious for a rise, and so very restless that he constantly changed his position from one end of the rock to the other, until finally his tramping became a mirthful theme for the lookers on. As he passed on one of his exciting trots, for he made good time in his changes, I satirically suggested to him that he fish both ends of the titanic range at one and the same time. He smiled at the impracticable suggestion, but replied not, as he was just then too busily engaged to indulge in any sprinkling of the attic salt. At last the persistent angler had a rise, and striking in response, an astonished trout commenced

cleaving the water for his freedom. The angler, however, triumphed, and the gleaming beauty was laid in state with the other "dandies of the gleaming stars."

Encouraged at this, Ned fished more industriously than ever, still keeping up the race between the two ends of the glistening rock. At last another victim fell to his masterly tactics, and then as the sun was fast shading the rugged hills that gave picturesque sternness to the bold shore, he expressed himself satisfied and ready to take boat for camp.

The return gave us a delightful ride o'er waters that sounded the tiny foam bells, and by rugged shores of cliff-like rocks that caught the setting sun as it blazed in golden splendor. It is here in which a Chippewa tradition placed a siren who lured hunters to their destruction by the sweetness of her voice. Our half-breeds fully believed the romance and even listened, we thought, as we glided by, to catch the bewitching tones of her entrancing song. What a superstitious race these tawny barbarians are. Countless are their magic forms and numerous the spells they adhere to. As spiritualists, ghost-seers, table-rappers, etc., they excel even the pale faces. Our boatmen partook of all these, and at many a camp-fire we had listened to their extraordinary stories with great interest. No wonder the "medicine man" is so potent an agent with them. It would take many columns to do the subject justice, and as troutling is our specialty we will again revert to it.

On reaching our quarters I at once proceeded to the bluff in front with my yet unjointed rod, in hopes of getting a rise from the cunning and savage patriarch of the crimson dots that had so far outwitted us. I had on but a single fly, a big jungle-cock, which I had affixed in the boat as we came along for this particular occasion, and which had so greatly excited his curiosity before. With stealthy footsteps I approach the spot, and when near enough, away sailed the alluring fly. It hit the water with anything but downy lightness, and ere the ripples had started from their base a monster pounced upon it with such a leopard-like leap as to almost make me forget my mission. I struck, of course, but as a noted angler once said when in the same lamentable position, had missed by "the ninety-ninth part of a second." It might have been a little less, but when it's a miss a few fractions of a second make but little difference. I must admit that I was deeply chagrined at my utter failure in missing such a wolfish rise, and was unable to account for it unless as stated above. However, I did not then dwell on cause and effect, but instantly put forth my best efforts to once more induce him to tamper with the fanciful jungle-cock, be it ever so lightly. I dropped the fly over every inch of ground and fluttered it in every imaginable way, but the scarlet draped beauty was not to be coaxed to the surface again that evening, no matter how tempting or how subtle the art of the disappointed angler. Satisfied of this, I retraced my steps, deeply pondering on what excuse I should make to Ned for defeat at such a magnificent rise. Now, no angler would falsify on a trifling thing like that, of course not, but as there was a certain pride in the accomplishment of the art, one does not like to come out flat-footed and acknowledge, particularly in a contest like this, to such a dismal failure. I well knew that Ned would roast me severely if I admitted the fact, so I pondered over the situation as I slowly walked along, and finally determined to resort to equivocation if I found him in an inquisitive mood. Boldly I marched in, and when near camp I encountered Ned directly in the pathway. He looked at me with an inquiring gaze, and before I had an opportunity to say a word so as to divert his mind to other matters, eagerly asked:

"Did you have a rise?"

"Did Jonah swallow the whale?" I replied, and then I patiently waited the result of my crafty defense. To my utter astonishment and great relief he was completely deceived by my cunning reply and dropped the subject at once, and immediately began to consider what kind of fly he would use in the morning with which to tempt the object of his desire.

Fearful that he might again revert to the subject, I quietly walked away and busied myself unjointing my rod and in consigning it to its proper receptacle. To use an expressive "Americanism" I had "saved my bacon," but felt that I had somewhat fractured the fact a wee bit, just a wee bit, that's all, as an equivocation is a friendly ally to a fairy tale.

What selection Ned had made that evening from his feathery lures for the enticement of the big trout in the morning I never ascertained, for he had suddenly ceased to be communicative with me on that particular subject ever since I had so severely criticised his last wonderful production, "the water fowl."

The night being exceedingly beautiful we all after supper sought the summit of the gigantic mass of granite in our immediate front and watched the wavering lights and shadows as they fell on the ragged cliffs and the shivered rocks of the mountain tops with their aspect of eternal melancholy calm. So intensely quiet was everything, save the gentle murmur of the lake, and so deep the solitude and breathless stillness of nature that you'd think the whole earth was dead. Overhead the stars twinkled with brilliancy equal to the advancing moonlight, while the great lake catching the sparks of ethereal light danced in shimmering tints of silver. From the valleys densely massed in darkened foliage and still darker in deeper shades came an exhilarating air full of sweet soft scents ravishingly intoxicating, while from every copse and dell the glow-worm blazed and "a sheen of iridescent silver flashed through the grass, right and left at every flicker of the camp-fire, like a flitting phantom of a rainbow." There was a singular fascination in drinking in this wild and silent beauty of an approaching night and a flowing together of impressions that you are unable to put in definite shape.

"In such a night let the abroad remain  
Till morning breaks and all's confused again."

The sun had sunk in a red glare without a cloud dimming its face, and this alone, said Ned, signaled for the morrow a bright day and a calm lake.

ALEX. STARBUCK.

[TO BE CONTINUED.]

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

## THE MOUNTED COLLECTION OF FISH

At the U. S. National Museum.

FIRST PAPER.

In a paper I contributed to FOREST AND STREAM last October, on "Taxidermy at the World's Fair," the mounted collection of fishes on exhibition at the U. S. National Museum at Washington was briefly referred to. The specimens, it will be remembered, are plaster-of-paris casts, colored to imitate nature, and one of them, a trigger-fish, was figured in the article. Some of these casts are so perfect, and such good representations of the original fishes, that it occurred to me that the readers of FOREST AND STREAM, interested in fish, would like to see a few more of the same collection and hear something about

BUFFALO FISH—*Ictiobus urus*.

them. This idea I propose to carry out in a few brief papers, of which the present one is the first of the series. Some very fine photographs have been taken of those casts of fishes for me, and reproductions will illustrate each contribution. These casts have all been prepared with great skill, and upon their being reduced by photography for illustrations, we are sure to obtain figures of the fish which in any case are as true to the forms of the originals as it is possible to be. They are far superior to any drawings made otherwise, with which I am familiar, and as a rule stand a long way ahead of the majority of figures given us in works upon the subject—especially in the matter of accuracy of form. The illustration of the pompano, for example, will not be mistaken for anything

A PARROT FISH—*Scarus* sp?

else by those at all familiar with this interesting species. It is the common one (*Trachynotus carolinus*), and not the round pompano (*T. ovatus*), another type sometimes met with by fishermen at various points upon our Atlantic coast, much less either of our two remaining species—that is, the African pompano, or the banner pompano. It is said that the word pompano is derived from the Spanish, and means a "grape leaf," probably in allusion to the shape of the fish, but possibly to something else. Common pompanos I have caught hundreds of in Key West harbor, Fla., and taken a few of the banner pompano off Pensacola, where the local fishermen call it the "gaftopsail pompano." A few years ago the common species was found to occur also on the Pacific coast,

COMMON POMPANO—*Trachynotus carolinus*.

having been captured in the Gulf of California. In the Havana markets this fish is very highly esteemed, and indeed this is the case almost everywhere where it is known. With us, for the table, it is in its best condition in the autumn, at the time the old ones are leaving the coast. They are then very fat, and far better eating than they are in the spring of the year. They are beautiful objects when caught with hook and line, and I will never forget the first fellow I safely landed over the side of the boat. Sheet silver could not compare in color with his brilliantly-tinted sides, and the effect was much enhanced when he was free to thrash about in the bottom of the boat under the bright rays of a Key West sun at noonday. Another good cast in the collection is that of a buffalo-fish. "The three species known as 'buffalo-fishes' (*Ictiobus bubalus*, *urus* and *cyprinellus*)," says Prof. Jordan, "are found mainly in the river channels of the Mississippi and its tributaries. They are the largest of the suckers, reaching a weight of 15lbs. or more. In the Mississippi

and Ohio valleys they form a large percentage of the food fish consumed. They usually bring a better price than the smaller suckers, excepting the black horse, but at the best they are coarse, poor fishes, the flesh being full of small bones and scarcely worth the trouble of picking. The buffalo-fishes are found by Prof. Forbes to feed on small crustaceans more than do the other suckers and less on mollusks." While living at New Orleans I have frequently seen these great suckers loaded up in wagons by the fishermen and drawn into the city to be exposed in the market-place for sale. They are generally purchased by the poorer classes as food, and are rarely eaten by those who can afford better. I have seen some seined that weighed as much as 20lbs., and one exceptional case where the specimen weighed over 30lbs. With their large scales, bronzed bodies and ponderous forms, it is a fine sight to see a lot of living ones together lying on the river bank just after the nets have dragged them out of their natural element.

Fishes with large scales and other strong external characters make fine casts, and such an one is shown in the figure of a parrot-fish. These peculiar species derive their name from the resemblance of the mouth parts to the mandibles of a parrot, which, it will be seen from the illustration given, is quite striking. R. W. SHUFELDT.

WASHINGTON, D. C.

## ANGLING NOTES.

### Early Trout Fishing.

WHEN the spring opened early in northern New York, so unusually early, judging by the time that the ice went out of the lakes and ponds, that the oldest inhabitant had no recollection of a similar early spring, the brook trout fishermen girded themselves for action and great was the preparation for the first fishing on the 14th of April. Except for wind with, at times, a March flavor, the 14th of April was a bright, sunny day, and perhaps the warmest day of the season up to that time, and great was the joy thereat in the hearts of some scores of fishermen. In a moment of weakness I promised Mr. C. H. Baxter, secretary of the Mohican Rod and Gun Club, that I would go a fishing on the opening day, but that there should be no misunderstanding about the matter later, I told him I believed we would get few if any trout, that they would not rise to the fly with the streams full of snow water, as they were in spite of the warm air, and any trout we might get must be taken from the bottom with the barn-yard hackle, which they would swallow with more deliberation than a sucker, and when caught would be found to be slimy and poor in flesh. He thought I was throwing water on the scheme colder than any we would find in the brooks, but he was game to go. I have not yet confessed to him that when, a few days before the 14th, the Surrogate asked me if I could appear in his court the morning of the 14th without breaking my heart, I whispered in his ear, "Judge, you have saved me, but to make a dead sure thing of it issue a bench warrant for my appearance and give it to Sheriff Reed, for I have promised to go a-fishing on that day."

To my friend Baxter I said: "I must appear before the Surrogate at the proving of a will, and I am extremely sorry that I cannot go out with you and get wet." Mr. Baxter and Mr. John Watson did go and they got home again safe and fairly well. Mr. Alexander Canfield, a veteran trout fisherman, caught one trout, slimy as an eel and very thin in flesh. Hon. A. B. Abbott and sons caught two trout, and about fifty other fishermen that started between 1 o'clock and 5 on the morning of the 14th, and scoured all the brooks within reach, got the same as Mr. Baxter—nothing. The brooks were low, the water cold, and the trout sluggish.

A few days later Mr. G. R. Harris, secretary of the Paper Company, fished what is called an "early brook," and with two companions caught nearly fifty trout, and he told me that at noon they dug a hole in the snow and put their morning's catch in it to await their return at night.

The Washington county streams are considered earlier than those in Warren county, and Mr. Charles H. Wilson has for years made it a point to fish there on opening day. One of his companions who was as regular as he was, formerly a companion of Dr. Bethune in fishing the same streams, Mr. Wilson, writes me: "My trip to Salem for opening day fishing was a very pleasant one, but the fishing was very poor. The streams that usually yield a fair catch were fished with poor success owing to low water and cold weather. Our party of four, Mr. T. A. Wright, of New York city; Mr. J. M. Williams and Charles Whitcomb, of Salem and myself, caught on Saturday in White and Black creeks, fifty-two trout of lawful size. High hook 2lb.

"Monday, the same party took from the headwaters of Black Creek 46 trout of better size, one of 1 1/2 lbs. weight.

"The usual large trout story was sprung on the Salem people by two strangers, who caught 23 trout, weighing 19 1/2 lbs. I saw them. They were in an 8lbs. basket, which was not quite full."

From Rochester Mr. Thomas W. Fraine writes: "My line was wet on the opening day. I caught 5 trout from 6 to 9 in. long. Never saw the streams so low before."

Whether the water is high or low, April 15 is too early to expect good trout fishing in the streams of northern New York. Trout may be caught, it is true, but they afford no sport, as they show no more fight than a piece of dead wood, and when dragged out are slimy and in poor condition. The warm and gentle rain which is falling as I write, and turning the grass green as it falls, and at the same time opening the tender green leaves on the trees and bursting the blossoms of the plum and the cherry, will change all this, for the insect life in the streams will awaken, and the trout will come out from the deep holes, and on the gravel of the rapids will be washed clean with burnished sides, and take on flesh and become vigorous and alert for flies, natural and counterfeit, that may fall on the water of the murmuring stream. Then there will be some fishing worthy of the name.

As to lake fishing, Fish Commissioner Wentworth, of New Hampshire, reports that at Newfound Lake a salmon (ouananiche) was caught the morning of the 16th and two the morning of the 17th. On that date the ice was still in the lake, except at the head of it, where there was open water and where the fishing was done.

Mr. Alonzo J. Cheney writes from Sunapee Lake, N. H., under date of April 16, that he thinks the ice will be out of that lake during the week ending the 21st and that

the smelts were running up Pike Brook from the lake in small numbers. He adds that on the opening day of the trout fishing season in New Hampshire, from a small pond near Sunapee Lake, a man caught a number of speckled trout weighing from one to four pounds each. They must have been caught through the ice.

Perhaps, the most novel report, in view of the belief that in order to catch trout one must now go to some place remote from the towns, comes to me from Mr. H. S. Bull, of Albany, who writes: "Went for trout Wednesday, the 18th. Left my house at 2:30 P. M., was back at 5:40 P. M. Never went beyond the city limits and brought home four trout of above legal size."

#### A Rainbow Trout.

Saturday evening, April 21, there was a ring at my door, and Mr. P. T. Ross, of Gansevoort, and a member of the Gansevoort Fish and Game Club, came in with a rainbow trout which he had caught in Saratoga county, and had driven eight miles to show to me. The trout weighed 2lbs. 9oz., and was caught on the 19th. It was 18in. long and 4in. deep, and was one of a lot of rainbow trout planted by the Gansevoort Club in 1891. Mr. Ross was naturally proud of his catch, as he had taken personal charge of the planting of the fry. The same species of trout have been planted in other streams in Saratoga county than the one selected by Mr. Ross, and have in nearly every instance disappeared after the second year, as they have from so many other streams in other portions of the State.

Mr. Ross tells me that knowing of the peculiarity of the rainbow trout in this respect, he selected Deleagar Brook, in the town of Wilton, in which to make his plant, as the brook flows into Chase Pond, from which the fish cannot escape down stream. Last year he caught from the stream rainbows weighing 12 and 14oz. each, showing that there was an abundance of food. He says that the trout have spawned in the brook and are undoubtedly there to stay.

The Gansevoort Club caught some men netting one of the trout streams this spring before the fishing season commenced, and had them arrested and fined. The netter is the curse of the country trout streams, and next to him comes the baby trout fisherman.

#### A Reminiscence.

How the scenes of past trout fishing come back to us at this season of the year!

I was talking with a friend in my own house one evening lately after a game of whist, and he described a stretch of brook that had impressed him while wheeling in the country that day. Instantly there came to my mind a bend in Minerva Creek, in Essex county, N. Y., several miles above the village of Olmsteadville. The stream used to be flooded every spring to drive out the saw logs cut at its headwaters, and at one bend there was a deep hole under a high bank, making the stream unapproachable from the bank side. The opposite side was low, with a shelving, gravelly approach to the pool. The deep hole had gathered drift of all sorts, but chiefly stumps of trees with a mass of roots. Fishing down stream I cast my flies on the water at the upper end of the pool, and with a rush a trout came from the stumps and roots and took the stretch fly. It seemed to be about 1½ lbs. in weight and for a few moments fought a fair fight in the clear part of the pool. Suddenly it turned to find shelter and safety among the roots, and I checked the rush when the fish had almost gained the haven. There was nothing to do but pit the rod and leader against the fish and the current and the issue was fairly fought, as I held the rod back and the butt forward. An extra spring of the rod during a desperate struggle on the part of the trout would carry it so near the roots that its tail seemed almost to touch them. At first I expected the leader would part or the hook give way, but as the seconds went on I gained confidence in the tackle; and then all in a moment the trout came to the top of the water on its side, and drawing it toward the shelving bank the net did for him.

Now, as I think of it with every detail as fresh as though the fight occurred yesterday, I wish almost that I had put the trout back in the water to live and perhaps fight again. When this came back to me, like a flash, the other evening, I could see it and feel it all, and when I went to sleep I was fighting the fight over again, and it was the best fighting I have had this year.

#### Earl of Aberdeen on the Restigouche.

Back in 1878 Mr. John Mowat, then a fishery officer of Canada, received directions to take charge of a party of royal fishermen and women on the Restigouche in New Brunswick. H. R. H. Princess Louise, Lord Lorne, the Governor-General, Duke of Argyll and daughters, and Lady MacNamara were of the party. Messrs. Fleming and Brydges had given up the river for the season to the royal party, and Mr. Mowat fitted up Mr. Brydges's famous barge Great Caesar's Ghost for the occasion. It was during this trip that the Prince's Pool was named. Mr. Mowat has told me how some of the party had descended the stream, leaving Her Royal Highness, Lady MacNamara and attendants with crew of the barge and two Indian canoemen behind for the last fishing. Mr. Mowat put one of the Indians out and took his place, hoping to give the Princess the best fishing the river afforded. The fishing was in the present Princess Pool, then unnamed. The veteran fisherman, after looking over the fly-book of his royal mistress, put on her leader one of his own flies, and she hooked and killed a 24lbs. fish in eleven and a half minutes. The next was foul-hooked and required twenty-two minutes and weighed 22lbs. The next was a fish of 26lbs., and the fourth and last a 27-pounder, which Mr. Mowat gaffed from the canoe. He then asked permission of Her Royal Highness to name the pool in her honor, and as she consented he named it Princess Louise Pool.

The Restigouche Salmon Club has now asked his Excellency the Governor-General, to be the guest of the club for the salmon fishing in June, and Mr. Mowat has been invited to take charge of the Earl of Aberdeen and his party and show them where the big salmon lie, as he did for the Governor-General sixteen years ago.

#### Bait in a Vial.

It strikes me that at some time I have heard or read that a very few of the fishermen of the cave dwelling period, or it may have been a few hundred years later, carried their bait in a bottle or jug. No doubt fishermen generally of this day credited such allusions to the para-

grapher in the fanny papers, but truth is more real than fiction, and at this moment there is on my desk a vial in which not only to carry bait, but in which the bait is offered to fish. I have seen alleged bait bottles and pigs portrayed in the comic papers, but they were several sizes larger than the vial, which is wired to the shank of a hook with silver wire, and in it an angle-worm is supposed to be placed, then stoppered in with a cork and the whole outfit offered to an unsuspecting fish. If the inventor would supply eye glasses for the fish it is possible that the fish might discover what the vial contained, otherwise they are quite likely to take the vial and contents for a long .22 cartridge.

#### "Not All of Fishing to Fish."

The Fly-Fishers' Club, London, has just issued its Annual, after its tenth year of existence, and on its cover is shown, for the first time, the book plate for the club's library, specially designed by Mr. Batchelor. The design is very attractive as well as appropriate, displaying as it does a fish-basket, or creel, of the stereotyped form as made of French willow, with cover raised to show that it is filled with books instead of trout.

The shoulder strap is wound around the front of the creel and bears the legend, "Fly Fishers' Club Library." Under the figure of the creel is the Latin motto, *Piscator non solum piscatur*. Curved gracefully around the creel are two great leaders, or casting lines, each terminating in an up-winged fly, making the whole design in the form of a shield.

Now, I have nothing but unqualified praise for this design, for it is well drawn and so "fetching," that it will make a book-loving angler's eyes glisten as he looks upon it; but on one of the pages of the Annual I read: "The book plate for the library and its Latin inscription will be found to embody the maxim of that celebrated American angler, Thaddeus Norris, that 'it is not all of fishing to fish.'"

I would be the last man to rob "Uncle Thad." of anything due to him or his memory, but I believe that the Fly-Fishers' Club has credited the maxim to the wrong man. Thad. Norris may have used the expression, that it is "not all of fishing to fish," but his name has never been associated with it over here, and I have just made an

FORM 2 A.

The Sheriff has no control over the Jury Lists, and cannot excuse any person from Jury Duty.

SIR:

You have been drawn to serve as a TRIAL JUROR, and are required to attend at the CITY COURT OF NEW YORK [Part 1st], to be held in Room 20, OLD CITY HALL, in the City of New York, on MONDAY, the 7<sup>th</sup> day of May 1894 at 10 o'clock A. M., and there await the further order of the Court.

Sheriff.

CHAINED TO BUSINESS.

HE THOUGHT HE WAS GOING FISHING NEXT MONDAY, BUT—

examination of his books to see if I could find reference to it, and find nothing to indicate that he ever heard of it.

The late George Dawson, editor of the Albany Evening Journal, is the one to whom the maxim should be credited, and it may be in order for me to explain how I once came to use it myself. When Mr. Dawson's "The Pleasures of Angling" was published in 1876, I read in it, "They are greatly in error who suppose that all there is of fishing is to fish," and the expression took root within me, and I came to say on all proper occasions, "It's not all of fishing to fish." When "Fishing with the Fly" was published, I used for a title to one of the chapters, "Not All of Fishing to Fish," and did so without the least thought that I was robbing Mr. Dawson of something which belonged to him. Some time later I was told that Mr. Dawson himself in a little book, "Angling Talks," written for and published by FOREST AND STREAM, had used for a title to one of the chapters, "Not All of Fishing to Fish," and then I began to have grave doubts about the propriety of my action in using the expression without indicating by quotation marks that it was borrowed, although to this day I have not seen a copy of "Angling Talks," nor do I know the date of its publication in relation to the date of publication of "Fishing With the Fly," nor does it make any particular difference at this late day, for I absorbed the expression from Mr. Dawson's book, and to him is due the credit for it. "Fishing with the Fly" contains the last paper upon fishing, "Fly-Casting for Salmon," that came from Mr. Dawson's pen, as he died quite suddenly very soon after writing the chapter, the manuscript of which I retain, with the date on which it was written, in the author's hand. The committee of the Fly-Fishers' Club may like to know that Mr. Dawson, whose words are quoted on their book plate, was born in Falkirk, Scotland, in 1818.

#### In Justice to Mr. Dawson's Memory.

Soon after Mr. Dawson's death in 1883 I received from his son a copy of a memoir of the dead journalist and angler, beautifully printed and containing a fine steel engraved portrait of the subject of the memoir. One sentence in it struck me as unjust to Mr. Dawson as an angler and I wrote on the margin, "Correct this." Up to the present time I have not done so, but tardy justice is better than none.

One beautiful tribute, written as I have always believed by Mr. St. Clair McKelway, mentioned Mr. Dawson's closing days, and among other things said: "There was nothing to fight for or against. He ached for the time when he could whip salmon and snare trout." The italics are mine.

It is quite evident that the writer had not the least

idea of even suggesting that Mr. Dawson was aching for the time when he could take trout unlawfully, or in an unsportsmanlike manner, for he knew him well and knew that he was not a law-breaker; but it is also evident that the writer was not an angler and was unfamiliar with angling terms, and in testifying to his lore of angling used the wrong word. But there it stands to this day, in the sense in which it is used, almost like a confession on the part of Mr. Dawson himself. Here is Mr. Dawson's own testimony: "The greatest enthusiast soon wearies of bait and troll as lures for pike and pickerel, or sunfish and perch. As coarse food palls on the palate so the love of angling soon dies out unless it reaches up to the higher plane of trout and salmon, lured by the tiny fly, kept in check by the gossamer-like leader and conquered by the skillful manipulation of the slender rod, which curves to the pressure as gracefully as the tall pine to the blast of the tempest. It is only in this higher department of the art that the angler finds the witchery of his vocation." A. N. CHENEY.

#### OUANANICHE AND TROUT.

TO COMMENCE with, I would strongly urge all who desire a literary acquaintance with the game qualities of the ouananiche and the manner of taking him to procure a copy of Mr. Eugene McCarthy's "Leaping Ouananiche," so fully reviewed in your last number. My friend McCarthy's views on the natural history of the fish differ from mine in some details, but that is naturally no proof that he is wrong. But his exceedingly interesting, correct and vivid description of angling for ouananiche in the summer and autumn—the seasons in which the enthusiastic and popular Syracuse angler and author has for so many years matched his strength and cunning against the *finesse* of his finny prey, cannot but prove helpful to those who may contemplate their first trip to "the land of the ouananiche" during the coming summer. It is a mistake, however, to assert that "before June 1 it is too early and cold" for ouananiche fishing. One of the best day's sport that I ever had with the fish was upon May 23 or 24, 1892, when in the course of a very few hours some dozen or so of 3 and 4lbs. fish fell to my rod in the pool at the mouth of the Ouatchouan, and excellent sport was had on the same occasion by my angling companions, R. M. Stocking of Quebec, Mr. Chase, president of the Waterbury Watch Company, and Mr. John Wallace of Ansonia, Conn. There are no flies to bother one in Canada in May, and though the comforts of the Hotel Roberval may be lacking, for it seldom opens before June 1, country board

may be had in the village of Roberval, and for a small party, at Ouellet's, within a stone's throw of the pool, and near the famous falls of the same name. I would not advise a visit to the Ouatchouan, nor yet to the mouth of the Metabetchouan, where the spring fishing is about the same, before about May 18 or 20, though this year the season promises to be somewhat earlier than usual, and to friends that talk of reaching Quebec a week or so sooner, I say that were I in their place I would stop over at Lake Edward, half-way to Lake St. John, and enjoy a few days' sport with the large and lusty *fontinalis*. Successful fishing for these may be had from the time the ice leaves the lake. All necessary supplies can be had at Lake Edward, including guides, but Roberval has a Maine prohibitory law, except in so far as the hotel is concerned, which, as already mentioned, is not open in May. Large flies, almost salmon size, are used for ouananiche in early spring fishing at Lake St. John. The Jock-Scott, silver-doctor and professor are nearly always successful.

E. T. D. CHAMBERS.

#### Baits for Whitefish.

Owosso, Mich.—Please inform me what kind of bait will attract whitefish. A lake near here was stocked with them several years ago, but none were seen until last year, when a party of fishermen from this city surprised some vags, who were using dynamite in the above lake, and picked up several fine ones on the surface of the water. The lake referred to is about 60ft. in depth. J. S. C.

Various baits have been used successfully. Seth Green recommended small minnows about 1in. in length and red angle worms for Otsego Lake. Chas. Carpenter caught a few at Kelley's Island, Ohio, with cockroaches drawn rapidly through the water. Dr. Theodatus Garlick fished in 25ft. of water at Copper Harbor, Lake Superior, and caught several large whitefish at night, baiting with small pieces of fresh beef. He took a few also with rod and fly at the Sault St. Marie in the rapid water, at and about the canal company's locks. Hon. Emory D. Potter saw a great many whitefish taken at Sault St. Marie with a hook baited with the June or soldier-fly, the bait resting on the bottom of a deep, still pool, adjacent to the rapids, Boys and half-breeds are said to catch a great many in that way in 20 to 30ft. of water.

Elihu Phinney has described the capture of whitefish at Cooperstown, N. Y., as follows: "The fishing for Otsego bass [a name for the whitefish] in our lake has all been done within a quarter of a mile of the village in water from 10 to 40ft. deep. The fishermen's huts, some fifteen or twenty in all, and about 6ft. square, are dark-

ened so as to enable the occupants to see more clearly into the water below.

"The tackle is extremely light, the hooks, which are quite small, and two or three in number, being attached about a foot apart to the main line with a bit of ordinary gut. The baits in vogue are of many sorts—bread crumbs, bits of beef or angle worm, the common house fly, small cockroaches or other bugs, and pellets of wheat flour mixed with cotton or flax, but chiefly, most successfully and most unaccountably, a tiny bright shiner, either living or dead, or a small portion of it.

"Two lines are generally used, one with the bait lying on the bottom and the other with the baits kept moving in plain sight near the surface, where the fish are distinctly seen. And, singularly enough, it is in this last way that probably nine-tenths of all the catches have been made."

Mr. Phinney stated that the fish bite equally well by day or night, and that tiny rock bass were once found in the stomach. Inspector F. C. Gilchrist reported the discovery of a young burbot in a whitefish stomach. J. R. B. Van Cleave, the well known Chicago angler, has never seen the Miltona Lake whitefish caught with a hook, but perhaps no one has tried in that lake the plan above set forth.

### Conewango Creek Cripples.

FOR several years I have noticed numbers of dead and crippled fish in Conewango Creek, Pa. Some seemed to be partly paralyzed, swimming around close to shore on one side, others stone blind, the eyes being literally eaten out of the sockets. This I believe is caused by the poisonous acids cast into the waters by the oil refineries and chemical works. The fish principally affected seem to be soft fish, such as suckers, mullet and shiners, though rock bass and an occasional black bass are found. The acid or whatever it is seems to have the effect of turning them white, or part white, giving them a queer appearance. Anybody crossing any of the bridges over the Allegheny or Conewango and seeing the quantity of oil on the water would naturally wonder how fish can live in it. They do, but it must certainly be at a cost to their numbers.

W. G. S. O.

### Success in Stocking with Bass.

I HAVE been looking over a few of the past numbers of FOREST AND STREAM this evening, and in doing so ran across the article relative to transporting fish alive, which appeared in Mr. Cheney's "Angling Notes" several weeks ago. I have always been very much interested in what he has to say and quite frequently experiences of my own are brought to mind. The article referred to is a case in point. While my experience in transporting fish has been somewhat limited, I think that I have learned something, and perhaps what I have to say may be of interest to others.

Last July a few of us thought that the fishing in some of the ponds in this vicinity could be improved by stocking them with black bass. The fishing is heavy in all the ponds around Worcester, and as they are not protected, the native fish have to a very considerable degree been caught out. From our experience with bass we are convinced that once introduced into a lake it is practically impossible to entirely destroy the fishing, if legitimate methods are employed. So we decided to try the experiment. The first question that confronted us was how to transport the fish from one pond to another. And after many ways had been considered and set aside, we finally hit upon a plan which proved to be entirely successful. We procured a sugar barrel that was watertight and filled it about one-third full of water, to prevent the water from slopping over the top, and also to prevent too much agitation. We took the head of the barrel, fastened the thin pieces of which it was made together with cleats and allowed it to float on top of the water in the barrel. In this way we transported 200 bass, about 20 at a time, and lost only one, which was injured when caught. They were carted about three miles over a rough road.

My experience has been that great care must be used in transporting fish not to change the water too often, as a slight change in temperature will sometimes kill many if not all of them. I remember going on a fishing trip to New Hampshire several years ago with a party of friends. We took along with us about 300 shiners for bait. The fish were in the baggage car and were doing well, but we thought that perhaps the water ought to be changed occasionally; so at one of the stations we refilled the can with water from the water tank, and in less than an hour nearly half the fish were dead. The water from the tank was probably several degrees colder than the water in which we were transporting the fish, and it killed them.

My experience in stocking streams with trout and salmon fry has not been encouraging. I presume I have planted one hundred thousand trout fry in the streams in this vicinity in the last few years, and as yet have seen no good come of it. Ten years ago several of the fishermen in this vicinity placed 60,000 landlocked salmon fry in two of the lakes near here, where the chances for their doing well were apparently good. But we have yet to hear of the capture of the first salmon. I believe that the only proper way to stock streams or lakes is to place in them fish at least a year old, and I think this is the opinion of most of the anglers in this section of Massachusetts at least. If any of your readers can throw more light upon this subject I wish they would do so, as I think we have much to learn yet as to the proper methods to be employed in stocking our lakes and streams.

GRAY HACKLE.

WORCESTER, MASS.

### New York Game Laws.

The omnibus bill sent to the Governor by the New York Legislature, which adjourned last week, prescribes the following close seasons: Deer in Sullivan county, Nov. 1-Oct. 1. Black and gray squirrels, hares and rabbits, Jan. 1-Sept. 1, except in Cattaraugus county; and Aug. 15-March 15 in St. Lawrence, Franklin, Essex, Clinton, Lewis, Warren, Hamilton, Herkimer, Jefferson, Monroe, Chemung, Richmond, Fulton, Seneca, Ontario, Wayne and Oneida counties; and in Onondaga and Orange counties. Wildfowl, March 1-Sept. 1. On the Hudson River and tributaries south of the Troy dam May 1-Sept. 1. Mongolian pheasants protected for three years. Trout, Sept. 1-April 1, in Lake George and in Lewis, St. Lawrence, Franklin, Fulton, Clinton, Essex, Warren, Hamilton, Herkimer and Saratoga counties, Sept. 1-April 15. Black bass, Jan. 1-May 31. Pickering, wall-eyed pike, in St. Lawrence River, Jan. 1-May 30. Up to the time of our going to press (May 1) the bill had not been signed.

### A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$2).

### PUBLISHER'S DEPARTMENT.

Mr. WALTER WELLMAN, who is organizing a North Pole expedition, writes to Spratts Patent, from Liege, Belgium, as follows: "On inquiry here we find that your Patent Meat Fibrine Vegetable Dog Cakes and Cod Liver Oil Dog Cakes are superior to anything we can get for the large pack of Belgium draft dogs which we are taking on to the Arctic."

The Baltimore & Ohio R. R. Company issue an attractive little circular "Where to Find Game," which gives information compiled from reports of B. & O. agents as to the kinds of fish and game to be found at different points along the road, the character of the country, names of streams, hotel rates, livery and guides' charges, etc. It may be had for the asking.

The illustrated circular of the Natchaug Silk Company giving the award of prizes for last year and particulars for the '94 competition for \$225 in gold will interest all fishermen. It is worth noting that among the letters from last year's prize winners and competitors, which are here published, FOREST AND STREAM is mentioned many times, while no other journal is named even once. As the competition was advertised generally and extensively this fact is of telling significance and offers one more proof of FOREST AND STREAM's value as an advertising medium.

The Syracuse Arms Company have put upon the market a hammerless gun which possesses a number of new features, and which, when it becomes better known, will no doubt prove very popular with sportsmen. Its simplicity of construction and the fact that all its parts are interchangeable, are strong points in its favor. The gun can be taken apart and assembled without the use of any other tool than a screw driver. The entire locking mechanism is hung on two pins, and the hammer and the cocking device are all one piece. Mr. E. Hollenbeck, the inventor, claims that he is the first to successfully apply the system of interchangeability of parts to the manufacture of high-grade shotguns.

Messrs. C. C. Abel & Co., of New York, who are sole agents in the United States for C. G. Van Tubergen, Jr., of Haarlem, Holland, send price lists of flower rods on application.

Mr. Thos. Hunter, the big and popular president of the Hunter Arms Co., made a flying trip far South as Baltimore recently, and received a number of orders for the L. C. Smith gun. He reports that dealers are not stocking up to any great extent as yet, but that individual sportsmen are buying.

Vol. I., No. 1 of the *Baker Gun Quarterly* has come to hand. It is an admirably written and arranged little paper, and full of meat regarding the Baker gun. The publishers state as their object in issuing the paper as follows: To collect and publish experiences of practical gun men. To carefully note all questions that arise affecting the making and selling of guns. To do what we can toward educating people in an intelligent use of guns and toward strengthening the interests of legitimate sport generally.

The Wm. Malcolm Telescope Company, of Syracuse, have sent rifle telescopes for hunting and target work all over the known world.

The Burgess Gun Company have centrally located offices in the Erie County Savings Bank Building. The factory is in the north end of the city and is best reached by trains of the Belt Line Railroad which leave from the New York Central Station and which are operated by the Central Railroad Company. This Belt Line railroad beats the New York elevated roads for cheapness, carrying passengers entirely around the city, a distance of fifteen miles, for a single five cent fare. Its trains land passengers directly in front of the Burgess Gun Company's factory, giving them en route a view of Lake Erie and the upper Niagara. The factory is a three story and basement brick building, well supplied with the best modern machinery for turning out a perfectly finished gun. Last week a representative of FOREST AND STREAM was shown over the building by Mr. C. A. Damon, and also had the pleasure of firing one of the repeating shotguns, which worked like a charm. The Burgess Gun Company make a specialty of turning out special guns with one or more barrels to suit the needs of individual sportsmen. They have turned out guns bored for ball or buckshot, and are constantly experimenting for special charges. Their expert is at present perfecting a new device for ejecting in the possible contingency of misfire. The device now in use seems to answer the purpose admirably, and may be retained after the other device has been given a trial. The Burgess Gun has won many friends and has a bright future in store.

I asked Dan Cupid to other day  
What made him so surprising fair.  
"My Ma-Mam Venus," he replied,  
"Keeps Packer's Tar Soap at her side,  
And scrubs me everywhere." —*Adv.*

The Hazard Powder Company has moved from its old office at 63 Pine street, to new and more commodious quarters in the Continental Life Insurance Building, 44, 46 and 48 Cedar street.

### Two Spring Tours to Washington, D. C.

On Thursday, May 3, and Thursday, May 24, the Pennsylvania Railroad Company will run two delightful spring tours to the National Capital. These are what are called three-day trips, and embody all the advantages of an inexpensive trip, as well as an excellent opportunity for seeing the beautiful city of Washington under the most favorable circumstances. The rate from New York \$18, and from Philadelphia and Wilmington, \$11, carries with it transportation in a special train of Pennsylvania Railroad standard coaches, accompanied by experienced tourist agent and chaperon, who aid the tourist very materially in their journeying in and about the city of Washington, and the advantages of an inexpensive trip, as well as an excellent opportunity for seeing the beautiful city of Washington under the most favorable circumstances. The rate from New York \$18, and from Philadelphia and Wilmington, \$11, carries with it transportation in a special train of Pennsylvania Railroad standard coaches, accompanied by experienced tourist agent and chaperon, who aid the tourist very materially in their journeying in and about the city of Washington, and the advantages of an inexpensive trip, as well as an excellent opportunity for seeing the beautiful city of Washington under the most favorable circumstances. ## LOS ANGELES DOG SHOW.

(Special Report.)

THE sixth annual bench show of the Southern California Kennel Club, held at Los Angeles, April 18 to 21, must go on record as another success. The entry, though not a large one—170—was made up of representative classes. The pointer classes held their own. The St. Bernards, English setters, fox-terriers, pugs and cockerspaniels have improved wonderfully in the last two years. The hall is very centrally located, cool and well lighted. The attendance has been very good and I imagine that the club will come out ahead. I heard but very few complaints, and the majority of those were without cause. The judges gave very good satisfaction; I find cause to differ from them in a few instances only, and in those it is merely a difference of opinion as to type.

Mr. G. L. Waring, of Riverside, judged fox-terriers and bull-terriers; Mr. A. C. Waddell, of Coffeyville, Kansas, all other classes. As is often the case, the preparations for the show fell almost entirely upon one man. Mr. C. A. Sumner, the secretary, has had almost entire charge of affairs and to him must be given the credit for the success of the show. Mr. Ingalls, the elected superintendent, was unable to attend and a son of Mr. Sumner's officiated in that capacity. He performed his duties well and gave very general satisfaction. The dogs were well fed and well cared for.

## Mastiffs.

This class as a whole were a poor lot in comparison with Eastern dogs. Bishop, the winner, was the best in skull, bone, back and action. Phillip, second, has the best front, but is too high behind, light in eye and deficient in head. Phelps's Bishop is too leggy, weak behind and in pasterns, but has the most character, best mask and eye. In bitches Fanny II. won, a second would have been more than she is worth, small, weedy and snipy. Lomita Rex was alone in puppy class and well deserved the blue. He is well proportioned, sound and in prime condition, but, for a son of Ingleside Crown Prince he should show more skull.

## St. Bernards.

A big improvement over former years. California Bernardo, the winner in dogs, is the best in expression, character, coat and limbs. Reglov, given third, is much taller and larger in every way, equal in skull, but longer in muzzle; he is straight in stifles. Both of these dogs are dark in head markings. Leaving out the eyes, Reglov was a very easy second. He is blind in one eye, however, and on this account Mr. Waddell put Monk over him. Monk is a good type of dog, a little chap, but with a good head of the Swiss type, blocky but expressive, small ears, no blaze, good bone, bad coat. I preferred Reglov for the position. In open bitch class Tabitha was alone; she is a smooth-coat, or at best a broken coat; very nicely marked, but small and weedy. A finely-marked lot of puppies faced the judge. I never saw more perfect markings and shadings, but the entire lot were weedy.

## Great Danes.

Titan and Marjel, last year's winners, were the only entries. They are of the proper type, but rather small. In puppies, Marjel's show more quality than Titan's.

## Foxhounds

Brought out but two entries. Both are fair specimens of the American hound.

## Deerhounds

Only mustered two entries, Cervus and Flora. Both are good.

## Greyhounds.

The classes were small but very good. Skyrocket, the winner of many a hard fought battle in the coursing field, was again a victor. He is a very nice built dog all round. Falcon, his closest competitor, beats him in front and front feet, is equally good in shoulder and hindquarters, has the best skull, but loses to him in jaw, back, loin and neck. Donard M., third, has a nice skull but is short and weak in muzzle; lacks power; he is lower in front and better in hocks than Wallace, but is shorter and carries a poor tail. Wallace Go, reserve, is another good one, but is loaded in shoulders and short in neck. The positions of these two might well be reversed, but both are faulty. In open bitch class the competition was again close. Pronto, the winner, took the fancy of the judge; she has a nice head, good neck, front, depth of chest, the best arched back in the class, but is light in second thighs. Lady H. Glendynne, last year's winner, was shown a little too fat and soft; she excelled in hindlegs and back, has good head, shoulders and feet. Juno, third, has the most powerful muzzle of the lot and is well arched but is too long cast and straight in stifles. The puppies were very good and promising, well deserving the ribbons.

A so-called Russian wolfhound was given a second prize, said to be bred by Lord Tennyson. If I mistake not it is a cross between a greyhound and a wolfhound. It certainly has no resemblance to any of the barzois that I have seen in either England or America.

## Chesapeake Bay Dogs.

A good specimen of a Chesapeake Bay dog won; Prout, the well known winner. He is a bit wide in front and in poor coat, otherwise good.

## Pointers.

In challenge classes Sally Brass II. won in the over 50lbs. class, Kankoo in the light-weight dog class and Amariyllis in light-weight bitches. Sally Brass was shown in the best condition that she ever was since reaching this coast. She shows her age but little; Kankoo is a bit heavy in skull, but his good square muzzle and well put up body will carry him through a lot of trouble. Amariyllis has won now under four different judges; her only competitor was Patti Croxteth. Amariyllis won with much to spare; she has one of the best pointer heads that I ever saw, good clean neck and shoulders, good body, legs and feet, though she might be improved in stifles, and has an excellent stern. Patti Croxteth is like the most of the Croxteth stock, very wide in skull, loaded in shoulders and too "chunky" in build, not rangy like Amariyllis and all other dogs that possess speed and endurance. She has excellent feet and was shown in prime condition. Amariyllis afterward beat Sally Brass for the special. In open dogs, heavy-weight, Jap, the winner, excels in head, neck and pointer character. Bob, second, is a trifle light in muzzle and thick in skull and short in couplings, but has excellent front feet and stern. Rush, third, is throaty, a bit wide in skull and light in eye. Ben, reserve, is too wide in skull and cheeky. In open heavy-weight bitches Little Nell won; she is a Duke of Vernon—Sally Brass pup, full of quality and pointer character, nice head and neck and the best of feet; a little light for a heavy-weight. Hornell Bess, second, was shown in fine condition, though perhaps a little too fat. She is a good-headed bitch, might carry her ears a little better, has good shoulders and good body, but stands too wide behind. Flossy, third, has a good square, deep muzzle, but was shown in whelp and consequently not in condition. Open light-weight dog class brought out five entries. J. H. Keifer's Baldy won, a son of Idstone Bang. He has a square muzzle, but is too short and wide in skull, otherwise he is a capitally put up dog. Benkoo, second, I preferred for first place. He is better in neck and head, is more of the rangy order and to my notion a more typical pointer, with no great faults. Glenbeigh, third, was shown in fine fettle, but will never make a bench winner. He is too wide in front, too straight in stifles and short in head. Open bitches under 50lbs. brought out five; Kito won; she is wide in front, turns her elbows in too much and was shown too fat. Tippetta, second, has not

improved with age. She has grown a little cheeky and her feet might be better. Nancy S., third, is only a puppy and will improve. She has a nice type of head, a wee bit light in muzzle, good neck and shoulders, but weak in pasterns and has poor front feet. Belle, reserve, is slack in loin, ragged in hips and was shown much too thin; her head, neck and shoulders are excellent. Pointer bitch puppy class was won by Lulu King Don. Arabella, second, was too young for the class—a very promising puppy.

## English Setters.

Not a good class. Prince Charles, the winner, has the best type of head, but is coarse all through, ears too spaniel like. Mercury, second, a son of Dick Bondhu, is too short in head, is well ribbed up and has good legs and feet. Stamboul, third, I would like better were it not for his flat ribs. Cayador, reserve, is much too wide in skull, has bad expression and stern; his ribs are well sprung, and legs and feet good. Kash, vhc., who won under Messrs. Mortimer and Kaper, was overlooked; he lacks setter character and is very deficient in coat; had the judge handled him he would have unquestionably put him higher, as he has very few faults. In open bitches Countess Noble won with something to spare; while she might be lighter in skull and longer in muzzle, taken all in all there is not a bitch in California that can beat her. Diana, second, has the best head in the class, barring the lack of stop, and has the best feet, but stands poorly behind. Estrella, third, is of good type, but very small and not right in head. The puppies were good and somewhat resemble their dam, Countess Noble.

## Irish Setters.

Dick Swiveler was alone in challenge dogs; his head was never right and age has not improved it, lacks stop and is too full below the eye, one of his pasterns shows weakness, otherwise he holds his age well and was shown in prime condition. I used to think him small when he was going the rounds of the Eastern shows, but he seems to have filled out and thickened with age. Lady Elcho was alone in challenge bitches; I much prefer her head to that of Dick's, as it is, to my notion, much nearer the proper type, but she loses to him in body, back and loin, coat and color. Nemo II., first in open dogs, is not so good in head as Sultan, second, but beats him in body, is more developed, but in legs and feet and coat they are about equal. Prince Douglas, third, is very coarse and very large, but has a fair head and good coat and color. Reporter of Glenmore, reserve, is not a bad sort, good coat, body and legs, but deficient in muzzle. In open bitches Queen of Kildare won; she is a catchy little bitch with nice expression, too short in head, but of good type, coat rich in color, but deficient in quantity, well ribbed, and with good legs and feet; lithe as a cat and a good mover. Lightning, second, is best in coat and condition, good length of muzzle, but not square cut, full in brow and narrow at base, giving her an idiotic expression; she is a bit away-backed from maternal cares, otherwise very good. Nellie is short in skull, too much on the English setter order and has too much white on her. Glenmore Clipper was alone in the dog puppy class; he is a very promising youngster.

## Gordon Setters.

In dogs, no entries. Gyp won first in bitches; she is too light in build for a Gordon, has not sufficient depth of muzzle, coat flat and of good texture, tan of the proper shade. Lady Clara Jane, second, is a good bitch in very poor condition, out of coat at present, but in condition an easy winner. Roxie won first in bitch puppies; she is quite promising.

## Irish Water Spaniels.

Barney L. first in dogs and Nellie first in bitches; both good ones but shown too fat.

## Spaniels.

In field spaniels Little Nell took a first and Miss Bertie a second, but neither should have had anything; Nell is the best, but she is not a field spaniel. The same may be said of the dog puppy Fred.

The cocker classes were the best ever shown in Los Angeles. Woodland Duke won rightly enough, but King Douglas, second, pushed him hard; King has the best coat and is the more cobby, nearer the proper type of body, but Duke beats him in head; King is also short in ear and was shown much too fat. Dan Slater, third, is a big liver and white of fair quality but not up to those placed above him. In bitches Gypsy Jane won, she is a nice black, full of cocker character, perfectly flat coat, very good skull and ear, but a bit snipy. Sprite, second, is full of cocker character, but shown in whelp. Woodland Red Queen, third, should have changed places with Sprite, and Jessie V., reserve, should have been second; she is a liver and white ticked bitch that is, in my estimation, barring color, one of the best cockers on the coast to-day; barring a growing tendency to snipiness in muzzle, I do not see a fault in the bitch. Red Queen is very long and very snipy in muzzle and much too small and toyish. Diana won in bitch puppies; she is a black bitch with considerable character, too long and snipy in muzzle and too long in body, otherwise good. Woodland Red Queen took second in this class. Nina, third, has a fine coat but is badly faced, toy spaniel type.

In challenge Clumbers Buster won; he might be larger and is too short in skull and muzzle. Lady Florence, first in bitches, is much too small and too much of a cocker type on head, otherwise excellent.

The one dachshund was a very good one; long, low, well crooked and active, muzzle might be more powerful.

## Collies.

Fordhook Bravo won in open dog class; he is quite typical, has a fair outer and under coat, good muzzle, skull a bit thick, expression good. Aunt Dinah, first in bitches, is a very nice one, beautiful head and expression, but nursing a litter of puppies and was out of coat.

## Bulldogs.

A little French toy faced the judge, excellent in skull, body, legs and stern, but not broken up enough in face.

## Pugs.

Here we must beg to differ from the judge entirely. Balmaceda, first, should never have won the position, he is to begin with far too big, has a good pug skull, but has not a sign of wrinkle; his ears are good, but muzzle is too long, too nails pure white and feet poor. Royal Dusky, second, is a nice size, full of character, nice coat, good skull and muzzle, splendid wrinkle and expression, nice ear, beautifully curled tail, toes as black as ink, perfectly straight and sound and an easy winner, or should have been. Whitten Punch, third, has an excellent wrinkle, but is not wide enough at base of skull and is too long in body. In bitch puppies the very promising Victorina won first.

One fairish Japanese spaniel won first without competition, and a nice little Mexican hairless won in its class also alone.

I append Mr. Waring's report of fox-terriers and bull-terriers. He has neglected to speak of the Boston terriers, and I am glad he has, as I wish to say that the specimens of dogs that he gave the blue ribbon to are no nearer a Boston terrier than a mastiff. They were pit bulls of pronounced type, weighing probably 40 to 50lbs. each.

The most pronounced victory in the specials was the winning of S. M. Tonner's Amariyllis in pointer class. She very rightly defeated Sally Brass II., Patti Croxteth, Kankoo, Baldy and Kito for best light-weight pointer, and the above named bitches for best light-weight pointer bitch.

NAMQUOT.

## Fox-Terriers.

Judge's Report.

The fox-terrier classes were exceptionally strong, and certainly comprised the best lot of dogs that have ever appeared at Los Angeles. In the open dog class the duty of awarding prizes was a difficult one, as several entries were very close together, and the types rather divergent. Raby Rasper won with a very small margin over Ford Veni. The former is rather coarse, too thick in the neck, a little wide in front (though on occasions this is not apparent). He has a good coat—a trifle too abundant—excellent bone and good straight legs, and capital feet. His head is good, though it might be improved, being a trifle pinched below the eyes. His ears are good and well carried; he stands beautifully, and has an excellent outline, plenty of muscle, and particularly good hindquarters and hindlegs. His eyes are good, but expression rather soft. Good depth of chest and well-placed shoulders. He is a dog that must command attention, as he stands so well and shows himself. Ford Veni has a better head and ears than Raby Rasper; in fact, they are particularly good. He, however, was very deficient in coat, stands rather out at the elbows, and his hindlegs are too much bent and carried too much under him. In all other respects he is very good, and if he had a better coat the positions might have been reversed. The third prize dog, Lomita Patch, is a remarkably good shower, apparently very game, well-muscled, compact, has a good head, ears and bone, and straight legs and good feet. He is too wide in front, and is altogether rather too round in the muscles—slightly on the bull-terrier order. He wants more coat. Hampden Tip, reserve, showed badly and was in poor condition. He is a good dog, might be deeper in the chest, has a good head, with ears too large and too widely set, and light eyes; but altogether a taking dog. Blenton Reeper, vhc., was in very poor condition and looked a different dog to what he did last year. The loss of part of one ear is sufficient to put him out of court in the show ring—not as a disqualification, but because it so spoils his appearance. He is a good-bodied dog, with a nice outline, has capital coat, good legs and feet, is rather bitch-headed, and a little high on the leg. His intact ear is badly carried. That he is a good stock dog seems to be apparent, as no better fox-terriers were shown than Golden Gem and De Oro, two of his daughters. Golden Gem, the winner in the open bitch class, is a particularly good one, but she refused to show herself to advantage in the ring. Even this handicap was insufficient to prevent any mistake being made as to her superiority over the others. She is good everywhere and in describing her I found my statements on an inspection that I made of her after the judging was over. Had she shown herself in the ring as she did afterwards, I would have awarded her the prize for the best fox-terrier in the show. Her head is very good, her small ears hang beautifully and not leathery, though they might be set a little closer together. She has a good neck, sloping shoulders, good legs and feet, the right width and depth of chest and height of leg, a good outline to stern, capital coat, but might be a little heavier and deeper at loin with advantage. Altogether the best bitch I have seen in California. Lomita Winifreda, the second prize winner, is a different type; she is large and exceedingly game looking; she has an immense advantage in the manner in which she shows, has a remarkably good head and nice neck, well set on; might be deeper in the chest and less round; has not the best of legs and feet and a very bad tail carried over her back; also a bad coat. Sacerott Myrtle, third, has a nice head and well carried ears, a good body (perhaps a trifle long), a disproportionately coarse tail, only a fair coat and pretty good legs and feet. If she had an inch out off her tail it would improve her. Lomita Nettle, reserve, is large, too high on the leg, not very good in the body, but has a capital head and is game looking. Mission Belle, though pretty, is too light. Gussie would probably have been in the money if she had not shown so badly and thrown her ears back all the time she was in the ring. Her head and ears and body are good and her coat is right; she is deficient in bone but her forelegs are straight; a nice little bitch that spoiled her chances by her behavior. Bonnie Biddie, a good bitch, refused to show herself. Nellie, first at San Francisco 1891-92, was passed over on account of her brindled markings; apart from this she is a fair average bitch, good in the loin and body with very good ears; too thick in the head and too wide in the chest. The novice dogs were not a gaudy lot. The first novice bitch carried her ears badly but was otherwise fair. Bonnie Brush, first in dog puppies, is a nicely-made little dog with good coat, legs and feet and a nice outline; carries her ears too high, and is weak in jaw. It was a close thing between him and Don Juan, who is a neat little dog, fairly good everywhere except that he is wide in front and his coat is not good. Lomita Spratt is too large. The winner in the bitch puppy class, De Oro, is a good specimen. She possesses a very good head, ears the right size and shape and well carried, a very good loin and is a good depth all through, nice neck and good coat, tail and legs right but the feet are not round enough. She ought to be heard of again. Lomita Nettle was second and Bonnie Blot, third, carried her ears badly. Sunset Vixen, reserve, is too much of a toy.

## Bull-Terriers.

Judge's Report.

Chief, the winning dog, is fairly good; his ears are badly cropped, coming together at the tips; were they wider apart, as they originally were, his appearance would be immensely improved. Jumbo beat him in everything but head. Little Starlight is a well-turned, good-headed bitch, is rather wide in front and a little short in the leg. She beat the dog for the special.

G. L. WARING.

## LIST OF AWARDS.

MASTIFFS.—Dogs: 1st, M. S. Severance's Bishop; 2d, G. J. Griffith's Philip; 3d, Mark Phelps's Phelps's Bishop. Bitches: 1st, J. P. Goytino's Fanny II. Puppies: 1st, Lomita Kennel's Lomita Rex.

ST. BERNARDS.—ROUGH-COATED—Dogs: 1st, J. G. Barker's California Bernardo; 2d, F. McCallister's Monk; 3d, Dr. A. T. Regensburg's Reglov. Bitches: 1st, Goucher & Alkman's Tabitha.—PUPPIES—Dogs: 1st, C. F. A. Last's Pontiff; 2d, Goucher & Alkman's Puchi; 3d, Capt. F. E. Colver's Prince. Bitches: 1st, C. A. Sheldrick's Lady Thornton; 2d, Goucher & Alkman's Judy.—SMOOTH—1st, G. W. Lynch's Rover; 2d, M. E. Frazer's California Wonder.

GREAT DANES.—Dogs: 1st, J. G. Borglum's Titan, Bitches: 1st, J. G. Borglum's Marjel.—PUPPIES—Dogs: 1st, Mrs. H. E. Small's Figaro; 2d, Col. J. G. Otis's Toro; 3d, F. R. Miner's Faust. Bitches: 1st, J. H. Outhwaite's Minjion.

FOXHOUNDS.—AMERICAN—Dogs: 1st, T. Lowe's Dixie. Puppies: 1st, K. C. Klokke's Figueroa.

DEERHOUNDS.—Dogs: 1st, J. E. Hoy's Cervus. Bitches: 1st, J. E. Hoy's Flora.

GREYHOUNDS.—Dogs: 1st, P. Curtis's Skyrocket; 2d, S. Tyler's Falcon; 3d, H. McCracken's Donard M. Reserve, A. Barrell's Wallace Go. Bitches: 1st, S. Tyler's Pronto; 2d, H. McCracken's Lady H. Glendynne; 3d, T. Lowe's Juno.—PUPPIES—Dogs: 1st, S. Tyler's Oak Glen actor; 2d, H. McCracken's Midnight II. Bitches: 1st, Mrs. S. Tyler's Oak Glen Victress.

RUSSIAN WOLFHOUND.—2d, E. P. Boden's Cossack.

CHESAPEAKE BAY DOGS.—1st, T. Higgin's Trout.

POINTERS.—CHALLENGE—Dogs (under 50lbs.): 1st, E. K. Benchley's Kankoo. Bitches (over 50lbs.): 1st, H. Vernon's Sally Brass II. (Under 50lbs.): 1st, Mrs. H. M. Tonner's 2d, Amariyllis 2d, A. B. Truman's Patti Croxteth T.—OPEN—Dogs (over 50lbs.): 1st, A. P. Kerckhoff's Jap; 2d, A. E. Messerley's Bob; 3d, H. E. Green's Rush. Reserve, J. A. Silvers's Bob. Bitches (over 50lbs.): 1st, Presidio Kennels' Little Nell; 2d, J. H. Sammi's Hornell Bess; 3d, L. Simonson's Flossy. Dogs (under 50lbs.): 1st, J. H. Kiefer's Baldy; 2d, J. E. Walker's Ben; 3d, Howard Vernon's Glenbeigh. Reserve, George A. Ralph's Grover. Bitches (under 50lbs.): 1st, E. K. Benchley's Kito; 2d, H. Y. Evans, Jr.'s Tippetta; 3d, J. H. Sammi's Nancy S. Reserve, B. C. Hinman's Belle.—NOVICE—Dogs (any weight): 2d, E. E. Sallady's Nig.

—PUPPIES—*Bitches*: 1st, H. D. Dunton's Lulu King Don; 2d, Howard Vernon's Arabella.

ENGLISH SETTERS.—*Open*—*Dogs*: 1st, Godfrey Fritz's Prince Charles; 2d, A. P. Kerckhoff's Mercury; 3d, Jos. Singer's Stamboul, Reserve; 4th, Winder's Gazd; 5th, Very high com. G. A. Van Derbeck's Kash. *Bitches*: 1st, H. T. Payne's Countess Noble; 2d, W. Garms's Diana G.; 3d, H. M. Towner's Estrella.—*Puppies*—*Dogs*: 1st, W. E. Lester's Don Juan. *Bitches*: 1st, Samuel P. Hughes's Silverplate.

IRISH SETTERS.—*Challenge*—*Dogs*: 1st, A. B. Truman's Dick Swiveler. *Bitches*: 1st, A. B. Truman's Lady Elcho T.—*Open*—*Dogs*: 1st, A. B. Truman's Nemo II.; 2d, Glenmore Kennels' Sultan; 3d, A. I. Dilley's Prince Douglass. Reserve, Dr. E. N. Lowery's Reporter of Glenmore. Very high com., M. Splittsoesser's Martin. Com., Mrs. C. M. Shays's Sport. *Bitches*: 1st, J. W. Keen's Queen of Elmont; 2d, A. B. Truman's Lightning; 3d, J. G. Thurston's Nellie. Reserve, Mark G. Jones's Reddy.—*Puppies*—*Dogs*: 1st, Glenmore Kennels' Glenmore Clipper.

GORDON SETTERS.—*Open*—*Bitches*: 1st, G. P. Loos's Gyp; 2d, J. W. Edwards's Lady Clara Jane. *Puppies*: 1st, J. W. Edwards's Roxie.

IRISH WATER SPANIELS.—*Dogs*: 1st, A. Lorschach's Barney L. *Bitches*: 1st, J. H. Sammi's Nellie.

FIELD SPANIELS.—*Open*—*Bitches* (over 28lbs.): 1st, J. B. Arnold's Little Nell; 2d, M. Lowry's Nellie Bly; 3d, H. Finley's Miss Bertie.—*Puppies*—*Dogs*: 1st, M. H. Sinclair's Fred.

COCKER SPANIELS.—*Dogs* (under 28lbs.): 1st, F. E. Miller's Woodland Duke; 2d, Mrs. E. Kadish's King Douglas; 3d, Mrs. E. S. Slater's Dan Slater. *Bitches*: 1st, E. S. Slater's Gypsy Jane; 2d, Mrs. W. S. Taylor's Sprite; 3d, Mrs. E. Kadish's Woodland Red Queen. Reserve, H. Varley's Jessie V.—*Puppies*—*Bitches*: 1st, W. L. Prather, Jr.'s Diana E.; 2d, Mrs. Kadish's Woodland Red Queen; 3d, W. E. Murphy's Nina.

CLUMBER SPANIELS.—*Challenge*—*Dogs*: 1st, Ivanhoe Kennels' Buster.—*Open*—*Bitches*: 1st, Ivanhoe Kennels' Lady Florence.

DOGS.—*Bitches*: 1st, Dr. J. R. Davidson's Fannie.

COLLIES.—*Dogs*: 1st, J. B. Banning's Fordhook Bravo. *Bitches*: 1st, J. B. Banning's Aunt Dianah.

BULLDOGS.—*Dogs*: 1st, L. A. Vay's Tramp.

BULL-TERRIERS.—*Dogs*: 1st, W. H. Collins's Chief; 2d, C. M. Merry's Jumbo. *Bitches*: 1st, W. H. Collins's Little Starlight; 2d, C. E. Botsch's Queen.

BOSTON TERRIERS.—*Dogs*: 1st, J. E. Hoy's Tiger. *Bitches*: 1st, J. E. Hoy's Gretie.

FOX-TERRIERS.—*Dogs* (smooth): 1st, E. Cawston's Raby Rasper; 2d, and 3d, Lomita Kennels' Fordham and Lomita Patch. Reserve, F. Stokes's Hampden Tip. Very high com., J. McLatchie's Elmont Reeler. *Bitches*: 1st, J. A. Sargent's Golden Gem; 2d, and reserve, Lomita Kennels' Lomita Winifreda and Lomita Nettle; 3d, F. E. Holden's Seacroft Myrtle. Very high com., J. McLatchie's Elmont Belle, W. G. Brittan's Bonnie Biddy, R. Liadel's Nellie and C. Thomquest's Gussie.—*Novice*—*Dogs*: 1st, H. H. Shorting's Fly; 2d, Miss A. M. Brooks's Ned. *Bitches*: 1st, C. A. Sumner's Bonnie Blot.—*Puppies*—*Dogs*: 1st, C. A. Sumner's Bonnie Brush; 2d, W. W. Howard's Don Juan. *Bitches*: 1st, J. Heffernan's De Oro; 2d, Lomita Kennels' Lomita Nettle; 3d, C. A. Sumner's Bonnie Blot. Reserve, T. S. Casey's Sunset Vixen.

PUGS.—*Dogs*: 1st, H. L. Park's Balmaceda; 2d, Mrs. W. G. Brittan's Royal Dusky; 3d, Mrs. S. C. Goucher's Whitten Punch. *Bitches*: 1st, S. Gerson's Tricksey; 2d, Mrs. W. G. Brittan's Maud.—*Puppies*—1st, Miss Sumner's Victoria.

JAPANESE SPANIELS.—*Bitches*: 1st, Gerson's Dot.

MISCELLANEOUS.—*Dogs*: 1st (Mexican Hairless), A. B. Bates's Gyp.

The specials other than those named above followed in almost every instance the awards in the regular classes, and every breed was provided for.

Best kennels—Greyhounds, S. Tyler; pointers, Howard Vernon; Irish setters, A. B. of mat. Clumber spaniels, Ivanhoe Kennels; fox terriers, Lomita Kennels; St. Bernards, Goucher and Ackerman.

DOG CHAT.

The New York Specialty Show.

The largest specialty show ever held in America opened to-day (Tuesday) under most favorable auspices, brilliant weather, good judges and the cream of the fancy in the different breeds—St. Bernards, collies, fox-terriers, spaniels and bulldogs. The only drawback is the fact that the dogs are benched in the basement of the Madison Square Garden, and although Spratts Co. have arranged the benching as well as possible under the circumstances, the *tout ensemble* suffers by comparison with a show benched on the main floor. The very interesting farm exhibits take up all the space on this floor, so there is no alternative. A number of the prominent kennels benched their dogs last night. The Swiss Mountain Kennels have 18 dogs, including the best that they can show in St. Bernards and spaniels. Andrew Laidlaw, C. M. Nelles, Geo. Bell and Geo. Douglas will surely score high honors for the Dominion, especially in spaniels. A number of fox-terriers and collies from the Hempstead Farm were already benched, as well as their auxiliary exhibit of pointers, retrievers, Irish terriers, beagles, etc., that are of course not for competition. The Woodlawn Park Kennels also benched a satisfactory collection of bulldogs, collies and fox-terriers. Blanton Kennels have some of their cracks there, too, and are confident of winning a fair share of the ribbons. Messrs. Rutherford of course cannot let such an occasion pass, and have brought Warren Safeguard and Warren Captions, who will make the competition interesting in the challenge classes, together with several others.

The exhibitors, Messrs. Hunnewell and Smith, are there in strong force, and Oakleigh Bruiser, Cribbage and Janet will no doubt add further laurels to their wreaths. In wire puppies ten are shown and all, with the exception of Mr. Ritchie's Mister Great Snap, are from Hempstead and Hillhurst Kennels. J. Pierpont Morgan has his collies Sefton Hero, Charlton Phyllis, Roslyn Wilkes and others, and the two former will do battle for the first time in the challenge classes when they will meet the old heroes from the Chestnut Hill Kennels, Wellesbourne Charlie and Luella. The open collie classes will charm the collie enthusiasts when the well known Christopher Woodmansterne Trefoil, Conrad II., Hempstead Trefoil, Prince Wilkes, Hempstead Rex, Ormskirk Dollie and the uneaten sensational puppy Hempstead Dorothy come together, to say nothing of several lesser lights which have been decorated before. The St. Bernard classes are sure to please the lovers of the Holy breed, for the collection benched, though not as large as might have been expected, is representative of the best we have in the East, while the West is supported by two such celebrities as Sir Bedivere and Rustic Beauty, whose plucky owner considers distance no object when dog shows are considered. The bitch challenge roughs will provoke keen rivalry when Miss Anna, Rustic Beauty, Lady Livingstone, and Sunray troop into the ring, and the winner may well be hailed as Queen of the May. In Bedivere, Otos, Kingston Regent and Altoner form no mean puzzle for the judges after the blue ribbon is given out. The open classes are also very strong and the judge, Mr. Sidney Smith, will be able to form some idea of the kind of St. Bernards we are producing, especially when he sees Mr. Moore's strong term of Altons in the smooth classes.

A review of the spaniel classes is quickly made—the very best of the year are entered and almost every name has become a familiar one in the past season's prize list at one show or another. With the Woodlawn Park Kennels, John H. Matthews, John H. Congdon, J. R. Gilmore, E. K. Austin, W. K. Travers, R. D. Winthrop and A. B. Graves out with their choicest it is scarcely necessary to say that the judge will be pleased to return to his comparatively easy duties, as manager of the whole show, after his puzzling work. King Lud, His Lordship, White Venn, Saleni, Found It, Bathos, Wal Hampton, Rustic King II., Leonidas, etc., are dogs that any country, even Old England, may be proud to acknowledge. The judging is done on the main floor in the ring set apart for the equine performances. Judging commenced in good time but will not be finished the first day as the specials

form no small portion of the programme. As we go to press soon after the judging commences we are unable to give the awards, but a full report will appear next week. In all there are 464 entries, a number of which are special exhibits from Mr. Trevor's and the Hempstead Farm and Mr. Senn's toy spaniel kennels.

Mr. H. G. Trevor, who may, with Mr. Hunnewell, be termed the poodle missionary, has sold out several of his dogs to Mr. Weldy of Tamaqua, Pa., who intends to show extensively. The list contains such well known curlies as Sidi, Girofla, Cigarette, Zola, etc. Mr. Weldy will show at Louisville next week and Mr. Trevor will also take a brace of his best down to the Kentucky event.

We have received an excellently arranged catalogue of the Wankie Kennels' Scotch terriers. Half-tones of Kilroy, Tirie, Kilree and Culbrian are given together with much useful information as to their breeding, as well as the lesser lights in the kennel.

Miss Bibby, an English lady, is evidently a suffragist, for she entered a brace of English setters, Sam Cross and Milly Cross, in the recent field trials in England.

The fifteen-year-old fox-terrier Belgrave Tony was recently killed in a fracas with a kennel mate. He was game to the last.

We have received the following from the Columbus Fanciers' Club: "Whereas, certain rumors having been put in circulation concerning Mr. T. A. Howard, to wit: That he had attempted to bribe a judge at the recent Columbus dog show; Resolved, That after a careful examination of all the evidence we find that Mr. Howard has been guilty of indirect letter writing and that we censure him severely for the same."—BENCH SHOW COMMITTEE COLUMBUS FANCIERS' CLUB CO."

The show at Oakland Cal., will take place May 30 to June 2. Mr. K. E. Hopf has been invited to judge mastiffs, St. Bernards, great Danes and Newfoundlands. They will also try to get a judge from the East for the other classes.

The Mount Sion Kennels, of Albany, N. Y., have just imported from Mr. Wm. Marshall, of Scotland, the smooth-coated St. Bernard bitch Scottish Ruby. This bitch is litter sister to champion Scottish Leader and has won a number of firsts and specials for Mr. Marshall on the other side. These kennels have also purchased from W. C. Reick the well-known champion Kingston Regent, also the rough-coated bitch Miss Jerome and a smooth by Refuge II. out of champion Cleopatra. Kingston Regent has improved wonderfully during the short time he has been at these kennels, and will soon be placed in the stud, as will a son of champion Beauchamp, Sir Marmaduke. Miss Jerome was bred to Regent three weeks since.

Mr. John H. Matthews, the owner of the dachshund Polly Finders, is very proud of his bitch's success in scoring twice for the Manice dachshund cup for the best American-bred at New York and Boston shows. She has beaten the best, and this is as much as any one can expect. Mr. Matthews has another good one in Pretzel, but he says his good fortune, however, does not turn his heart from his first love, the "bulls." Mr. Manice has done good service to the breed by putting up such a handsome and valuable trophy.

There is a little inside history connected with the awarding of the wolfhound special cup for best kennel at Boston that is interesting. The Seacroft Kennel counted on winning it with nine dogs. The N. E. K. C. special was given according to the judge's book, without having the dogs in the ring, and it went to the Marlborough Kennels, the judge claiming that sortiness and levelness do not count when dogs are shown in five classes. The Seacroft kennelman kicked vigorously at this and protested. The committee allowed the protest, and the judge was told to have the dogs all in and score them. He made a score of 10 for first, 5 for second, 3 for third, 2 for reserve, 1 for vhc. This was agreed to by all parties concerned, and Mr. Brooks kept the score as the dogs were brought forward and the judge called the prizes. The result was Marlborough Kennels 38, and Seacroft Kennels 36. A novel mode of settling the question, to say the least. The awarding of these wolfhound specials seems to have stirred up a good deal of feeling, but the Seacroft Kennel representative should curb his temper and accept defeat and victory with the same equanimity, as becomes a man of supposed experience in dog showing.

Ben Lewis will take about sixty dogs down to Louisville show, including many of the best dogs around Philadelphia, from Seminole, Dr. Dixon's and other kennels. By the way, we have seen a letter from Mr. John Read, in which he states that Ben Lewis did see him on the Monday previous to the Boston show, when the Leo B.—Duke of Wellington affair was fully explained to him, and he in turn saw Mr. Loveland, so it is evident that the management was early in possession of the facts in the case, and with this explanation due to Mr. Lewis this little sensation may be allowed to simmer down.

Dr. T. G. Sherwood, finding his veterinary practice increasing, is compelled to move to larger quarters at 107 West Thirty-seventh street, New York, where he will have better facilities for treating his numerous patients.

The Los Angeles show, while not a great money maker, left the management on the right side of the ledger. The club deserves every praise for their pluck in holding a show alone. The club, however, will, we are afraid, find it a difficult matter to fill the secretaryship, which Mr. C. A. Sumner has so ably conducted for years past. As most of the duties connected with the show fell upon his shoulders, the time this consumed interfered with his business interests, and this is the reason he urges for retirement. Mr. Sumner sends a picture of himself, taken by himself and also of his fox-terriers, Bonnie Brush and Bonnie Blot, both winners at the late show, and seem very promising youngsters.

We have had numerous inquiries lately for great Dane puppies. If the breeders considered their interests they would not hide their kennels but advertise them in our business columns.

Notices on the English Kennel Club show and the field trials are unavoidably left over this week as well as several letters.

The *British Fancier* scored in enterprise on the occasion of the recent Kennel Club show. Although the paper is printed 200 miles from London they succeeded in setting down at that show a full report of all the classes and the prize list within twenty-four hours of the judging. The issue was handsomely gotten up in a special cover. This journal seems to be in anything but a moribund state as some of our friends would have us believe.

FOREST AND STREAM last week published the earliest complete report and prize list of the Boston show. *Verb sap.*

The recent transaction whereby the English fancier Mr. Tom Ashton became the purchaser of the noted Irish terrier Crow Gill Sportsman, brings to light an important phase of dog-buying ethics. Mr. Ashton, it seems, wired Mr. Jowett

for the price of the terrier and the answer was \$250. Mr. Ashton wired "I'll have him," to which Mr. Jowett replied, "Meet me at the show" (Liverpool). The latter then offered a sum of money to relinquish the bargain; this was refused and the upshot was that Mr. Jowett finally refused to let the dog go. This resulted in a letter from Mr. Ashton's lawyer demanding the dog and depositing the money, \$250. Thus brought to terms Mr. Jowett let the dog go. The outcome of this transaction has an important bearing as showing that the price on a dog once set and accepted by the party of the second part, the bargain is binding on the seller at least, and should be made so on the buyer's part. In passing we may say that this terrier won three firsts at the Liverpool show, and gave the great Breda Mixer the closest rub he has yet had for the special.

POINTS AND FLUSHES.

[By a Staff Correspondent.]

Manitoba Field Trial Matters.

MR. R. J. GALLAUGHER, Secretary of the Manitoba Field Trials Club, writes me as follows concerning the club's programme for its forthcoming trials:

"The directors meeting was held on Saturday evening, April 23, in the office of Mr. Rose, Winnipeg, and all the resident members were present. Mr. Simpson, the president, was in the chair. A great deal of discussion took place in regard to the amount to be offered in prizes. It was finally agreed upon that \$500 was all that the club could guarantee, \$250 for the Derby and \$250 for the All-Aged Stake. Entries for the Derby close on July 1; no extension. Five dollars to enter and \$10 to start. All-Aged entries close Aug. 15 and are open to all dogs which have never won first in any recognized field trials. Five dollars to enter and \$10 additional to start. Entry forms can be had on application to the secretary.

"An Amateur Stake will also be run, governed by the same rules as that of last year. The prizes of this stake will be announced later; \$5 to enter and \$2 to start.

"The selection of a judge was not made. Several names being submitted to the committee, the sec-treas. was instructed to correspond with them in order to find out the possibility of obtaining any of them. Another meeting will be held on May 5, when this and other matters of interest pertaining to the club will be dealt with.

"At present, appearances would indicate that we will have a larger entry, especially from the United States, and if I succeed in getting special arrangements made with the Northern Pacific Railway people for the free transportation of dogs to our trials, as I hope to, then I am sure we will obtain larger patronage from our friends in your country."

The club, in my opinion, did wisely in cutting down its prize list to limits which it reasonably could afford to assume. It is decidedly better to hold any field trial on a sound financial basis than to hold a big trial with a deficit. If the latter results there necessarily is an assessment. That is something to avoid. No sportsman, be his enthusiasm ever so great, likes to pay money out, as a club member, for a deficit in a sport which brings him so little direct return. It is a great misfortune in the long run for the competitors at a field trial to win large stakes which subsequently have to be made good on the part of the club members by an assessment. Interest is killed by it, members withdraw and as a consequence the club either quietly drops out of existence or ceases to give field trials thereafter.

A club with a sound financial policy might give field trials successfully year after year for an indefinite term. On the other hand, if the expenditure exceeds the receipts it is a certainty that the members will lose interest, and if the loss is repeated once or a few times the club will cease to exist.

ANSWERS TO CORRESPONDENTS.

J. C. D., Baltimore, Md.—Rock is not registered in the A. K. C. Stud Book. Rye (imported) A.K.C.S.B. 7,773. Breeder and pedigree unknown.

S. J., New Orleans, La.—Monk's Mark (A.K.C.S.B. 22,790) is Monk of Furness (21,178) out of Nellie Grey (8,356, Vol. V.).

R. O. De W. W., Albany, N. Y.—It would be invidious on our part to recommend any kennel; look in our business columns, or a Kennel Special will bring you what you want.

FOXPOUND, Chicopee Falls, Mass.—Feed three times a day with soup mixed with boiled rice, oatmeal or dry bread, alternately. A couple of dog biscuits in the morning, soaked or dry, will be beneficial. Give him shin bones to gnaw on and also raw meat chopped up three times a day.

W. J. N., St. Louis, Mo.—You should get an experienced man to crop your terrier's ears. Friar's balsam is a good thing. There is no book on the subject.

IGNORANT, Philadelphia.—Treat for worms. Any of the advertised remedies will do.

ENTHUSIASTIC READER, Fort Sill, O. T.—The dog biscuit advertised in our business columns are good. About four biscuits a day would be sufficient for your dog; feed one in the morning and three at night. They are fed either dry or soaked, with hot water or a light soup.

P. A. H., West Bedford, Mass.; H. S. W., New York; C. F. M., Langsborough, N. Y.; W. E. S., Port Angeles, Wash., and J. H., Salt Lake City, will be answered by mail.

A Kentucky Camp Hunt.

As a guest of Mr. Francis J. Hagan and Mr. Howard Tracey, I spent the week of March 19 at Mr. Hagan's lodge at the Gap in the Knobs, 25 miles south of Louisville, on the L. & N. Railroad, on a week's camp hunt after reynard.

As hosts the above gentlemen are *par excellence*. Those participating were the most noted fox hunters of Kentucky, not only as private breeders for their own amusement, but to excel their neighbors in game, true dogs. Their success has been such that their breeding has achieved renown not only in Kentucky, but wherever a lover of the chase resides. Mr. Hagan's lodge is admirably situated on a hill, with surroundings of thickets and dense cover, with long stretches of blue grass pastures, just the place not only to show speed, but the intricacies of a winding trail. Most of the gentlemen participating are known through the sporting press in a general way, but it's a pleasure to know them personally and to associate with them, note their peculiarities and benefit by their long experience.

Mr. Hagan is a young man of fine attainments, a lawyer by profession and a fox hunter through love of the sport, ambitious and a royal good host, who inherits the chivalry and hospitality of a true Kentuckian. Mr. Howard Tracey, like the true gentleman, quiet and polite, is instructive in his conversation at all times, and polished to a fault. Messrs. Trigg and Herr are retired gentlemen that have passed the half mile post in life, and who have been known for the past forty years as the pioneers in fox hunting, and have bred some of the most noted dogs in Kentucky. Mr. Trigg, at the present time, has two couples of the original Birdsong blood, without any outcrosses. By his inbreeding these bogs have lost in size, but still retain their wonderful fox dense and gameness; they are solid red in color.

Capt. Davis is a new hand at the sport. Who has not heard of Roger Williams? he, like Mr. Tracey is the acme of politeness, a true lover of sport, a fine horseman with an unlimited knowledge of hounds and horses.

Mr. Walker, with whose name is coupled a breed of dogs that have no peers and are known in every locality for their excellent qualities, combining speed, endurance, hunting qualities and fox sense, and who brought dogs with him that upheld the reputation of their breeders. Mr. Walker is probably forty-nine years old, 6ft. 4in. tall and weighs 225lbs., but so evenly distributed that he does not seem to carry an ounce of superfluous flesh. He is a man with a face of the strongest character, one that you would be willing, at first sight, to put your life in his hands and know that you would receive justice; his opinions are always respected.

Mr. Goodman, the breeder of the Goodman strain, whose dogs are always in the front or very nearly so, is of uncertain age, I guess it fifty years, a gentleman probably 5ft. 9in., weighs close to 180lbs., with the appearance of a man that enjoys life. He is a wit and the greatest talker I ever heard, but there is one beauty about his conversation, he is instructive, witty and entertaining and knows what he is talking about, and is rarely contradicted. When it comes to pedigree, with Mr. Walker, every dog of any note can be traced back, off-hand, for thirty or more years. In repartee he is a success, and would make his mark as an end man in a minstrel show.

Taken as a whole, the above gentlemen made camp life a pleasure. Mr. Hagan had taken the precaution to have no feminine about camp, the cooking, waiting on table, and help generally, were done by colored men. Breakfast was announced at 6 A. M., and lasted until 6 the following morning; with hard galloping and bracing air appetites were wonderful.

This was my first trip to Kentucky. When I left the depot a colored boy, wishing to carry my grip, called me Captain, and before I had reached a carriage I had graduated up to a General. The people at large throughout the country have formed a wrong impression of Kentucky from reading the accounts of killings and moonshine whisky. When I bid my family good-bye, my wife asked me if my life insurance policies were all paid, while my daughter said, "Papa, be careful in your talk, don't let them bluff you, keep your pistol handy." This impression is wrong, and while in some parts of Kentucky life is cheap, it is only so in the mountains, where they must have something to gossip about.

In Indiana we ride to the meeting point in a buggy and in Kentucky you go on horseback, and the faster that horse can run and the higher he can jump the better, as it is the idea to keep as close to the hounds as possible by cutting the corners. Not being an adept at steeple-chasing I looked upon my mount in alarm; he was a bang-tail, with all the symptoms of a flyer, going under the name of Crab Cider. I got the name mixed up with a noted steeple-chaser and stampered, and tried to exchange with several, but they all said mine was the best horse on the grounds and their refusal to trade increased my fright, but I finally mustered up courage to mount. Everything went lovely until we put up a fox and everybody started pell mell after the dogs. I then knew I was lost unless I could hold on; dropping the reins I secured a neck and nail hold, and gave him the steel and told him to go, and then shut my eyes for the shock. As I didn't fall off I opened my peepers and came to the conclusion that I had missed my calling years ago, grabbed the reins and started after Messrs. Hagan, Tracey and Williams, who were leading me about three hundred yards. I jumped logs, ditches and low fences, dodged low-hanging limbs and finally came to a halt at a ten-rail fence that Mr. Williams had endeavored to jump and had succeeded in getting over, but his horse had hit the top rail and there was a queer combination of Williams, horse and rails for a moment. I discreetly lowered the fence and jumped at in true Indiana style. I got to the regular dare devil rider on the first day, but on the second day, not being used to the pounding, I was in a pretty bad condition. Taking Cider out in the woods I practiced for a half hour endeavoring to get a motion so that I could keep from hitting the saddle so hard. I tried English, Kentucky, Indiana and several other modes, but none gave satisfaction. I finally adopted a combination peculiarly my own which led me out of the wilderness, and I am thankful I am able to write about it.

Mr. Walker brought 4 dogs, Mr. Trigg 8, Capt. Davis 4, Mr. Herr 6, Messrs. Hagan and Tracey 20, while Messrs. Goodman, Williams and myself were afraid and did not bring a dog. Quite a number of gentlemen living in the vicinity attended the hunt, and there were probably 75 dogs present. With the exception of two chases, the dogs were either too fast for the fox or the dogs scattered so that whichever way the fox would turn he would meet an enemy, and for policy's sake take to earth. An effort was made several days for each owner to enter 2 dogs, making a pack of 12, but outside dogs would come in and there would be such a scattering that the fox would soon go to ground. Very few of the runs lasted over half an hour.

The first run we had lasted two hours and a half. Mr. Hagan's Judge Lynch did most of the leading, with the pack badly scattered. The last run of the hunt lasted four hours and was the only race that really showed the high qualities of a foxhound. The fox, after making a circle, started for the Knobs, with Mr. Walker's Brag in the lead and the rest badly scattered. They were out of hearing for three hours, and on the return Brag was still in the lead and running very fast, and he retained his lead until holted.

Like fishing, fox-hunting yarns are whoppers. Mr. Hagan said he once owned a dog that was so game that when they attempted to pull him out of a hole where he had holted a fox, the skin broke near the back of his head and slipped off his frame; just about that time the fox broke cover and the dog caught the fox six hours later, fifteen miles from where he lost his coat.

Mr. Goodman said that he once had a bitch due to whelp on a certain day. That day she escaped and got in with the pack and ran the race through, having given birth to the pups during the race. He then took the mother and a basket, and going over the territory gathered up ten pups.

Mr. Walker said he had a bitch due to whelp, who got in with the pack after a fox that passed his stable on his circles, and that on his circle this bitch led the pack carrying a pup in her mouth that she had whelped, and after depositing the pup in her kennel would take out after the pack. He incidentally remarked: "But this bitch was an unusually fine bitch."

In riding around among the Knobs I looked carefully for an illicit still, as I saw numerous sparkling rivulets, with which Kentucky whisky is associated.

I had one or two rivals with the gloves in our gymnasium, and was anxious to see if my experience in dodging limbs while tearing through the woods on Cider had been beneficial. The first pass my opponent made, I bumped my head on the floor.

When breaking camp the help, with the assistance of a guitar and banjo, bade us farewell, singing "Home, Sweet Home," "Auld Lang Syne," and other melodies.

May my life be prolonged to meet with these spirits once more. F. W. SAMUELS.

INDIANAPOLIS, Ind., March 24.

Mr. Huntley writes us that the Huron Club will make an effort to get the American Coursing Club to locate their meetings at Huron, S. D., permanently, and if they are successful they feel positive the American Club will be pleased with its location.

### English Yachting Exhibitions.

The yachting exhibition is an institution which, though unknown in this country, is apparently popular and profitable in England, two being held last year, while two more have been held during the past two months. One of those of 1893 was held during August, on board a vessel specially fitted up for that purpose, which visited the various yachting ports, the venture being purely a commercial one. The other was held in London, at the Royal Aquarium, a general exhibition of models, pictures, yachting appliances and relics. This experiment was sufficiently successful to induce the organizer and originator, Mr. E. du Plat, to repeat it, this year, during the ensuing month of February, the result being to gather together a most instructive and interesting collection of yachting paraphernalia.

We are indebted to some unknown correspondent for a copy of the catalogue, compiled by Mr. du Plat, which is specially interesting from the amount of historical matter relating to the early days of British yachting. The exhibits, which have already been described in part in the *Forest and Stream*, include models, both half block and full-rigged, of all classes of vessels, though chiefly of yachts; paintings and photos of famous yachtsmen and yachts, old flags, books, etc., etc. The "Trade Section" includes exhibits of builders and dealers. A very important part of the exhibition is the collection loaned by Mr. Dixon Kemp, of lines, pictures, books and models collected during his long experience as editor of the *Field*.

In the latter part of March, the Norwich Yachting and Fishing Exhibition was opened at Norwich, on the East Coast. This enterprise, first suggested by the Yare Sailing Club, is for the benefit of the Royal National Lifeboat Institution. The exhibits are very interesting, and are specially complete in the many types of local craft peculiar to the East Coast, the Norfolk wherry, the old lateen-rigged cutters or sloops and the Yarmouth beach yawls. A valuable feature of this exhibition is the offering of prizes for designs and models as follows: Class I. Model and design of 2-rater, suitable for any waters; prizes \$5 5s., \$2 2s. Class II. Model and design of a 1-rater, suitable for sheltered waters, prizes \$5 5s., \$2 2s. Class III. Complete sail or sails, with attachable gear, mast and spars, set as for sailing, suitable for 1-rater not exceeding 18ft. l.w.l.; prize \$3 3s. Class IV. Dinghy complete, suitable for the 1-rater, prizes \$1 1s., \$1 1s. Class V. Dinghy, price to be stated; prizes \$5 5s., \$3 3s., if 6 enter. Class VI. Model of body and model or design of internal arrangements for a 10 ton cruiser not exceeding 4ft. draft, suitable for the Broads; prize \$3 3s. Class VII. Model of any craft, not exceeding 5 rating, not exhibited in any of the above classes; prize \$5 5s. Class VIII. Model of a drift-net fishing vessel; prize \$3 3s. Class IX. Model of a North Sea trawler (sailing); prize \$3 3s. The classes for model yachts were: Class A. For the best model yacht not exceeding 12 tons M. Y. measurement, suitable for sailing ponds; prizes \$1 1s., 10s. 6d. Class B. Model for a beach yawl, not exceeding 50in. in length, suitable for sailing on ponds; \$1 1s., 10s. 6d. Although the prizes are small in amount, nearly all of the classes had good entries. The value of such exhibitions and the interest in yachting and water sports needs no demonstration, there is ample material, both modern and historical, for a good yachting exhibition in New York or Boston, and we hope to see the experiment inaugurated sooner or later.

### Racing Rules and the New York Y. R. A.

The New York Yacht Racing Association, as the result of the recent attempt to enforce its rule on the associated clubs to the exclusion of all others, is now working through a committee over the matter of amending all of its laws, including the measurement rule. This conclusion, though unlooked for at the outset of the difficulty, has been rendered necessary by the enactment and rescinding of various contradictory amendments proposed by one or other of the contesting parties. While certain principles of government are also involved, the entire dispute mainly hinges on the measurement rule; and the present revision of the rules is a direct result of the Association to start anew with a rule or rules which shall be really up to the times.

Complicated as the measurement question is, there are several important truths which lie on the surface, and which, if regarded, will tend to simplify the more extricate issues over which the best authorities are at present at issue. The prime objects of a measurement rule are, first, to unite existing boats on a given course, and second, for purposes of racing; and second, as every rule must exert a powerful influence on the design of new craft, that influence must be such as to further the development of a desirable type or types; and to offer every opportunity and all encouragement to the designer, owner and builder. A third fact that may be set down as an axiom, is that the rule must be such as to give no advantage to any one, but alone by the specific formula or by arbitrary restrictions which may vary considerably in different places.

In the case of the New York Y. R. A., it is generally admitted that under the circumstances attending its formation, the first requirement was the uniting of a number of independent clubs, all of which practically were interested in the peculiar type of small yacht which has grown up about New York under the influence of various local rules. Under these circumstances, there was no alternative from a dispute over measurement which would in all probability have disrupted the projected union before it was fairly formed, save to avoid all argument by adopting a rule that was familiar to all and favored by the majority. This was the reason advanced at the time for the rule, and, but satisfactory, this reason existed and justified, if it did not give rise to the adoption of the "mean length rule."

At the same time, however, there was another and very important side to the matter which the organizers of the Association declined to recognize; though it was plainly apparent to those who gave serious thought to the matter. Another association of very similar lines in the East had just succumbed after some years' existence, the time having expired, but satisfactory, this reason existed and justified, if it did not give rise to the adoption of the "mean length rule."

Side to the matter which the organizers of the Association declined to recognize; though it was plainly apparent to those who gave serious thought to the matter. Another association of very similar lines in the East had just succumbed after some years' existence, the time having expired, but satisfactory, this reason existed and justified, if it did not give rise to the adoption of the "mean length rule."

Unfortunately, as it has since proved, the Association took its stand by a length rule alone; and, as a matter of necessity, it has since been in a position of opposition to all other yachting bodies. The lack of any great amount of racing about New York, and of the general participation of a number of association yachts in all open regattas, has prevented any serious clash between the two systems; and as the direct efforts of the Association have been limited to one season, the effects of the rule have been less noticeable than under other conditions. Had the racing been as frequent and general as in Boston, for instance; and had the Association yachts participated in the races of the larger clubs, there would have arisen a conflict between the two rules which could not have terminated in one way.

That the Association has been successful in its present position, it has done much that has been unsuccessfully attempted by previous unions of the clubs, and it has welded into one large body a number of smaller ones; with all the strength and mutual gain which comes from such a union. Recent events, however, indicate that the full measure of success possible under the present policy has been obtained, and if the Association is to prosper in the future, it can no longer go its own way, but must adopt a course that is liberal, progressive and in harmony with the ideas and principles of other American clubs.

Had the recent attempt to mend the constitution been successful, and had the growth of racing within the Association continued with

such success as to call for the building of new boats, an end that every yachting body should work for; the only result would have been the creation of a fleet of yachts which would be debared from all races outside of the Association, and which could not have been sold into one of the many clubs outside it. Such a success as this would be the worst possible failure, and the Association has had a narrow escape.

At best the question of measurement, including classification, is in an unsettled state, in America and abroad; and it is impossible to forestall the improvements in design or construction, or the changes in the social and other conditions of yacht racing which may call for a new rule, but for all the purposes of the New York Y. R. A., the length and sail area rule which has been in use now for ten years, is likely to answer satisfactorily for an indefinite time. The Association is specially fortunate in that it is not compelled to legislate for a purely racing fleet, but deals with yachts which are built for cruising and general use, rather than for racing alone; yachts which race regularly for a series of years under one owner instead of being outclassed and sold after the first season. While having due regard for the existing fleet, composed largely of yachts of the older model, and protecting them if necessary by the retention of the present rule for such yachts as elect to be classed under it, the Association should at the same time take up the measurement question with a view to adopting a rule which will exert a positive influence in encouraging such a craft as will suit the needs of its members; of reasonable proportions, durable construction, moderate cost and possessing good all-round qualities as well as speed. It is quite unlikely that a perfect rule will be found, or even that any rule, however good, will at once produce a new fleet of yachts, but the Association has made a noble effort to advance the interests of yachting, and to do at least as much as other organizations will undoubtedly bring to the aid of the Association a moral influence both from within and without its membership that must be in the highest degree beneficial.

### Midget Yacht Club, Marblehead, Mass.

Editor *Forest and Stream*:

In the spring of 1893, a number of boys of this town owned miniature yachts of the fin-keel model and a number of prominent citizens offered a cup for the boys to race for. As most of the yachts were about 30in. long, the limit was placed at 33in. The races began Decoration Day and were continued every Saturday and every holiday through September, three races being sailed each day. There were about thirty boats entered, the winning boat "Pep mint," being owned by F. B. Smethurst, now Vice-Commodore. On the Saturday following the last racing day, all those who raced gathered at Red's Pond, on which the races were sailed, and a chowder was served by some of their lady friends. Two gentlemen who were interested in the races proposed that the boys should get together and have a fair for the purpose of raising funds for prizes for the coming season. Twenty-five of the boys came together on Dec. 15, 1893, and formed a club and elected the following officers: Com. Thos. T. Faine, Vice-Com. Fred B. Smethurst, Sec'y, John H. Goodwin, Treas., W. Oliver Doherty, the Measurer. W. O. Doherty, being elected later. It was decided that the fair should be held Feb. 22, 1894, afternoon and evening, and although there were two entertainments that evening the fair was a grand success, \$145 being realized.

Three cups were purchased, one for the first class conundrum model (pickle stern), one for the first class ordinary fin-keel model, and one for the young ladies to race for; each young lady sailing a boy's yacht. The ladies race the last Saturday of each month and every holiday. The cups are on exhibition in the window of Goodwin's drug store, Marblehead. There are twenty-five members in the club at present, and each member has a yachting cap, the commodore has an anchor with a star on each side worked in gold, the vice-commodore has the same figure worked in silver, the rest have M. Y. C. worked in gold. As soon as the ice was out of the pond, the boys began to sail their yachts in order to make all the improvements they could before the races. The sides of the pond are lined with spectators every race day and great interest is taken by the old people as well as the young. JOHN H. GOODWIN, Sec'y M. Y. C.

### The Queen's Cup of 1852.

The letter of Mr. Tankerville Chamberlayne, to which we alluded last week, appears in the issue of the *Field* just to hand, as follows:

Editor of the *Field*:

The America Cup, at present on the other side of the Atlantic, has been the means of inducing several English yachtsmen to cross over and make an attempt to bring it back to England, it being held by the New York Yacht Club, and offered as an international challenge cup. I am the owner of the cup given by her Majesty the Queen to the Royal Victoria Yacht Club in 1852, and won from the America by my cutter yacht Arrow, then the property of my late father, I should point out that at that time the Arrow was, perhaps, the fastest English yacht afloat, and that she was never beaten by the America. In the previous year the America won the cup given by the Royal Yacht Squadron, and the Arrow was in that race, but she ran on the rocks near St. Catherine's, and had to give up. How the race would have ended had Arrow then the property of my late father, I cannot say, but the Arrow was the 45-ton cutter Aurora, a vessel the Arrow had beaten over the same course by more than an hour. In the following year the Arrow met the America again, and defeated her, as I have already stated, in the race for the Queen's Cup. The two cups have, therefore, a similar history, the difference being that one was given by the Queen.

Now, with a view to tempt American yachtsmen to visit us, I am prepared to offer this cup as a challenge cup to be competed for only by American and English cutters under certain conditions, with all of which I need not trouble you now. I should ask the committee of the Royal Victoria Yacht Club to allow the races in this country to be sailed under their auspices.

I am doubtful whether I ought not to exclude all British yachts now afloat, but I am not sure, because, perhaps, the fastest cutter has been recently beaten by the American yacht Vigilant, and all interest would be taken away if the result were a foregone conclusion. But I must first endeavor to ascertain how far the Valkyrie, for instance, is capable of improvement. If you will kindly allow this letter to appear in your columns it may attract the notice of American yachtsmen, and possibly induce someone in this country to build a vessel to defend the America (Queen's) Cup. TANKERVILLE CHAMBERLAYNE. HOUSE OF COMMONS, April 17.

### A New Watson Centerboard Yacht.

The most remarkable yacht building on the Clyde is a 20 centerboard rater by Adam, Gourcock, from the design of Mr. G. L. Watson. This cutter is for a German nobleman, whose intention is evidently to be champion of the class. This cutter is 46ft. on the load waterline, but her overhangs fore and aft are so extreme that the over-all measurement will be 71ft., with a beam of 14ft., and a draft without centerboard of 6ft. She is built of wood, with oak keel, stem and sternpost, and with oak deck, and has a very large and enormous keel, which is brought up oak keel in a way which suggests the enormous strain exerted. The stem, also, extends in strength, runs into the keel in a very flat curve occasioned by the shallow draft, and the frames already in place on the stem suggest a full bow above water, with just enough of displacement to carry the keel, canvas and other dead weight. Should this cutter prove as successful as expected, her success will mean a further revolution in yacht building and yacht designing. Although Mr. Watson has had either the merit or blame of shoving forward the centerboard build, he is not converted to it, but in the German owner who has commissioned this cutter he has found a patron with a practical intelligence, who desires to lead the way for the sport in Germany untrammelled by prejudice. The slot in the lead keel for the centerboard is of course formed, but the precautions taken to insure strength and prevent twisting suggest that on account of the cost the progress of building centerboards will be slow. The centerboard is not weighted, but is built of English elm, which insures no warping or twisting. American elm, maples and other foreign timber have been so much in fashion in connection with yacht building that the fitness of British timber has been overlooked. Fortunately, English or British elm has at least been found to be stronger than oak, and with its knotty grain, more artistic than walnut, and, as a consequence, it is being adopted for stern boards in the smaller class of yachts building on the Clyde. In due time English elm will displace walnut, maple, oak and Hungarian ash from the cabin, and the owners of heavy elms will find their timber quite valuable. —Field.

### Fast Time in a Small Boat.

The mosquito boat Valkyrie, of the Atlantic City Y. C., was designed in 1892, by Dr. W. W. Hollingsworth, under the club rules, and is 15ft. over all, 12ft. 6in. l.w.l., 5ft. 2in. beam. On April 8 she sailed down the river with a party of 15, her crew, her owner, J. H. Johnson, measurer of the Philadelphia Y. C., Mr. Orlando Johnson, and Geo. T. Williams, secretary of the Philadelphia Y. C. The boat was carrying but 60 sq. ft. of sail and the tide was running a strong flood 3 to 3½ miles; and in the teeth of a strong N. E. to N. W. wind, a very ugly chop sea was kicked up. The distance sailed, all down wind, was 14 statute miles, by accurate surveys, the river being very well charted, and the tide was 15 minutes. A speed of 15.5 miles per hour. The figures are vouched for by the three gentlemen named. This is a remarkable record for so small a boat, and speaks well both for the model and handling.

many braces on each side cut up the space. There are two iron hammock cots forward, and a light transom seat on each side amidships with no other fore-and-aft deck seats. The deck is smooth and finished with a fine mahogany finish. The hull is finished with a large oval coaming inclosing part of the deck. There is a small hatch which permits the helmsman to stand partly inside the boat while at the tiller. The fore overhang is moderate, the stern is cut off square, and the chines are straight and pointed. The hull is finished with mahogany planks, and the workmanship is excellent throughout. The sails have been made by Lapborne & Ratsey, and are awaiting the boat on the other side. With a crew of 35 she will be allowed 1,715 sq. ft. of sail. The R. M. S. *Drusilla* was built at a cost of £10,000, and has been reduced to 1,690. *Drusilla* carried 1,632 by the Seawanaba rule.

### Action of the Y. R. A. Rules on Length and Sail Area.

*Editor Forest and Stream:*

I thank you for kindly sending me a copy of your paper of March 31 and am glad that it interested you. The paragraph you disagreed with was, perhaps, stated too concisely in my analysis and I think if you allow me space to explain it more fully you will be brought round to agree with me.

Yacht racing in British waters is now almost confined to class racing, and for this racing yachts are, in ninety-nine out of a hundred, built to fit the top of the classes. The only important exception is the "over-rating" class, which contains yachts such as the *Starling*, *Sandwich*, *Wendy*, *Wendy*, etc. In this class there is no top limit of rating, and consequently the classification is faulty and the results are often misleading. In all the other classes, however, the competitors practically start at the same rating, the top limit, and you will therefore observe that the "successful use of lighter materials in the construction of hulls, or of lighter cotton or silk in the sails, or lighter spars and rigging," could not be usefully adopted, "without such advantage being covered by means of an increase of ballast!" as you suggest—for the simple reason that it would put the boat over her class limit of rating.

A designer therefore who finds that he can decrease displacement by some, or all, of the above mentioned means is faced by the question whether he had better carry more sail on a shorter length or less sail on a longer length; and the reply in these waters has been an increase of length, as the power to produce a lighter hull has been developed.

In other words, the development in these waters under the existing Y. R. A. rule of rating (which we employ not only for time allowance, but also for classification) has been to produce a large number of boats in the top class. But here again we have an important exception which I pointed out in the concluding paragraph of my analysis, viz., the big class, the reason being that this class has no top limit of rating and consequently that the yachts in this class are precisely able to do that very thing which I suggest. It is impossible to do this in the other classes which have a top limit of rating.

It is possible therefore that my curve (continuous line), being as it is an attempt to show the evolution under the Y. R. A. rule with class limits of rating, should have stopped at the 40-raters (our class of 60 rating being defunct), and if this had been done the curve would have been still lower and, perhaps, would not have intersected the 1730 curve (dotted line) at all.

THALASSA.

Vigilant and Valkyrie.

The plans of Vigilant's new owners, as announced in print from day to day, would keep busy the whole fleet of ship defenders for several weeks. The fleet would have to be ready, as Mr. Gould announced their intentions, but it is quite possible that they may take the yacht to England, using the large steam yacht *Atlantia* as a convoy and racing tender. Capt. Fish of Hildegarde, Mr. George Gould's schooner, will take Vigilant from Port Jefferson shortly, and she will probably go to Bristol for an overhaul. The command of the yacht has been offered to Capt. Terry of Grayling, but he has declined, partly on account of ill health, and is quite put out of the question. The only other person to accept the position, being now a member of the crew, is Mr. George Gould's friend, Mr. John Paine.

Capt. Cranfield has Valkyrie in fine shape for her return voyage and she will sail on May 3 for Glasgow. A new mainmast and a small mizzenmast have been shipped at the Erie Basin Drydocks, and the yacht has been out for some repairs to her rudder. A small jib-headed mizzen will be carried, and a wheel has been fitted in place of the tiller.

## YACHT NEWS NOTES.

Boston Y. C. will be started on May 30, starting at 10 A. M., and will be open to yachts of not over 35ft. and not under 12ft. sailing length (l.w.l. plus one-fifth overhang). There will be five classes, keels and centerboards sailing together. First class, yachts 20 and not over 35ft.

sailing length, first prize \$20, second \$10. Second class, yachts 24 and less than 29ft., first prize \$20, second \$15, third \$10. Third class, yachts 20 and less than 24ft., first prize \$20, second \$10, third \$5, fourth \$3. Fourth class, yachts 15 and less than 20ft., first prize \$15, second \$10, third \$5, fourth \$3. Fifth class, yachts 12 and less than 15ft., first prize \$10, second \$5, third \$3, fourth \$2. Sixth class, yachts 10 and less than 12ft., first prize \$5, second \$3, third \$2, fourth \$1. Seventh class, yachts 8 and less than 10ft., first prize \$3, second \$2, third \$1, fourth \$1. Eighth class, yachts 6 and less than 8ft., first prize \$2, second \$1, third \$1, fourth \$1. Ninth class, yachts 4 and less than 6ft., first prize \$1, second \$1, third \$1, fourth \$1. Tenth class, yachts 2 and less than 4ft., first prize \$1, second \$1, third \$1, fourth \$1. Eleventh class, yachts 1 and less than 2ft., first prize \$1, second \$1, third \$1, fourth \$1. Twelfth class, yachts 0 and less than 1ft., first prize \$1, second \$1, third \$1, fourth \$1.

\$3. Fourth class, yachts 15 and less than 20ft., first prize \$10, second \$10, third \$5. Fifth class, yachts 13 and less than 15ft., first prize \$8, second \$5, third \$3. One-half of first prize will be awarded for a walk-over. No second prize will be awarded unless three or more yachts

compete, no third unless four or more and no fourth unless five or more yachts compete. Entries must be made in writing, giving name of yacht and owner, waterline and over all length must be sent to G. F. Clark 43 Milk street, Boston, where the numbers authorized by the

congress of regatta committees for the season of 1894 may be obtained before 12 M., Tuesday, May 29. The preparatory gun will be fired at 10 A. M. The first class will start at 10:15 and the other classes at five-minute intervals. There will be no restrictions on sail and no shifting.

minute intervals. There will be no restrictions on sail and no sailing of ballast. Yachts will be allowed one man for every four feet of sailing length or fraction thereof.

One of the neatest-looking and fancy-looking small boats water writer has seen this season is the 13ft. centerboard building at Lawley's for C. F. Lyman, owner of the Fancy, from designs by Stewart & Binney. The new boat is intended for afternoon sailing, single-

handed or with possibly one companion, and has a hinged arrangement for lowering her mast so that she may be towed behind the larger boat. Her dimensions are 19ft. 5in. over all, 13ft. waterline, 5ft. 6in. beam and 10in. draft. She is very lightly yet strongly built, with

oak frames, 3-16in, cedar planking, 1/2in, pine deck planking and oak cockpit coaming. The centerboard trunk rises to the deck and the cockpit is a small one and watertight. The lines of the boat are very fine and her form easy. She will carry a Tobin bronze board and 275ft.

The new finkeel built for his own use by N. G. Herreshoff is named *Albatross*. Her dimensions are reported as 45ft. over all, 32ft. l.w.l.

A meeting of the special committee of the New York Y. R. A. was held at O'Neil's on April 25 for the amendment of the rules, but no action was taken. The committee will meet again on May 2.

At a meeting in Toronto on April 21 of the executive committee of the C. I. O., the location of the next meeting was not decided.

the Lake Yacht Racing Association the location of the meet was decided on after a lengthy discussion, Sodus Bay, between Charlotte and Oswego, being selected. The lake fleet will rendezvous there on July 3 and races will be sailed on July 4, 5, 6 and 7, the annual circuit

The Sandusky Y. C. has been organized and will apply for membership in the Interstate Yachting Association. The following officers

have been elected: Com., L. D. Anthony, vice-Com., J. S. Gm., Rear-Com., F. A. Hubbard; Sec'y and Treas., Lane Lockwood; Surgeon, Dr. Wm. Gaylord; Surveyor, J. J. Cleary; Measurers, Harry Molyneux and A. B. Davis; Regatta Committee, Geo. P. Barker, C. R.

On April 18 the steam yacht Arthur Mallon, owned by George W. Kugler & Sons, of Philadelphia, was wrecked off Back River. The yacht was completely in two, and she sank in 20 ft. of water.

heavy seas broke her completely in two, and she sank in 12 ft. of water. Capt. Heathcote and Engineer C. M. Derrick were rescued from their small boat and were brought to Cape Charles by the fish steamer Luce Brothers.

The Racine Y. C. has elected the following officers: Com., Wallace Easson; Vice-Com., Ed. Millstead; Captain of the Fleet, Mike Mickelson; Lieut. of Fleet, Gus Sonnenman; Sec'y, A. C. Mickelson; Treas., [illegible]. The first regatta will be held on [illegible].

The last issue of *The Yachtsmen* to hand, of April 19, contains two supplements, the regular one, showing the house of the Bombay Y.

C., being supplemented by a special one, an excellent photo of the Prince of Wales, taken on board of Britannia while at Cannes.

Mr. John Clark, owner of Mohican, steam yacht, one of the leading Scotch yachtsmen, died at his home at Paisley on April 11.

The Minneapolis *Journal* of April 7 contains a very good article on model yacht designing by John Hadden.

Eleanor, steam yacht, will be launched at Bath, Me., on May 8.

## "The Yachts and Yachtsmen of America."

UNDER the leadership of Dr. Henry A. Mott, to whom is due the inception as well as the carrying out of the work, the International Yacht Publishing Co., of New York, has labored for two years in the production of the largest and most comprehensive work on yachting that has yet been attempted. The first of the two volumes, just issued, is of itself a convincing evidence of the extent of yachting in America, as this great book, larger than the standard unabridged dictionaries, covers but a part of the subject.

The scheme of the work is an extensive one, and the arrangement of details is systematic and logical, beginning with the evolution of the yacht from the first primitive forms of log, raft and dugout, through the various craft of all periods and peoples, to the comparatively recent time when the pleasure yacht obtained recognition as a distinct type. The second chapter deals more specifically with the history of yachting, following which are chapters on yachting in the United States; the cost of yachting; types of yacht; the centerboard; rig of yachts; speed records and yachting trophies.

Our space is too limited to review these various chapters in detail, and we can only say that every part of the subject has been dealt with most carefully, thoroughly and intelligently, and that the immense collection of material facts, both historical and technical, has been ably handled. The chapter on the centerboard, in particular, is very complete, and much of it will be new, even to experienced yachtsmen. Nearly 500 pages are devoted to the history and records of the various clubs throughout the United States and Canada, in which are included records of races, descriptions of yachts, and notices of members.

The illustrations number in all nearly a thousand, the descriptive portion of the text being fully illustrated by pictures and diagrams. Added to which are 240 portraits of American yachtsmen and 100 full page photo-graves of yachts and club houses, many of them most artistic, the negatives having been made specially for this work. The volume is 11x14x4in., and is handsomely printed and bound. The second volume, of the same size, will deal in detail with steam craft; and will also include the history of the America's Cup, and the conclusion of the club histories. The work is published only by subscription. We trust that the labor and money expended in the preparation of such a tribute to American yachting will meet with a fitting return on the part of clubs and yachtsmen.

### Away "Up North."

(Continued from page 369)

SATURDAY was spent by the Chief in exploring, and by the rest of the party in building a cache, grinding axes, rigging up camp and other easy work, a much needed relaxation after the four days of arduous toil on the Metabetchouan. The bottom of the Nora shows signs of the rough work in the rapids of the Metabetchouan. Sunday passed as Sundays generally do in the woods; a swim in the morning, a good deal of eating and sleeping, some reading and some fishing and exploring, and on Monday we commenced the serious business of the survey. This was routine work, one day very much like another, scrambling over bluffs and through thickets, and then, after a chopping and leveling day after day. The country was extremely rough, the flies outrageously bad, and the brush, owing to frequent rain and showers, nearly always wet, consequently the work was anything but pleasant, and there was a headlong rush for the canoe as soon as the signal to knock off was given each evening.

Then a race for camp and a picnic on the lake, then supper, smoke, and yams around the campfire. The cook himself was hospitably inclined and always accorded us a hearty welcome to his premises, and he was an adept at story-telling and an inveterate talker; being left alone in camp all day it was only natural that he should be eager to exercise his powers of speech at night.

The second Sunday in camp, just as we were finishing a tardy breakfast, there appeared off our landing a large canoe bound west, evidently for Temagami Post. The crew were about ten in all, and included a young Indian and his wife, who had just been down to Temiscaming to get married. They were invited ashore and feasted with the best the camp could afford.

On the following Saturday night volunteers for a trip to the Hudson Bay Co.'s post at Temagami were insufficient. Our fleet was insufficient in tonnage for the work before it, and Temagami is the great entrepot of canoe manufacture of the district. Tired as the men were, one-half of them responded, and the Nora and Dora set off at 7 P. M. for the 25-mile voyage. Carrying over a quarter-mile portage at Rabbit Lake, we entered White Bear Lake. Three miles of navigation and a 200yds. portage brought us to Crooked Lake, two miles long. Another short portage over the height of land took us into Caribou Lake, a mere pond, and a fourth portage, about 300yds., brought us at dusk to the great Lake Temagami.

This is the largest sheet of water in the district, and acknowledged to be the most picturesque. It lies high, nearly 1,000ft. above the sea, and is a bewitching maze of islands and points, over 3,000 of the latter having been actually counted and laid down on the map by the Geological Survey. The water is deep and beautifully clear, in fact, Temagami means, in the native Algonquin, "the deep sheet of water," and, as may be imagined, it swarms with fish, and has long been the source of supply of this article of food for the plants of the Hudson Bay Company. In general the scenery resembles that of the Thousand Islands of the St. Lawrence, but the timber is larger and finer, the straight, clean shafts of the Norway pines being predominant near the water, and the more remote slopes being wooded with the lordly white pine. The lumberman's ax has never swung in this region, and the murderous bush fire has done little damage.

Pushing off from the portage in the dusk, the two canoes headed west, the crews ply their paddles with a steady swing. Emerging from the narrow channels among the islands into a wider expanse, the moon began to rise and soon flooded the lake with silvery light. The lake was smooth as a mirror, and the canoes swept on and on, hour after hour, the crews breaking out into snatches of song, until, at 2 A. M. we rounded the point of Bear Island, and the houses of the post were made out close alongside. A ringing chorus as we swung up to the landing brought the trader in charge out to the door, and he hospitably invited us to spread our blankets on his living room floor, and in a few moments all were sound asleep.

We spent next morning looking around the post and inspecting canoes, of which there was a large stock on hand. A pleasant acquaintance was made with M. Paradis, a Roman Catholic priest, also a guest at the post, and of the modern representatives of the long line of missionary explorers who, since the days of Champlain, have been ever in the front in the march of civilization. Toward noon the two brigades started out, Pere Paradis going north to his station on Sandy Bay and we east to our camp on Rabbit Lake.

There was a fresh breeze from the southwest after we got out three or four miles; and extemporizing sails out of blankets the three canoes swung gaily along, the crews fanning themselves with a stream of tobacco smoke arising from each. At 7 P. M., exactly twenty-four hours from our start, we swung into the landing at the camp, having covered fifty miles without any undue fatigue.

A few days later we ran our survey out to its northern end and turned our canoes' bows southward. So far we had been on the high road of communication between Temagami and the outside world. We were now to enter a *terra incognita* to the south of Rabbit Lake. Tents were struck and duffle stowed, we ran down the outlet of White Bear Lake, and after a hard tussle with wind and wave, reached the south end of Rabbit Lake about noon, eighty miles. A large stream enters here, which we rightly guessed was being the most likely road to the south. Signs of an old trail were found, and opening this up we found a reach of nearly dead water. Canoes were portaged over, reloaded and we set off again.

The creek was filled with snags and sandbars, but with caution and occasional wading and lifting, a mile or two of advance was made, when the creek turned abruptly to the north and west, barring further progress. Camp was pitched in the only available place which could be found, a smooth sloping rock, and the Nora started out to explore.

Eventually a small stream was found coming from the southeast and draining Rankin Lake and Three Portage Lake, a portage of a quarter of a mile was cut out to the latter, and thence three-quarters of a mile to Redwater Lake, a long, narrow river-like stretch of water extending some five miles on to one side or the other. From Redwater we descended to Chokecherry and from Chokecherry into Boyce's, a beautiful sheet of water.

The Nora in her wanderings often ran upon deer feeding; one or two bears were sighted, but scuttled off too fast for a shot; moose were seen several times and the signs of all these animals were everywhere abundant. Partridge began to be very thick toward the middle of August, and every lake was full of bass and pickerel. The flies disappeared almost altogether as the creeks fell, and the swamps dried up, and life on the line became pleasant.

Summer melted into fall, the days grew shorter and the nights chillier, and still the call in the morning was "All aboard for the line," and three canoe loads of men would go shooting through the morning mists, bound for the end of the "line." Marten Lake was still some distance away, and there were no signs of any one but ourselves in these wilds, with the exception of a detachment of the Geological Survey, who were working in the same region, and an occasional visit from whom was among our pleasant experiences.

Provisions began to get short, and especially those staples of Canadian backwoods life, tea and tobacco. The Chief being the only one of the party who had no regular everyday duties to perform, he elected to proceed to the nearest post; and, picking the strongest packer and paddler of the party for his bowman, Nora's bow was again turned toward Lake Temiscaming. John Wabi was a half-

THE WEDDING PARTY.

breed of the Algonquin race, born in this region—a stout, thick-set young man with a very ugly, but decidedly good-humored face. He was enormously powerful and carried the Nora and a moderate sized pack on his shoulders, and a rifle or gun in his hand, over the most execrably rough ground with the greatest apparent ease. He swung the heaviest axe in camp all day without apparent fatigue, and when the other men were inclined to grumble and fret, John had usually a good humored word and a smile. He was easily the best man in the party, and hence his being chosen for the present arduous expedition. Urged by strong, steady strokes, Nora sped away northward, threading her way between the beautiful pine-clad islands of Boyce's Lake, up the tortuous reedy course of Chokecherry Creek, over a half dozen of portages on John's back, and then out over the more open expanse of Redwater Lake.

A few minutes' halt at the north end of this last was sufficient to fry a few slices of bacon and make a cup of tea, and again Nora lay bottom up over John's head, and we tramped gaily over the dreaded Purgatory portage, sped across Three-Portage Lake, and over Hell portage, and by 2 P. M. were afloat on Rabbit Lake again. The day had grown overcast and threatened rain, which meant camping early in order to provide a snug camp and lots of dry wood, so we hastened to make what progress we could, and steadily dip, dip went the paddles without intermission.

Two hours later we crossed the first portage on the Metabetchouan, and the rain still holding off, we ran merrily down the smooth reaches

HUDSON'S BAY CO.'S POST LAKE TEMAGAMI—THE AGENT'S HOUSE.

and stepped briskly over the portages, until an hour later we found ourselves on the first of the Bass Lakes and began to look about for a camping place under some overhanging rock or spreading spruce tree; when, lo! the clouds broke in the west and a flood of golden light came pouring in upon the sombre forest, and presto! the gloomy ravine became a smiling valley, and the inky water began to sparkle and gleam in the rays of the setting sun. With rising spirits John and the Chief plied their paddles with renewed vigor; the shores sped by, and just at sundown we stepped out of the forest on to the bare rock on the summit of Jordan portage, and paused a moment to take in the grand panoramas of mountain and valley, gloomy forest and slumbering lake spread at our feet. Only for a moment, however; down the steep hill we went, carefully picking our footsteps; down the babbling purling rapids of the lower Metabetchouan, and, just as twilight gave way to night, we reached the mouth of the river.

While John got a cup of tea ready, the Chief mounted to the plateau above and brought from the post office a tremendous accumulation of mail matter. A farmhouse clerk supplied the unaccustomed luxury of milk. Snapper was rapidly dispatched by the light of the fire.

"Tired, John?" asked the Chief. He had come some thirty-five miles in twelve hours, and had carried across nineteen portages varying from a few yards to over half a mile in length. So the question was opportune.

"No," said John, laconically. "What do you say to going on to the fort, it's going to be a fine, bright night?"

"I guess that better way," says John. Maybe blow hard to-morrow.

Without more parley the traps were stowed aboard again; and just as the moon rose over the hills on the opposite shore, Nora shot out of the river on to the broad bosom of Temiscaming.

Steadily dip-dip, pit-pat, went the paddles, heeling cliffs, sandy coves, mysterious-looking, gloomy valleys, went by in endless procession. A sharp turn to the left around a low point, another to the right round a sandy island, and there in front, two miles away, gleam white and ghostly in the moonlight the whitewashed buildings of a bay was a few years ago one of the most important of the Hudson's Bay Company's posts. A breeze springs up behind us and raises quite a sea, on top of which Nora reels and swings along at a great pace, through the narrows and again on the still greater expanse of the upper lake; and rounding a rocky point on the eastern shore, we sight the lights of the settlement of Baie des Peres, and flitting past the familiar shape of the Meteor lying at her wharf, in a few seconds Nora's bow grates upon the gravel in a quiet little cove and our desti-

nation is reached. Fifty miles of steady paddling and portaging; not a bad day's work, even in the territory of the H. B. Co.

A good night's rest, albeit with a rather smothery sensation on account of the unaccustomed wooden roof and walls, and Sunday morning dawned bright and sunny. We overhauled the H. B. Co. store, bought our supplies, chatted with the company's employees, and with our old friend, Capt. Percy, of the Meteor, and with the ladies of the hotel. John, I believe, went to church at the Meteor. After another night's rest we were off again on the Meteor for Montreal River. We called for a few minutes at Fort Temiscaming, and found little difficulty in realizing its glory and importance in bygone days. We pictured the scarlet ensign floating from the lofty flagpole, a brigade of high-prowed North canoes sweeping into the lake, fifty paddles dipping in unison to the strains of "Edouard la moutte" or "La claque fontaine," the chief factor, followed by his clerks, coming down to receive them, and the ladies waiting on the veranda, while a crowd of swarthy, black-haired, bead-ornamented Indians and squaws looked on quietly and attentively, but incuriously, from a respectful distance.

Bah! the Meteor's brazen whistle toots a summons and the romantic pageant of other days fades away, and in its place is the reality of sweeping sandy beach, tumble-down buildings and smoking steamboat, with a few dusky children in front of a log house and the ladies on the veranda, the wife and sister of two of the Geological Survey staff, the only living realities.

But if the Meteor has no romance or nonsense about her she is at any rate strong and speedy, and with a favoring wind she runs down to the Montreal River in a remarkably short time, and the Nora, John and I are unceremoniously "dumped" on to the heaving billows off its mouth. Cautiously keeping her bows to it we drop ashore and without a moment's delay commence the toilsome ascent of the river.

The supplies aggregate a considerable weight now; John slings a pack of sundries over his forehead, turns the Nora over on top, takes up the ax in his hand and intimates that the remainder of the load, consisting of blankets, tobacco, 30lbs. of sugar, 10lbs. of tea and sundry other matters, will be about right for me—and this at the foot of a hill 300ft. high. With a sinking heart I prop this tremendous-looking pack upon a log, put the broad strap over my forehead, swing myself round so that the weight comes into the small of my back and then straighten myself up. John starts off up the precipitous ascent with a satisfied grunt and I follow, and, rather to my surprise, in fifteen minutes we have gained the summit and in five more are wiping the perspiration from our foreheads at the end of the portage.

Seven times is the operation repeated during the afternoon, and at dark we scud in before a howling north wind to a sheltered sandy cove near the south end of Rabbit Lake, and spread our blankets under a noble Norway pine on some willow brush hastily cut by the light of a fire of pine bark. Oh, the luxury of a pipe and a hot cup of tea before the cheery blaze, with the scud flying overhead and the bitter cold blast shrieking through the pine tops. Little recked we of the weather, it could hardly rain with such a wind, and if it did, had we not the Nora ready to turn over our heads, and oh, the soundness of our sleep after two nights in a stuffy bed room in a very dirty little hotel.

We awoke giants refreshed, and threaded the windings of Rabbit Creek, Purgatory Portage, Redwater, all the familiar scenes, and early in the afternoon reached our camp on Boyce's Lake. The party had moved on in the meantime, as we had intended, and we pushed on for the outlet. A mile of bouldery channel, two portages of fair length, and we entered a large stream coming from the northeast.

Another little life line, some rapids, and the creek became wide, deep and winding, with low, earthy banks of alluvial soil on either hand covered with a profuse growth of blue ash and other hardwood trees. Around bend after bend, and through reach after reach, we swept, until it seemed as if the river is interminable, but at last the heavy bush begins to give way to willow scrub, and at about 4 P. M. we are in the reedy expanse of Wicksteed Lake. A way in the southwest, three or four miles, we fancy we detect smoke, and cheerily now the paddles are plied for the last stretch of our 100 and odd miles of voyaging. A couple of miles further on, shouts on the bank are heard and a couple of the survey party appear on the shore, and tell us of the whereabouts of the camp, and in another half hour we detect the sheen of the white tents among the Cedar Land balsams, and in a few minutes we are greeted by the cook and welcomed "home" again.

[TO BE CONCLUDED NEXT WEEK.]

### British Racing Canoes.

In view of the fact that an American canoeist will visit England this year to compete for the R. C. C. Challenge cup, the following, from the *Field*, is of special interest:

With the advance of the season, canoe men are becoming aware that so far as the metropolis district is concerned, no canoes are being built, notwithstanding the free hand in designing which has been given by the new classification rule. It may, of course, be possible that new vessels are being built for members of the Royal C. C. in secluded places, but the two members who were early in the season mentioned as about to build have turned over to the canoe-yawl club. Unless there are such dark horses ready to build, then, the club stands in real danger of seeing, for the first time, its £300 challenge cup competed for by visitors, and carried away for a year without any real attempt at defense by the club.

Under the new rule of classification it would be next to absurd to maintain that the present holder of the cup, the Stella, could, except by fluke, beat canoes specially built and fitted for racing; or even hold her own against some of the old canoes if they are refitted with bulb fin-keel and una or sloop rig.

"The alteration of some of the late first-class canoes to bring them up to date would not involve very heavy expense, and the large numbers of races to be given on the Thames would seem to justify the failure to any but half-hearted racers. A lifting fin and bulb keel can be fitted to most canoes, and the existing center-plate cases at a cost of about £4. The shifting of mast cases, addition of a sliding smoke-plate, possibly the cutting up of ends to shorten the rating waterline, are not really heavy expenses. Whereas, stripping the side-planking and rebuilding out to the extra fin of beam now permitted, would, in addition to new work at forefoot and after heel to shorten the i.w.l., prove a somewhat heavy item; but even then the expense would not be over half the cost of a new boat, as all the expensive items of keel, chocks, centerplate case, keel, rudder and deck, and the masts and rigging all come in, and the boat thus renovated would be more saleable and saleable."

### CANOE NEWS NOTES

The Spring Lake Clinker Boat Co., of Spring Lake, Mich., has issued a handsome catalogue of boats for rowing, sailing, fishing and hunting. The company has lately abandoned the construction of steam launches, canoes, etc., in order to devote its energies to the improvement and perfection of the class of boats through which, in particular, its high reputation has been established.

## Rifle Range and Gallery.

### Rifle at San Antonio.

The first thing a member of the San Antonio Rifle Club does as he enters the precincts of the range is to look at the topmost end of the flagpole to see if Old Glory is on hand. The next thing he takes is a meander through the forest of newly-planted trees to see if his tree is growing; then he spits on his hands, borrows two buckets from Clancy, goes to the ditch and gives the tree a drink; then he comes in the shooting hall, takes a drink himself, unbuckles his gun case, wipes the oil off his gun and the perspiration off his brow, and devotes the rest of the day to the rip-roaring, steam-splitting-up-the-back meet-race of the greatest aggregation of good fellows in this country. Scores at 200yds., muzzle rest, globe and peep sights, American Standard target:

### Zettler Winter Gallery Shoot.

The Zettler Club finished its winter shoot in the gallery for the season 1893-4, on Tuesday night of last week.

At the opening of the shoot last fall the club put up a liberal programme of fifteen cash prizes, the five highest prizes for the members making the best 50 scores; the next five prizes for the best 35 scores; and the last five prizes for the best 25 scores. In addition to the cash prizes the club hung up the champion gallery medal which has been up for competition for the past ten years.

Heretofore the medal has been held by the winner making the highest score on the first entry at each weekly shoot, the member winning it the most times during the season to hold it until the opening of the next season. But this year the rule was changed and the medal was subject to competition on the bullseye, each member allowed one shot each practice night, and the member having the best center shot at the end of the season, to become the owner of the medal.

At the close of the shoot on Tuesday night the bullseye box was opened and the cartons measured. Many of the members had shots that seemed to be almost perfect centers, but after the cartons had gone through the measuring machine Barney Zettler was found to have the winning shot, it measuring only 11". Henry Holges was second, his carton measuring 11 1/2".

In addition to the club prizes the Zettler Bros. gave an extra medal to go to the member making the highest number of points during the twenty-six weekly competitions. The competition for this medal developed a close race between Ross and Holges. Ross won this medal on a total of 3181 points in 130 shots, beating Holges by 20 points.

The attendance during the winter has been light, only sixteen members filling out their scores as called for in the programme. The scores of the winners, with their averages, will be found appended:

Most points, one prize (Zettler medal):

F C Ross, 130 scores (1,300 shots).....31,810      Average for 10 shots 244.6  
H Holges, 130 scores (1,300 shots).....31,734      Average for 10 shots 244.1

### Schlicht Rifle Club.

At the weekly shoot of the Schlicht Club, April 23, nineteen members entered the competition for the class medals. Capt. Brellenthine won the champion medal, Wm. Schlicht the first class, Aug. Meyer the second class and Ch. Meyer the third class. The scores are appended:

G. Schlicht 240, A. Meyer 238, E. O. Brellenthine 233, W. Schlicht 232, C. Meyer 231, G. Dorr 229, J. Diehl 228, P. Mau 226, F. Lambrix 225, M. Daus 225, E. Mehr 224, Capt. Krobatsch 223, C. Steur 221, J. Schlicht 210, J. Dedrick 219, G. Lauterberger 218, A. Deubline 217, C. Schlicht 216, G. Richter 215

### Ross vs. Dorrier.

TWO rifle experts, Fred. C. Ross and Michael Dorrier, came together again on Saturday of last week in the Greenville Schuetzen Park to shoot off the first match in the new series of two out of three, 100 shots per man each match and \$25 a side. The unsatisfactory ending of the previous match shot at Wissel's Park on April 16 created so much interest in the minds of the local riflemen as to the merits of the two men that it was expected that there would be a large gathering of lovers of rifle shooting to witness the second contest, but such was not the case. Outside of a few friends of Ross's from Williamsburgh, there were but few people present to take in the sport. The weather on Saturday morning opened fair, with a moderate southeast wind. The two contestants were on the grounds in the early forenoon, and went into preliminary practice.

Ross was apparently in good form. Dorrier, who never looks healthy, looked decidedly off in form, and eventually, as the match progressed, his shooting showed that the old veteran was not in condition for brilliant work. In settling the preliminaries previous to the opening of the contest, Geo. Krauss was made referee. Collie Boag was present to look after the interests of Dorrier in the shooting house.

At the target house was stationed Geo. Klingelhoefer for Ross and Geo. Purkess for Dorrier, who acted as judges and supervisors of the markers. With the finish of every 10-shot score of each contestant the judges sent up to the shooting house the results, where they were compared with the scores kept by the score keepers at that point and verified. Thus all possibilities for errors were reduced to a minimum. Dorrier was to declare his readiness to begin the contest. A few more shots on the part of Ross, and he was ready. By a preconcerted signal the old targets were run down and new, clean targets put up in their place. At this point, about 11 A. M., the referee declared the match open. Dorrier was the first to lead off, scoring a 20. Ross followed with 21. Dorrier's second shot was 19 and Ross's 23. Dorrier's third shot was a 15, and when 10 shots had been fired the child at the target house was again present; but a moment later Ross, who seemed to have been struck with the same fit of unsteadiness, scored a 17. This seemed to have the effect of relieving the demoralization in the Dorrier camp for the time being. It was only temporary, however, for Dorrier scored a 19 on his fourth shot, while Ross followed with a flag (25). From this point to the end of string (10 shots) Dorrier could not seem to budge his shots in the middle of the eye, his total for the 10 shots being 190, while Ross, who seemed to gain confidence, settled down to his work and succeeded in putting up the good score of 235, leaving Dorrier 22 points behind—altogether too much of a lead for two men evenly matched. Dorrier's second string, 215, was a little improvement, but Ross finished his second string with a total of 220, adding 5 points more to his lead. With the beginning of the third string Dorrier seemed to get down to his old form, and finished his score with a total of 224 against Ross's 235. The fourth score opened with each man apparently settled down to do his best. Dorrier finished his score with a total of 224, against 215 for Ross. Dorrier in the last two scores had reduced Ross's lead of 27 points down to 9, and it looked as though the old veteran would yet crawl out of his dilemma. The fifth string resulted in a total of 217 for Dorrier against 216 for Ross, reducing the lead of the latter to 8 points. At this point the two contestants laid aside their rifles for a short rest and to await the passing of a shower of rain which had been gathering during the forenoon.

With the passing away of the storm came the resumption of the match. Dorrier's sixth string was a decided disappointment to his followers; he finished it with a total of 207 points against 223 for Ross. The result of this score raised Ross's lead to 23 points. The seventh string added 11 points more to Ross's lead, leaving Dorrier 214 against 225 for Ross. In the eighth string Dorrier reduced the lead 8 points, making 223 against 223 for Ross. On the ninth string Dorrier gained 1 point, making 224 against 223 for Ross. The tenth and last string of the match resulted in a tie, each man making 223, and giving Ross the match by a margin of 31 points on a total of 2,215 against 2,184 for Dorrier.

There was during the match no incident of an unfavorable character to mar the spirit of good fellowship between the two contestants or their followers. There was a decided absence of the betting element and in the interest of the shoot we are pleased that such was the case. The return match will be shot at Cypress Hills, the date of which is yet undecided. Scores:

J. R. BUCHANAN, Sec'y.

### Greenville Rifle Club.

THE Greenville Rifle Club started its new series of gallery handicap shooting on Friday of last week. The scores are appended:

First Class—Dorrier 237, Purkess 239, Robidoux 231, C. Boag 239, Collins 238, Schelme 232, J. Boag 230. Boag first, Purkess second.

Second Class—Dodds 232, Agneau 232, Gotthardt 217, Fagen 236, Chavant 236, Spahn 233, Charlock 229. Agneau first, Charlock second.

Third Class—Hill 226, Barr 226, Lembeck 218, Holzapel 234, Daniels 210, E. Wuestner 204, F. Wuestner 226, Zeiger 210. F. Wuestner first, Hill and Barr second.

### Palisade Rifle Club.

NINE members of the Palisade Rifle Club were present at Schlicht's gallery, April 22, to participate in the contest for the class medals. Fred Esperer won the first class; Geo. Dorr the second; Fred Krobatsch the third. Scores: Fred Esperer 235, Geo. Dorr 235, Fred Krobatsch 231, Ch. Hemberger 239, Henry Rose 235, R. Glaser 222, O. L. Aufderheide 218, Aug. Ahles 214, Fred Ward 211.

### Independent New York Schuetzen Corps.

THE third monthly shoot of the Independent New York Corps. Cap. Wm. V. Weber, for the present season, took place in Washington Park of last week. While the weather was all that could be desired for outdoor sport, there was only a moderate attendance of the members. The usual quota of the experts of the Corps were on hand prepared to compete for the honors for high scores on the various targets. To one who enjoys the sport of rifle shooting the afternoon was replete with interesting incidents.

Among the many good marksmen present were to be seen Wm. Hayes, Gus Zimmerman, B. Walther, Geb. Krauss, Ignatz Marten, Geo. E. Jantzer, Alex. Stein, Ernest Fisher, Herman Weber, J. Bittschier, Aug. Schmitt, and others. Captain Weber was on hand looking after the details of the shoot. On the ring target there were some fine scores made, 5 shots constituted a score, possible 125. Wm. Hayes led his competitors with a score of 117, Geo. Krauss was second with 116, Geo. E. Jantzer third with 115, and Gus Zimmerman fourth with 114.

On the man target B. Walther divided the honors with Gus Zimmerman, each having 58 out of a possible 60. Wm. Hayes was second with 57, Alex. Stein third with 55, Geb. Krauss and J. G. Bauer fourth with 54 each.

On the point target was made some of the finest shooting of the day. The bullseye was divided into two parts, the center (4in.) counting 4, and the balance of the disk 3, 5 shots constituted a ticket, possible 20. Gus Zimmerman made the possible 20 points, 5 4in. centers. He made one run of 9 consecutive flags, and in a series of 100 shots he made 42 flags; this was remarkably fine shooting, and earned for Mr. Zimmerman many congratulations by the other marksmen who were present and witnessed his shooting. The scores of the successful marksmen on the several targets will be found appended:

Ring target, 5 shots, possible 125: Wm. Hayes 117, Geb. Krauss 116, Geo. Jantzer 115, Gus Zimmerman 114, Wm. Soll 111, Ignatz Marten 107, E. Fisher 109, Bittschier 95, Greiner 99, Frank 84, Dr. Paucritius 65, Schneider 82, Haist 66, Halbe 47, Herhman 45.

Man target: B. Walther 58, Gus Zimmerman 58, Wm. Hayes 57, Alex. Stein 55, G. Krauss 54, E. Fisher 53, J. G. Bauer 54, Grauer 51, Bittschier 51, L. Marten 51, Wm. Soll 30. Zimmerman made 42 flags in 100 shots.

Point target, 5 shots, possible 20: Gus Zimmerman 20, E. Fisher 18, Geo. E. Jantzer 17, Wm. Hayes 18, Geb. Krauss 17, L. A. Hoffman 17, Baab 16, Ignatz Marten 16, Greiner 14, Frank 14, Wm. Soll 14, Sternkopf 13, Dr. Paucritius 13, J. Bittschier 12, R. Schneider 12, F. C. Halse 10, A. Hostman 7, Hoist 6.

### Chicago Rifles.

CHICAGO, Ill., April 28.—A good deal of interest centers in the telegraph match between the Pastime Rifle Club, of Chicago, and the Missouri Rifle and Pistol Club, which takes place Tuesday evening, May 1, between 8 and 12 P. M., each club shooting in its own city. A close competition is anticipated, as there are excellent shots in each team of ten men.

In a letter to Mr. E. Hough concerning this shoot, Mr. Sam G. Dorman, St. Louis, adds some interesting matter pertaining to the rifle. He says: "Rifle shooting in this city has been practically dead since the close of the tournaments last fall, but the prospect is encouraging for the coming season. A new 200yds. range is being built by the Central Sharpshooters, near the southern limits of the city, which will be probably the finest range in the western country. The target house has been completed and the shooting house is nearly so. The announcement of their opening shoot may be looked for next month. The members of other clubs in this city have commenced practice, and a few more days will bring the boys all together once more. But if rifle shooting is to be encouraged, we want no more repetition of the last Cypress Hills affair. Like the rest of the cranks I had the shoot all figured out, and so far as the principals are concerned I have no fault to find. But when I received the official report in FORREST AND STREAM I found I had in my figuring overlooked the most important factor, I had figured on only two men being in the race." B. WATERS.

### Beideman Rifle Club.

PHILADELPHIA, April 25.—The following shows the weekly shoot of the Beideman Rifle Club, at their range, Beideman Station, N. J., for week ending April 21. Conditions, 25yds, possible 250, 14in. ring target, 14in. bull outside range, strictly off-hand:

Drardier.....25 25 25 25 25 24 24 23 23-244  
W Wurfleld.....25 25 25 25 24 24 23 23 23-240  
J S Wood.....25 25 25 25 24 24 24 23 23-240  
A C McGowan.....25 25 25 24 24 24 24 23 23-237  
W Gilbert.....25 25 25 25 24 24 23 23 23-236  
G Taylor.....25 25 24 24 23 23 20 19 19-232  
Pistol score, 50yds., Standard American target:  
Dr Gardiner.....10 10 10 10 10 9 9 8 8-94  
WALT GILBERT, Sec'y.

### Susquehanna County Rifle Association.

THE twenty-third meeting of the association will be held at Foster, Pa., on May 24 and 25. All interested in rifle shooting are cordially invited. Any one can become a member by paying entrance fee to matches.

Fifteen pounds standard weight of barrel. All over must give 1-16in. per pound, and all under will receive 1-16in. per pound on each string. String measure, globe sights, muzzle rest, butt of gun held against shoulder, distance 20 rods. Shooting commenced at 10 A. M.

For silver medal and three money prizes. Two strings, 10 shots each string. At 2 P. M. County match for silver medal and three money prizes. Two strings, 10 shots each string. May 25.—At 9 A. M., Scranton match for silver medal and three money prizes. Three strings, 10 shots each string. DUNMORE, Pa. H. M. SPENCER, Sec'y.

### Miller Rifle Club.

HOBOKEN, N. J., April 25.—A special meeting of the Miller Rifle Club, Capt. R. W. Dewey, was held this evening at their headquarters, 423 Washington street. There was quite an attendance, many out of town faces were seen. The members are predicting grand things for their eighth annual shoot at Schuetzen Park, Union Hill, Monday, May 7, and are working hard to make this shoot the best one they have had. Several of the prominent shooters from other clubs have signified their intentions of being with them on that day, and it is expected it will be an enjoyable and profitable affair for visitors and the club. After the meeting the following scores were made: Schmidt 244, Miller 243, Meyers 241, Schmitt 235, Zoch 232, Dewey 232, Vanderheyden 230, Rogers 225, Scott 224. The medal winners were: Schmidt 244, Zoch 232, Vanderheyden 232. W. H. ROGERS, Sec'y.

### The Tobin Trophy.

SAN FRANCISCO, April 17.—The Tobin trophy is shot for annually by the various companies of the N. G. C. The contest was held on Sunday at Shell Mound Range and was won by the redoubtable Co. C, 1st Regiment with the fine score of 865 points, 20 men, to shoot each, 200yds., regulation rules. This is the highest score ever made on the coast by 20 men in a regular match. The Carson City guards of Nevada had the record previous to Sunday, viz., 852 points. ROEEL.

### Heidenreich Rifle Club.

SCORES shot at our 100ft. range April 22. Horn 240, Hicks 239, Steel 239, Goodman 226, Kellner 219, Busch 215, Bogner 216, Heidenreich 212, May 215, Kaufman 228.

April 22—Score shot at our 100ft. range: Val Horn 239, Wm. Steel 232, A. Busch 229, Kook 228, F. Goodman 221, Kellner 219, Bogner 216, Wm. May 215, Kaufman 227. Wm. MAY, Sec'y.

### RIFLE NOTES.

During the time that Ross and Dorrier were shooting their match some of the members of the Greenville and Excelsior Clubs were present and indulged in practice. Among those present we noticed L. H. Hansen of the Excelsior Club, who is developing good shooting form, in a series of 50 shots he made a total of 1090.

Teams from the New York Schuetzen Corps, New York Central Corps, New York City Corps and the Harem Independent Corps, will meet in a contest for the Corps some time next month.

The members of the Zettler Club will meet in Wissel's Cypress Hills Park, to-morrow May 6. This is the regular bi-monthly practice for club prizes in the season shoot. Visiting riflemen will receive a cordial welcome to participate.

The Williamsburgh Shooting Society, Capt. Geo. Schmidt, will hold its annual festival in the Cypress Hills Park, on May 13-14. The prize programme is liberal and should receive a hearty report from our local riflemen. On the ring target are 20 prizes ranging from \$40 down to \$2. On the bullseye target there are 18 prizes ranging from \$40 down to \$1. There are six premiums for the most flags ranging from \$10 to \$1.

Don't forget the Miller shoot which takes place in Union H. Schuetzen Park, next Monday, May 7.

The New York Schuetzen Corps, Capt. Henry Offerman, will hold its second practice shoot at Union Hill, on Friday of next week.

Manson's First Annual.

MANSON, Ia., April 18.—The first annual tournament of the Manson Gun Club ended to day. The attendance was fair and the shooting quite good. The weather was up to noon of the first day; it then commenced raining and a high wind made the shooting quite difficult during the rest of the tournament.

C. W. BUDD.

Missoula Rod and Gun Club.

MISSOULA, Mont., April 22.—The weekly shooting contest of the Missoula Rod and Gun Club occurred this afternoon; attendance light, shooting only fair, weather favorable, except that a breeze was blowing in the teeth of the shooters, which made the shooting difficult. Lieut. Devol, of the Twenty-fifth Infantry, U. S. A., took the lead with a score of 13. The shoot was at 15 singles, known angles:

J T Sawhill.....101100010010111-8 F P Kern.....00000110110100-6  
After the regular event an interesting team shoot took place, two teams of six, one headed by H. A. Stephens and the other by T. S. Jones, at 10 birds each man, unknown angles. Scores: Jones's team 37, Stephens's 32. Repeating the scores were: Jones's team 38, Stephens's team 39. Then shooting 5 down to decide the best two out of three they scored: Jones's team 20, Stephens's 24. This made Stephens's team the winners, but the teams tied on the total number of birds broken. WILL CAVE, Sec'y.

Answers to Correspondents.

No notice taken of anonymous communications

GEOMBECK, Arkadelphia, Ark.—The notion that hares change their sex in winter is of a piece with the old time "vulgar error," that in the winter the cuckoo turned into a hawk.

W. E., New York.—You will find lines of a good boat in the FOREST AND STREAM of April 21, 1887. "Canoe and Boat Building for Amateurs" contains very plain and complete directions for building boats. We have published no lines of model yachts. "Model Yachts," by Grosvenor, contains instructions for building and sailing.

# YALE MIXTURE

A GENTLEMAN'S SMOKE.

WE COULD NOT IMPROVE THE QUALITY if paid double the price. It is the choicest Smoking Tobacco that experience can produce or that money can buy.

MARBURG BROS., BALTIMORE, MD

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where we get back a good deal more than cost of catalogue and postage.

ABBEY & IMBRIE,

18 VESEY STREET, NEW YORK CITY

Notice to Fishermen! Cut Prices for 1894.

I am with you again with lower prices for Fishing Tackle. I find by experience that putting down the prices and not decreasing the quality, it increases my business every year.

One lot of Split Bamboo Fly and Bass Rods will be sold at \$1.58 until all are sold. Rods are all nickel mounted, solid reel seats, silk wound, complete in wood form and will give satisfaction. Length and weight of the Fly Rods are: 9ft., 6oz.; 9½ft., 6½oz.; 10ft., 7oz.; 10½ft., 7½oz.; 11ft., 8oz. Reel seats below hand. # Standard Works for the Sportsman's Library.

ANY BOOK HERE NOTED WILL BE SENT POSTPAID ON RECEIPT OF PRICE BY THE FOREST AND STREAM PUBLISHING CO., 318 BROADWAY, NEW YORK.

## ANGLING.

### The American Angler's Book.

Combining the natural history of sporting fish, the art of taking them, with instructions in fly-fishing, fly-making and rod-making, and directions for fish breeding. Description of salmon runs, inland trout fishing, etc. By THAD. NORRIS. 80 illustrations. Cloth. Price, \$5.50.

### American Fishes.

A popular treatise upon the game and food fishes of North America, with especial reference to habits and methods of capture. By G. BROWN GOODE. With numerous illustrations. Cloth, 496 pages. Price, \$3.50. This is, by far, the most popular work which has ever been published on the fishes of America, and is the book that no angler who takes pleasure in knowing the fishes which afford him sport, can afford to miss.

### Book of the Black Bass.

Comprising its complete scientific and life history, together with a practical treatise on angling and fly-fishing, and a full description of tools, tackle and implements. By JAMES A. HENSHALL, M.D. Illustrated. Cloth, 470 pages. Price, \$3.00. Dr. Henshall's monograph is the standard work.

### More About the Black Bass.

Being a supplement to the "Book of the Black Bass." By JAMES A. HENSHALL, M.D. Fully illustrated. Cloth, 204 pages. Price, \$1.50. This is a supplement or sequel of Dr. Henshall's first volume, in which the author's aim is to bring the subject matter down to date.

### Fly-Fishing and Fly-Making for Trout, etc.

By J. HARRINGTON KEENE. With plates of the actual material for making flies of every variety. Illustrated. Cloth, 160 pages. Price, \$1.50. The matter of the book embraces everything which the fly-fisherman wants to know about the senses of fish, practical fly-fishing, casting and fly-making; with list of standard flies and their dressings; the feathers, silk and other material used in fly-making, there are samples of all, attached to blank sheets like pictures by way of illustration.

### Fishing Tackle.

Its Materials and Manufacture. A practical guide to the best modes and methods of making every kind of appliance necessary for taking fresh-water fish and for the equipment of the angler and fly-fisher. With 454 illustrations and explanatory diagrams. By J. HARRINGTON KEENE. Price, \$1.50.

### With Fly-Rod and Camera.

By EDWARD A. SAMUELS, President of the Massachusetts Fish and Game Protective Association, author of "The Ornithology and Ology of New England and Adjacent States and Provinces," "Among the Birds," Associate Editor of "The Living World," etc., etc. Cloth, 480 pages (9x9 1/2 in.), 147 illustrations. Price, \$5.00. The author is known as one of the most devoted and expert salmon fishermen of America. The volume is likewise noteworthy as an example of the rare possibilities of amateur photography.

### Fly-Rods and Fly-Tackle.

Suggestions as to their Manufacture and Use. By HENRY P. WELLS. Illustrated. Cloth, 364 pages. Price, \$2.50. The most exhaustive work on the subject in print.

## MANUALS.

### Game Laws in Brief.

Laws of the United States and Canada Relating to Game and Fish Seasons. For the guidance of sportsmen and anglers. Compiled by CHARLES B. REYNOLDS, Editor of *Forest and Stream*. Paper. Price, 25 cents. Gives all sections relative to game and fish seasons, limit of size or number, non-residents, transportation, etc. All in brief, but full enough for the practical guidance of sportsmen and anglers. Carefully compiled, and shorn of verbiage. Handsomely illustrated with numerous half-tone engravings from *Forest and Stream*.

### Woodcraft.

By NESSMUK. Cloth, 160 pages. Illustrated. Price \$1.00. A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain English.

### Tricks of Trapping.

Camp Life in the Woods, and the Tricks of Trapping and Trap Making. Containing hints on camp shelter, all the tricks and bait receipts of the trapper, the use of the traps with instructions for the capture of all fur-bearing animals. By W. HAMILTON GIBSON. Illustrated. Cloth, 300 pages. Price, \$1.00.

### Log Cabins.

How to Build and Furnish Them. By WILLIAM S. WICKS. New and enlarged edition. Price, \$1.50. Mr. Wicks might have called his book "Every Man His Own Log Cabin Builder," for he has set out to describe fully and particularly each detail in the process of construction. Plans are given for cabins, large and small, with details of exterior and interior.

### Hints and Points for Sportsmen.

Compiled by "SENECA." Cloth. Illustrated, 224 pages. Price, \$1.50. This compilation comprises six hundred and odd hints, helps, kinks, wrinkles, points and suggestions for the shooter, the fisherman, the dog owner, the yachtsman, the canoeist, the camper, the outer, in short for the field sportsman in all the varied phases of his activity.

## SHOOTING.

### Names and Portraits of Birds

Which Interest Gunners, with Descriptions in Language Understood of the People. By GURDON TRUMBULL. Cloth, 222 pages. Price, \$2.50. The average gunner with this work at hand would have little difficulty in identifying the contents of his bag from the text alone. Identification is further facilitated by portraits of the birds.

### Antelope and Deer of America.

A comprehensive scientific treatise upon the natural history, including the characteristics, habits, affinities and capacity for domestication, of the Antilocapra and Cervidae of North America. Second edition. By JOHN DEAN CATON, LL.D. Cloth, 426 pages, 50 illustrations; steel portrait. Price, \$2.50.

### The Gun and Its Development.

With Notes on Shooting. By W. W. GREENER. Breechloading Rifles, Sporting Rifles, Shotguns, Gunmaking, Choice of Guns, Chokeboring, Gun Trials, Theories and Experiments. Fully illustrated. Cloth, 770 pages. New edition. Price, \$2.50.

### The Art of Shooting.

An Illustrated Treatise on the Art of Shooting. With Extracts from the Best Authorities. By CHARLES LANCASTER. Illustrated with numerous drawings from instantaneous photographs. Price, \$3.00. New edition.

### Field, Cover and Trap-Shooting.

By CAPTAIN ADAM H. BOGARDUS, Champion Wing Shot of the World. Embracing Hints for Skilled Marksmen; Instructions for Young Sportsmen; Haunts and Habits of Game Birds; Flight and Resorts of Waterfowl; Breeding and Breaking of Dogs. With an appendix. Cloth, 493 pages. Price, \$2.00. There is no other man in this country—or in any other, for that matter—better fitted to teach a novice the art.

### The Still-Hunter.

A Practical Treatise on Deer-Stalking. By T. S. VAN DYKE. The information contained in "The Still-Hunter" is as exhaustive as it is possible to make it. 300 pages. Price, \$2.

### The Breech-Loader and How to Use It.

288 pages. Price, \$1.00. A book for that numerous class of sportsmen who delight in a day's shooting, but have neither the time nor the means to make the sport a life's study.

## CAMP AND HOME.

### Uncle Lisha's Shop.

Life in a Corner of Yankeeeland. By ROWLAND E. ROBINSON. Cloth, 187 pages. Price, \$1.00. "Uncle Lisha's Shop" is brimful of quaint humor and sentiment, and there is an unmistakable touch of human nature in Uncle Lisha himself and his good old wife, Aunt Jerushy; in Sam Lovel, the hunter, and in fact in all the other characters introduced.

### Sam Lovel's Camps.

A sequel to "Uncle Lisha's Shop," by ROWLAND E. ROBINSON. Cloth. Price, \$1. When Uncle Lisha went West, Sam Lovel took Antoine as his partner, and the fortunes and misfortunes of the two as trappers are described with all the charm of our author's quaint style, while their friends and enemies, and all with whom they are brought into contact, in the course of the story, step on to the stage real living creatures.

### Pawnee Hero Stories and Folk-Tales,

With Notes on the Origin, Customs and Character of the Pawnee People. By GEORGE BIRD GRINNELL. Cloth, 417 pages. Illustrated. Price, \$1.75. New edition, revised. Like most Indian tribes, the Pawnees are story tellers. They have a vast fund of folk-tales and traditions, which have been handed down from father to son, and transmitted from generation to generation. Years ago, when the tribe lived in Nebraska, the author of the present volume camped and hunted with them, and joined in their village life. The nights were given up to story telling, and many of the tales told in the lodge and by the flickering camp-fire were carefully translated and written down. When published they excited great interest. They are tales of daring and adventure, weird accounts of magic, mystery and the supernatural; relations of the ways of life in the old, wild days; stories of war and the craft of war parties, the history of the tribe as treasured by the very old men. There is mother-wit in these stories, they are full of humor, sentiment, pathos and human nature.

### Blackfoot Lodge Tales.

The Story of a Prairie People. By GEORGE BIRD GRINNELL. Cr. 8vo., \$1.75. In this volume the story of the Blackfoot tribe is told by a friend, one who has hunted with them on the prairies, slept in their lodges, lived in their camps, and shared their daily life. The stories which constitute this history have been taken down by the author from the lips of the narrators, and are given without change as told to him. There is a singular and charming freshness about the stories, which give the history of renowned warriors of ancient and modern times, show how ancient customs arose, and explain natural phenomena. The account of the daily life, customs, and history of the Blackfeet presents a series of graphic pictures of savage life in peace and in war.

### Our New Alaska;

Or, The Seward Purchase Vindicated. By CHARLES HALLOCK. Cloth, 209 pages, illustrated. Price, \$1.50. Mr. Hallock's writings are always vivid and full of life.

## THE KENNEL.

### Dogs: Their Management and Treatment

IN DISEASE. A Study of the Theory and Practice of Canine Medicine. By ASHMONT. Cloth, 208 pages. Price, \$2.00. The *Forest and Stream* says that this is one of the most valuable treatises on canine management and therapeutics that has appeared on this side of the water.

### Kennel Record and Account Book.

Boards, \$3. An indexed volume of 180 pages, consisting of a series of carefully prepared blank entry forms suited to the registration of all kennel events and transactions.

### Dog Points and Standards.

First Lessons in Dog Training, with the Points and Standards of all Breeds of Dogs. Paper, new edition, 106 pages, revised to date. Price, 50 cents.

### Training vs. Breaking.

Practical Dog Training; or Training vs. Breaking. By S. T. HAMMOND, Kennel Editor of *Forest and Stream*. Revised and re-written. To which is added a chapter on training pet dogs, by an amateur. Cloth, 165 pages. Price, \$1. A book for dog owners, who, by the instructions here plainly given, can successfully train their hunting dogs.

### Modern Training;

Handling and Kennel Management. By B. WATERS. Illustrated. Cloth, 373 pages. Price, \$2. This treatise is after the modern professional system of training. It combines the excellence of both the suasive and force systems of education, and contains an exhaustive description of the uses and abuses of the spike collar.

### House and Pet Dogs;

Their Selection, Care and Training. Paper, price 50 cents.

### Lee's Modern Dogs.

History and Description of the Modern Dogs (Sporting Division) of Great Britain and Ireland. By RAWDON B. LEE, kennel editor *London Field*. Illustrated, 584 pages. Price, \$6. This is a standard work by an acknowledged authority, and is up to date. It treats all sporting breeds exhaustively. The illustrations are idealized portraits of typical specimens.

### Kennel Secrets.

How to breed, exhibit and manage dogs. By ASHMONT. The dog from the time he is conceived to the time he curls himself up for his last long sleep is treated from every standpoint that could possibly occur to a man of wide experience with dogs. Every important subject that has engaged attention has been fully discussed, generalities being held practically valueless and misleading. Illustrated, 344 pages. Price, \$3.00.

### The Spaniel and Its Training.

By F. H. F. MERCER. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, \$1.

### Scientific Education of Dogs for the Gun.

By H. H. Cloth. Price, \$2.50. The instructions are the result of the author's amateur practical experience of 37 years. *Forest and Stream* says: "This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even our hands to study."

## YACHT AND CANOE.

### Small Yachts.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice. With numerous plates and illustrations. By C. P. KUNHARDT. New ed., 470 pp. of type and illustrations and 87 plates. Size of page, 14 1/4 x 12 1/4. Price, \$10. This book is intended to cover the field of small yachts, with special regard to their design, construction, equipment and keep.

### Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. New ed., 287 pp. Price, \$3.00. A complete review of the development and present status of the marine engine and boiler as applied to steam yachting.

### Canoe and Boat Building.

A Complete Manual for Amateurs. Containing plain and comprehensive directions for the construction of Canoes, Rowing and Sailing Boats and Hunting Craft. By W. P. STEPHENS, Canoeing Editor of *Forest and Stream*. Cloth. Fourth and enlarged edition, 264 pages, numerous illustrations, and fifty plates in envelope. Price, \$2.00.

### Canoe Handling.

The Canoe: History, Uses, Limitations and Varieties, Practical Management and Care, and Relative Facts. By C. BOWYER VAUX ("Dot"). Illustrated. Cloth, 168 pages. Price, \$1.00.

### Yacht Architecture.

By DIXON KEMP, Associate of the Institute of Naval Architects and Member of Council. Second edition. Super-royal 8vo., 530 pages, numerous plans and designs. Price, \$16.80.

### A Manual of Yacht and Boat Sailing.

By DIXON KEMP, Associate Institute of Naval Architects (Member of the Council). 750 pages, with numerous plans and designs. Price, \$10.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

If he is a friend of yours; if he is interested in the gun or the rod; if he is not a reader of FOREST AND STREAM; if you would like to have him see it for three weeks; and if you will give us his name, we will supply him with one of the

FOREST AND STREAM'S SILVER BULLSEYE Cards, which will make it easy for him to send for the paper. . . . .

## PROTECTION FOR THE PARK.

THE bill for the protection of the Yellowstone Park, which for some time had been before Congress, was favorably reported last week from the Conference Committee, passed both Houses, and received the signature of President Cleveland last Monday.

The enactment of this law will be hailed with sincere satisfaction by all good citizens and especially by the readers of the FOREST AND STREAM, to whom the past unfortunate condition of things in the Park has long been known. While the bill is not all that could be desired, it is fairly satisfactory, and properly enforced will effectively protect the forests, the game and the natural wonders of the Park.

It is not too much to say that the passage of this bill is due directly to the agitation of the subject by the FOREST AND STREAM, which for many years has regarded the Yellowstone National Park as its special charge. The long delayed action of Congress might have been still further postponed had it not been for the boldness of the poachers, whose recent wholesale raids upon the buffalo startled Congress from its lethargy. The FOREST AND STREAM was the first newspaper to urge protection for the National Park, the first to announce last winter's bloody work, and to point out the inevitable consequences unless Congress took immediate action; and it looks with satisfaction on its record in this matter, for it has become known far and wide as the champion of the Park.

Nothing could have been done in Congress without the active aid of interested members in both houses, and fortunately the Park has a number of warm friends, both in the Senate and in the House. First among those who deserve special credit for long continued labors in the cause of protection for the Park, is Senator George G. Vest, of Missouri, whose active interest in the reservation dates back a dozen years. In his public services in this matter Mr. Vest has always been ably seconded by Senator Manderson. It was Mr. Vest who drew the bill which we believe six times passed the Senate and once the House, and many of the provisions of his bill are found in the measure which has just been enacted. Of Senator Carey's

valuable services in connection with the present bill, and of those of Mr. Lacey in the House of Representatives, mention has already been made. Senator Lodge, of Massachusetts, Hon. Bellamy Storer, of Ohio, Hon. John E. Rayburn, of Pennsylvania and Mr. McRae, of Arkansas by their active sympathy contributed much toward the speedy passage of the bill.

For many years Superintendents of the Park and Secretaries of the Interior have kept up the unequal fight against lawlessness within its borders, and have striven to amend the condition of things there. In the list of these workers there are a number of honorable names, but never since the Park was established have there been officers of the Government more deeply interested in its protection than Hon. Hoke Smith, the present Secretary of the Interior, and Capt. George S. Anderson, the present Superintendent. They have worked together assiduously and unselfishly, and have done the best that was possible considering the fact that their action was always hampered by the absence of any law permitting the punishment of offenders. Capt. Anderson, who has resided in the Park, has done the actual hard work and faced all the annoyances inevitably connected with such duty; but Mr. Smith has given him constant help, encouragement and support in his difficult task. It is certainly an especially happy circumstance that the protective measure has become a law under their administration.

There is in Washington another person—a private citizen—who for many years has labored heart and soul for the best interests of the National Park. He has traveled backward and forward over it, has reported on it to the Secretary of the Interior, has watched legislation which threatened to affect it, and has contributed his legal knowledge to every movement for its preservation. It is not too much to say that he has done more than any one else has done, and perhaps more than any one else could have done, toward bringing about the happy result that we announce to-day. This person desires to remain unknown; yet the few individuals who are acquainted with the facts and who know how great is the debt of gratitude owed him by the public, feel a sincere regret that they are not at liberty to make some public acknowledgment of his services to the Park and to his countrymen.

SNAP SHOTS.

In these days of going fishing and of planning for summer campaigns with the rod, substantial assistance may be found in the weekly fund of information given in our Sea and River Fishing pages. Not a week goes by that there are not accounts of successful excursions to waters abounding in bass or trout or other fish; and the FOREST AND STREAM is thus a veritable anglers' directory. To make this feature more valuable is our constant desire. Its accomplishment rests almost entirely with the angling reader. While no one is called upon to abandon to the public his jealously guarded secret of good fishing in waters likely to suffer from publicity, every member of the fraternity owes it to the craft to tell of lakes and streams and bays where the fishing may be of scope and quality so generous as not to suffer even if others do know of it. Send in your contribution to the common fund. No one has a right to keep a good thing to himself when it may be shared with others. If this is not true doctrine for a true fisherman where is the fallacy?

Ring-necked pheasants have been introduced into Nova Scotia with most gratifying success, by the enterprise of the Game and Inland Fishery Protective Society; and the result demonstrates that the species is well adapted to the climate of the Northeast. In October, 1892, some young pheasants were put out by a resident of Kentville, N. S.; and lived through the severe winter without being fed or given shelter. Encouraged by this result, the society imported from England in May, 1893, eighteen birds, of which fifteen were hens; and they were put out in the same month, and were left to shift for themselves. They bred, hens being seen with sixteen, ten, seven and four chicks respectively. The winter of 1893-4 was one of the severest ever known in Nova Scotia; for three months the snow lay three feet deep, and the season was one to test most effectively the hardiness of the new game. The pheasants came out in the spring in fine order, and the society now looks for a large increase in this, the second year. The experiment has demonstrated the ability of

the pheasants to take care of themselves, with no artificial feeding whatever; and as they are protected by law, there appears to be ample reason for regarding them as an established game species. The Game and Inland Fishery Protective Society will undoubtedly strengthen itself with the public by this public-spirited service to the Province. It is much the same in Canada as in this country, that the actual and efficient work of game protection must be undertaken by individuals or voluntary associations of private citizens, and the Nova Scotia society has made an excellent record by many years of untiring service in the cause of protection. One abuse the society's wardens have constantly to combat is the snaring of moose. The snarers, or "rope men," as they are called, are among the most persistent of law-breakers, and it is exceedingly difficult to detect them.

We print "Coahoma's" reflections on the "Right and Wrong of It," because we consider their author to be entitled to a hearing, and not because we consider the legitimacy of the pursuit of game, for sport, is properly a subject of debate in this journal. There are people who, lacking a taste for field sports, hold with perfect sincerity a prejudice against such pursuits, as being cruel, or as involving an unnecessary taking of life. But the FOREST AND STREAM is published in the interest of a class which believes in the use of the gun, and for that class, and in such a journal, the question of the propriety of field sports is not debatable. Nevertheless, some good must come from the recent discussion begun by "Coahoma" in his letter concerning the killing of a snake, participated in by others, and now closed by him. More rational, less wanton, more manly and thoughtful and less cruel, must be the attitude toward animate nature, for the reading of such a discussion and the reflections prompted by it.

Now that an effort is making to restock the Catskills with deer, it seems a pity that the game should not have every protection the law may afford. The deer will naturally stray into Sullivan county, and they should be exempt from pursuit there for five years at least. The game bill which the New York Legislature sent to the Governor this year contains a section which provides that no one shall kill deer in Sullivan county "save only from the first day of October to the first day of November." This, however, does not expressly repeal the law now in force which forbids killing deer in Sullivan county prior to 1897; and it is to be hoped that the game protectors will insist upon the observance of the old law.

In our last issue we alluded to the Byrnes case, a suit brought by Protector Kidd to recover penalties for quail unlawfully served in March of last year. The defendant is playing the customary game of delay so familiar to every one who has ever attempted to put through game law prosecutions in this county; and he secured another adjournment last Tuesday. Mr. Byrnes is simply putting off the evil day. His counsel may adjourn as persistently as did the Delmonico people, but there is only one certain ending—he must pay up; and we are going to record his doing so.

The annual meeting of the American Fisheries Society in Philadelphia next week promises to be an interesting one. The society will be entertained by the Pennsylvania Fish Protective Association, and the programme calls for a planked shad dinner, and apropos of this will be a paper prepared by Mr. Charles Hallock telling of a time "When Shad were a Penny Apiece" in the Connecticut Valley. Among other papers to be read will be a series prepared by members of the United States Fish Commission.

The report of a buffalo herd discovered in Texas is important, if confirmation may be had; and we shall endeavor to determine the truth of the story. A correspondent, under whose notice had come the press dispatch, suggests that while the report may be the signal for an army bent on the capture of the game, it ought to arouse every man in Texas to defend the herd.

Never leave a gun loaded in the house. Never carry a loaded gun into a house.

## In the Wilds of the Borderland.

A Woman's Hunting Trip into the Wilds of the Borderland Between Maine and Canada.

OFF at last! It was a bright, beautiful autumnal morning of last year on which we began our journey, and we even looked to the long day's ride with pleasure, for we were going into what was to us *terra incognita*. After distributing our belongings and becoming comfortably settled in our chairs we leaned back in the full enjoyment of our surroundings, and of having nothing to do but anticipate, all cares having been left behind as we boarded the train, unless Jerry be excepted, of whom more anon.

The year before I had taken my wife for her first real camping trip. We spent two weeks among the 27,000 islands of Georgian Bay, Ontario, and although the black bass fishing was grand all else was disappointing. It was hot and rainy, the wind was never right, either too much or none at all. The islands were masses of rocks, for the most part without trees, and we found nothing but frogs on which to try the new Marlin. These, however, were good for practice and also for eating, our French boatman and cook presenting them to us as perfectly cooked as though done by a "blue ribbon." The climate, snakes and spiders were tropical; thunderstorms such as we had never experienced about New York were frequent, and we returned much disappointed.

But during the long winter following our trip in retrospect appeared to have been more and more enjoyable, for the disagreeable incidents were gradually forgotten and only the pleasures recalled. The greatest pleasure was then the presence of a little all black cocker Jerry, who had been loaned us at the village from which we started, and who proved such a sociable companion during the trip that our longing for him after our return home persuaded us to send for him. He arrived during the coldest weather of last winter and ever since has been our companion, joy and comfort, and no doubt was one of the primary causes of our second trip. As the spring

going east. A little after 5 in the morning we arrived at Jackman an hour late, and a long, mostly pleasant, railroad journey was ended.

We arrived at Jackman cold to the bone and in a pretty state of mind. But a good fire, hot breakfast and cordial greetings from everybody at the Colby House, restored us to warmth and equanimity. A little shopping for things forgotten and at about 8 o'clock we started for a 25 miles drive, Jim\* and I and Jerry in a buggy, and Llewellyn Rainey with a two-horse buckboard and our trunks.

Fifteen miles from Jackman through a beautiful rolling country, and part of the time through dense woods, always rising, brought us to the top of the Boundary Mountains, 3,000ft. above the sea. A short halt to water

"WHEN THE SUN GOT LOW."

the horses and then a gradual descent, mostly on a trot over better roads for ten miles, brought us to hospitable Mrs. Rainey's.

Our journey had been long and wearisome, and after a refreshing bath and a hot dinner, we went to bed and were asleep at 4 o'clock in the afternoon, not waking until sunrise next morning.

Our trunks were searched for our regimentals, and city clothes knew us no more for three weeks. Jim appeared in her short-skirted corduroy hunting suit that had proved so serviceable last year, while I made my debut in knickerbockers, and so comfortable I found them that I shall always wear them upon like excursions hereafter.

The air was crisp that morning and we needed our sweaters during the first hours, for we already felt the effect of the change, and were hungry long before being called to the generous hot breakfast prepared for us. Afterward we met our guides. Robert Elliott, head guide, was a strong, wiry man of 45, active, full of business and exceedingly good-natured and anxious to please. We found him always polite, very even-tempered and a hard worker. Nothing was too much trouble for him if he could add to our comfort or pleasure, and wet to the skin, cold and tired, his heart was as warm and his eyes as twinkling with fun as though he was as comfortable as he had made us. Disagreeable weather and reverses seemed only to bring out good characteristics. He had trapped and hunted winters for twenty-five years and had driven logs in the springs. He was a thorough woodsman and trapper.

Albert Cathcart, the second guide, was a man of 30.

"WE WATCHED THE PREPARATIONS FOR BREAKFAST."

He was leaving his two weeks' old son and heir to go with us. He proved strong as an ox, and as kindly, considerate and obligingly good-natured as it is proverbial for strong gentle men ever to be.

Mrs. Rainey and her son, Llewellyn, deserve more than a word. They were the kindest people we met on our trip. Llewellyn drove us in and out of the woods, and we still here his cheery voice encouraging the horses at a particularly bad spot, while Mrs. Rainey sent delicacies to us on every occasion, and spent many anxious hours worrying about "that poor little woman off in the woods."

The morning was spent in making the acquaintance of the guides, the family, and the neighbors who came to

\*At the very outset I will take my readers into my confidence and say that in the seclusion of the home or camp my better half is known to me by the sobriquet of "Jim," and for the sake of brevity and convenience, she shall be known as "Jim" throughout this camp chronicle. My readers must therefore be prepared for any seeming inconsistencies of gender that may grate upon ears grammatical.

see the city lady who was to go where no white woman had ever been, and carry her own rifle, and shoot it, too. In the afternoon we went out to try our rifles. They were satisfactory except that I could not make mine shoot as straight as Jim's; she beat me, as usual, and rose correspondingly in the estimation of Bob, and from then on I played second fiddle. During our tramp we came to a broad, shallow brook, with pools at intervals. Bob's hat band furnished a 3ft. leader and a fly, and the woods a stick. With this outfit we were soon at work. Bob caught the first trout to show us how, and fishing alternately we soon landed fifteen or twenty trout, averaging about a quarter of a pound. We were both new to trout fishing, and enjoyed it greatly. The fly would no sooner touch the water than a swirl would be a signal for a strike. Several of the larger fish were saved for supper, the others thrown back.

The next morning was cloudy, but we decided to make a start, and with our "duffle" packed compactly on two strongly made sledges, each horse drawing about 250lbs., with Jim riding "Sandwich Island style" on a tall horse led by an officer in one of Her Majesty's cavalry regiments at Quebec, who was a volunteer in our party, we filed out back of Mrs. Rainey's house, across a cleared piece, over a ditch, through a pair of bars, into the woods. When not a hundred yards from the house a fine misty rain began to drizzle down, but there was no turning back, and for the first hour or two after entering the woods it was not especially disagreeable, as the trees were so thick the rain did not reach us. Bob had started that morning at daylight with his ax to clear away the wind-falls, and we soon came on a specimen of his work—a huge tree cut in two places, the center piece drawn to one side for our passage.

After going about four miles a man appeared coming toward us. It was the U. S. Mail named Armstrong, physically strong-armed. He had made fourteen miles that morning, carrying a mail bag containing a dozen letters, a Winchester and a haversack containing half a deer and a partridge shot on the way. A few words of greeting, some local news exchanged, and we passed on.

Our first halt was six miles off and we were nearly five hours in reaching it, the rain becoming heavier, also the walking. There had been a heavy storm a few days be-

WILSON POND CAMP.

THE CAMP AT FROST POND.

approached and brought thoughts of outings, and when Jerry would trot out of doors, turn to the north, raise his nose and draw in long breaths, we would say, "He is trying to smell Penetang, poor fellow," and it would also set us longing for Penetang, or, at least, for woods and lakes.

One Thursday in April, when perhaps the longing was something intense, my *FOREST AND STREAM* contained a letter from Mr. Fred Talcott, of Providence, R. I. He offered to correspond with any reputable person desiring to know of the whereabouts of a "sportsman's paradise." We were the particular ones meant, although unconscious of it at the time. I wrote him and his answer came promptly. I wish I could give it here. His "paradise" was situated on the Maine-Canadian boundary, and was to be entered by leaving the railroad at Jackman, Me. He promised everything—a perfect country; perfect guides; trout faster than one could land them; deer, moose and caribou, ducks, partridge; and last but not least, moderate prices for everything. I wrote again and again. His replies read like news from a long lost rich uncle. They were awaited with impatience and read with avidity. The correspondence lasted all summer; indeed it has not yet ceased.

I wrote the guide and waited a month for my first answer, and received but little satisfaction beyond his prices. His later letters, however, were more satisfactory, and although he would promise but little, we concluded he was trustworthy; and on the knowledge obtained from Mr. Talcott, we decided to enter his "paradise" and engage his guides.

Then came a busy six weeks of preparation. Bacon and court plaster, flour and bandages, guns and scalpels, fishing tackle and baking powder, 350 assorted cartridges, rifles, shotguns, rods, dozens of flies, ditto hooks, etc., constituted but a fraction of our outfit. Of what we did not already possess we bought enough for half a dozen, and what a pleasure it was with always one more special journey down town to add another leader, more hooks or cartridges for fear we should run short.

Then came the selection of the route with careful consultation of time tables and maps. At last we were ready, our belongings in two strong trunks and a handbag, a package of mackintoshes and wraps, another of guns and rods, and—Jerry.

We left New York about 9 A. M. on the "White Mountain Flyer" of the N. Y. N. H. & H. R. R., our route taking us along the Sound, the Connecticut River, through the Berkshires, and along the edge of the White Mountains, arriving at Wells River about 5 o'clock. A tramp through that pretty little village, supper, and the north bound train at 7 o'clock brought us to Lennoxville at 11:30 P. M., with an hour to wait for the Canadian Pacific train

fore our arrival, and mud, water and windfalls were plentiful. I had been over tote roads in the Adirondacks and had read of Mud Pond Carry, but had never imagined that such a collection of stumps and sloughs of despond could be gathered into such a small space as a clearing 12ft. wide and ten miles long, and every one seemed placed where it would most help the others to obstruct our passage. Twenty times one or the other of the sledges would bring up against a stump too large to get over, or one runner, passing over a boulder, the other would find itself in a mudhole a little deeper than the driver had anticipated, and over it would go. Under the expert care of the cavalryman, Jim alternately walking and riding, proceeded along beautifully and arrived at our lunching place but little fatigued. Jerry had disappeared after the first mile or two, but caused us little anxiety, for his tracks were plainly visible, and we found him on our arrival with Bob, each looking wetter than the other. For the last half hour it had been pouring, and it continued for the rest of the day.

Arriving at the little brook that marked the ending of the first stage, Jim was placed under cover of an uprooted tree, a roaring fire was started and a shelter of rubber blankets was quickly raised. The kettle soon boiled and in spite of the rain we had a jolly cold luncheon with hot tea, the whole party seeming to think it a regular picnic, and most of all Bob, whom the rain seemed particularly to exhilarate. Perhaps an hour and a half was allowed to bait the horses and we were again on the way. We were now deeper in the woods, on higher ground, and found the roads better and the four miles were soon covered. Then a sudden turn off from the main road, over a little brook, up a short rise, and Wilson Pond Camp was in view. It was a long, low, log camp, built like a double lean-to with no roof over the center, and through the opening the smoke curled, making a welcome sight.

Bob had again preceded us and a roaring fire had already dried the camp a great deal. Many hands made light work, the horses were soon unharnessed, the baggage unloaded and carried under cover and in the experienced hands of the guides; in an hour we were quite at home. Jim and I on one side of the fire sat on our bed made on the ground, in dry clothing, and Bob, Mr. Perkins and Llewellyn were on the opposite side, standing and sitting, turning first one side and then the other to the fire, drying their only clothes. Albert, the nonchalant, wet, but still happy, was busy getting supper. Bob was overhauling the things, estimating the damage, which was trifling, and storing the minor articles among the shingles of the roof. Comfortable, warm, happy and at rest we had nothing to wish for except supper, which came quickly and disappeared with equal rapidity. With pipes and cigarettes, funny stories and the relation of individual ex-

periences of the trip, darkness came all too early, the wet clothing furnished a screen and soon we were comfortably in between the blankets. Jim feared neither spiders nor snakes, lulled into fancied security by Bob's assurance that they did not grow in that part of the country. Neither did she fear bears, wolves nor Indians, for were there not on the opposite side of the great fire in close call and in full view, four stalwart men to defend her. The horses stamped and the rain pattered on the roof, but within the fire crackled and the blaze cheered and soothed us and we slept as though on a bed of down until daylight.

Oh! what a change. The brightest, crispest, sunshiniest morning ever seen! We were soon up. How glorious was the water dipped with a tin basin from the brook! Breakfast was quickly over, and Llewellyn and Mr. Perkins speeded on their return journey. Everything was soon out of camp to dry more thoroughly in the open air. About 10 o'clock, taking our rifles, with Bob leading, we went up to Wilson Pond, half a mile distant, to see it and shoot what we might. Approaching very carefully, hoping for a buck, we came to the edge of a pretty little pond, perhaps a quarter of a mile in circumference, a marsh at one end, another at the opposite, and woods on all sides. We sat down on a fallen log just within cover, keeping very quiet, and in a few moments on the opposite marsh appeared a doe and fawn—the first wild deer Jim had ever seen. A few moments later another doe appeared and they fed slowly along the margin of the pond in full view. With our field glasses we could see them very distinctly, and watched them for half an hour until they finally vanished into the forest. It was a beautiful sight, and we felt amply repaid for all our hardships. We became quite familiar with this sight, for during our week at Wilson Pond we rarely visited it without seeing from one to three deer feeding, always does or fawns, never a buck. The latter were on the ridges at this time, and finding plenty of water, rarely came to the ponds.

On returning to camp about 12 o'clock for dinner, we found Walter Armstrong, the mail man, bound on his journey into the lumber camps. The round trip is made three times a week by him and his brother alternately, 23 miles each way, and for this the United States pays them \$300 per year, less than \$1 a day.

He stayed for dinner, and when he left us we, thinking of our ten miles of the day before, were rather inclined to pity him with thirteen to fourteen more before him; but from the cheerful manner in which he slung his mail bag on and picked up his rifle and started off, he seemed not to mind it. A short nap over, we started back to the pond with rifles and rods. We had a fair shot at a doe, but as we wanted horns as well as meat we refrained, and went to casting from the shore. We soon landed a dozen trout weighing from  $\frac{1}{2}$  to 1 lb., then crawling into the bushes we watched for our buck till sundown, but he did not come. There was no wind, the lake was like a sheet of glass, and the only sounds heard were the occasional cry of an angry kingfisher, the chattering of ground squirrels, and once in a while the low, booming, penetrating drumming of a partridge.

Our fish were served for breakfast, and from that time we were seldom without trout in the larder. Our morning was spent about camp, while Bob and Albert went to the pond and built a raft from which to fish. The afternoon went quickly on the pond, catching trout about as fast as Bob could take care of them. When the sun sank low in the heavens we stopped, tired of catching fish, and pulling to shore watched for deer.

And thus a happy week passed away all too soon. It rained sometimes, perhaps a good deal, but we did not mind it. We tramped the woods for birds and deer or fished the lake to our heart's content. The extra trout were sent out to Mrs. Rainey by the obliging "U. S. Mail," and also a letter home, written on birch bark, enveloped in the same and sealed with pine pitch. Several times we would know that the "mail" had passed by finding one or two partridges hanging on a tree at camp. We shot no deer, but saw numbers, and had one exciting still-hunt for a yearling buck, but frightened him. We had seen fresh caribou tracks several times, but his majesty did not show himself to us. One evening while poling the raft in I shot at a passing duck. Immediately we heard a heavy crash near the foot of the pond. Upon reconnoitering we found our caribou had been down to drink and my shot had sent him off; his tracks were large and deep and the water in them very muddy. Mr. Talcott shot this fellow about three weeks later, and he proved to be a royal animal of twenty-three points.

One morning, on going to the pond to watch for deer, we found a loon in possession, and not a particle of wind. We went back in the afternoon for fishing, carrying plenty of cartridges. The loon was still there and we had some fun with him. Jim's .38 and my .45 rang out alternately and our bullets chased him all over the pond. He did not get one full breath for half an hour; at times he was awfully rattled and once he rattled us. We ex-

pected him to rise at a certain point some distance off, but he bobbed up within 10 ft. of the raft. It would be hard to say which was the more surprised. We shot and seemed to hit him, but didn't. When we left him his wild cry of triumph and derision followed us half way to camp. Bob declared the loon would get out that night, "if it had to climb a tree." The next morning it was gone.

During the week we grew strong and well. We took longer and longer tramps with less fatigue; we slept like babes and ate like backwoodsmen, always hungry, with what anxiety we watched the preparation for breakfast, dinner and supper, lest there should not be sufficient food cooked, but the chef gauged our appetites well and there was always enough left for Jerry.

We made one little side trip, taking tent and provisions and staying over night at a small pond about three miles from the Wilson camp. The shore of the pond was literally embroidered with deer tracks. We watched that night and the next morning, but saw nothing but a little fawn. Albert was with me at one point, Bob and Jim at another, and we were completely hidden by undergrowth. It was about sunset and there was not a sound to disturb the stillness. Suddenly Jim heard a slight crackle as of a twig snapping behind her, and turning found a baby deer staring at her over a fallen log, only 5 or 6 ft. away. In a second it turned, showing Bob the tip of its tail as it bounded into the undergrowth. At this little camp we had as visitors a number of jays (moose or meat birds as they are called locally), and we were much interested in them and their peculiar ways, their familiarity on short acquaintance causing much surprise and wonderment.

At length we felt that we should move along, and so one morning Bob and Albert started with packs as heavy as I could lift to their shoulders and carried six miles to

weeks and disappeared from camp, to be found scattered along the road toward Jackman, working or beating their way back to railroads and whisky. The rule prohibiting the use of intoxicating liquor is necessarily very strict. Once in a while a bottle would be smuggled into camp and some of the men get fighting drunk. They would be assisted to their bunks, willy nilly, and the next morning if an old hand and the first offense, he would be forgiven, but if a new hand, he took the road to Jackman. The cook in a lumber camp is next in authority to the foreman of a crew; he has charge of all supplies, domestic arrangements and the discipline. He is assisted by a "cookee," who is the drawer of water and the hewer of wood, and who also peels the potatoes. Logs for firewood are brought in at night by returning teams. The food is coarse but wholesome and well cooked, and the men may eat as much as they desire.

Early Monday morning we packed up and were soon under way for Long Pond. Two trips with the canoe carried us and ours across Dole Pond and a two miles' carry brought us to Long Pond. This was the prettiest body of water we had yet seen. It was a lake three miles long by a quarter to three-quarters of a mile wide, surrounded to the water's edge with woods. The water was very high and we knew our chances for deer would be fair. The carry road had brought us to the outlet of the pond, for we were beginning to swing back around the circle, and were again ascending. Long Pond empties its waters into Dole Pond and is another of the sources of the Penobscot. We paddled up the lake for a mile and a half, and on high ground, a stone's throw from the lake we found a deserted lumber camp which, after some vigorous house cleaning, we made our own; at least that portion of it that had been the kitchen and dining room.

We found the cabin, after a few repairs, dry and tight, and a stove left behind by the lumbermen served us well for cooking and heating purposes. In one corner was the cook's bunk, and this, with some dry boughs, made a comfortable bed for us. A long shed ran out from the entrance and made us a place to store our supply of dry wood, while opposite the entrance was a large, massive, log-built stable.

The weather was now getting cool, with heavy frost, and we found ice in the basin every morning. We spent pleasantly two or three days here, roaming the woods and looking for a lost pond known only to Bob and one or two others, and at which place Mr. Talcott had shot a caribou the year before. Our next move was to Portage Lake via Penobscot Lake. Bob and Albert carried part of the camp equipage over the four miles to Penobscot Lake the day before and we were able to take everything else on one trip, Bob carrying

A CARIBOU OF THE BORDERLAND.

Frost Pond. We went with the second load and half a load more for each completed the move, the latter part of which was made in the rain. Our camp at Frost Pond was prettily situated just off the road and within 100 yds. of the lake. At one side a picturesque brook flowed, coming from Twin Ponds four miles away to empty into Frost Pond. We were now back in the United States, having crossed the boundary two miles before reaching Frost Pond; there had been a steady rise to that point and from it the descent began. On the one side all waters flowed to the St. Lawrence River, while on the other they went to form the Penobscot and thence to the Atlantic Ocean. We noticed on crossing the line that it was easier walking and not so muddy. A short stop of a day or two and we journeyed on. Bob had brought his canoe up from Dole Pond and was able to take all the luggage down by water. Albert, Jim and I went overland, which included a six-mile carry, during which Jerry had a chance to show his untrained skill. We had fair shooting at partridges at our first camp, usually at single birds, but we here struck a covey which Jerry treed very nicely for us and we bagged five out of the lot, Jim shooting three straight. I missed one, Jerry found and brought them to us, and we felt that he had earned the bones which he eventually received.

We landed at Dole Pond camp in the rain (we had begun by this time to look for rain whenever we moved), but our tent was rapidly pitched and we were soon under cover. The next day was Sunday and rainy. In the afternoon we had an agreeable call from Mr. Edgerly, manager of a large lumber plant. He was busy establishing new camps and getting ready for the winter's work. He expected to run four camps with crews of forty men each. We found him very entertaining, and on his invitation visited the home camp and took some photographs, including one of the crew, most of whom turned out of bed to have their pictures taken. One man was sharply sent back to put on his trousers, as a lady was present. They were a rough-looking lot, only about half of them being respectable woodsmen, which gave Mr. Edgerly the balance of power, but he needed all his mental and physical strength and all his courage, to manage the rest who came from parts unknown, stayed a few days or

the canoe. Penobscot Lake is the most beautiful of all and is the largest of the sources of the Penobscot River. The surroundings were primeval—the lumberman had not yet desecrated God's handiwork and we were with nature—pure, grand and beautiful. The trout in this lake are large, plentiful and gamy, but we could not stop to have a try at them. We paddled to the opposite side and after a hasty dinner in the rain, we started over the half-mile carry to Portage Lake, and it was here we found our caribou. We were in usual marching order, Bob first, Jim next, I third and Albert bringing up the rear. It was raining heavily, which may have drowned the noise of our walking somewhat. We had reached a piece of woods more open than usual, when suddenly Bob stepped aside and backward, which brought him to Jim's shoulder, and there appeared before us in the path a magnificent bull caribou. It was a sight worth traveling a thousand miles to see, and sufficiently thrilling to give any one a severe attack of "buck fever." He stood with full face toward us, head elevated and thrown back in proud defiance. Jim had received her instructions, and at a touch from Bob, she raised her rifle, and as she did so the caribou leaped and lightning was not quicker than his movements. A couple of jumps at right angles in our path, into the woods, and he stopped, broadside to, with head again elevated and looked curiously at us. It was fatal to him. The rifle rang out; he plunged forward, partly rose—Bob said "Hit him again," Jim obeyed, another plunge and he was down, never to rise again. We rushed to where he lay and found him dead. Jim burst into tears and the strain and excitement were over. As Jim fired the second shot I brought my .45 into play, and broke his back, but my shot was unnecessary, for Jim had placed both of hers back of the shoulder.

He was a noble animal, and we could not repress a pang at having killed him, but the guides had no such sentimentality, and were soon at work dissecting the juiciest steaks.

The afternoon was half gone and there was much to be done, but we all worked industriously, and the carry was short. While we lugged the duffle over, Bob crossed the lake in the canoe with a load, and brought back from his camp a large row boat that carried all else remaining,

and skirting the shores of Portage Lake for three miles, it was a happy party, though cold and wet, that landed about dusk at Bob's home camp. A good fire soon warmed and dried us and the camp, and caribou steaks were quickly in the pan. After supper we retired, but not before we had "talked it all over again."

The next morning the bright sun showed us the beauties of Portage Lake, the largest of that region. Well wooded, irregular shores, its surface studded with several islands, it is indeed beautiful. Opinions differ as to which is the more beautiful, Portage or Penobscot. They are fortunately close together, and a camp on one or the other is almost equally convenient, with perhaps the odds in favor of Portage.

We spent several days at Portage eating our caribou, visiting the lakes and ponds in the vicinity, and fishing, which we found superb. We seldom went without bringing in enough for camp use, and had we been more enthusiastic and diligent could have supplied Fulton Market.

There are thirteen lakes and ponds within a small radius of Portage, and nearly all contain trout of good size and game qualities. Some of these lakes are unknown except to Bob and at all of them one may be sure of the very best sport, as up to the present time they have been but little fished. Bob says in June and July he can fill a canoe in short order. He says that sometimes during the summer, when not in the woods, he gets fish hungry, and leaving Mrs. Rainey's in the early morning he goes to Portage and is back the same night with as many as he can carry.

At last we had to leave, and so Albert was sent out to see his baby and get Llewellyn and the team. They came the next evening and the following morning we started with our belongings on a buckboard with two horses attached, and made the nine miles to Mrs. Rainey's in about five hours. Dinner, a civilized wash and, city clothes were resumed. The settling up was rapidly and agreeably accomplished, and by 4 o'clock we were en route for Jackman with sincere regrets that we must ever leave the country and the people. Staying all night at Jackman, the early morning train carried us to Lennoxville and thence home by sleeper, and thus ended the most glorious and satisfactory trip I have ever taken.

In conclusion I would like to say: The trip from New York, compared with that, to say, the Adirondacks, is long and expensive, but the gain more than compensates. The scenery is beautiful. It is as yet a region but little traversed. One can go assured of getting his full share of fish and game. Robert Elliott and the men he employs are truthful, honest, temperate and obliging. They are engaged at Mrs. Rainey's and paid from that time, saving the two or three days' extra pay for guides brought from a distance and the transportation for them and their belongings. They are thoroughly familiar with the country and are first-class woodsmen and hunters. We made a detour of about forty-five miles, as our wish was as much to see the country as to shoot and fish. One can spend the time at his disposal with perfect satisfaction in one camp, and I would recommend that at Portage Lake as preferable, all things considered. If one wishes to travel and explore, there are miles of wilderness to the eastward but little known to sportsmen and full of fish and game.

Every one you meet is anxious that you shall have a good time and will take any amount of trouble to facilitate it. The charges are extremely moderate, and we can pronounce no better recommendation than to declare with enthusiasm that we hope to go there again next year. Mr. Talcott had not employed the language of hyperbole—it is indeed a "Sportsman's Paradise." F. W. G.

## Natural History.

### Quail Packs in Texas.

OSHKOSH, Wis.—*Editor Forest and Stream:* Your staff correspondent speaks of quail "packing" in Texas as though he expected to be "called down." Four years ago this winter I saw at least seventy-five quail in one pack on the Nueces River in Texas. They rose out of the thick weed on a flat side of the river. We were not 20 yds. from them when they rose. They flew about 150 yds. and alighted in a pack, but scattered the next time they were put up. Mr. N. T. Wilson and I had rifles, while ex-Gov. Baxter, who was with us, had a shotgun. He followed the quail up and down that field of weeds two hours, and by the poorest shooting I ever saw killed six brace in about fifty shots.

I reported the size of this flock in print, and some correspondent told me I had seen nothing marvelous, as he had seen a thousand quail in a flock. I subsided. These were Bob White quail. As to the size of Texas quail, I have weighed a good many and they average about three to the pound. I don't know how that compares with Northern quail, as I never had the good fortune to see a covey since I was big enough to shoot a gun. When the cover is good I think Texas quail run very little, except toward spring, when they begin to pair off. The Mexican blue quail of Texas run like turkeys, and disgust a dog as well as the shooter. AGAMAK.

### Who Introduced the English Sparrows?

*Editor Forest and Stream:*

*Nil mortuis nisi bonum.* Is it known or remembered that the Rev. Dr. Okeson, who lies buried in St. Paul's churchyard at Norfolk, Va., introduced the pesky English sparrows into America? Evidently the birds have not forgotten him, for they flock all about his grave and swarm in the ivy which mantles the old church walls. They could not have been more attentive to the historical babes in the woods. C. HALLOCK.

### North Carolina 'Gators.

NEWBURN, May 2.—Mr. George H. Moulton, taxidermist, has just finished mounting an 11-foot alligator which was shot last week in Onslow county by a son of President McIntyre, of the Wilmington & Newbern Railroad. This is a large saurian for this section, which is near the northern boundary of its habitat. 'Gators are not uncommon in Trent and Neuse rivers above Newbern, and are numerous in localities not thirty miles distant. C. HALLOCK.

### A Buffalo Herd Reported in Texas.

SAN ANTONIO, Tex., April 29.—C. H. Moran, a sheep man of Valverde county, is in the city and brings news of the discovery of a herd of about forty wild buffalo in the remote mountains of that county, near the Rio Grande border. It has been rumored for years that a herd of buffalo existed in that section of the border, but these rumors were never verified.—*Press dispatch.*

### First Otter in Forty Years.

ITHACA, N. Y., April 28.—A live otter was caught April 26 in the town of Enfield, in this county. When caught he was in an open field at least half a mile from any creek or body of water. This is the first otter that has been caught in this county in over forty years. The Cornell University now have it in their possession. W. H. W.

### Linnæan Society.

AT a regular meeting of the Linnæan Society, to be held at the American Museum of Natural History on May 22, Mr. Frank M. Chapman will read a paper entitled, "Notes on a Second Visit to the Island of Trinidad."

## Game Bag and Gun.

### THE HIGH ART OF STILL-HUNTING.

SILVERDALE, Wash.—In your issue of April 14 I see "Ransacker" comes back at me on the dog question and declares for the dog. His "definition of a dog" is a good one—for those who admire these animals.

I also know Indians who have dogs; indeed, the Indian who does not is an exception; but the hunters among them—that is, the ones who do nothing much but hunt—do not as a rule use a dog. They prefer to match their own skill against the instinct of the game, and they are the successful hunters among a tribe of people who were in early days forced to hunt or starve. Sioux or Siwash, it is all the same, the best of them don't use a dog.

"Ransacker" says he takes a dog along more for company than for use. I may say to him as I said to "B.," he must "learn to study little things" and he won't miss the "company" very much.

There may be a difference in the definitions of still-hunting, which accounts for the difference in opinion on the dog question. In my school, still-hunting meant not only absolute silence, watchfulness and an accurate knowledge of the habits of my game, but the ability to put this and that trivial circumstance together and deduct a correct opinion. It is a study of cause and effect coupled with a faculty of reading "sign" at a glance. For instance, start two hunters into the woods for squirrels, one a still-hunter, the other a man who hunts with a dog. Let a crow see a squirrel and commence his racket, cawing and scolding as they always do—then which man notes the disturbance the most quickly and forms his opinion the more nearly correct? The still-hunter, because he has trained himself to investigate anything and everything he sees or hears on the trail. The other man will likely note the actions of the crow just as quickly, but only as a passing incident, one of the private affairs of the bird, and none of his business. The same principle holds good whether it be crows or deer. A deer may pass to leeward of your dog, unknown; but if in passing it startles a jay or magpie to noisy remonstrance the still-hunter knows something has passed within the bird's range of vision and an investigation is in order. Another advantage the still-hunter has is his training as a trailer. A bent blade of grass, a bit of overturned bark or gravel, a faint hoof mark amid the fallen leaves are but a few of the many signs which the still-hunter reads at a glance, and which serve to guide and govern his future actions. In short, everything must be perfectly natural, both in appearance and sound, or the still-hunter is alert in a moment, for he has studied nature and is familiar with all the trivial details which others pass unnoticed, but which he is forced to know from his very method of hunting. The man who hunts with a dog is like the man who handles dynamite, "apt to get mighty careless," and to be a loser in the end.

As to shooting, "Ransacker" says that a "snapshot often results in a wounded deer." Here again I beg to differ, provided the hunter is a snap shot. To be a good snap shot a man must use the same gun, and shoot enough to be able to throw his gun to his shoulder in exactly the same way every time, with the sights in line with his eye. He must practice until he is an expert. I know cowboys who lash the trigger of their six-shooter back against the guard or take it out altogether and work the hammer with the thumb. This requires whirling the gun around the forefinger, which is inserted in the trigger guard, and as the gun barrel whirls forward and downward the thumb catches the hammer only to release it again when the position of the barrel brings the weight to bear at a certain point. There can be but one result when this is practiced until a man becomes an expert—that is, accuracy. When a man handles a six-shooter this way he can put the whole six bullets in almost the same spot; but in doing so never uses the sights, it is merely a mechanical action, and practice makes perfect.

So it is with a rifle. Try it yourself by taking your empty gun and "covering" a target as fast as you can. Don't pay any attention to the sights, but throw your gun to your shoulder and lower it again for several times in rapid succession. You will see that it "jumps" to almost the same level—that is, your line of vision—every time, provided you only watch your target and pay no attention to the gun. Practice will enable you to cover a given spot and shoot almost in an instant. Then you have learned snap shooting in a manner that will be of practical value when a deer is in sight.

I sketch a great deal, and derive as much enjoyment from that as from hunting, and it serves to bring details to my notice which perhaps otherwise I would overlook. This I find of great value in studying game, too; and it may in a measure account for my preference for still-hunting, for half learning will not serve for sketching. Your knowledge must be complete, comprehensive and accurate lest you get into "deep water" and paint your smoke against the wind.

Again, my hunting has been mostly in open country, where game could be seen further than it can west of the Cascades, and a lost deer from escaping wounded is an

unknown chapter in my book so far because I learned to trail among men who wore moccasins and no hat.

"Ransacker" will probably use his dog and continue to kill his dog, for it would be useless to try to convince him otherwise on paper, but should our trails cross I have an idea that I could show him a whole lot of sport, an endless array of company and a few snap-shot deer with a hole square through the shoulder, all on a still-hunt, "Injun fashion." This dog business is only a matter of taste, anyhow, unless the dog is used to run deer into runways or a lake, where they can be butchered in a cold-blooded way that raises my ire. Then, you hear me, if I'm in that neighborhood, my gun will crack and somebody will have a chance to bury a dead dog.

EL COMANCHO.

### THE RIGHT AND WRONG OF IT.

*Editor Forest and Stream:*

When I launched my small pebble on the subject of the wanton killing of snakes, et cetera, I did not expect to set rolling so many stones as your columns of late give evidence of. It is gratifying, however, to note that the suggestion of extending more considerate treatment to the dumb creation appears to have excited a sympathetic chord in the minds of so many of our worthy brotherhood of sportsmen. I think the exasperation exhibited by our friend Mr. Kephart, in his last article, while quite natural, was based upon a misconception of the animus of the discussion, as the fate of his particular blacksnake, and his own attitude in that encounter, were lost sight of in the larger subject of the general treatment to be accorded to the creatures of the woods and fields.

I have read with much interest all the contributions on the subject, and will crave the forbearance of yourself and readers while I offer some reflections on the various expressions therein noted.

The article of Mr. S. H. Greene, in a recent number, opens up a wide field for discussion. An adequate reply to his question "where are we at," in relation to the ethics of the subject, if all the lines of thought suggested by him were fully considered, must be not only comprehensive enough to cover all the questions that have been raised, but would doubtless fill a good sized volume.

I will, therefore, endeavor to simplify my treatment of the case by assuming a general concurrence in the proposition that man is truly the "lord of creation," in so far as this little world of ours is concerned. I think it may be assumed as accepted by philosophers of all creeds, in a practical way at least, that all mundane creatures exist only with reference to man's welfare and happiness, having no rights except those which he chooses to accord to them. This is practically true, and in the nature of things must be so, whatever theories may obtain on the subject. Under this view man has a right to destroy all creatures whose existence is inimical to himself, to restrain the growth of those whose increasing numbers threaten his safety or welfare, and to cultivate such as are conducive to his comfort. This involves the right to slay creatures for food, regardless of the pain inflicted, and even to find enjoyment in their persecution, if he can do so. Viewing the matter then from a strictly selfish standpoint, let us consider what is man's logical attitude toward the multitude of living creatures that nature has placed under his dominion, always assuming that his conduct toward them is to be regulated solely with a view to his gratification, and with no reference to the good of the creatures themselves except in relation to his interest or pleasure.

All animated creatures appear to be divided into three great classes. The carnivorous on the one hand, the herbivorous on the other, and the omnivorous between the other two. In the order of nature the function of the herbivorous creatures is to supply food for the carnivorous and omnivorous; the function of the carnivorous is to prevent a too great multiplication of the other two, and the omnivorous acts as a balance between the two former; all with reference to the well-being of their master, man. In man's savage state his chief concern was to supply his stomach with food and his back with raiment. These he procured from the birds and beasts, fishes and reptiles, probably from insects also. As he developed a faculty for amusement and exultation over his enemies, the sufferings of his victims were a sweet savor to his soul. This most degrading characteristic of barbarous man still clings to him even down to the present day. The evidences of this spirit in all its original barbarity, in untutored boys, and men of a low degree of refinement, are too palpable and common to need enumerating. As men grow more refined in their sensibilities, the sufferings of the creatures they pursue for food or sport cease to afford them enjoyment. In the evolution of this sentiment the second stage is to be merely apathetic concerning them; after this the consciousness of pain inflicted becomes a disagreeable incident of the chase, which is smothered or tolerated from habit or as being subordinate in importance to his supreme right of enjoyment. But as he comes to more fully realize the vast extent and degree of suffering imposed by him on the lower creatures, when his own sustenance has ceased to be an object, and sport alone is the incentive of the chase, then it may be that the mental discomfort which he thus inflicts upon himself will come to outweigh the sense of pleasure derived from such pursuits.

It is possible that a few individuals among robust manhood have already arrived at that sublimated condition of intellectual apprehension, but it must be confessed that the great mass of us who flatter ourselves with the conceit that we are in the forefront of highly civilized development, are at best only in the tertiary stage, and habitually smother the "still, small voice" in order to the enjoyment of what we call sport.

But what is the nature of the enjoyment we thus derive? When we kill domestic animals for food we do not subject them to unnecessary physical pain, and the absence of apprehension of danger, which constitutes man's greatest misery, relieves them of all pain whatsoever. The death of unconscious brutes without physical pain, is not a hardship. We do cut off such measure of enjoyment as their life may afford them, but others take their places, so that the sum total of such enjoyment is not diminished. Now, what is the element in what we call field sports that affords us enjoyment? We take no pleasure in killing bees and hogs. It is no sport to shoot into a covey of partridges (or bery of quail, if you prefer those terms), when huddled together on the ground; or to shoot a buck when tied to a tree. It may

be said that the enjoyment afforded is derived from the skill required to compass the destruction of the victim, and the uncertainty which attaches to our efforts, and that the suffering entailed is a mere incident, disagreeable, it is true, but unavoidable. This is doubtless true with the more sensitive and more highly developed sportsman, and that is why, as we grow older and more reflective, we have an oppressive consciousness and a haunting sense of remorse when we consider the vast number of poor deer, for example, that flee madly away from vengeful enemies, carrying death wounds to some sequestered brake, where, frightened and exhausted, they lie down to die in lingering agony, without sympathy, companionship or any remedial agents which serve to ameliorate the sufferings of human beings when in like extremity. All of which produces great discomfort of mind, viewed solely from a selfish standpoint.

But what are we to say of the hearty zest with which we pursue the unfortunate fox, with a pack of hounds in full cry behind him, for hours, and sometimes days, in a single chase, he suffering a mortal terror in momentary apprehension of being torn in pieces by his pursuers? Or the lively interest we take in routing out the raccoon from his fancied safety in some tall tree, to be thrown among a lot of fierce and eager dogs to fight out his life in a hopeless combat? Are not these exultations over the misfortunes of our fellow creatures an inheritance from our barbarous forefathers? If we could kill with certainty and promptness, through the exercise of a high degree of skill, each bird, duck, deer or what not aimed at, the sport would doubtless be satisfactory in the absence of the element of uncertainty, and freedom from the consciousness of suffering inflicted would be a great relief to sensitive sportsmen; but if we should contrive such destructive agents that no skill would be required, then the element of sport would at once vanish. I maintain that the consideration we accord to helpless creatures which fall into our power is at bottom based upon selfish motives, though we are unconscious, perhaps, of the fact. If a dog comes within convenient reach of your buggy whip, you do not give him a cut, as a man of coarser texture would be tempted to do. Why? Not because of the dog's pain, but because the consciousness of it would occasion you discomfort of mind. We are not as much concerned for the sufferings of a human friend at a distance as for those of a faithful dog or horse immediately before our eyes. This theory may be unpalatable, but I believe is true nevertheless.

That which constitutes human enjoyment is in itself only a question of taste. As we become more highly developed, intellectually and morally, our tastes are more refined. What gives pleasure to the savage may be repulsive to the civilized man, and conversely, we derive enjoyment from contemplations to which the savage is indifferent or oblivious.

The vast domain of living creatures which furnish neither food nor sport we may presume excited little or no interest in our savage ancestors, and indeed very little in the uneducated of the present day. But as we become more cultivated we discover an illimitable field of pleasure in the study of their structure and habits, in the songs of birds, and in the contemplation of the very enjoyment of birds and beasts when undisturbed amid their natural surroundings; even the apparently insignificant insects become subjects of deep interest and absorbing study. This leads directly to the question, is it not wise and logical that we should preserve, instead of destroying, all those creatures whose existence is not offensive to man? The suggestion also arises, when we invade nature's domain and assume to destroy one class in order to protect another (leaving domestic creatures out of consideration as being removed from nature's control), are we not proceeding blindly, with no knowledge of the consequences of our acts, which may be far-reaching for evil? Let us cite the blacksnake for example, which has excited so much animosity in the minds of some sportsmen because of his depredations upon the small birds' nests, is it not a fair presumption that he is performing a wise function in nature's economic plan? Reasoning by analogy I think it is, for nature does not often, if ever, make mistakes. It may well be that without the intervention of the snakes and other predatory birds, animals, etc., the small birds would become too numerous. At all events, we know that these processes have been going on from the far indefinite past, and without any serious interference by man we have still left a great abundance of small birds.

I send these rather disjointed remarks, Mr. Editor, in the hope that Mr. Greene, to whose accomplishments I desire to pay tribute, or other of your many able contributors, will pursue the discussion with more ability than I have been able to show. Permit me here to send a greeting to Brother "Kelpie" for his kindly expressions toward me, and to express the hope that his vivacious pen may never lack of ink to afford entertainment to myself and the numerous readers of FOREST AND STREAM in the future as in the past. COAROMA.

### CHICAGO AND THE WEST.

[From a Staff Correspondent.]

#### The Flight.

CHICAGO, Ill., April 28.—The geese have passed north of Dakota. The flight was unusually abundant. The heavy storm which drove the ducks back late in March was fatal to thousands. In Iowa at least 100,000 were killed in four days. A few ducks are still staying in Dakota, mostly breeders. There was phenomenal shooting on ducks and snipe all through Missouri and Arkansas. The increase of game in '93-4 is phenomenal and hard to explain. Let us hope the coming fall will show good numbers. Dakota is full of water this year, and the shooting should be better for fowl than for years.

?????

I respectfully ask of any friends who shoot in the spring: Do you really think it is the right thing to do?

#### Elk Perishing.

A despatch from Lander, Wyo., this morning, says that hundreds of elk have been found dead in that locality. The snows drove them out of the Park. There is more snow in the Park this winter than was ever known.

#### Plenty of Elk.

The Rocky Mountain guide, S. N. Leck, who is thoroughly familiar with all the Jackson's Hole country, south of the Park, writes me: "Marysvale, Wyo., Feb. 5.—So

far we are having a light, pleasant winter in Jackson's Hole. Game of all kinds is doing well. A heavy storm early in the winter drove the game down from the mountains in unusual numbers. Not for four years has there been near as many elk or deer in the valley. It must be that a great many were driven out of the Park that usually winter there. Coyotes are thicker this winter than I ever saw them in here; they are doing some damage to the deer. The only way to reach us now is with snowshoes, yet FOREST AND STREAM comes regularly every week, a welcome visitor."

That is a good letter from a far-away land. Mr. Sargent, of the late Hamilton Sargent ranch, south of the Park, told Sergt. Van Buskirk of the Shoshone sub-station that the elk were all over that country this winter, and had eaten up most of the Mormons' hay. He said that no elk were being killed for the skins, though some were killed for meat.

#### A Texas Scheme.

Mr. A. J. Bryant, of Cincinnati, O., writes me and incloses the following clipping from the *Enquirer* of that city:

A.—WANTED—Man of good address to sell Texas and Mexican deer and antelope horns for decorating saloons, club rooms, sporting halls, offices, private parlors, etc.; can furnish beautiful specimens by the thousand pair; demand phenomenal; business new, novel; no competition; will be bonanza to party engaged; letters answered if self-addressed stamped envelope is inclosed. Address COL. VAN RAUB, Van Raub, Bexar county, Tex.

Mr. Bryant says: "Don't you think it would be a good idea to have this matter looked into and to discover, if possible, where and at what seasons of the year these thousands of horns are secured? I respectfully suggest that you forward clipping to the State Game Warden of Texas, with request that he look into the matter in the interest of all sportsmen in general and of Texas in particular."

#### Costly Quail Out of Season.

On April 24 Mr. Matthew A. Hogan, who keeps a restaurant on State street, Chicago, was prosecuted by Game Warden Mr. Blow and Mr. M. R. Bortree, president of the N. G. B. and F. P. A., for breaking the game laws, the offense consisting in having in possession and serving three prairie chickens and a quail in his restaurant on March 27. He was fined \$20 and costs. The suit against Mr. H. V. Bemis, proprietor of the Richelieu, for a similar violation of the law, was won by the prosecutors, the defendant paying a fine of \$50.

Mr. H. A. Loughran of Pittsburgh writes: "In regard to Mr. Jos. Irwin's inquiry as to how to carry live minnows, my way is to have a syringe or pump, made of a joint of cane rod. Push this down to bottom of bait can and pump full of fresh air. I transport minnows in a milk can."

On the same subject Mr. J. W. Gray of Westboro, Wis., says:

"Allow me to make a suggestion which will cost little to carry into practice. Make a hoop of tin or wood out of a strip about 2in. wide and just large enough to fit within the pail or other receptacle in which the bait fish are carried. Fasten within the hoop strips, same width as hoop, about 2in. apart and parallel to each other. Fasten the hoop in the fish pail so that it will just touch the surface of the water, and place the pail in the wagon in such a position that the strips within the hoop will be parallel to the line of travel. The jolting of the wagon will cause the water to splash about and the water will be kept aerated. The cover of the pail should be sufficiently perforated to allow a free circulation of air, and the pail should not be more than three-fourths full of water. I hope this device will prove in practice what it seems to be in theory."

#### The N. G. B. and F. P. A.

Life being short, let it go at that. The executive committee met April 25, Messrs. Bortree, Hertz, Hicks and Pond being present. A favorable report was made on the badge design, that of a star, the central design being that of a pair of quails with brood, surmounting a trout single, the initials of the association to be placed on the points of the star, only one initial to each point. The material will be of gold and the design will be copyrighted. The association will publish a handbook for distribution, giving a list of members and officers, and having constitution, etc., a synopsis of game laws and a list of State wardens. To avoid the charge of flippancy, I will write out the name of the association. It is the National Game, Bird and Fish Protective Association. I hope they will never get caught out in a storm with all that name. Why not shorten it, calling it, say, the Sportsmen's National League? It's an awful thing to meet such an array of consonants when you are just going about your business peacefully.

E. HUGH.

909 SECURITY BUILDING, Chicago.

#### Brant at Monomoy.

BOSTON.—Mr. Walter S. Hill came back from brant shooting at Monomoy the other day. He, with Mr. O. W. Whittemore, of Arlington, Mr. Henry Eager the champion wing shot, Mr. Harris, treasurer of the Union Pacific Railroad, and Mr. Stickney, of Charlestown, were the guests of Mr. Warren Hapgood, the senior promoter of the Monomoy Brant Club. They had most glorious sport, and have really carried off the championship this spring for brant shooting at that point. Their number was over sixty—as Mr. Hill remembers it, some sixty-eight. The result of one morning's shoot was enough to enthrone any lover of the gun in the world.

#### Breeding Live Goose Decoys.

THE Narrows Island Club of North Carolina has a fine stand of a couple of dozen wild geese, which each year prove themselves very useful during the shooting season. Until recently they have been confined in a pen 25×100ft., and, though so well cared for that they are always in a good condition, they have never shown any disposition to mate.

This spring the executive committee of the Narrows Island Club determined to give them an opportunity to breed and moved the goose pen, enlarging it so that its area is about 100ft. square. The result of this has been very satisfactory. Five pairs of geese have mated, and there is a prospect that some of them may rear young. A recent letter received by the secretary of the club from Ashley Corbell, the superintendent, says: "There are four

pairs of geese mated now. There were five pairs, but one of the females was so beaten by a gander that she died. There were two eggs from the dead goose, which I set under a hen. There are two more geese laying." The results of this experiment will be looked for with a good deal of interest, and if it should prove successful under present conditions, there seems no reason why all clubs which have stands of live wild geese might not be able to increase their stock of decoys indefinitely.

### National Park Protective Act.

#### AN ACT

To protect the birds and animals in Yellowstone National Park, and to punish crimes in said Park, and for other purposes.

Be it enacted by the Senate and House of Representatives of the United States of America in Congress assembled, That the National Park, as now defined, or hereinafter may be hereinafter defined or extended, shall be under the sole and exclusive jurisdiction of the United States; and that all the laws applicable to places under the sole and exclusive jurisdiction of the United States shall have force and effect in said Park: Provided, however, That nothing in this Act shall be construed as to forbid the service in the Park of any civil or criminal process of any court having jurisdiction in the States of Idaho, Montana and Wyoming. All fugitives from justice taking refuge in said Park shall be subject to the same laws as refugees from justice found in the State of Wyoming.

Sec. 2. That said Park, for all the purposes of this Act, shall constitute a part of the United States judicial district of Wyoming, and the district and circuit courts of the United States in and for said district shall have jurisdiction of all offenses committed within said Park.

Sec. 3. That if any offense shall be committed in said Yellowstone National Park, which offense is not prohibited by the United States or by any regulation of the Secretary of the Interior, the offender shall be subject to the same punishment as the laws of the State of Wyoming in force at the time of the commission of the offense may provide for a like offense in the said State; and no subsequent repeal of any such law or the State of Wyoming shall affect any prosecution for said offense committed within said Park.

Sec. 4. That all hunting or killing, wounding or capturing of any animal or bird or wild animal, except dangerous animals, when it is necessary to prevent them from destroying human life or inflicting an injury, is prohibited within the limits of said Park; nor shall any fish be taken out of the waters of the Park by means of seines, nets, traps, or by the use of drugs or any explosive substances or compounds, or by the use of hook and line, and then only at such seasons, and in any other time and manner as may be directed by the Secretary of the Interior. That the Secretary of the Interior shall make and publish such rules and regulations as he may deem necessary and proper for the management and care of the Park and for the protection of the property therein, especially for the preservation from injury or spoliation of all timber, mineral deposits, natural curiosities, or wonderful objects of the Park; and for the protection of the animals and birds in the Park from capture or destruction, or to prevent animals being frightened or driven from the Park; and he shall make rules and regulations governing the taking of fish from the streams or lakes in the Park. Possession within the said Park of the dead bodies, or any part thereof, of any wild bird or animal shall be *prima facie* evidence that the person or persons having the same are guilty of violating this Act. Any person or persons, or stage, express, company or railway company, receiving for transportation any of the said animals, birds, or fishes killed, taken or caught shall be deemed guilty of a misdemeanor and shall be fined for every such offense not exceeding three hundred dollars. Any person found guilty of violating any of the provisions of this Act or any rule or regulation that may be promulgated by the Secretary of the Interior with reference to the management or care of the Park, or for the protection of the property therein, for the preservation from injury or spoliation of timber, mineral deposits, natural curiosities or wonderful objects within said Park, or for the protection of the animals, birds and fish in the said Park, such person shall be deemed guilty of a misdemeanor, and shall be subjected to a fine of not more than one thousand dollars or imprisonment not exceeding two years, or both, and be adjudged to pay all costs of the proceedings.

That all guns, traps, teams, horses, or means of transportation of every nature or description used by any person or persons within said Park limits when engaged in killing, trapping, ensnaring or capturing such wild beasts, birds or wild animals shall be forfeited to the United States, and may be seized by the officers in said Park and held pending the prosecution of any person or persons arrested under charge of violating the provisions of this Act, and upon conviction under this act of such person or persons using said guns, traps, teams, horses, or other means of transportation, such forfeiture shall be adjudicated as a penalty in addition to the other punishment provided in this Act. Such forfeited property shall be disposed of and accounted for by and under the authority of the Secretary of the Interior.

Sec. 5. That the United States Circuit Court in said district shall appoint a commissioner, who shall reside in the Park, who shall have jurisdiction to hear and act upon all complaints made, of any and all violations of the law, or of the rules and regulations made by the Secretary of the Interior for the government of the Park, and for the protection of the animals, birds and fish and objects of interest therein, and for other purposes authorized by this Act. Such commissioner shall have power, upon sworn information, to issue process in the name of the United States for the arrest of any person charged with the commission of any misdemeanor, or charged with the violation of the rules and regulations, or with the violation of any provision of this act prescribed for the government of said Park, and for the protection of the animals, birds and fish in the said Park, and to try the person charged, and, if found guilty, to impose the punishment and adjudge the forfeiture prescribed in the said act. An appeal from an appeal shall lie from the judgment of said commissioner to the United States District Court for the district of Wyoming, said appeal to be governed by the laws of the State of Wyoming providing for appeals in cases of misdemeanor from justices of the peace to the District Court of said State; but the United States Circuit Court in said district may prescribe rules of procedure and practice for said commissioner in the trial of cases and for appeal to said United States District Court. Said commissioner shall also have power to issue process as hereinbefore provided for the arrest of any person charged with the commission of any felony within the Park, and summarily to hear the evidence introduced, and, if he shall determine that probable cause is shown for holding the person so charged for trial, shall cause such person to be safely conveyed to a secure place of confinement, within the jurisdiction of the United States District Court in said State of Wyoming and shall certify a transcript of the record of his proceedings and a transcript of the testimony in the case to the said court, which court shall have jurisdiction of the case. Provided, That the said commissioner shall grant bail in all cases bailable under the laws of the United States and said district. All process issued by the commissioner shall be directed to the marshal of the United States for the district of Wyoming; but nothing herein contained shall be construed as preventing the arrest by any officer of the Government or employee of the United States in the Park without process of any person taken in the act of violating the law or any regulation of the Secretary of the Interior. Provided, that the said commissioner will only exercise such authority and powers as are conferred by this Act.

Sec. 6. That the marshal of the United States for the State of Wyoming may appoint, with the approval of the judge of the District Court of the United States for the said State, one or more deputy marshals for said Park, who shall reside in said Park, and the said United States District and Circuit courts shall hold one session of said courts annually at the town of Sheridan in the State of Wyoming and may also hold sessions at any other place in said State of Wyoming or in said National Park at such dates as the said courts may order.

Sec. 7. That the commissioner provided for in this act shall in addition to the fees allowed by law to the commissioners of the Circuit Court of the United States be paid annually a salary of \$1,000 to be paid quarterly, and the marshal of the United States and his deputies and the attorney of the United States and his assistants in said State, shall be paid the same compensation and fees as are now provided by law for like services in said District.

Sec. 8. That all costs and expenses arising in cases under this act, and properly chargeable to the United States, shall be certified, approved and paid as like costs and expenses in the courts of the United States are certified, approved and paid under the laws of the United States.

Sec. 9. That the Secretary of the Interior shall cause to be erected in the Park a suitable building to be used as a jail, said building not to exceed five thousand dollars, to be paid out of any moneys in the Treasury not otherwise appropriated upon the certificate of the Secretary as a voucher therefor.

Sec. 10. That this act shall not be construed to repeal existing laws conferring upon the Secretary of the Interior and the Secretary of War certain powers with reference to the protection, improvement and control of the said Yellowstone National Park.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable

## Sea and River Fishing.

### ON THE NORTH SHORE OF LAKE SUPERIOR.

(Continued from Page 393.)

THE morning opened with the sun red as a rose, a cloudless dome and a lake smooth as velvet. With this condition of things elemental, fishing was not to be thought of, and so we remained in camp. Ned, however, took his turn for the big trout, but returned in less than an hour without a single scale. I smiled as I questioned him about having a rise, wondering if a miss demoralized him to the same extent it did me. He had no rise, he stated, but Peter, who had been wandering around where he was casting, looked quite surprised when Ned answered in the negative. That look satisfied me that Ned and I were both playing at the same game of deceit and defense, so intent were each of us to have the glory of capturing that particular trout. It was an endeavor to create the impression that the desired trout had vacated his quarters. Rather foxy, but we both remained on the scent all the same.

It was not long before we became restless, and as the sun-tipped pinnacles of the mountains confronting us looked as if they were in regions delightfully cool, we concluded to make their ascent. Alpenstocks being requisite, they were soon crudely made and then off we started like explorers bold in the hot blazing sun as if for the Matterhorn. We had hardly gone but a few hundred yards before we were repenting of the hasty enterprise, for it was along a tortuous path winding through thickets, over fallen timber and by huge broken ledges and masses of rock. Many of these detached blocks were riven and split in all manner of forms and looked so gray and storm-beaten as if they had lain here for untold ages. It was over such disorganized masses we had to pick our way, and so flint-like and sharp-edged we found them that considerable care had to be exercised to prevent accident.

Our ascent was necessarily slow and laborious, as we frequently had to stop and rest in the grateful shade of some towering pile or under the spreading branches of some friendly tree. Unlimited numbers of the aged rocks were delicately threaded and seamed by rich bands, while others were deeply creviced from the interstices of which sombre pines grow and bushes innumerable flourish. In the dark shades, ferns, flowers and mosses abound together with trees of every variety, while down the hill-sides and over the rocks you occasionally see some ribbon-like brook purling along, seeking lake or river with which to mingle.

Ned, being of portly form, blowed like a porpoise and perspired like a fountain as he clambered over these confused heaps that looked as if they had been "split to fragments in the mill of the centuries."

After toiling until we were about breathless, we at last reached the top, and then the grandeur, picturesqueness and beauty of the scene burst upon us with impressive vividness. The lake so serenely quiet lay at our feet like a vast and solid sea of quicksilver with the distant islands in our immediate front gleaming akin to sapphire gems. Here where the breeze is pure and fresh enough to have come from the courts of Paradise, sunshine and shadow are ever changing place and reveal each instant along the mountain sides new wonders of soaring ridges, jutting crags and rounded slopes, declining to pale depths of winding ravines down whose shadowed sides crinkle the narrow silvery hues like faint lightning on sombre clouds. Turn to the ragged shore line that curves around the mountains' base, and there confront you grim and tempest-worn cliffs that swim in a wonderful sea of color as the sun and clouds play their frolicsome game of hide and seek. Sweeping around, we face pinnacles of sullen rock dim with ages of sun and storm, and then receding valleys and defiles are revealed in gorgeous splendor, and here you see line upon line of misty-like bands that seem to enrich some far away fairy land. Again let the vision trace the wooded heights to the right and you realize the sinuous course of Gravel River, and if your eyes are sharp they will catch a glimpse of another silver-like rivulet that is wandering through lovely groves to drop at last with rippling lullaby into the bosom of the great lake. Gaze where you will, nature is ever presenting some fresh picture of indescribable beauty that for witchery of color and mystery of shadow exist nowhere but in the mountain region.

I feel with Ruskin, that "mountains are the beginning and the end of all natural scenery; in them, and in the forms of inferior landscape that lead to them, my affections are wholly bound up; and though I can look with happy admiration at the lowland flowers, and woods and open skies, the happiness is tranquil and cold, like that of examining detached flowers in a conservatory or reading a pleasant book."

After a long rest, which the toilsome trip demanded, Ned discarded the poetic and turned to the practical by making a raid on some blueberry bushes which are quite numerous here. After having gratified his appetite with the succulent berries, and again drank in the wild and solemn beauty of the mountains, expressed himself ready for the alpine descent which would be accomplished in less time than the ascent and with less expenditure of vitality. Without a moment's delay we started with a rush down the sloping terraces, then along a narrow ledge and anon sliding over some smooth faced rocks to meet and breast our way through tangled thickets, where unceremoniously we affrighted some lovely woodland warblers and sent a red squirrel scurrying as if his very life depended on his swiftness. The rocky impediments which were the very ideal of nature's savagery required more care and exertion to surmount, but when once over them it was again onward with a rapid pace. One moment we were hanging by tough-rooted bushes and then again swinging arounds some saplings over a ragged ledge, and as if to add variety, creeping or crawling over, as occasion demanded, some fallen pine, or coasting on the smooth surface of a rocky decline.

Ned declared that my rheumatic knee must have been restored to its normal condition, for I was dashing along like a trained athlete. After numerous slips, a few bruises and a serious tearing of garments, we reached our quarters quite heated and well spent, and just as the boys were ready to serve our dinner.

Our mountain trip had given us an excellent appetite, and when we were through with the meal the table looked as if a terrific cyclone had struck it. It was

simply a case like unto that of Esau, who at that moment would have sold his birthright for a beefsteak.

About six o'clock, the weather showing a radical change, we took to boat with evident intent of slaughter in the house of *S. fontinalis*. We succeeded in the murder of one of the royal scions of that famous house and then beat a hasty retreat to camp to avoid a threatened rainstorm which showed signs of immediate realization. Our intrepid oarsmen, however, landed us safe in harbor, barely escaping a hurricane blast at our heels.

So hot and breathless had been the day that I was satisfied we were to have a first-class storm without any of the incidentals being omitted; one in which "the heaven is all spray, and the sea all cloud, and that you can see no further in any direction than you can see through a cataract."

Hardly had supper been disposed of before the advancing hosts of Jove were heard. They came with low mutterings and direful moans. The sky responded with a scowl and its silver-edged fleeces took fright and raced to unknown regions. The sea also answered, for its white teeth glittered in an unmistakable language. Lightning, sharp and vivid, painted itself upon the murky clouds and then the deep toned thunder rumbled across the darkened sky. The fierce and appalling battalions were all abroad and all bent upon dire destruction. Like the notes of a chromatic scale that run upward the storm king was advancing his entire army. The heavens hearing the summons took on a more sombre shade, the wind perceptibly increased, the lightning flashed more rapidly and brilliantly, and the thunder,

"Enlarging, deepening, mingling; peal on peal  
Crush'd horrible, convulsing heaven and earth."

The battle is fiercely on, the whirlwinds gather additional force, the woods are torn, the sea leaps in fury and bathes the rugged cliffs in white foam; lightning and thunder are incessant, one glaring in lance-like flames, the other growling like a horde of savage and enraged beasts. It is appalling in its intensity, making all cower before it, and realize that

"God moves in a mysterious way  
His wonders to perform;  
He plants his footsteps in the sea  
And rides upon the storm."

Our half-breeds now rush out from their tent, and as they pass our quarters ask for aid in securing the boat which is being battered by violent waves in such a destructive manner as to soon reduce it to splinters. We spring to the rescue and drag the boat high and dry.

"This is one of 'em," said Ned, as we retreated to the tent.

"Ay, a dozen in one."  
The storm was now raging in boundless fury, the heavens being one sombre curtain aflame with sheeted lightning; the sea one mass of creaming foam "which hangs in ropes and wreaths from wave to wave" while as it beat against the flinty shore vied with the detonations of thunder for supremacy. The forests swayed and groaned and twisted, and trees fell with a crash as if the work of a sulphurous bolt. Up among the loose disjointed cliffs where "the thunder winged with red lightning and impetuous rage" the storm was infinitely appalling. Night coming on apace, the dark drapery fell and the storm increased in intensity, until finally nothing was heard but the warring elements, and nothing seen but the lightning's vivid glare. It was a fearful sight of storm, grand and sublime beyond expression. To complete the elemental battle, gushing torrents fell as if with deluge intent, and long into the midnight hours Jove held possession, affrighting all. Sleep came not during the terrible uproar, for the very vibrations of the awful thunder were felt in the earth's pulsations, and the lightning was so magnetically sharp as to be seen with closed eyes. As I heard the angry waters storming the massive intrenchments around our quarters, the wonder that the stanchest boats are wrecked on this turbulent lake ceases to exist. Ah, how often since have I thought of that ill-fated steamer, the Western Reserve, the stormy night she left the "Soo" and went down with the loss of all aboard, save one, who alone was left to tell the sad tale of disaster. Evidently nothing can long resist these terrible tempests and if a harbor is far distant to reach it is a contest for life. Many a time in our little coaster have we earnestly struggled for our haven from the gales which came racing after us with such power and velocity as to send the waters whirling and "flying in rags and fragments from wave to wave." I shudder to think of it.

The storm finally abating we dropped asleep, but when dawn opened our eyes, the tempest of the night was our only theme and it was an absorbing one. Ned and the half-breeds were positive that the lightning had struck near by during the night, for the very earth, they said, trembled as if from an earthquake. I was also deeply inclined to the belief, for I never in all my experience on the lake, encountered such a tempest of fire as prevailed till the midnight hour.

As a consequence of the heavy rain and a change in the temperature, there was a dense fog over land and lake, and to add to the unpropitiousness of the situation a southeast wind was blowing in no gentle manner. I was positive I would tempt no trout that morning, with such adverse weather.

Ned, thinking of making a victim of that particular trout that had his home under the ledges of the outer intrenchments of our quarters, sailed out for a trial of his skill. He returned, however, in a short time, with his hopes blasted and the statement of "nary a rise."

After breakfast, despite the heavy fog, we tried the little bay again, in expectation of capturing a few "beauties of the gleaming stars," but we returned in a couple of hours with the undesirable record of a mere cipher; a "goose egg" as the knights of the diamond have it.

ALEX. STARBUCK.

[TO BE CONTINUED.]

#### A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

#### A SATIETY OF BASS.

LUCIUS and I started one morning the latter part of July with State Line, Wis., for our destination, and Lake Vieux Desert, five miles distant to the east from the station, our point of location.

On this lake Levi Thomas had lived for forty years, having carved his way into the wilderness when a young trapper, subsequently marrying a squaw, by which act he became a fixture in the country, the tribal laws binding him to it, as is the case with all squawmen. A low order of morals led and he abandoned civilization to cast his lot with the Indians, who at that time were the only inhabitants of this region. As the years rolled by a group of young half-breeds began to grow up around him. He erected quite a pretentious log cabin on the shores of Vieux Desert, cleared off and fenced in two or three acres of land for a garden, and settled down to a life of indolent ease varied only by the pursuits of his calling, which he continued until the fur animals became so scarce as to make it unprofitable as a business enterprise. About this time adventurous sportsmen, loggers and cruisers, began to go into the wilderness, lured by the prospect of sport and wealth, as well as by the wonderful attractiveness of the countless lakes that dot this region. With an eye for the "almighty dollar" he erected another commodious log cabin a short distance from his home for the use of those whom business or pleasure called his way. To this spot we were induced to wend our way, as it appeared from all the information we could gain to be the only gateway to the enchanting chain of lakes that extend west and south, west of State Line Station for a distance of seventy-five or a hundred miles, and it was this chain of lakes, or a portion of them at least, that we wished to visit.

Arriving at State Line we were met by Clark, a son of Thomas, about seventeen years old, who was destined to play a prominent part in the drama to be enacted during the next week or ten days. He bundled us and our traps into a big broad-wheeled lumber wagon drawn by a team of Canadian ponies and we started on our five miles ride through the woods to Vieux Desert. The experience was a very novel one to us, for, spurred on by the lash which was used unsparingly, the tough little ponies went helter skelter over the roughest road I was ever on. We bounced over fallen logs, into water holes, up hill and down hill through the open woods, until I felt sore all over. We arrived at our destination without broken bones, but with badly demoralized anatomies. The surroundings were very rough and unlike any previous experience I had ever known, but we were well cared for and found our host's family very desirous of making our stay with them pleasant. We had two sleeping rooms off a large living room, each with a comfortable bed protected from mosquitoes by canopies. With good beds, good food and plenty of room to move about in what more could we who were out on a roughing trip want?

The Wisconsin River rises in Lake Vieux Desert and it is said to be the home of large muskallonge, but during our visit the latter had closed up their house and gone to a summer resort, at least, we could not find them at home after repeated efforts to gain admittance to their sanctum. Vieux Desert is quite a large body of water, nearly round, with an occasional deep bay or inlet, and from six to eight miles in diameter, but it is very shallow and filled with weeds. These grow to within a few inches of the surface, rarely appearing above it, and form a mass of vegetable growth beneath, making it almost impossible to pull a spoon through it.

Thursday, the 28th, I started out alone to try the muskallonge. After working faithfully for several hours I found myself at the most distant part of the lake from the cabin, when I was startled by a violent clap of thunder, and in a few minutes a torrent of rain was descending upon me. Before I could reach shelter my clothing was saturated and I was compelled to row seven miles through the downpour to the cabin. Clark started a roaring fire in the big stove, and I spent the afternoon drying out.

Friday we started on a hunting and fishing trip, embarking in a boat. Clark rowed us across Vieux Desert to its furthest extremity. Here we found a blind trail leading through the woods; which we followed for about a mile, when we came to a beautiful little body of water called Bass Lake. It is about two and a half or three miles long and from three-quarters to a mile wide, nestled in the heart of the dense pine woods. Clark went to a clump of bushes near the trail, where he had another boat concealed; dragging it out, we entered and were soon on our way to the head of the lake, where Clark said the best fishing was to be had. As it was yet early in the day we anticipated sport, and our expectations were fully realized, for business began at once. Within an hour Lucius and I had taken 25 beauties, weighing from 2½ to 3½ lbs., and then we ceased for the morning and explored the lake until lunch time. Oh! but this is a wild spot round this lake. There is no indication that the foot of man ever rested upon its beautiful forest-bound shores, and Clark tells me that but one angler previous to our visit had ever cast line in its waters to his knowledge. During the afternoon we killed 42 bass, making 69 for the day, and, becoming weary of the sport about 4 o'clock, started for home, which we reached in time for supper. I was so charmed with this lake that I decided to visit it again, so on the way home I arranged with Clark for a tent and provisions for two days, with the determination to return the next day.

We spent two more days here and had rare sport with the bass. We caught them as fast as we could land and return them to the water, for on this trip we kept only what we could eat. It was impossible to keep supplied with minnows in this kind of fishing, so we resorted to the use of small spoons, which answered the purpose of bait just as well, and were far more convenient. We caught no small bass; they would run from 2½ to 3½ lbs.; would average about 3 lbs. We caught a great many more on Saturday than we did the day before, but kept no account of the number. I do not think the bass of these northern lakes are as gamy as those taken in New York State or the lakes of Maine; but they give the angler all the sport he can reasonably ask for, and as for numbers, the Eastern waters are not "in it." A very natural desire to rush them when they strike, so that he may get numbers, takes possession of the angler; so they do not have the chance for their lives they otherwise would.

I found Clark a very capable guide despite his age, and after further talk with him and consultation with his father, decided to take the trip of our outing, to the chain

of lakes west of State Line, under his guidance. The wagon, driven by a younger brother of Clark, was to leave us at the first lake and return for us in ten days. We reached Anderson's Lake about 6 o'clock in the evening after a terrific jolting over the worst road I ever saw. But this kind of experience was what we expected, and we got it with a vengeance. Anderson's Lake is quite a small but a beautiful little gem, dropped down in the heart of the forest. We found a desirable camping spot, and while engaged in putting up our tent a flock of loons came flying over the place and settled on the water within an easy rifle range. Lucius and Clark grasped their rifles, and stepping to the edge of the water opened fire upon them. Having witnessed so often their unsuccessful attempts to bag these birds, I was not sufficiently interested to even watch their fusillade; but a moment later a sharp cry from Lucius, "Oh, papa, come here, quick!" brought me to his side with a bound. I found him standing with open mouth staring into the water. Seeing at once that he was not injured by an accident, as I feared from his cry, but that he was looking at some object in the water that created great surprise and riveted his attention, I also was attracted, and met a sight that was enough to make an angler almost wild with excitement. At the report of the guns there came up out of the deepest water a dark mass like a black shadow, that evolved itself into a dense body of black bass that had been attracted by the noise. There they were, all along the shore as far as we could see on either side; great big fellows, crowding each other out of place, and rolling their big eyes at us.

It is hardly necessary for me to say that we hurried our preparations for supper, after which we pushed our boat into the water, and for the next two hours, or until after dark, were taking bass as fast as we could handle them. We kept three for breakfast and returned all the others to the lake. After this evening's record I was prepared to believe any kind of a story anybody might tell about catching bass in these lakes. I was simply tired of catching them; and after this performance, with the exception of an occasional fish for food, did not try the bass again while in Wisconsin. I have not the slightest doubt that I can go to the several lakes we visited and kill from 200 to 300 lbs. of bass a day and not count any that would weigh less than 2½ lbs. Indeed we caught no small bass. I don't believe I hooked a bass that weighed less than 2 lbs., neither did I catch any that were larger than 4 lbs.

As indicated above, this was my last assault on the bass during my trip, the sport had become tame and I looked in other directions for entertainment. The fact is, bass fishing in Wisconsin is too easy for sport. Of course the angler does not have to take any more than he desires; but in the midst of the excitement the insane propensity to kill will take possession of him, and he goes on killing until weary. As I reflect over the events of our outing I find one source of satisfaction, viz., I did not kill one bass more than we had use for as food.

We spent the night in camp at Anderson's, and at sunrise on Tuesday morning started on our trip through the lakes. How can I adequately describe this journey? A man and two boys, alone with nature, in a wilderness not one foot of which had ever been seen by any member of the party, for even Clark had never been here. However, guided by his native instinct he proved a valuable guide, never wavering for a moment in directing our course, and was an intelligent, companionable fellow.

Nature is very prodigal here in two respects, viz, woods and water. The woods have not as yet been subjected to the encroachments of commerce, but stand as they came from the hands of the Creator in all their primeval grandeur. The latter, beautiful in tranquillity, are like diamonds set in a field of verdure. Imagine us then in an unknown country, threading our way through the maze of these innumerable lakes, each turn in our course revealing to us new beauties and disclosing the locked up mysteries of nature. From Anderson's Lake a short carry through the woods landed us in Spring Lake, a pretty body of water, but the least beautiful of all we saw. Leaving Spring Lake by a thoroughfare of three miles in length, which winds a sinuous course through the forest, Lake Mamie bursts upon our view, a crystal gem. Then Zephyr Lake, with its irregular outlines, presents its mirror-like bosom for our inspection. We loiter on our way through these lakes, for the scenery is fine and we wish to feast our eyes upon its loveliness. At the head of Zephyr we find another thoroughfare of about a mile, through which we pass to Big Lake. From Big Lake a short passage leads us into First Lake, thence into Deer Lake. From Deer we enter into Thousand Island Lake by quite a stream of clear, running water perhaps a mile and a half or two miles long. These waters were all lovely and worthy of notice. In Thousand Island Lake we pass inland after island as we traverse its length, all heavily covered with timber. The water is deep and clear and this is said to be the home of lake trout. As I viewed the environments of this lovely body of water, I could not dispute the fact that deep down in those mighty channels mighty specimens of lake trout were sporting themselves. Here I called a halt and decided to remain until we should retrace our steps toward civilization.

Selecting a beautiful site we established our camp upon an island, prepared our supper and then started out on a tour of inspection of our temporary home. In the quiet of a beautiful evening we floated on the surface of this the most enchanting lake I ever saw.

After breakfast Wednesday morning I concluded to try the trout; but having failed to add trout spoons to my collection of fishing tackle, I was compelled to use a large spinner which did not work well, and I found myself in the same relative condition that Lucius was in when he needed a rifle and a shotgun. I had all the other necessary tackles for deep water trolling and I cannot understand how I came to overlook the spoons; but I did, nevertheless, and had occasion bitterly to regret it, for I had repeated heavy strikes but was unable to hook a single trout; they invariably hung on for a second and then disengaged themselves. This kind of work was very discouraging and I gave it up. The day was perfect for enjoyment and we spent the remainder of it exploring the lake. There was such a labyrinth of channels, bays and open spaces between the islands that Lucius and I were both bewildered, and had we been alone would no doubt have been lost; but the little Indian had no trouble in bringing us back to our camp at supper time. I should have enjoyed taking some of the big trout that I know inhabit this lake, but we had a very interesting time nevertheless.

On our return we passed over the same course taken in

going in until we reached Spring Lake. Here we camped Thursday afternoon by the side of a delicious spring, from which the lake takes its name, and remained until Friday morning. At this spot an event occurred which is worth mentioning. After pitching the tent Lucius and Clark went in to the woods with their rifles to hunt game. The tent was pitched on a knoll about 100 ft. from the water and there was a trail running past it down to the lake. I started down the trail to go to the lake, I saw an animal about the size of a cub bear, which it resembled very much, cross the trail and run into the bushes. I thought it was a cub and instantly made up my mind that the mother was near at hand and that I had my foot in it, so to speak. The boys had the two rifles, but had left me the shotgun, which stood leaning against an adjacent tree. I did not know how it was charged, but I hastily got possession of it and stood with bated breath and shaking knees waiting for the onslaught of the old gal. After a few seconds of suspense, hearing no disturbance, I concluded to investigate the intruder. Proceeding down the trail ready for battle at close quarters, my heart thumping like a trip hammer and my knees quaking, I detected a movement in the bushes and halted to take observations. I saw my visitor at the foot of a big pine tree, and more than ever impressed with the idea that it was a cub, I began to think discretion might be the better part of valor and a retreat the best thing I could do. By this time I was wrought to a state of extreme excitement, and utterly regardless of consequences blazed away at the creature and had the satisfaction of seeing it roll over, make several spasmodic kicks and remain motionless. I must be strictly truthful in narrating this event, and say that after I saw my victim apparently dead, I did not have sufficient courage to approach it, for I still feared the old one was in the vicinity, and if she saw me bending over her dead offspring I might never see my friends again. So I went back to the tent, recharged my gun with buckshot and awaited events. In a few moments Lucius and Clark, having heard the report of my gun, came running to the camp fearing I was in trouble. I told Clark I had shot a bear, but was afraid to go near it. He ran at once to the spot. I would like to draw the curtain here and not tell the rest of the story, but that would not be fair. As Clark saw the game he made the woods ring with laughter, for he had the joke on me in great shape. I had shot a measly porcupine, an inoffensive creature that the children in the region kill with clubs.

I did not sleep well this night, notwithstanding Clark had made me an extra thick bed of balsam boughs. We were booked to remain nearly a week longer in the woods, as the team, by arrangement before starting, would not come for us until the following Wednesday. Here was a dilemma. I woke up Friday morning quite feverish and feeling badly, with a desire to get out of the woods greatly increased, but how to do so was the problem that confronted me. On our way into the wilderness the team passed along the shore of Black Oak Lake. It occurred to me that if we could get from Spring Lake into Black Oak we could by our boat lessen the distance to the railroad station by six miles, and being that much nearer something might turn up to help us out. But this carry of half a mile was the stumbling block. As good luck would have it, while we were preparing breakfast we heard approaching footsteps and saw a man coming along the trail. Where the human face is so seldom seen, as is the case in this wilderness, there exists a bond of human fellowship among all who meet, except Indians. Our visitor proved to be a squatter living somewhere away over in the woods. He appeared to be a very decent sort of a fellow. I told him of my desire to get into Black Oak Lake and that as I was not feeling very well I did not like to undertake the labor of moving our traps with only the two boys for assistants. "Well," he said, "if that is what you want you shall get into Black Oak Lake almost before you know it. Now, you just sit down on that log, and when your guide and I have packed up your traps we will carry them over to the lake, and all you need to do is to carry yourself over there." I was very glad to accept his friendly aid I can assure you. Clark and Bane, for that was the man's name, hustled our things over to Anderson's, where we embarked and rowed across, and then they repeated the performance into Black Oak. Our quondam friend here bade us goodbye, refusing to accept any remuneration for his services. We proceeded along Black Oak Lake, arriving at the foot about noon, where we again pitched our tent.

If Thousand Island Lake is beautiful, Black Oak Lake is grand and imposing. I could not help thinking that it was a great pity that such a grand body of water should be so far removed from civilization. As we traversed it on our way to its foot the water was like a mirror, deep green in color, showing great depth. It is said to be full of lake trout, but I did not try them, remembering my failure in Thousand Island Lake. While making our camp a stiff breeze sprang up from the northwest, and the waves began to roll up on the sandy beach in front of the tent. We were camped in a very beautiful spot just back of the beach, which was composed of clear white sand such as I have seen only at the ocean. The waves as they came rolling in formed a surf which was so inviting that Lucius and I could not resist the temptation to take a bath in them. It was the most delightful swim I think I ever enjoyed. After dinner, refreshed by the bath, we rowed to the end of a deep bay that looked very inviting, on a tour of exploration. Here we found a trail leading into the woods which we followed a short distance, where it terminated at another lovely little lake. This we could not explore, as I did not care to drag the boat to it, but there were evidences of its being a fine fishing water, as we found an old raft with fishing-poles and fish-boxes on it, all going to decay, showing that at some remote time some one had been in the habit of coming here to fish. We afterward found the frame of a shanty near the locality on a branch trail, that Clark said had been occupied by fishermen. I thought it might have been a lumberman's shanty, but Clark said it was too small for a lumberman's camp. He was certain that the place had been the shelter of fishermen who have spent their vacation on Black Oak and other lakes in the vicinity. Rambling around in these out-of-the-way places is full of interest to the novice in the wilderness. And in this way we spent the afternoon.

Returning to camp we had our supper, after which we started out to visit other portions of the lake. The intense solitude of these sequestered spots, especially as evening begins to draw the curtains of night about one, is almost

awe-inspiring; and I expect one must live a long time under such environments before he can shake off the feeling of oppression that takes possession of him. The wind subsided as the sun went down, and again the surface of the lake was like a mirror. Under the shadow of rocky bluffs we pursued our way, marveling at the handiwork of nature that had carved into fantastic shapes the huge boulders that lined the shores and in other places had laid up a wall of rock as though set in masonry, so smooth and symmetrical was it.

Here occurred an incident that I shall always remember, as its weird effects are ineradicable. We noticed that our ordinary tone of voice in conversation was taken up by the echo over the nearest shore and increased in volume, was thrown across the lake, and from that point carried to the other portions of the lake, or other lakes perhaps, for it would continue to roll on and on until distance alone prevented our catching the sound. If an ordinary tone could have such an effect, I wondered what would be the result produced by the discharge of a gun. Acting upon the suggestion Lucius fired his shotgun and for fully five minutes the sound rolled from one shore to another and from one lake to another until it seemed as though a fierce battle of musketry was going on for miles and miles around us. We remained on this lake until a late hour awakening the echo with voice and guns, and then to bed.

On our way into the wilderness on the preceding Monday we had passed near a large lumber mill about three miles from where we were then camped, and Saturday morning I sent Clark there to see if he could hire a team and wagon to take us to State Line. He returned very soon with the conveyance and we reached State Line just in time to take the noon train home. Thus we left the wilderness five days sooner than we had expected to do, and it was none too soon either, for I was quite upset with the rough experience I had, and was very glad to get back to my comfortable bed and regular rations. To thoroughly enjoy a sojourn in what I consider this wilderness to be, a paradise for the anglers, it would be folly to go as I did. The companionship of a boy is very delightful under some circumstances; but in such a place as this one wants congenial associates. This given, all the rest of one's pleasure can be plucked hand by hand as you gather the rich fruit from your vines. With a select party of kindred spirits one would find every placid lake a storehouse of pleasure, the balsam laden atmosphere would be more exhilarating, the grand exhibition of the works of Nature more imposing, and the camp-fire more entertaining. Man was not made to enjoy these things alone.

It was our aim to follow the chain of lakes through to Mamatoish on the other line, but as we could not secure guides to take us through we had to abandon the project. This is the trip to take, for I am told we did not see the most beautiful portion of the country or the prettiest lakes. Were I to undertake this trip again I should want a jolly party of fellows, say three or four, three guides capable of doing all the heavy work, and to go through the thirty or forty lakes in the chain mentioned above. A rapid journey can be completed in five days, but two weeks spent *en route* would be none too long for such a party to enjoy every minute of it. A wall tent 12x14 ft. for the party, a smaller tent for the guides, a strong flat-bottom boat for camp equipment and supplies and two birch bark canoes would constitute about all the necessary appliances for the journey. *En route* the party would probably like to camp for a day or two each on such lakes Black Oak, Thousand Island, Palmer, Whitcomb, Aurea, Flora, Crab and Manetowish; and it would be the event of a life in outdoor sports. With such guides as Louie and Oliver Thomas, and John Draper, all of whom know the country thoroughly, the trip could be made in comfort and every minute enjoyed. If you should ever desire to catch fish until weary of the sport, join such a party and visit the lakes of Oneida county, Wis. I will guarantee that you will not have to work hard to find where the bass are located, and the result of a day's fishing will be a revelation to you. All the bass have to do in these lakes is to multiply, for not enough of them are taken out to make a mark. There are plenty of lakes where a line has never been cast and they are alive with bass.

FRANK.

#### The Mastigouche Waters.

We have had from time to time enticing reports of the trout fishing enjoyed by the Mastigouche Fishing Club in their waters some eighty miles from Quebec, and an impression has been given that the Mastigouche was not open to outsiders. This is a mistake. Some of the waters are reserved, but there is an abundance of territory free to all; and from what a Montreal correspondent tells us, the Mastigouche region offers decided attractions to trout fishermen. He says: "The Mastigouche House opens about May 20, the ice usually going out of the lakes from the 18th to the 20th, according as the season is early or late. Fly-fishing begins as soon as the snow broths run off, and is very good the last week of May and first week in June; in fact it is good all through June, but the black flies and mosquitoes begin to get in their work in great shape early in that month, and keep it up until about August 1. A person can have a good comfortable time with good fishing, and stay at the main camp; but if one wants to rough it, he can take tent, guide and canoe and go to some of the lakes a few miles distant. Any of the trout flies used in the Adirondacks are suitable for our waters. A person wishing to go to these lakes had better go to the Canadian Pacific Railway Co. here, and ask for return ticket to the Mastigouche House, fare \$6.70 for the round trip, including buckboard from St. Gabriel, the railroad station, to club house and return to St. Gabriel. On arrival at the latter place by rail about 9 P. M., the driver of the buckboard, who meets the train, will take the checks and baggage to the hotel and be ready next morning to start for the house at any time passengers may desire. The scenery is fine, perhaps not so grand as some parts of the Adirondacks, but it has a peculiar charm of its own that is very delightful. We do not catch any of those big 8 and 10-pounders that the Rangeley sportsmen tell about, but an occasional 3 or 4 lb. trout is not altogether a rarity in our waters."

Mr. E. M. Copeland is in charge of the club house and hotel; the post office address is St. Gabriel de Brandon, Que.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

## ANGLING NOTES.

## The Thomson Mills Fishway.

I HAVE received the following letter from Mr. W. Hubert Rogers, inventor and builder of two of the Hudson River fishways:

"I was very glad to read your defense of the present location of the fishway at Thomson's Mills, in FOREST AND STREAM of this week. You have taken the right ground in the matter.

"I was with my father when the location was made, and also superintended the construction of the fishway. The driftwood problem was thoroughly considered, and with ordinary care it seemed all trouble of this kind would be averted.

"I incline to your opinion, that the fault lies in the rebuilding of the upper end destroyed by the washing away of the bulkhead or feeder wall of the mill.

"At a small expense this trouble can be remedied without moving the fishway; while to move it would entail a considerable expenditure of money and ruin its usefulness. There is no place on the dam so favorable to all the conditions of a successful fishway as the present location, and I earnestly hope that before the question of moving it is seriously considered, an effort, at least, may be made to keep the mill refuse from about the entrance, and that otherwise due care may be given it. If that be done the people above will have no cause to complain.

"It has occurred to me that possibly in rebuilding the wrecked portion of the mill, changes may have been made whereby the refuse may be dumped or fall directly at the head of the fishway. It seems not improbable to me, knowing the place as I do. Even so, to move the structure would be a mistake when the remedy is so easy."

## Ouananiche in the Hudson.

Last week I read a paper in the hall of the Young Men's Christian Association, where the Mohican Rod and Gun Club had been invited, upon the necessity of building fishways in the Upper Hudson before the river could become a self-sustaining salmon stream, and in the paper described the salmon, its habits, appearance, etc. The next day a gentleman, Mr. John Sherman, called upon me and said that after listening to my paper he was convinced that I had solved the identity of two strange fish caught in the "Big Bay" of the Hudson, a few miles above Glens Falls. He related the circumstances of the capture thus: Two young men who have always lived on the river and are perfectly familiar with the fish native to it, were fishing in Big Bay some days before the date of his visit to me and caught two fish such as they had never before seen. They weighed when dressed  $4\frac{1}{2}$  and  $3\frac{1}{2}$  lbs. respectively, and undoubtedly belonged to the salmon family; and from my description he would pronounce them sea salmon, except that he could not reconcile the size of the captured fish with my statement that as smolts the young salmon go to sea weighing 2 or 3 oz., after which the fish could not return to Big Bay because of the obstructions in the stream. I told him that I could clear up the mystery for him without assuming, as he did, that two sea-going salmon had for some unknown reason remained in fresh water until they reached the weights given of the captured fish. Clendon Brook, a trout stream in which sea salmon fry had been planted since 1884, flows into the Hudson at the head of Big Bay, and the salmon fry have done remarkably well in it for ten years. In 1887 I planted in this brook 20,000 landlocked salmon by direction of Prof. Baird, who thought as the sea salmon did so well there the fresh-water salmon might do as well. I never had any faith in the ultimate success of the plant, for the river does not furnish food or temperature of water for the fresh-water salmon when they have outgrown the brook. The fish Mr. Sherman reported to me may have been grown from the plant of landlocked salmon made in 1887; if so, it is the only result obtained from the plant as far as I have been able to learn.

## Salmon Planting in the Hudson.

Four years ago, by direction of the U. S. Fish Commissioner, I examined and mapped the trout streams in Saratoga county flowing into the Hudson River, preparatory to the receipt of 20,000 yearling salmon, which were to be sent to me for planting. As the yearlings began to die, some of them, between Bucksport and Boston, the car came only to Troy, where the survivors were put into the river. I was so impressed with the fitness of Saratoga county streams for salmon fry, that I suggested them to Supt. Mather as the place for planting fry this year. All the streams I examined are trout streams, and all come together in a fair sized brook which flows into the Snook-Kill, and which in turn emptied into the Hudson below Fort Edward, so the salmon find no obstructions between the place of planting and the sea, except such as are covered with fishways. Accordingly the entire plant this year, a small one as compared with other years, of 55,000 fry and 180 yearlings, was made in the Saratoga county streams. During the eleven years that I have assisted in planting salmon fry in the Hudson I have not seen a better, stronger lot than those of this year. The fry were twenty-two hours on the road between the hatchery of Cold Spring Harbor and the place of planting, and when I took the temperature of the water I found it 51 degrees in the can and 50 degrees in the brook.

## Transplanting Pike-Perch.

In 1880, Mr. Myron O. Brown, proprietor of the Sagamore Hotel, at Bolton, Lake George, procured at his own expense from Lake Champlain, ninety pike-perch, weighing from one-half to 2 lbs. each, and planted them in Lake George. Not long after a dead fish of this plant, probably, was found floating on the water. With this exception nothing was seen of the fish until last year one was reported to have been caught near Green Island. Mr. Brown has long considered his pike-perch planting a failure, but I have maintained that they have remained in the lake, for they have water, food, spawning grounds, everything to their liking; but they never have been fished for systematically in waters where they would be likely to be found. Few, comparatively, know of the plant, but with so many people fishing for black bass in the lake each season, it is strange that not a pike-perch has been caught, so far as known.

Now Mr. Brown tells me that during the last days of April pike-perch were seen by scores, if not by hundreds, spawning around the shores of Green Island. First, the captain of his steam yacht saw the dorsal fin of a fish

sticking out of water near the shore, and supposed it to be a pike, *Esox lucius*, commonly called a pickerel, but a closer examination developed a fish with two dorsal fins. Alec Taylor, one of the best fishermen on the lake, then made an examination and found pike-perch in pairs and groups of four, five and six, all along the shore, some of these fish estimated to weigh 10 and 12 lbs. each. So far the shores of Green Island only have been examined, but it shows conclusively that another excellent game and food fish has been added to the list of fishes inhabiting the waters of Lake George. From the number of spawning fish seen about Green Island one must admit that this lake is well stocked with pike-perch, and probably efforts will be made to catch them this season, and their haunts will be located.

This reminds me that except in the Susquehanna River there is no close season provided by the general game law for pike-perch in the State of New York.

## Ouananiche and Saibling at Sunapee.

The ice went out of Sunapee Lake, N. H., on April 20, and Commissioner Wentworth writes that on the next day the fish, salmon, trout and saibling, were breaking water in every direction. On the 23d 17 salmon and saibling were taken at one point. Commissioner Wentworth and Mr. Alonzo Cheney, who is in charge of the Sunapee hatchery, agree in saying the fishing is far better this year than in many years before. Saibling of 4 and 5 lbs. have been taken, and Mr. Cheney caught one salmon of only 2½ lbs., which is a rarity, as they are not generally caught under about 5 lbs. Up to the 29th it is claimed, so Commissioner Wentworth writes, that more salmon trout and saibling were caught on our noted fishing ground than were caught altogether last season on the same ground. The one objection to Sunapee Lake as a fishing resort in former years has been the lack of comfortable quarters, boats and guides. As will be seen in an advertisement in FOREST AND STREAM, this has been remedied, and Soo-nipi Lodge offers every convenience for the angler and his family.

## Lake Trout Are Up.

After four weeks of speculation as to whether the lake trout would be at the surface of the water or the bottom of the lake when it became legal to fish for them, on May 1 fishermen who have been complaining because the ice went out of Lake George a month earlier than usual and a month before the close season for lake trout fishing expired, have had an opportunity to set all doubt at rest on this subject and have discovered that all the kicking against circumstances has been wasted energy.

Tuesday, May 1, was a perfect day for fishing, and fishermen and lake trout met on the surface at Lake George, and when the sun went down there was a tale to tell, worth the telling where big scores are in order. Here are some of the catches: Justice C. S. Enches and Deputy Sheriff Earl B. Smith, of Glens Falls, fished near the Sagamore, at Bolton, and caught fifteen trout weighing 92 lbs. They fished only the first day of the season, returning home at night. Mr. Smith told me that from the Sagamore dock he counted thirty rowboats and three steam launches in sight at one time, the occupants all trolling for trout. The most of this catch was taken at the surface without any sinker on the lines. The boats from Bolton caught over 500 lbs. of trout the first day.

I trolled for lake trout at the surface for more than twenty years before I saw one jump above the surface, and put it on record over and over that they did not jump, although they come up and make a "boil" at the surface that is unmistakable. One May morning I saw two big trout jump, fair and square, above the surface within an hour. Mr. Smith says that on May 1 of this year trout were frequently seen jumping above the surface. A New York angler was out early at Caldwell, the head of the lake, where little fishing is done at this season, but he caught six trout, one of 10 lbs., and went south on the 11 A. M. train.

Mr. George N. Finch, Sheriff of Washington county; Supervisor N. E. Baker, of Salem, and Deputy Sheriff Morrison, of Sandy Hill, fished on Tuesday and part of Wednesday with the result that they caught 27 trout, the largest 14½ lbs. They were caught south and east of Dome Island. Mr. Finch told me that every trout but one was taken at the surface with unleaded lines.

Hon. D. P. McQueen and Hon. A. J. Quackenbush, of Schoenectady; J. H. Madden, E. F. Dean and J. G. McKee, of Glens Falls, fishing the same length of time as the Finch party and in the same portion of the lake, caught 124 lbs. of trout. The largest one dressed 10½ lbs., and there were 24 fish in the string, and all were caught at the surface. From this it may be inferred that the lake trout are "up" and it is a good time to go a-fishing with reasonable certainty of success.

## After the Rain.

In notes last week I said that it was raining at the time I was writing, a rain that promised to improve the stream fishing in northern New York. Well, we have not yet had rain enough nor has it been warm enough to thoroughly thaw the trout out. I went out May 2 just to see if trout would rise to the fly. At the head of a little stream there was once a pond and a pool still remains, and in it an 8 in. trout rose to a Marston's-fancy, then two more scarcely 6 in. long rose to the same fly. I went down the little stream and by borrowing a worm from my companion, Mr. W. E. Baldwin, of the Mohican Club, I caught a 12 in. trout. It should have weighed a pound but I do not think it weighed ten ounces. Lean and lank, it was in no condition to be eaten; nor was it active. Of twenty odd trout hooked only one was in good condition, and except the three that rose to the fly the trout were in the deep holes—not one on the rapids. For two weeks the brooks have been fished daily for these half-fed trout that have not recovered from the semi-torpor of winter. The streams are low, no food has washed into them, and the insect food is not yet hatched out in the water, although the insects of the air are on the wing occasionally.

I am more than ever convinced that trout fishing in the streams of northern New York should not open legally before the middle of May. I would not give a brass farthing for such fishing as I had, and yet I had a good time. The meadows were covered with violets, and on low ground I picked cowslips and stuck them in my hat and in the button hole of my fishing coat. I sat under a leafless tree in the sun and smoked more than one cigar, and finally stretched myself on the scant turf and felt

creeping things trying to crawl down my neck and up my sleeves. I got my feet wet and my legs too, and I came home tired and hungry, with a burned face, and although I did not have a blessed trout, I knew I had been a-fishing, and that night I slept as well as though I had caught 10 lbs., and far better than I would had I killed one 5 in. trout.

A. N. CHENEY.

## FISHING COMMENCED IN CANADA.

## Editor Forest and Stream:

As foretold in these columns a week or two ago, the angling season in Canada has commenced unusually early this year, more than a fortnight, in fact, earlier than usual. For the first time in many years the ice had altogether left Lake Beaufort prior to May 1, and a number of fine trout have already fallen victims to the angler's delusions in this gem of Canadian waters.

The ice left Lake St. John yesterday (Wednesday) morning, some sixteen days earlier than usual. The water is exceedingly high, having risen some 23 ft. within the last fifteen or twenty days. The bait-fishing for ouananiche must now be good at Pointe Bleue and along the Roberval shore of Lake St. John, and the "little salmon" of the Montagnais Indians always rises readily to the fly from about the second day after the disappearance of the ice both in the mouths of the Ouiaichouan and Metabetchouan rivers. A number of Quebec anglers are leaving for these fishing grounds in the early part of next week and no doubt some heavy catches will be reported by the time that these lines appear in print. The end of next week and the whole of the week following ought to see about the best of the spring fishing for ouananiche in the westerly and southerly portions of Lake St. John. Within less than a week of the time that ouananiche fishing usually commences in the Ouiaichouan and Metabetchouan it ought this year to be at an end. It usually lasts about three weeks, but much depends upon the condition of the lake, for the fish leave it and the mouths of its tributaries, or at all events cease to rise in them when the water perceptibly lowers. This is usually some twenty days after the departure of the rise, after which the fish are found in great numbers in the rapid waters of the Grand Discharge. This year, therefore, the ouananiche fishing at the Grand Discharge, which usually commences about June 12 to 15, ought to be very good by the end of the present month.

The hotels at Roberval and the Grand Discharge will only open on June 1, but country board can be had at Roberval at all times. Among other fishermen who write me that they are coming up this way for ouananiche this spring are Mr. Geo. Hart, superintendent of the Waterbury Watch Company and party, and Mr. R. Plumb of Detroit and a number of friends. Plenty of good sound leaders and a fair supply of large trout flies and of salmon flies tied on number 3 and number 4 hooks will be found useful in ouananiche waters here, both throughout this month and in the early part of June. Later on, the size of the flies used must be reduced.

A day or two ago I received a message, through a mutual friend, from Mr. A. P. Low, the Canadian government explorer, who was the first to thoroughly survey Lake Mistassini, and who has now succeeded in doing something else that was never accomplished before, that is, to conduct an expedition through the interior of Labrador from Lake St. John to Ungava. The letter, which is full of interesting details of the perilous journey and of the magnificent canyons of the Ungava River, etc., left Hamilton Inlet, where the expedition wintered, on December 5, and so occupied within a day or two of five months in reaching Quebec. The explorers were to have started last month on a new attempt to traverse the Labrador peninsula, this time from east to west, or from the Atlantic to Hudson Bay—a journey through a practically unknown territory, and necessitating the crossing of more than 20 degrees of longitude. E. T. D. CHAMBERS, QUEBEC, May 3.

## A TEN-POUND WEAKFISH.

PHILADELPHIA, May 2.—Editor Forest and Stream: Mr. William Cook, for several seasons a sojourner at Atlantic City, N. J., in his own house, purposely erected by him very close to the fishing waters of the place, is credibly reported to have offered a premium of \$10 for a 10 lbs. weakfish (squeteague) within the two seasons last past. Mr. Cook died. I then took up and continued his offer of a \$10 premium for a 10 lbs. weakfish.

To-day I am in receipt of a remarkably fine specimen of this fish sent by Mr. George Washington Watson (known locally as "Wash" Watson, with whom I have fished for a number of years at Atlantic City), which weighed, on receipt, 9 lbs. 7 oz. and measured 2 ft. 7 in. from muzzle to tail end, and was 6 in. deep and 8 in. thick and 17 in. in extreme girth. What it weighed when taken from the water I do not yet know, but I have no doubt that it turned the scale at more than 10 lbs.

I have caught many of these fish, some of them weighing 8 to 9½ lbs., on a very thin sea grass line and a box rod, but I have never seen one so large as this, and I have never known of one of the same kind taken at this season of the year.

However, there are some things I do know. One of these is, that the capture of this fish with light tackle affords sport in autumn that but few anglers appreciate; another is, that Capt. Watson, of the Chester Brown, knows as much, if not more, than any other man on Absecon Beach about the habits of this fish and how to catch him.

I expect to lose the sight of a ten-dollar bill through the landing of this big weakfish! If I do, I shall count the cost as cheap for the sight of such a beauty.

I cannot close this without a reference to the statement made at the Fisheries Conference, held last December in your city, to the effect that weakfish do not bite on the hook. As I have caught some thousands of them with bait on hook, I feel that I must enter my humble protest against such an assertion as one devoid of foundation in fact and as utterly devoid of any foundation whatever. It is well known—and it is thoroughly well known—that weakfish take the bait; and when they take it, the angler had better look out for his light tackle. If his terrific darts and desperate pulls do not give the fellow at the other end all he wants to do for some minutes, then he is a different kind of a foe from that which I have tackled off Absecon Beach for more than twenty years past.

ALFRED HAND.

MAINE WATERS.

The ice is out of all the Maine trout lakes, and much earlier than usual. Moosehead cleared on the afternoon of April 30, twenty days earlier than in 1893. It is always expected that the Rangeleys will clear within a couple of days after Moosehead, and this year the usual conditions were carried out. Word came from Richardson Lake on the morning of May 2 that the ice was out, and in the afternoon the telegraph announced that Mooselucmagantic and Rangeley were clear; eighteen days earlier than last year. But after all this clearing of the ice from the celebrated trout lakes of Maine is not the earliest on record, though earlier than the average for the past fourteen or fifteen years. In 1882, as may be seen by the files of the FOREST AND STREAM, the Rangeley Lakes cleared of ice on May 12; in 1833, May 14; 1884, May 13; 1885, May 15; 1886, May 8; 1887, May 16; 1888, May 21; 1889, April 30; 1890, May 9; 1891, May 10; 1892, May 4; 1893, May 20; 1894, May 2.

This early clearing of the ice has taken the trout fishermen who annually visit the Maine lakes, by surprise, and not the usual number are "on the wing" for their favorite trout waters. Hundreds of them will go a-fishing, but they will not be on the ground directly after the ice is out as is usually the case. The Produce party, some twenty-five in number, will be ready to start in a few days. They have their steamer on Moosehead already engaged. Mr. O. A. Dennen will have the annex to the Kineo House open and ready for them. The Lake House at Greenville, at the foot of the lake, is also open. Other parties to Moosehead will follow, and one or two sportsmen have already gone, in fact. The Tuttle party will early leave for the Rangeleys. Mr. Tuttle has annually visited his handsome camps at the foot of Rangeley Lake for many years. Mr. S. C. Dizer, with Mrs. Dizer, will start for the Birches, Mooselucmagantic Lake, on Monday of this week. It is rather earlier than he expected to go, but the ice is out and he is an enthusiast as to the Maine lakes and his rifle is fast becoming so. Hence they have concluded to be off. They will doubtless visit Kennebag for a day or two before their return. Mr. Dizer thinks Kennebag is one of the most beautiful lakes in the world.

Mr. L. Dana Chapman arranged for the taking and transportation of about 2,000,000 smelt eggs for the Megantic waters from Lake Auburn. Commissioner Henry O. Stanley has arranged for the taking of the eggs. The Megantic waters are to have food for the landlocked salmon. It is understood that on the bottom of the breeding streams running into Lake Auburn the smelt eggs, at this time of the year, are to be found to the depth of nearly an inch, in some locations. The Megantic Club's new fish hatchery is completed and will be put in use this fall. It has a capacity of 800,000 trout or salmon fry. Mr. Chapman hopes to be there at the time of taking the fish and the eggs.

Mr. Henry E. Cobb, with Mr. March, will go to the Inglewood Club waters on the 17th of May for landlocked salmon and trout fishing. The ice is out of those waters, and the gentlemen will doubtless be accompanied by other members of the club.

Mr. Claude H. Tarbox, of Byfield, with his friend C. O. Bailey has made another trip to the trout brooks. The gentlemen suggested to "The Col." that he go with them. Now the Col. has been a great fisherman in his day, and you only have to mention the trout streams to start him off. Tarbox and Bailey suggested that he meet them at a certain turn in the road at 5 o'clock A. M. He would be there. They warned him that his age was telling on him, and that if he was not on hand he would be left. At five in the morning he was not there, and they started without him. A few minutes later he appeared, and they took him in. They reached the stream. Both the other men caught trout till eighteen or nineteen swelled their creels, but not a trout could the Col. get. He allowed that it was his hook, since he had strike after strike; and Mr. Tarbox opened his fly-book to the Col.'s service. But the results were no better. He could not catch a fish. The other men finally allowed that it was his advancing years telling on him—he is only about 50. He could not get started in the morning, and he had failed to catch fish. He will try the boys again.

Reports of good fishing begin to come in. From Lake Auburn in Maine some good trout have been taken. These trout are described as very handsome and gamy. They resemble the famous Swan Lake trout, from the lake of that name in Belfast. From Moosehead there are also reports of good fishing. Mr. O. S. Ham, of Lewiston, Me., writes his friend, Mr. Harry B. Moore, of J. E. Soper & Co., Boston Chamber of Commerce, that he went to Moosehead May 2, the day the ice was fairly cleared. With his guide he went to a camp up the lake about five miles above Kineo. He fished there one day, with the result of 23 square-tailed trout, the number weighing a trifle over 42lbs. He was satisfied with this string, and immediately wrote his friend to come on. But Mr. Moore will hardly take in Moosehead this spring. He hopes to make a trip to the Inglewood preserve a little later in the season.

There is another proof positive that the trout is on, though it is very early. A 14-pound laker, or togue, was shown in Dame, Stoddard & Kendall's window on Saturday. This big trout was 30in. in length. It was taken from Newfound Lake, in New Hampshire, a day or two before, by Mr. Samuel Wax, the Temple place confectioner. The card on the trout stated that it was taken on one of the Never-break rods of that firm.

Mr. Leroy S. Brown has a letter from the Inglewood Club preserve, stating that the ice left the lake on May 3, exactly the same date as a year ago. A large party of the Club members is fitting out to start on the 17th. A list of names will be appended later. Another party will follow a week or two later.

"Away Up North."

BROOKLYN, N. Y.—I was up after ouananiche as soon as the railroad was opened, in fact I went part of the way on the construction car. I think there is no game fish in the country equal to it, taking all things into consideration. I am much pleased with the papers "Away Up North," having been over most of the ground mentioned. Oh! that climb up from the Montreal River. But it pays. The writer mentions a guide from Mattawan, named Gus Pillou. I know of no better man in Mattawan for the purpose, only keep away from him the curse of the Red Man. He is a most thorough woodsman and strong wital, both in the canoe and on the portage.

[MEDICUS.

NEWS FROM FISHING WATERS.

CANADENSIS, Pa., April 30.—The fishing in the Broadhead and other streams in the immediate vicinity of Canadensis is better this spring than usual, which is probably due to the stocking done each year recently to a limited extent, coupled with the favorable natural conditions prevailing there. Messrs. Price Brothers, at their Spruce Cabin Inn extend a cordial welcome to fishermen and furnish comfortable accommodations, with livery if desired. Mr. Milton Price one afternoon last week caught 16 trout weighing 7lbs. But the large catches are not by any means confined to the natives, as a guest this week in a day and a half's fishing hooked 68 fish, of which he retained 40 of fair size, ranging from 6 to 11in., using the fly wholly. Canadensis is reached via Cresco, 106 miles from New York, on D., L. & W. Railroad. G.

ABBOT VILLAGE, Me., May 2.—The ice went out of Moosehead Lake Tuesday, May 1. F. S. BUNKER.

DINGMAN'S FERRY, Pa., May 1.—Two guests of the High Falls Hotel, Mr. Stebb and Mr. McCabe, of New York, fished Dingman Creek to-day from Adams's saw mill to Fulmer Landing, taking 40 and 30 fine trout, beauties, all nice size. Herman Lange took 17 handsome trout, also from Dingman Creek. The prospect is for good fishing. PHILIP F. FULMER.

P. S.—Two more of our guests have just come in, having fished over three miles—about four hours—and have brought in 12lbs.—40 fish. P. F. F.

FLAGSTAFF, Me., May 1.—In Kibby Valley the ice is out of all the small ponds, and by the third of this month will be out of Spring Lake. Being the largest lake in the Dead River region it is the last to open up. We are already taking trout from the small ponds on a fly. Last night the fish rose very readily to the red-ibis, and 9 were taken in one hour's fishing. A. B. DOUGLASS.

SUNAPEE LAKE.—The early fishermen at Sunapee Lake in New Hampshire were unusually successful. The ice, I am told, went out about April 18. A few days after there were caught at Blodgett's Landing, in three days' fishing, 42 landlocked salmon and trout weighing from 3 to 10lbs. each. Most of these fish were taken from the wharf, with live smelt for bait. I drove up to the lake and spent a day and a half, but it was very cold and rough, and I did not get a fish. A few fish were taken while I was there, as follows: One salmon of 8lbs., one of 7lbs., two of 6lbs. and a native trout of a little over 2lbs. Smelt seemed to be the only bait the trout or salmon would take. Several parties tried trolling, but only one fish, a trout of 4lbs., was taken. C. M. STARR.

WOODBORNE, N. Y., May 14.—Fishing is getting good, the stream has been high until now, the catches this past week are improving each day, trout begin to rise to flies. Eli Garrett has made the best catch, the trout averaging 4lb., filling a 12lb. basket. L. L. WALDORF.

NEVERSINK, N. Y., May 5.—George Sarvens and friend, stopping at the Neversink Valley House, caught on May 2 and 3 231 fine trout, and 56 good size, larger than have been caught for years past. James Dart and Stephen Harten from Brooklyn caught on Friday, May 4, 13lbs. of fine trout out of the Neversink River. GEO. SARVENS.

DINGMAN'S FERRY, Pa., May 5.—Mr. W. J. Stibbs, of New York city, fished May 1, 2, 3, 4 and 5, every day with splendid success—a basket full of handsome trout. Fished Dingman Creek and Indian Ladder Creek. All our guests are well pleased with the fishing. Streams all in fine condition for fishing. PHILIP F. FULMER.

Shad Take Worms, Flies and Grasshoppers.

WASHINGTON, D. C., May 2.—On Saturday last, while fishing with angle worm for white perch, about two miles above this city, in the Potomac River, we caught two large roe shad. My little daughter Mabel caught one which weighed 3½lbs.; the one I caught weighed over 4½lbs. They were caught fairly in the mouth as though they had taken the bait.

I have fished on this river for twenty years or more, and never before had a like experience, nor can I find any one who has had. I have always understood that shad could not take a bait of any kind, and when they come up stream to spawn they do not feed, as their stomachs are always found empty.

I will appreciate any opinion, or explanation you give me of this most curious act on the part of shad.

C. CORSON.

[Shad do not come into rivers to feed, hence they seldom notice any kind of bait; but in a few localities, notably Washington, D. C., and Holyoke, Mass., they have been captured with small and light-colored flies, like white-miller or white and ibis, dressed on hooks corresponding in size with No. 6 or 7 Sproat. In his report on the fishes of Lake Ontario, Dr. Hugh M. Smith, of the U. S. Fish Commission, notes the taking of shad with grasshopper bait in the St. Lawrence. The fish were supposed to have come from a planting of shad in Lake Ontario waters. He says: "In August, 1881, Mr. H. L. Matheson, of Oswego, New York, was fishing at that place for black bass. As an experiment he baited his hook with a grasshopper and cast his line from the shore of the island into the current, made somewhat muddy by a strong westerly wind. The bait was promptly taken, and to his great surprise a 3lbs. shad was landed. More grasshoppers were secured, and fifteen shad, weighing from 2½ to 3lbs. were taken in a few hours. On succeeding days, six, three and two fish respectively, were caught. Several other parties took one or two fish each in the same way." Mr. J. V. Sharp reported in these columns that he had seen shad take the fly in the James River, Va., the fly of medium size and bright color; on one occasion five roe shad were taken in an hour.]

Central New York Fishing.

ITHACA, N. Y., May 4.—Overflowing creels of brook trout are now reported from many parts of this and adjoining counties. These reports, however, are of only recent origin, the beginning of the season and the first ten days following having been marked by light catches.

Old fishermen declare the prospects for a satisfactory angling season on Cayuga Lake to be of the right sort, notwithstanding the notorious resistance to the enforce-

ment of the provisions of the law governing the hauling of seines, manifested by a certain contingent of citizens.

W. H. Miller, of this city, recently landed a 7½lbs. mas-calonge on an 8oz. rod, a feat not always easily accomplished, when the fighting qualities of Cayuga Lake mas-calonge are taken into account. M. CHILL.

The Pennsylvania Fish Protective Association.

No. 1,020 ARCH STREET, Philadelphia, May 2.—The American Fisheries Society will, by invitation, hold its next annual meeting in this city, at the rooms, No. 1020 Arch street, on Wednesday and Thursday, May 16 and 17.

There will be morning and afternoon sessions, at which papers will be read and discussions had on subjects of interest to our members, all of whom are invited to be present.

In honor of the American Fisheries Society a planked shad dinner will be served at 7 o'clock on the evening of the 16th inst., at Reisser's, Fifth and Minor streets, for which tickets—not transferable—will be issued free to members by the committee, at the Rooms on Thursday, Friday and Saturday, May 10, 11 and 12, between the hours of 4 and 6 P. M., and members so desiring can be accompanied by friends on payment of the cost per capita for the dinner.

Committee: Wm. H. Burkhardt, chairman, Henry C. Ford, Wm. P. Thompson, John Gay, Jas. H. Miller, H. C. Demuth, Edward Hagert.

American Fisheries Society.

THE annual meeting of the American Fisheries Society will be held at Philadelphia, at the rooms of the Society for the Protection of Fish and Game, 1,020 Arch street, on Wednesday, May 16. E. P. DOYLE, Sec'y.

Not Much Poetry, But Truth, Perhaps.

When the winter has departed and the river's free from ice,  
The angler gets his fish-pole and starts out to entice  
Some member of the finny tribe with enthusiasm great,  
Enough to be deluded into nibbling at his bait.

He gets him to some favorite spot, and then proceeds to plank  
Himself with circumspection upon the river's bank,  
And there he waits with patience from early morn till night,  
Never doubting if he perseveres that he will get a bite.

With drowsy expectation he sets and sets and sets,  
While the great world all around him with action fumes and frets.  
From a generous twist of pigtail a goodly hunk he gnaws,  
And dreamily inspects his bob and chaws and chaws and chaws.

What though empires disappear and vanish at a look,  
They're less to him than one good tug upon the cruel hook  
That into the wriggling worm he skillfully inserts,  
And heaves it back while placidly he squirts and squirts and squirts.

Far out into the turbid stream and seeks once more to rest,  
And not a wave of trouble rolls across his peaceful breast.  
And he seeks to lure the finny tribe with every known device,  
When the winter has departed and the river's free from ice.  
—Upton Department of the Otsego Journal.

TRAIN RACE FROM FLORIDA.

Fast Trip Over the Richmond & Danville from Jacksonville.

The keen rivalry between The Florida Central & Peninsular and Richmond & Danville, "The Florida Short Line," which now has the government contract for carrying the Southern Mails, and The Atlantic Coast Line, which formerly enjoyed that privilege, culminated in an exciting race between two special trains over those roads from Jacksonville to New York, yesterday. The Florida Short Line train winning by an hour and twenty-four minutes, despite a handicap of thirty-five minutes at the start. Both trains carried a large excursion party of Florida people. The Atlantic Coast Line train of 5 cars was scheduled to leave Jacksonville at 10 o'clock Thursday morning, and The Florida Short Line train of 7 cars pulled out at 10:35. The latter train reached Washington at 6:05 yesterday morning, and its rival at 7:20. The victorious train then sped to this city, and in making the time in less than twenty-four hours, broke the record between Jacksonville and New York.—New York Times, April 28, 1894.—Ado.

St. Bernard Club Meeting.

A SPECIAL meeting of the St. Bernard Club of America, was held at Madison Square Garden, New York, May 1. The following members were present. W. H. Woodin, J. S. Hoyt, J. Keavan, W. C. Reick, T. M. Burke, J. N. Churchill, C. A. Pratt, B. P. Johnson, Mrs. J. M. Nicholson, Mrs. A. M. Hughes, G. P. Wiggins, S. W. Smith, Daniel Mann, H. B. Turner, William H. Joeckel, Jr., Jas. A. C. Johnson. Meeting called to order at 8:20 by the President, Mr. Joeckel.

A proposition of Mr. Terry (of the Hempstead Farm Co.) to hold a show annually in connection with the Farm Co. and the other specialty clubs was submitted by Mr. Reick, and after being informally discussed was approved by the meeting and referred to the board of governors.

Communication from Mr. H. D. Johnson, of the South Bend Kennels, in regard to the special prize offered by the club at the Mascoutah Kennel Club, was read and referred to the board of governors.

The question of establishing futurity stakes to be decided at the next dog show of the St. Bernard Club, was taken up and discussed and the plan was approved and referred to board of governors for action.

In response to an invitation to address the meeting, Mr. Sydney W. Smith said he did not approve of writing down the dogs as had been done, but at the same time he would confess that he was a bit disappointed in some of the dogs. He advised sticking to a certain line of bitches and breeding from them as practiced in his kennels at home, the result of which was illustrated in Rustic Beauty. He cautioned intending purchasers not to place too much reliance on press notices, but rather see the dogs or have some one in whom they had confidence see them.

A vote of thanks was given Mr. Smith for crossing the ocean to judge for the club. Meeting adjourned.

JAS. A. C. JOHNSON, Sec'y pro tem.

## THE SPECIALTY SHOW.

May 1 to 4. Entries 390; Dogs Benched 333.

The members of the five specialty clubs under whose auspices the dog show in Madison Square Garden which closed last Friday night was held must feel proud of the result of their efforts. Probably never have the breeds benched been represented in this country by a better class of dogs. The management of the farm show was extremely liberal in the matter of prize money, the prizes being identical with those given by the W. K. C. Then the different clubs devoted to the breeds represented showed their *esprit de corps* with such an array of specials that it must have been a very unlucky specimen, indeed, that did not secure a piece of the spoils. Further than this the members entered their very best dogs, so that all that was requisite to chronicle a complete success was crowded aisles, which means a good gate. This part of the show, however, was somewhat of a disappointment, though it was quite noticeable that when the dog show commenced the building took on a more lively appearance than when the farm exhibits were the only attraction. The Farm show was something of an innovation and the New York public, being a peculiar people, wait for the bell-wether—society—to lead them. Once they hear the tinkle of social success the masses flock and make the occasion an excuse to see and be seen. Such was the experience of the horse shows and the W. K. C. dog shows, both of which have now secured the necessary popularity. The poultry show is in the transition state and the Farm show, the youngest venture, has just experienced the chilly reception that the others did at first.

The date selected was not the most propitious, for this is the ragged edge of the season, society is feeling *blasé* and sighing for the country and Europe, to which many of them have flown, and others are busy in preparation. Still, a goodly number of well known people dropped in from time to time, and the management, far from being disheartened at the prospect of a financial deficit, pluckily announce that both the farm and the dog shows will be repeated next year, and dates to this end have already been chosen.

There is little more to be said about the dog show than was told in last week's issue. The dogs seemed comfortable enough in the basement, and perhaps they were better off there during the extreme heat of the first two days than if they had been benched on the main floor. Still, the basement is a stuffy place at best, and with little air circulating, or ventilating conveniences, there was in some places a conglomeration of smells that was anything but agreeable at times. The first day a leakage of gas seemed to have a drowsy effect on some of the dogs, but this being early remedied and "Sanitas" being freely used, the dogs did not suffer. Spratts Co. did their utmost to hide the bare walls with their large enameled signs, and with electric lights at every turn the scene at times was quite a lively one, and the attendance during the last two days of the show was fairly good. Dr. Glover, as veterinarian, had little to do, as most of the dogs were in charge of their respective owners and kennel men, but as usual he was attentive to his duties, for he is one of the very few "vets" who have a just appreciation of their position and its responsibilities. Mr. Mortimer, as manager of the whole show, was a busy man throughout the week, and had his mind fully occupied with his executive duties, the conduct of which was very commendable. He instituted Mr. A. M. Hughes as superintendent of the dog show department, a position which the latter filled very acceptably, and with a little more experience he will no doubt be found an acceptable substitute for Mr. Read, if he cares to take it up. The judging was, with the exception of a couple of minor specials, completed the first day, and taken altogether there have been few shows where less fault was found with the judges' decisions. Some mistakes were made, of course, for no judge is infallible, and if the exhibitor would now and then review the situation calmly and "put yourself in his place," many an unkind thought would be left unsaid.

A number of prominent fanciers were present during the show, in fact nearly all whose names are to be found in the list of awards as well as a fair sprinkling of New Yorkers and others whose fancy turns to pointers and setters such as John S. Wise, A. C. Pickhardt, F. S. Webster, G. Musser, Arnolt, W. Tallman, John O. Sharp, Edward Brooks, of Boston; Warham Whitney, of Rochester, and F. C. Wheeler. Spratts Co. deserve credit for the way in which they benched the show, for in benching the St. Bernards they had to circle one end of the basement, no very easy matter; their feeding was as usual, good. The aisles were kept clean and the dogs well bedded with clean straw, and two rings were provided on the same floor for exercising purposes. Upstairs on the main floor five rings were set apart for the judging, that for the St. Bernards being the performing ring, where there was plenty of room to show them off. Spaniels and collies were a little cramped for room. Before concluding this part of our report a word is due to that good fancier Mr. Thos. H. Terry, who assumed so much responsibility in the affair. He was constantly in attendance and having fully recovered from his painful illness, he was able to enter into the enjoyment of the occasion with zest and courteousness undiminished by the halting public, and that his efforts will meet with better appreciation next year is, we are sure, the wish of all of us.

## St. Bernards.

Sidney W. Smith, Judge.

Although there were only 81 entries altogether in this breed, Mr. Smith, who came across the sea to judge, must feel pleased to know that he had the best we have this side of the Alleghenies pass before him. The occasion must have been a pleasant one for him in that he met, once more, several four-footed friends whom he knew so well when on the other side—such as Rustic Beauty, whose curls he seemed to wonder at, though Arthur Trickett had her looking better than ever before; Scottish Leader, Eboracum, Florette, Sunray and Sir Bedivere, whom he never expected to see looking so well and hearty—nor did any one else for that matter. In challenge rough dogs four trooped into the

ring, but there was nothing to touch Sir Bedivere for first, for he looked as well as we ever saw him, in fact, livelier and more active than when he was first shown here, and the question was which should come second. This honor fell to that genuine dog Kingston Regent, who was looking really well, Albany already having had a beneficial effect. This is, we believe, Mrs. Nicholson, his owners's nearest approach to challenge honors, and she felt correspondingly proud of her new purchase. Oros took reserve over Altoneer, though the latter lost no friends by the decision, the latter scores very much in head and quality and type, and is a good all round dog, losing only to Oros in size and coat. In bitches (4) Rustic Beauty won over Lady Livingston, beating her in head and forelegs, though losing in color and flatness of coat. Between Sunray, reserve, and Miss Anna it must have been close work, the latter's sweet quality offsetting to some extent Sunray's better bone and size, but the latter as she gets older improves in expression and head. Miss Anna never looked better.

Rough open dogs (23), two of which, Lord Dante and Grand Master, were absent, saw Eboracum the winner, followed by Demetrius, who has a good type of head; might be better in forelegs; good body, though not yet furnished; better behind than his sire, Kingston Regent, but was not in proper show condition, being short of coat. Ardmore, third, might well have taken his place; he has a better head, better bone, excellent coat, and was well shown. Roland, Jr., our opinion of whom is well known, was correctly placed; he lacks the type and quality of the others. Imperator, reserve, runs him close, a handsome dog, who with less stop and more depth of muzzle, a little more rib and truer hocks would be a good dog, as he was in the pink of condition. Wach Erdman, vhc., was third at New York and Newark; he is houndy-headed and light in rib, not much type. Ashland Jumbo, also vhc., should be deeper and squarer in muzzle, but has a very fair head, excellent skull, shows lots of type, but has not filled out much in body since the fall; another year will improve him. Vindex, hc., good-headed

flatter, nice quality. Princess Enlalie, the W. K. C. puppy winner, third; nice body, coat and legs, head small, but fairly well shaped, nicely marked if it had a better defined blaze. Kingstonian Gloria, reserve, was too high and big, muzzle not square enough, shows some quality.

The struggle between Sir Bedivere and Alton, Jr., provoked some interest, but the decision went to the rough dog, body and hindlegs being better, though the smooth has the advantage in skull and depth and squareness of muzzle.

Mr. Smith judged with consistency all through, and his decisions were well received; the results differing little with the placings made by some of the home judges.

## Collies.

R. McEwen, Judge.

This was Mr. McEwen's first appearance in the ring in this capacity and that he acquitted himself well, on the whole, was, we believe, the unanimous verdict. The quality of the dogs shown could not be excelled in this country, and as many of the winners have so recently appeared at the several shows it is not necessary to go into any lengthy criticisms. Sefton Hero, Wellesbourne Charlie and Roslyn Wilkes was the order in the challenge dog class, Hero scoring his first challenge ribbon; he was looking well, beating Charlie in cleanness of head and coat. In bitches Charlton Phyllis won right, getting it in size, coat, length, cleanness of head, her ears might be better shown—she pricks them at times. Jakyr Dean, second, loses to Luella in expression and somewhat in shape of head, but is better in ears, the latter's being a trifle heavy, and she is short of coat.

In open dogs (14) Christopher, Gold Dust, Woodmansterne Trefoil and Conrad II. was the money order. Christopher was well shown and Gold Dust also looked better than before, with a good mane and frill; his head is improving with age and will do to thicken a little more in skull. Trefoil was looking in great shape, his coat is of excellent texture, and taking him all round there are few to beat him, and no mistake would have been made if he had been second, considering Gold Dust's faulty hind parts and loin, and in his present condition he gives Christopher a close rub. Conrad II. made a good fourth; he strikes me as getting a little strong in head now; he was in fair coat. Hempstead Rex, reserve, was at Philadelphia. Prince Wilkes, vhc., deserved his letters; he is too strong in head and heavy in ear to cope with the winners. Fifeshire Mark, vhc., has a fairish head, but is flat in ribs and short of underear. Old Bendigo was looking well but is showing his age. Blizzard and Rhoderick Dhot are well known. Hempstead Trefoil was absent.

In bitches (17) the quality dropped a little, first going to that sweet bitch Hempstead Dorothy, that swept all before her at the W. K. C. show; she, however, was not looking as well as when shown then; she is a well made bitch, and if she holds her present head will do lots of winning. Lady Fidget came next, with Glen third; she carries her ears well and has a fairly good head. Flora May was fourth, she is a little sharp faced, coat soft and short. Lillikulani, reserve, I did not see. Ormskirk Dollie, vhc., is a sweet headed one, does not stand true in front. Lassie was at Detroit, and Hempstead Bess and Ormskirk Julia were at

Philadelphia. Minnie Sefton, hc., is a pretty headed bitch, full of quality with well carried ears, small and light of bone. Princess Wilkes, like her mother, is heavy in ears, also light body, fair otherwise. In dog pups (10), four absent, first went to Hempstead Rex, pressed close by Cragston Discretion, the rather coarse headed Boston winner Douglas getting third; he excels both in denseness of coat, but the others beat him in cleanness of head. Seminole Amazement, reserve, is faulty in hocks, strong in skull, fair coat and condition. Hempstead Con I could not find. Richmond Scott is heavy in ears and poorly carried, too full in brow and skull. Hempstead Dorothy, Lassie and Hempstead Bess were the winners in bitches. In novice dogs (6), the judge made a slip in putting Hempstead Rex first and Conrad II. third; their open class positions being reversed, though in this class Cragston Discretion separated them. In bitches, Lady Fidget, Gem and Flora May was the order and most of the others have been commented upon. In smooths first went to Bluebelle, who beats Hempstead Maid in condition, head, ear and body. Blue Light, third, is wide in skull and cheeky, and faulty in ears. The bobsails were Herdman II. and Lord Mayor, both out before.

## Fox-Terriers.

R. F. Mayhew, Judge.

The different classes could not have been filled with better quality, as all the well known animals were there, and the judge had no easy task, and although he let one or two pass him his work was, on the whole, well done. The principal kennels took most of the spoils. In challenge dogs Blemton Victor II., Starden's King, Warren Safeguard and Ripon Stormer was the order, with Dusky Trap bringing up the rear. They were all put down in excellent shape, especially the three winners. In bitches Miss Dollar added another to her score, but Warren Captious must have run Dona very close for second money.

In open dogs (12) the winners are well known. Blemton Rasper, an all white dog, is soft in coat, a bit faulty in stop and brow and a little more rib would improve him; a nice terrier, though, all round. Beverwyck Royalist I think has the better head, but needs time yet to come to his feet. Arrandale Mixture, third, has been repeatedly written up; he was well shown. Blemton Stickler is another well known face; he should be flatter in skull. Reserve went to Warren Layman and vhc. to Warren Tip Top, a bit heavy in front. The others deserved their letters, though Warren Daysman, c., should certainly have had more; his good front offsets a rather long body; his skull should be flatter.

In bitches Dusky II., Blemton Vigil, weak before the eye; Warren Duty, who take her all round, beats the latter especially in body and expression, and Blemton Vindex were the money winners, and have faced the judge before. Beverwyck Twilight, reserve, was at Boston; she is young yet, and her skull has not shaped down. Verdict, hc., is an old time winner. In dog pups there must have been some change after the awards and ribbons were given out. Hillside Domino

C. A. PRATT'S SIR BEDIVERE. (LATEST PHOTOGRAPH.)

dog that he is, loses so much in hind parts and coat. Pontiff II. shows a good deep head, which more stop would improve; a little light in pasterns and faulty behind; good body, color, markings and leg bone; should have had another letter at least. In bitches Swiss Mountain Kennels were again victorious with the typical Florette, who was well shown. Royal Duchess, second, is a nice sort, beaten in coat and pasterns by the other, coat should be flatter. Mascot Bernie runs up close; she shows lots of quality; a little straight-faced, but good otherwise; she is well known. Countess Madge, sterling good bitch as she is, must always lose on account of her too white face; she is the best in shape of head in the class; she showed a lameness in the ring. Miss Amanda, vhc., has beautiful markings, a nice quality bitch, well deserving of her card. Alberta, hc., deserves her letters, though plain-faced, and as to Princess Wang, hc., more stop, flatter coat, more size and smaller ears would improve an otherwise fair bitch. In dog pups Lord Ripon, first at Boston, won. The other prizes were withheld. In bitches the well-known Madame B was alone.

Smooth challenge dogs saw Melrose King the winner, for his only opponent, Scottish Leader, was lame, having been injured in transit; he was also looking a little light in body, this will be reversed probably when they meet again, as Leader gets it in bone, legs, size and depth of head and true coat. Empress of Contocook and Miss Alton fought it out again and the Boston decision was upheld; both were well shown. In open dogs (9) of course Alton Jr. had things his own way. Plinlimmon V. coming second, some distance behind, rather plain faced, lacks shadings, fair bone, good body, faulty tail, but a true smooth; Patrol, well known, runs him close. Romeo II., fourth, has a rather long, homely head, but deep, square muzzle, broad blaze and almost white body, good bone. Victoria Collin, vhc., gets his tail up and is a bit straight behind, rather bitch-headed, but nice quality. In bitches (8) Lady Alton won this time, second going to the equally well known Sunol, who was well shown. Pandora, third, a very nice bodied bitch, good legs, head like her mother's, Cleopatra, long, homely and narrow, but deep and otherwise well shaped. Bellegarde, fourth, was rightly placed. Neither of these bitches has the right type of head, Bellegarde being too much on the bloodhound order; she is well known; Miss Olive, hc., deserved her letters, and Donna Marie might have been mentioned, for, barring head, which is homely, she is nicely shaped, and shows quality. Scottish Ruby and Lady Judith were absent. In dog pups (4), Emperor of Contocook won, the others not being deemed worthy of recognition. In bitches (3), Minka, second at the W. K. C. show, won over Virgie of Contocook. Both had gone when I came to their stalls. Third was withheld. In novice dogs (12) the winners have all been commented on. Among the mentioned ones, Nero D. is faulty in ear and hindlegs. Percival is also faulty in the latter respect; Duke Barry II. has not the best of dispositions and I could not handle him. In bitches (6), three absent, Pandora was first. Princess Hepsey, second, coat should be

**BULLDOGS.**—Best kennel, Woodlawn Park Kennels. Best Pair, His Lordship and White Venn. Best dog in open or novice class, His Lordship. Best bitch ditto, White Venn. Best puppy, Rustic King II. Reserve, Juno. Bulldog Club Medals—Best American bred dog, Handsome Dan. Best bitch ditto, Juno. Best American bred puppy, Rustic King II. Best dog or bitch owned by a non-member, Romany.

## AMERICAN KENNEL CLUB MEETING.

The regular quarterly meeting of the American Kennel Club was held at Madison Square Garden, May 3, Vice-President Thos. H. Terry in the chair. Present: Associate members, Thos. H. Terry, Dr. H. J. Foote, Col. J. D. Shotwell; Mascoutah Kennel Club, C. F. H. Drake; National Beagle Club, H. F. Schellhaus; New England Kennel Club, Edward Brooks; New Jersey Kennel League, Edwin H. Morris; Pacific Kennel Club, James Mortimer; Rochester Kennel Club, Warham Whitney; Southern California Kennel Club, James Watson; St. Louis Kennel Club, J. M. Taylor, Washington City Kennel Club, F. S. Webster; Westminster Kennel Club, H. E. Cromwell.

The minutes of the last meeting were read and on motion approved. The following credentials were read and on motion accepted: Rhode Island Poultry Association, H. S. Babcock; Washington City Kennel Club, J. Henry Gullick; Brunswick Fur Club, N. Q. Pope.

The secretary read his report, as follows: GENTLEMEN—We have had the following applications for admission to membership filed since the regular meeting in February last: March 17, 1894, Louisville Kennel Club, of Louisville, Ky.; April 20, 1894, Alameda County Sportsmen's Association, of Oakland, Cal. These clubs have complied with all of our requirements and are eligible to membership, and your secretary would respectfully recommend their admission.

The following resignations have been received and are herewith submitted: March 6, 1894, Burlington County Agricultural Society, Mt. Holly, N. Y.; March 27, 1894, Central City Kennel Club, Jackson, Mich. Neither of these clubs are in good standing, both being in arrears for the annual dues, which were payable on or before Jan. 1, 1894. I would, therefore, recommend that they be dropped from the list of membership for non-payment of dues.

Credentials have been filed by the Rhode Island Poultry Association, naming Mr. H. S. Babcock as its delegate; the Brunswick Fur Club, naming Mr. N. Q. Pope as its delegate.

The Des Moines Poultry and Pet Stock Association respectfully requests this club to consent to its change of title to that of the Des Moines Kennel Club, and asks that the change be made upon the records of this club accordingly. I would recommend that the request be granted and the records amended.

Agreeable to the resolution adopted at the last meeting of this club in reference to the admission of the Philadelphia Kennel Club, I have to report that the secretary of said club forwarded a letter to the effect that the late resignation was due to a misunderstanding and confesses their error in the action they then took. They express their best wishes to the American Kennel Club and are glad to be once more included in the list of members. This communication was forwarded to the vice-president, Mr. Terry (President Belmont being absent in Europe), and the same was officially accepted by him as being in full accord with the spirit of the resolution adopted by this body at the February meeting.

Charges have been referred by George R. Preston against Edwin H. Morris. Mr. Preston has complied with the rules and I would recommend referring same to the advisory committee, as is the usual course.

A communication from the Pacific Kennel Club has been received informing us of the expulsion by it of E. P. Schell, who was found guilty upon his own confession of dishonorable conduct in the sale of a dog and giving a fraudulent pedigree of said dog. They ask of this club to take such action in the premises as it may deem proper. Mr. W. L. Washington has lodged a complaint against the Akron Poultry and Kennel Club for the non-payment of prizes at its late show in December, 1893.

The following prefixes have been applied for: Richard W. Wainwright, for the prefix "Pine Crest," R. P. Sherman for the prefix "Crest," A. Alton Smith for the prefix "Al De Ber," Wm. T. Ford for the prefix "Wilford," Wm. R. King for the prefix "Waterloo," George Wm. Lang for the prefix "Woodlawn."

We have a communication from A. C. Bradley referring to special prizes offered at shows; as it is not an official appeal it cannot be specially reported upon by me, but the same can be called for at this meeting if thought best, so that a ruling may be made to cover future cases of a similar nature.

A. P. VREDENBURGH, Sec'y.

The treasurer read his report, which is as follows: GENTLEMEN—I herewith beg to submit my quarterly report of all moneys received and disbursed by me during the year 1894:

Balance on hand Jan. 1, 1894.....\$4,815.82

Receipts from all sources to date.....3,007.75

Disbursements for same period.....\$5,883.57

Balance on hand.....\$2,932.58

The following clubs are still in arrears for 1894 dues, final notice giving thirty days for the payment of same having been duly sent as directed at the February meeting: Municipal Kennel Club, Illinois; Central City Kennel Club, Michigan; Pennsylvania State Agricultural Society, Burlington County Agricultural Society, Elmira Kennel Club, Seattle Kennel Club, German Mastiff Club, Central City Kennel Club, Androskoggin Kennel Club. A. P. VREDENBURGH, Treasurer.

The report of the stud book committee was also read, as follows: GENTLEMEN—The business transacted by the stud book committee since the annual meeting has been almost entirely confined to routine work, calling for no special decisions.

The committee has at present a great deal of correspondence regarding pedigrees of dogs owned and bred by certain San Francisco breeders. The matter is, we understand, liable to come up in another shape before the club, and it has been thought well for the stud book committee to make the report. So many contradictory statements appear in the correspondence that it looks very much as if all parties were equally blamable for deception and fraud, the fact of there being fraud not being contradicted.

JAMES WATSON, Chairman Stud Book Committee.

The same was accepted and placed on file. The report of the advisory committee was read, accepted and placed on file. It is as follows: Meeting of advisory committee held May 3, at Madison Square Garden at 2:30 P. M.—Present: Messrs. Terry, Cromwell, Taylor and Brooks.

J. B. Martin vs. George Bell, re misconduct in connection with dogs.—Ordered that George Bell be and is hereby disqualified for the term of one year from this date, the committee having found him guilty of misconduct.

H. W. Huntington vs. N. Y. and N. E. Kennel Club, re failure to pay prizes.—Ordered that the officers and members of the dog show committee be and are hereby granted thirty days within which to disprove the charge or pay such prizes, in default of which they shall stand disqualified until such prizes shall be paid.

New Jersey Kennel League vs. Dr. L. W. Sattler, re misconduct in connection with dogs at the N. J. Kennel League show.—Ordered that Dr. L. W. Sattler be and is hereby disqualified.

Edwin H. Morris vs. Danbury Agricultural Society, re violation of dog show rules.—Ordered in consideration of resolution adopted at meeting of Oct. 27, 1893, the above charges are dismissed, and the forfeit deposited by Morris be returned.

A. P. VREDENBURGH, Sec'y.

The applications of the following named clubs for membership were read, and on motion duly accepted: The Louisville Kennel Club, of Louisville, Kentucky; the Alameda County Sportsmen's Association, of Oakland, California. The resignations of the Burlington County Agricultural Society and the Central City Kennel Club were read. It appearing that these clubs are not in good standing by reason of arrears in payment of dues it was voted that said clubs be dropped from the roll for non-payment of dues.

The request of the Des Moines Poultry and Pet Stock Association for a change of title to that of the "Des Moines Kennel Club," and that said change be made upon the records of the club, was on motion granted.

The following letter received from the Philadelphia Kennel Club was read:

A. P. Vredenburg, Secretary American Kennel Club: Yours of the 26th inst. received. We are pleased to be again enrolled as members of the A. K. C., as we are now fully aware that we resigned under a misunderstanding and frankly confess our error. As to the letter written by Mr. Brown while president of the club, we know nothing. The only letter we know anything about is the one by Mr. Brown which appeared in the sporting papers and bore his own signature. Mr. Brown as an individual had a right to write anything he saw fit, and of course the club is not and was not responsible for said letter. Mr. Brown is no longer a member of the club, and the officers are entirely different. We have only the best wishes for the A. K. C., and are extremely sorry to hear that there should have been any misunderstanding. Trusting that this explanation will be satisfactory to the officers of the A. K. C., I am yours very truly, Geo. D. B. Taylor, Sec'y.

Mr. Brooks—I move that the letter be accepted and that the Philadelphia club be admitted to membership. Carried.

THE SECRETARY—The next business in order is the charges preferred by George R. Preston against Edwin H. Morris. Charges of this kind are usually referred to the advisory committee for consideration and action.

Mr. MORRIS—I object very strongly to the matter being referred to the advisory committee. It is a trumped-up charge and can be disposed of in a very short time.

Mr. SCHELLHAUS—So long as Mr. Morris is not penalized in any way pending the investigation of the charges by the advisory committee, I move that it take the usual course and be referred to the advisory committee. Motion seconded.

Mr. WATSON—Could not the advisory committee grant Mr. Morris's

request and decide the matter right here, say after the adjournment of this meeting? I move as an amendment to the motion that the matter be referred to the advisory committee for immediate action.

The matter of the communication from the Pacific Kennel Club concerning the expulsion by it of E. P. Schell for dishonorable conduct in the sale of a dog, being next in order, Dr. Foote moved that the action of the Pacific Kennel Club be endorsed by the American Kennel Club. Motion seconded.

Mr. SCHELLHAUS—I move that Mr. E. P. Schell be suspended, and that the secretary be directed to notify him that unless he puts in a defense within thirty days said suspension will merge into a disqualification. Motion carried.

Mr. VREDENBURGH—As a member of the committee on rules, I must differ somewhat with Mr. Watson, who is also a member of that committee, and I desire to ask for an interpretation of that rule. I should like to have it interpreted at this meeting. I am quite clear in my own mind that the word "expulsion," as used, means expulsion from a club. I know it was my idea, because we had before us another case where a man had been expelled from a club, and it never reached us officially. If a man is guilty of misconduct to such an extent that his own club expels him, it ought not to rest right there, because that would amount to nothing. The Brooklyn Kennel Club might expel a man for dishonorable conduct. That same man who was not good enough for the Brooklyn Club to associate with can come right over here and show his dog in the Westminster Kennel Club show. If a man is to be disciplined by his own club, that club ought to protect its sister clubs from this man, and I am very clear that that is the reason this went into these rules.

Mr. BROOKS—Why does not Rule 9 cover the whole question? An expulsion by that club is a disqualification under the American Kennel Club rules. It comes under the special rules for holding shows.

Mr. WATSON—I have always been opposed to that rule. I don't think we ever had a discussion about it, and while the secretary may have had it in his mind, I do not think it was the intention. Some time ago I was a candidate for membership in the Philadelphia Kennel Club. They wanted to expel me. I had never qualified as a member, but I was to be expelled because of my effort to have the National Breeders' show. I was to be disqualified by that club. Under the rules there was a squabble between myself and the club, and I thought it was going a great deal too far. These rules are to a great extent doubtful. There was only one thing intended to be put in them in the premium list. The other part was entirely for club information. The object of our putting this rule in was to simplify things. Rule 24 says: "No person under sentence of suspension or sentence of disqualification can exhibit or take a prize." That is a dog show rule. I am rather sure that I incorporated the word "expulsion" in the rule thoughtlessly.

MAJOR TAYLOR—Do you mean to say that if one club suspends a member that man can show in any other club? If he has done anything dishonorable in connection with dogs, then we can disqualify him; but if he has simply done something that is objectionable to the club, that is another thing.

Mr. BROOKS—I move that Rule 9, under the regulations governing clubs holding shows under the American Kennel Club, be interpreted to mean that a person expelled from a club a member of the American Kennel Club can be employed in any official capacity, or exhibit or take a prize, or act as an agent for an exhibitor, pending an appeal to the American Kennel Club.

Mr. WATSON—If a man has done anything outside of his own club, then he can be suspended; but because there is a row in his own club and he is expelled, and it has nothing whatever to do with dogs, I don't see how he can be expelled.

Mr. VREDENBURGH—I think it would be well for the chair to make a ruling on this point and let the delegates appeal from it or ratify it.

THE CHAIRMAN—The chair rules that under American Kennel Club rules expulsion by clubs, as stated in Rule 9, shall mean under suspension, pending appeal.

Mr. WATSON—I appeal from that, because that is simply a rule governing the club. It is a duplicate rule placed in the dog show rules for the benefit of all exhibitors. Those dog show rules were all that were intended to be put in the premium list. It was duplicated again in the rules governing clubs holding dog shows, in order that the clubs might understand and have it for their own guidance. In the rule governing shows there is no reference to the word "expulsion."

Mr. VREDENBURGH—On appeal the vote means to sustain the chair, and I resist this against the roll. The roll resulted in the following vote: Messrs. Stevenson, Oldham, Foote, Shotwell, Drake, Brooks, Morris, Whitney, Major Taylor, Mr. Cromwell, yes. Mr. Watson, no. The decision of the chair was sustained by 10 in favor of 1 against.

Dr. FOOTE—Cannot that be introduced as an addenda under Rule 9? Mr. WATSON—I would like to see the chairman for further information as to the interpretation of Rule 9 goes?

THE CHAIR—He is not disqualified. He is under suspension pending appeal. A man under suspension cannot show a dog.

Concerning the complaint filed by W. L. Washington against the Akron Poultry and Kennel Club for non-payment of prizes at its December show, the secretary stated: The rule gives me the right to suspend that club, but then it is reported at the next meeting, and if the prizes have not been paid, the club can be disqualified. I have not taken advantage of the authority the rule gives me. I desire to bring the matter to a club before taking any action.

Mr. CROMWELL—I move that unless these prizes are paid within thirty days, the club be disqualified. Carried. The following prefixes were granted: Richard W. Wainwright, the prefix "Pine Crest," R. P. Sherman, the prefix "Crest," A. Alton Smith, the prefix "Al De Ber," William T. Ford, the prefix "Wilford," William R. King, the prefix "Waterloo."

On motion the prefix applied for of "Woodlawn" by Mr. George William Lang was not allowed because that prefix is already in use.

THE SECRETARY—I have a communication referring to special prizes offered by the Philadelphia Club. It is not before the club unless the club desires to reconsider.

Mr. SHOTWELL—I move that the matter be not considered at this meeting. Carried.

THE SECRETARY—I have a set of rules that are submitted which are to govern the stud book registration. Mr. Watson, chairman of the stud book committee, in connection with the acting secretary of the club, held a meeting last week, and the question was very thoroughly considered, and these proposed rules are the result. They are as follows:

Rules proposed to govern stud book registration: 1. A dog is eligible for registration in the A. K. C. stud book under either of the following conditions, (a) if it has a full pedigree for three generations, or traces to a registered dog when the pedigree is not so extended; (b) if it has won two first prizes in open classes at a recognized show.

2. No change in a dog's name shall be permitted after it has been published in the annual volume of the stud book.

3. In the event of change of ownership a dog may be entered in a subsequent volume of the stud book, but a new number shall be assigned to it, reference being made to the old number and volume in which the dog was registered.

4. No list of awards shall be given in connection with a registration, except in the case of a dog only eligible under condition 2 of rule 1, in which case reference shall be made to that fact and the dog's wins necessary to entitle him to registration shall be quoted.

5. No kennel name shall be given as owner or breeder of a dog unless such name has been registered with the American Kennel Club. The right to be considered the breeder of a dog remains always with the indenture or partnership owning the dam at the time of her being bred.

Mr. CROMWELL—I move that the secretary be instructed to have these proposed rules printed and sent to the delegates for consideration, and for action at the next meeting.

Mr. MORRIS—I have a communication from the committee of transportation. I beg to hand in petitions which I have had signed at different shows, and I think it is now in order for the secretary of the club to send them to the Trunk Line Associations. I think, if Mr. August Belmont is a member of that Association, it would be desirable to let him take it or ask him to support it before the Association. In the event of this not being successful, I have another course to suggest.

Mr. MORRIS—I have a communication from the chairman, Benjamin Lewis of misconduct in connection with dogs. This refers to the Duke of Wellington and Leo B. substitution case at Boston show. On motion the same was referred to the advisory committee.

On motion the clubs stated to be in arrears of dues for 1894, Minneapolis Kennel Club, the Illinois Kennel Club, Ohio Field Trial Club, Akron Poultry and Kennel Club, Pennsylvania State Agricultural Society, Burlington County Agricultural Society, Elmira Kennel Club, German Mastiff Club, Central City Kennel Club and Androskoggin Kennel Club, were dropped from the roll. Meeting adjourned.

Mr. A. C. Wilmerding, the popular president of the Spaniel Club, intends visiting England, sailing on June 6. While there he will contrive to meet the leading spaniel men, and we bespeak for him a cordial welcome from his fancier cousins on the other side.

Mr. A. M. Hughes was presented with a purse by the exhibitors at the Specialty Dog Show. Mr. Wilmerding made the presentation speech and Mr. Hughes was too astonished to say more than thank you.

## Judges' Troubles.

Editor Forest and Stream:

As a reporter of a Western paper has seen fit to condemn many of my decisions given at dog shows lately, and set himself up as an oracle, let us see how far he is qualified for the position. This is the party who was down as judge of English setters at the late New York dog show, and who handed out the ribbons in such a mysterious manner. Of the many reasons assigned by the spectators for the ribbons going where they did, none, in my hearing, attributed the reason as being owing to the merits of the dogs for the positions. Where exhibitors have a standard to go by, the animal filling the standard, most closely ought to be entitled to first position, and the one filling it next best to the second place, and so on, as they approach that standard of excellence—or otherwise, it being the duty of a judge to place them so. Were they so placed at New York, or what resemblance did the four prize winners bear to each other? None, any further than that of being dogs. Had he paid as much attention to legs in New York as he did to forearms at Boston his report of the New York show would have been more lengthy. In the bitch and puppy classes the winners were equally as unlike as in the dog class, no two winners being of one formation or type. He must have judged them by his own preferences, or by some field trial type, of which no two are of one size or formation, no more than field trial handlers or judges of field trials are. Unfortunately this method of judging often leaves some of the best specimens in the class entirely out of the money, as was the case at New York.

My next meeting with him was at Detroit, where he sat so constantly and watched so minutely at a table in my ring during the entire time of judging, giving earnest attention as if he were trying to learn something. I thought he had succeeded in just picking up a little knowledge, as at Chicago the following week, in what he claimed to be by far the best class of English setters shown this season, he placed the reserve bitch first in challenge class, the winning bitch at Detroit not being shown there although in the building on the way to another show. The dog which was first at Detroit won also first at Chicago, the third at Detroit being second, and the second at Detroit and third at New York being reserve at Chicago.

In the bitch class the second prize winner at Detroit was winner at Chicago, the Detroit winner being absent, and the winner of third at Detroit also held the same position there. The winners in Detroit, where I acted as judge, did remarkably well under him, and the following week in what he declared was "much the best show of English setters of the season," but what I considered, with a few exceptions, the most ordinary and ragged lot of dogs I ever saw shown in an English setter class of equal numbers, for sharp-nosed, yellow-eyed, prick-eared, curly-coated, sickle-tailed specimens were numerous enough.

I next met him at Boston, where he again took his seat by my table—no other place in the show had any attractions for him. Quietly and attentively he sat as any diligent student would, and after the judging of foxhounds had been completed, merely remarked that they were correctly judged. I said I thought they were, without asking who told him, and he had attended to his duties so closely and earnestly, I thought to encourage him as any attentive student ought to be encouraged. Through the excellent services of a most efficient steward I was enabled to finish my classes, specials included, before the evening, a thing he seems to have forgotten, and as his report of my classes has appeared, it may not be out of place for me to say a little also.

In English foxhounds I did not jump from one type to another as he asserts, both Rosemary and Winsome are typical English hounds—he fails to mention anything about the condition of Denmark. Any person who can fly from Antonia to the Earl, and from the Earl to Netherwood Nymrod, is scarcely competent to mention the word type, as they bear no resemblance to each other in any particular. The American foxhounds were an excellent lot, mostly strong and hardy looking and the winners bore strong resemblance to each other, a great improvement over former shows.

In English setters, which he describes as not of the best, several of which, although owned in or near New York, and which had not been shown there, could scarcely, in his opinion, be of the best. In my opinion I never saw as many typical English setters shown in any class of that breed heretofore—it was a treat to the lover of an English setter to look at the similarity of the four prize winners in the open dog class.

With the material shown at Boston, no fears need be apprehended of the decay of the English setter. More than a dozen good dogs were in the open class alone, and the bitch class was also quite equal to the dogs. But how it came to be badly handled, as he asserts, his criticisms, foolish as they are, fail to show. How does he know the award went to Blue Nell wrongfully over Beatrice? Any one claiming to be an authority on setters surely ought to have some record as an owner or breeder to show for his knowledge or how it was gained. Good loin, forearm, legs and feet can be easily found on a mule, but the head, eye, neck, general quality and outline of a Blue Nell never. If Countess Zoe was clearly the best bitch in the class, certainly the one most resembling her ought to be second, and that Albert's Moll was so cannot be denied, in my opinion.

His criticism of Monk's Nun is amusing, if she is not cow-hocked she is close to it. Blue Jenny is only fair on forelegs, and in the next sentence is good in legs and feet; such criticisms must be full of interest to intelligent readers on sporting dogs. But with all his adverse criticisms of the English setters at Boston he fails to show wherein they were not of the best quality; the absence of the brass-eyed, curly-coated, foxy-faced, sickle-tailed animals probably surprised him, who is so accustomed to looking at that kind and not being accustomed to seeing typical English setters often. Before again accusing any one of wrongfully giving prizes to dogs would it not be well for Major Taylor to glance over some of his own decisions and consider.

JOHN DAVIDSON.

MONROE, Mich.

## Red Cocker.

Editor Forest and Stream:

I beg to differ with your correspondent "Red Cocker" in FOREST AND STREAM of April 7, regarding red cockers being "almost invariably higher on the legs and much straighter than the black ones." There are certain spaniels now being exhibited as cockers, but in reality cross-bred fields and cocker spaniels; with crooked legs, low at that, long bodies and some of them with large heads, red and black in color. We saw in this city a red dog sire, by champion Red Jacket out of Brantford Bonita, but his legs are far from straight and he is very low. I am a great admirer myself of red dogs, but I think we have too many useless cockers at the present day.

Isn't this what "Uncle Dick," Dr. Niven and others have done so much writing about? I have a black dog by Victor out of May Brant with as straight a leg as any red dog or bitch "Red Cocker" can produce; and I think he is mistaken about red dogs being "almost invariably higher on the legs and much straighter than the black ones."

BLACK COCKER.

OMAHA, Neb., April 16.

There were few sales made at the show. C. M. Nelles sold his well-known red cocker bitch Golden Rod to Mr. Hector de Castro, of New York, for \$75, and took several orders. Andrew Laidlaw also sold several puppies for future delivery. Mr. Frank F. Dole bought the bulldog Clinker, reserve in novice class, from Mr. Sackett.

DOG CHAT.

Louisville Dog Show.

The entries for the Louisville Kennel Club dog show, received too late for our last issue, number 546, as follows: Beagles 16, black and tan terriers 5, Boston terriers 2, bulldogs 9, bull-terriers 19, Chesapeake Bay dogs 2, cocker spaniels 17, collies 27, dachshunds 4, deerhounds 2, English setters 60, field spaniels 2, foxhounds 37, fox-terriers 69, great Danes 6, greyhounds 17, Gordon setters 9, Irish setters 24, Irish terriers 7, Irish water spaniels 2, Italian greyhounds 9, King Charles spaniels 2, mastiffs 14, miscellaneous 8, Newfoundlanders 8, pointers 50, poodles 14, pugs 29, Russian wolfhounds 17, St. Bernards 43, Scotch terriers 3, Skye terriers 5, toy terriers 1, Yorkshire terriers 7, whippets 1; total, 546. Considering the time of year and the distance from the head centers of dogdom, the above entry is exceedingly good, and the club must be congratulated upon their good fortune. At the same time there is a good deal of dissatisfaction among exhibitors in the East, as they made entries under the impression for which the club is responsible, that some special arrangements would be made regarding their own and their dogs' transportation to the show. From what we can learn little has been done in this respect, and several entries will remain at home. Still, the entry is sufficiently large and of such quality as to promise the best show ever held in the South, if we except Richmond in 1888.

We have received the second volume of Rawdon Lee's work on "Modern Dogs." This is devoted to the non-sporting division, with the exception of terriers, which will be treated in another volume. The work is profusely illustrated with excellent wash drawings of dogs denoting the different breeds, by R. H. Moore and Arthur Wardle. The early history of the different breeds will prove very interesting both to the veteran fancier and the novice, and shows careful research. The chapters on collies, poodles, bulldogs, St. Bernards and mastiffs, are particularly instructive. Each breed is thoroughly treated, the facts of their origin, or as much of them as are known are given, together with names of the principal dogs and exhibitors from the earliest shows down to the present date. As a *fin de siècle* book on dogs it should meet with ready sale among lovers of the dog, as it covers the ground so thoroughly and at the same time succinctly that the reader who is interested in dogs will scarcely find a dull page in the whole book. The up to date standard of each breed is also given. The book is for sale at this office, price \$6.

There was quite a good deal of interest shown round the St. Bernard ring at the Specialty Show. Miss Whitney had come down to see how she stood in regard to past judging. She did not complain. Mr. Reick dropped in for an hour, and in attending the St. Bernard Club meeting and other ways showed that he has not lost interest in the breed. Col. Ruppert, Jr., forebore watching the grand performance of his two year old race horse Court Tenor in order to see the judging. Mrs. Nicholson, Mrs. Hughes, the Manns, John Brett, Messrs. Christopher and Link, of Newark; Fred Schmidt, Mrs. Smith and C. A. Pratt, who had come on from Little Rock, Arkansas, were also interested in the results. Around the spaniels were C. M. Nelles, A. C. Wilmarding, Geo. Bell, A. Laidlaw, Mrs. Meacham and Mrs. Gilligan, N. T. Payne, from Kingston, Pa., but who left Donovan at home; James E. Green, who came from Boston, all on account of Lisa; Geo. Thomas, who had quite a field day with his new dog. He should become a member of the Spaniel Club now. A. Beecher was also leaning over the fence.

Around the collies there were few others than those directly exhibiting. Henry "Nonchalant" Jarrett won a yacht with his Christopher, but expecting it would cost too much to keep in commission, he sold it to Mr. C. T. Sackett, who no doubt will bend its sails on the broad bosom of Lake Ontario. The yacht was quite three feet long. With such enthusiasts in the ring as Winthrop Rutherford, who has returned looking well and bronzed from his trip in the Valiant; August Belmont, who dropped in for a while; Clarence Rathbone, who pulled off another lucrative sweep with his Royalist—the puppy of the year; Harry W. Smith, with his wiry winners, the fox-terrier ring had quite a New York appearance. Messrs. Thayer and Hunnewell were, however, missed. Dr. Foote and Mr. Ritchie were on hand, but they missed a great snap this time. Mr. Matthews looked after the welfare of the bulldog interests, but there were few of the cognoscenti present if we except P. S. Hoyt, "Jim" Robinson and Frank Dole. Bob Armstrong and his brother must have been satisfied with their efforts on behalf of the Cragston Kennels.

We regret to hear that the well-known St. Bernard bitch Ellen Terry is dead. She died two weeks since of puerperal fever four days after whelping to Eboracum. Ellen Terry had proved herself a good matron in her early days, and the loss to her late owners, Messrs. Woodin & Hoyt, is a rather severe one.

Another nice St. Bernard bitch, Rosabel, who belonged to the Swiss Mountain Kennels, has also passed away, owing to maternal duties. She died during parturition the week after Philadelphia. We believe that we have already stated that Castor of Coutocock, that Mrs. Smyth sold at Philadelphia show, died of distemper a few days after that event.

Andrew Laidlaw, of Galt, Ont., sold during the show the two winning red cocker pups, Mr. and Mrs. Bow Wow, to Mr. C. T. Sackett, of Cape Vincent, N. Y.

We understand that Mr. Christopher, of Newark, N. J., who is quietly getting together a small kennel of Russian wolfhounds, is importing a dog from Europe.

Mr. H. G. Trevor, who has done so much for poodledom in this country, made a splendid display of about thirty dogs from his kennels. The stalls were tastefully arranged. He was successful in disposing of several youngsters, among them two at \$125 each, one to Mr. Bayard Cutting and the other to Mr. R. L. Ogden, both New York society men. Mr. Trevor has spent money lavishly on his kennels, the buildings alone costing something like \$5,000. He is getting some of it back now, for during the past six weeks he has sold upward of \$2,000 worth of puppies and other stock. Of course his advertisement is in FOREST AND STREAM.

We were pleased to see Mr. George Jarvis around again. The owner of the crack pointer Lad of Kent has had pneumonia and hardly looks in such good show condition as usual, but is now on the road to recovery.

The debate on the interpretation of the A. K. C. Rule IX, during the last meeting of the club and the action taken thereon will affect the interests of several prominent exhibitors and judges who have been expelled from the specialty clubs, members of the A. K. C. There seems to be no room for debate in the matter; the wording is plain enough.

As we write this Mr. James Robinson, manager of the Woodlawn Park Kennels, is on his way to Louisville show with 13 entries, and where he expects to scoop up the collie and bulldog prizes at least. Five more bull pups lately born in the kennels, are doing well, and bid fair to be as good as the last litter.

The different specialty clubs, the Bulldog, Fox-Terrier and Collie, had their trophies displayed in glasses in the sections devoted to their breeds, and these lent additional interest to the scene.

The season closes with a rather more than usual amount of gossip regarding passing events. The disqualification of Geo. Bell is the result of a *laissez faire* policy on his part that is past explanation. The circumstances of the case are briefly: That Mr. Bell bought a consignment of dogs from Mr. Granger's kennels when the latter gave up breeding. Among them were Rejoice and Blemton Consequence, an old winner. Mr. Martin, of San Francisco, negotiated for the sale of Consequence, as he supposed, heavy in whelp to Dusky Trap. Mr. Bell thinks Consequence is Rejoice and *vice versa*, and the result is Rejoice is shipped to San Francisco within a few days of whelping, slips and probably eats her puppies on the way, and Mr. Martin brings charges against Bell for selling a bitch purporting to be in whelp when she was not so. Meanwhile at Toronto show Mr. Bell showed Consequence as Rejoice, supposing she was that bitch. Along comes Mr. Hopkins and saw the bitch, recognizes her as old Consequence, and so informed Mr. Bell of the discovery. The case was afterward brought to the Kennel Club's and Mr. Martin's notice. His first charge fell through, as it was proved the bitch was in whelp; but as Mr. Bell took no steps afterward to rectify the mistake he had made about the two bitches, though given ample time and opportunity to do so, the club thought a little discipline was necessary, and Mr. Bell will retire for one year.

Mr. Morris is in trouble, too, but his case is now with the advisory committee and consequently *sub judice*, so we can say little further about this than that Mr. Morris contracted to import a field spaniel dog for Mr. Preston, which was to come over for the New York show. In the meanwhile Mr. Morris imports a bitch, and the dog not being forthcoming a proposition was made to Mr. Preston that if the dog did not arrive he should have the bitch. To this Mr. Preston agreed, the bitch came over, but Mr. Morris would not let her go, and hence the charge to the A. K. C. preferred by Mr. Preston and also court proceedings, whereby the bitch was seized by the deputy sheriff at the show on Tuesday afternoon. Mr. Morris will now have to sue for its recovery. The advisory committee held long meetings on the case Thursday and Friday, and finally decided in view of the case coming to court to allow it to be settled there first and then they would deal with the matter accordingly. There is no proof that the dog has even been bought yet.

Mr. Thomas Shillecock, of Birmingham, England, has sold the noted Princess Florence, in whelp to Young Bute, to Mr. J. Storey.

Mr. Geo. A. Fletcher, of Boston, Mass., is importing a collie bitch from Mr. Tom Stretch's kennel, in whelp to Rufford Ormonde.

A correspondent in an English paper in speaking of comminuted fractures in dogs' legs and the idea that they are practically incurable, remarks that while this is true in cases where the soft parts surrounding the bone have been badly injured, a great deal depends upon keeping the limbs motionless and also upon the state of the dog's health. A dog in hard condition, the result of proper food and exercise, would have a good chance to recover from a comminuted fracture to which a pampered animal would succumb. He then relates that he once assisted in setting the thigh of a smooth-haired terrier, which had been smashed so badly, close above the hock-joint, that the bone, for about an inch in length, felt as if broken into at least five or six pieces. Evidently there was no chance of these uniting unless the foot could be kept off the ground, and all movements of the limb, from the stifle downwards, prevented. Two strips of gutta percha were kept in hot water until quite soft, then quickly dried with a cloth. One, a rather broad piece, was moulded so as to form a sling, which held the back of the hock and leg below it, at right angles to the thigh; the ends reaching, one inside and the other outside, as far up as the stifle. The other strip was wound round this from the hock upwards, and held until both pieces had become stiff. A cotton bandage was applied over them, and the dog was placed in a covered basket, broad enough to allow her to lie flat on her side, but not high enough to permit of her standing up. She was a sensible, docile patient, and remained very quiet, except when taken out of the basket for a few minutes night and morning. The piece of bone united so perfectly that she ultimately recovered without having the slightest trace of lameness.

About eighteen months ago we published the fact that Mr. Andrew Laidlaw, so well known in the cocker fancy, had removed from Woodstock to Galt, Ont., where he started a weekly paper called *The Weekly Reformer*. His many friends in the spaniel fancy will, we are sure, be pleased to hear that he has made such a success of his venture that on April 6 the paper began its career as a daily. A copy of the paper which we have received shows that, as in his cocker breeding, he keeps his paper well up with the times.

Imagination.

Editor Forest and Stream:

A case of imagination in my Chesapeake Bay bitch Mary F. has just occurred that I think may interest your readers. On Jan. 24 I bred her to a very fine dog belonging to a neighbor; stunted to the same dog once before, she brought forth thirteen puppies. This time for some reason she failed to conceive, but on April 2 she made her bed in her kennel, and for four days has gone through all the motions of a bitch with a litter of puppies. I have five other dogs; these she will not allow to come near her box, driving them off and acting just as she would if puppies were in the box; when off on a walk with the other dogs she is as good-natured as she has always been, but on coming home it is a case of "stand off" if they go near her box. I searched her kennel, thinking it possible she might have had one dead puppy, which she had buried under the straw, but found nothing.

Her action at first worried me a good deal, as a sudden change of disposition from good nature to crossness is a precursor of hydrophobia, of which I have had two cases when residing in Pennsylvania, but which disease I am disposed to think does not exist on the eastern shore of Maryland, and is rare even here, except in the imagination of many people.

I think the above case extremely interesting, and would like to know if any dog owners have ever had a similar experience. Mary's actions are hard to describe, but any one who has owned an intelligent dog under like circumstances, seeing Mary's behavior, would, if here, want to "look at the litter of puppies" that they would naturally think from her actions were in her kennel. SINKBOAT.

EASTON, Md., April 6.

Field Trials Grounds.

THE matter of good grounds is always important to a club, since they are very essential to the success of a field trial. In a letter under date of April 3, Mr. W. W. Titus, of Waverly, Miss., wrote me as follows in respect to the grounds at West Point, Miss., once the scene of the American Field Trial Club in 1883:

"I think that the United States Field Trial Club and the prospective new one at Louisville, could not do better than to take the West Point, Miss., grounds. They can get them

gratis, and will only have to be out the hire of a man to watch them during the open season, from Nov. 15 to Feb. 1. There are there two as good hotels as there are in the State. One will be equipped with hot baths, etc., by fall, and will give rates at \$1.25 or a little higher, per day. Saddle horses not over \$1.50, and I think at \$1.25. The town has a good opera house, and evening entertainments will probably be going on. The grounds, the most important part, are the best that I have ever seen for field trial purposes. Birds are sufficiently numerous to insure plenty for the trials without stocking. All in all, I am confident that such grounds cannot be duplicated. And when the railroad facilities, the good accommodations, etc., are taken into consideration, I think any club cannot do better than to take them."

B. WATERS.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

Laddie Krueger and Graceful. By E. L. Stine for beagle dog and bitch, by Laddie out of Moss.

Yorkview Kennels. By E. L. Stine for his kennel of beagles.

Speedway Kennels. By E. J. Hearle, New York city, for his kennel of St. Bernards.

BRED.

Prepared Blanks sent free on application.

Virginia—Patsy Bolivar. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Virginia (Spokane—East Lake Virgie) to their Patsy Bolivar (Eberhart—Flossie—Flossie II.), April 6.

Queen Zip—Monghlow. Eberhart Pug Kennels' (Cincinnati, O.) French curly poodle bitch Queen Zip to their Monghlow, April 4.

Lady Cleopatra—Jasper. F. W. Kitchel's (Perth Amboy, N. J.) cocker spaniel bitch Lady Cleopatra (Obo C.—Black Cherry) to his Jasper (Red Roland—Floss), April 14.

Lady Bug—Othello. F. W. Kitchel's (Perth Amboy, N. J.) cocker spaniel bitch Lady Bug (Rollo—Brown Gyp) to C. T. Sackett's Othello, April 6.

My Lady Jane—Commodore. F. W. Kitchel's (Perth Amboy, N. J.) cocker spaniel bitch My Lady Jane (champion Doe—Lady Betty) to A. Laidlaw's Commodore, Feb. 23.

Broomfield Madge—Broomfield Sultan. Dr. H. W. Lincoln's (Brooklyn, N. Y.) black and tan terrier bitch Broomfield Madge (Jackson's Patrick—Jackson's Queen) to Dr. H. T. Bled (Bleaton Victor II.—Beverwyck Rita), champion Broomfield Turk—Broomfield Belle), March 8.

Bleaton Tille—Woodale Driver. W. F. Porter's (Sharon, Pa.) fox-terrier bitch Bleaton Tille (Bleaton Victor II.—Tiana) to his Woodale Driver, April 12.

Glenaug Kate—Jack. J. S. Niven's (London, Ont.) Irish setter bitch Glenaug Kate (Commissariate—Nettle) to R. Northcote's Jack (Doctor II.—Peppy), April 4.

Florence Gladstone—Antonio. Poston & Co.'s (Columbus, O.) English setter bitch Florence Gladstone (Gladstone—Florence) to Blue Ridge Kennels' Antonio (Rodrigo—Bo-Peep), March 19.

Speckle Gown—Gladstone's Boy. Poston & Co.'s (Columbus, O.) English setter bitch Speckle Gown (Count Noble—Nannie Gladstone) to J. S. Hudson's Gladstone's Boy (Gladstone—Sue), March 17.

Latonia—Gladstone's Boy. Poston & Co.'s (Columbus, O.) English setter bitch Latonia (Count Noble—champion Dido II.) to J. S. Hudson's Gladstone's Boy (Gladstone—champion Sue), March 8.

Nimble—Banter. E. L. Stine's beagle bitch Nimble to H. Twardell's Banter, March 2.

Clara Belle—Happy Toby. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Clara Belle to their Happy Toby, April 24.

Gulnara—Gladstone's Boy. J. T. Simpson's (Cincinnati, O.) mastiff bitch Gulnara to Eberhart Pug Kennels' Tiger, April 19.

Fannie—Tiger. W. T. Simpson's (Cincinnati, O.) mastiff bitch Fannie to Eberhart Pug Kennels' Tiger.

Bessie Kakas—Duke of Kent II. Glen Rock Kennels' (Boston, Mass.) pointer bitch Bessie Kakas to their champion Duke of Kent II., Jan. 3.

Ridgeview Patch—Duke of Kent II. Glen Rock Kennels' (Boston, Mass.) pointer bitch Ridgeview Patch to their champion Duke of Kent II., Feb. 15.

WHELPS.

Prepared Blanks sent free on application.

Lady Alma. Eberhart Pug Kennels' (Cincinnati, O.) pug bitch Lady Alma (Eberhart's Cashier—Mabel E.), Feb. 6, six (three dogs), by their Happy Toby (Spokane—Nelly T.).

Tube Rose. R. Merrill's (Milwaukee, Wis.) English setter bitch Tube Rose (Count Noble—Lib), April 17, seven (two dogs), by his Paul Bo (champion Paul Gladstone—champion Bohemian Girl).

Chingupin Chink. J. Hargreaves's (Stottville, N. Y.) fox-terrier bitch Chingupin Chink (Regent Tippler—Mona), March 30, four, by Dr. H. W. Lincoln's John Bird (Bleaton Victor II.—Beverwyck Rita).

Chatham Kit. S. Penfield's (West Haven, Conn.) bull terrier bitch Chatham Kit (champion Jubilee—champion My Queen), March 1, five (three dogs), by F. F. Dole's Gully the Great (Gladstone—Florence).

Edgewood Matchless. S. Penfield's (West Haven, Conn.) bull terrier bitch Edgewood Matchless (Gully the Great—Starlight), March 21, four (two dogs), by F. F. Dole's Ted Pritchard.

SALES.

Prepared Blanks sent free on application.

Daisy. Black and white fox-terrier bitch, whelped Feb. 10, 1894, by Dock out of Daisy, by Eberhart Pug Kennels, Cincinnati, O., to Lewis Finch, same place.

John Bull. Imported fawn pug dog, by champion Loris out of May Queen, by Eberhart Pug Kennels, Cincinnati, O., to Mrs. Lieut. E. S. Avis, New Fort Bliss, Texas.

Midget Nellie. Silver fawn pug bitch, whelped June 20, 1889, by Lord Clover out of Sietar, by Eberhart Pug Kennels, Cincinnati, O., to A. E. Dwelle, McPherson, Kan.

Boston—Weazel whelp. Smut beagle bitch, whelped March 5, 1891, by E. L. Stine to C. S. Wixon, Covert, N. Y.

Graceful. Beagle bitch, whelped July 19, 1893, by Laddie out of Moss, by E. L. Stine to F. Lynde, Philadelphia, Pa.

Hunting and Coursing.

FIXTURES.

Oct. 23.—New England Beagle Club, at Oxford, Mass. W. S. Clark Linden, Mass., Sec'y. Nominations close Oct. 1.

Oct. 29.—National Beagle Club. Geo. Laick, Tarrytown, N. Y., Sec'y. Nov. 7.—Northwestern Beagle Club. Louis Steffen, Milwaukee, Wis., Sec'y.

The American Foxhound Standard.

THE American foxhound while differing in many respects from the English, should be judged upon the same value of points.

The American hound should be smaller and lighter in muscle and bone. Dogs should not be under 21 nor over 23½ in., nor weigh more than 57lbs. Bitches should not be under 20 nor over 23½ in., nor weigh more than 50lbs.

Head (value 15) should be of medium size with muzzle in harmonious proportions. The skull should be rounded crosswise with a slight peak—line of profile nearly straight—with sufficient stop to give symmetry to head. Ears should reach to within 1 in. of end of muzzle and should be thin, soft in coat, low set and closely pendant. Eyes soft, medium size and varying shades of brown. Nostrils slightly expanded. The head as a whole should denote hound "character."

Neck (value 5) must be clean and of good length, slightly arched, strong where it springs from shoulder and gradually tapering to head, without trace of throatiness.

Shoulders (value 10) should be of sufficient length to give leverage and power—well sloped, muscular, but with clean run and not too broad.

Chest and Back Ribs (value 10). The chest should be deep for lung space, narrower in proportion to depth than the English hound—28 in. in a 25½ in. hound being good. Well sprung ribs—back ribs should extend well back—a 8 in. flank allowing springiness.

Back and Loins (value 10) should be broad, short and strong, slightly arched.

*Hindquarters and Lower Thighs* (value 10) must be well muscled and very strong. The stifles should be low set, not too much bent nor yet too straight—a happy medium.

*Elbows* (value 5) should be set straight, neither in nor out. *Legs and Feet* (value 20) are of great importance. Legs should be straight and placed squarely under shoulder, having plenty of bone without clumsiness, strong pasterns well stood upon. Feet round, cat-like, not too large, toes well knuckled, close and compact, strong nails, pad thick, tough and indurated by use.

*Color and Coat* (value 5). Black, white and tan are preferable, though the solids and various ples are permissible. Coat should be rough and coarse without being wiry or shaggy.

*Symmetry* (value 5). The form of the hound should be harmonious throughout. He should show his blood-quality and hound character in every aspect and movement. If he scores high in other properties symmetry is bound to follow.

*Stern* (value 5) must be strong in line with spine, and of medium length, carried like a sabre on line with spine, and must have good brush. A docked stern shall not disqualify but simply handicap according to extent of docking.

## SUMMARY.

Head.....	15
Neck.....	5
Shoulders.....	10
Chest and back ribs.....	10
Back and loin.....	10
Hindquarters and lower thighs.....	10
Elbows.....	5
Legs and feet.....	20
Color and coat.....	5
Symmetry.....	5
Stern.....	5

Total.....100

This standard was formulated by Dr. Heffenger and Messrs. W. S. Walker, W. C. Goodman, W. Wade, H. C. Trigg, F. G. Hagan and Roger D. Williams. This committee is thoroughly representative and the standard was unanimously adopted by the Brunswick Fur Club.

## HUNTING AND COURSING NOTES.

The Georgia Foxhunter's Club is evidently an enterprising association of sportsmen. According to the *Southern Sportsman*, whose editor, H. C. Brown of Atlanta, Ga., is the secretary, the club intends to inaugurate foxhound field trials, and trials for pointers and setters are also thought of. The club has instituted a book of registrations in which all hounds showing a pedigree of five generations are expected to be registered.

Dr. A. C. Heffenger's foxhound Tam O'Shanter, winner of second in the puppy class at the recent Boston show, broke a leg while hunting last week. He has had the best care but the fracture is not healing well and his recovery is doubtful. Tam was presented to Dr. Heffenger by Dr. J. W. Norris of Palmyra, Mo., and is the only representative of the Norris strain in New England.

## Yachting.

## FIXTURES.

MAY.

12. Atlantic City Cor., Trophy Race, Atlantic City.	26. Portland, Cruise.
12-13. San Francisco Cor., Cruise, California City.	27. San Francisco Cor., Sail Out.
19. Baltimore, Opening, Baltimore.	28. Atlantic City Cor., Trophy Race, Atlantic City.
19. New Rochelle, Cabin Cats, L. I. Sound.	30. So. Boston, Open, City Point.
19-20. San Francisco Cor., Cruise, Vallejo.	30. Racine, Opening, Racine, Wis.
24. St. Lawrence, Squad, Cruise.	30. San Francisco Cor., Annual Cruise, Tiburon.
26. San Francisco Cor., Sail to Quarry Cove.	30. Fall River, Open Regatta.
	30. So. Boston, Open, Boston Har.
	30. Douglaston, Open, L. I. Sound.

The past week has settled some of the rumors which have been afloat since the Nice regatta, and in a very satisfactory manner. Vigilant will race in foreign waters, and James Gordon Bennett will return to yacht racing in an American craft, though he did not purchase the last Cup Defender. Vigilant's new owners, Messrs. George and Howard Gould, are fitting the yacht out as rapidly as possible, she will be rigged as a yawl and will sail for England in a few weeks, and they have secured Capt. Hoff to sail her in the racing there, her racing spars and gear of course going over by steamer. Just what races she may sail in is as yet undecided. It is possible that both Mr. Iselin and Mr. N. G. Herreshoff may be with her on the other side. The yacht was launched early this week at Port Jefferson, and will fit out at New York.

Mr. BENNETT's yacht will be built by the Herreshoffs at once, and will be of the same length as Valkyrie and Vigilant. Her name will be Prunelle, but little else is known, though she will presumably be built entirely of Tobin bronze.

Two rumors of little account have been in circulation with the reports of Mr. Bennett's new yacht, one to the effect that she will be manned by a crew of American amateurs in her European races. The other rumor is to the effect that "Capt. Harry MacCalmont" will build a Tobin bronze yacht, to be named Tobin, in which he will challenge for the America's Cup next year. Mr. MacCalmont is the owner of the steam yacht Giralda, formerly Fiat Geraldine, but is not a sailing man and thus far has shown little interest in racing.

The committee of the N. Y. Yacht Racing Association at a meeting last week decided to recommend two rules for adoption, the present mean length rule for open boats and the Seawanhaka rule for the larger yachts. Another meeting will be held this week, as the details are not completed, but some such plan as this is likely to be adopted by the Association.

## Length in Measurement.

WHILE it is very improbable that length will ever be restored to its old position as the sole basis of yacht measurement, it is almost as unlikely that it will disappear entirely as a factor in some new system of measurement, or even that it will soon be deposed from the very important position which it now holds in the two rules which are most generally recognized, the Seawanhaka rule in this country and the Y. R. A. abroad. In every one of the frequent measurement agitations which add zest to yachting in the dull season, length figures in the foremost place; but as a rule the several subdivisions of the subject are jumbled together in a way which can only result in a waste of time and a failure to reach any satisfactory conclusions. In order to turn these discussions to more practical account, it is well to consider the various points which are met with in using length in measurement.

The length question naturally divides itself into two distinct heads, though the distinction is most generally overlooked. The first, and in one way the more important as involving a principle, is the value to be assigned to length in a measurement rule; whether, as has so often been done, to take it alone, ignoring all other factors, or if not, with what to combine it, and in what relative proportion to the other factors, such as sail area. This is a most important question, and not until it is finally settled is it necessary to consider the second part of the subject, the measurement of the length.

At the present time there seems little necessity for a discussion of the first question, the value of length as a factor. The accepted value

in America and Great Britain, which places length about on an equality with the square root of the sail area, is probably as nearly correct as is at present possible, and gives fairly satisfactory results when used for both measurement and classification. None of the opponents of the present length and sail area rules has been able to produce proof that existing evils are due to the rule and not to outside conditions, or that they could be cured by the adoption of any other specified rule or formula.

The question of where and how the length shall be measured is a far more real and practical one on which opinion is even more divided than on the first point. Omitting the ancient and obsolete measurements of length on keel, on deck to sternpost, and between perpendiculars, all of which were more or less imaginary and useless, there still remain four different measurements of length which may be taken.

The first of these is the length of load waterline as the yacht lies afloat in smooth water in racing trim, but "with the crew, if aboard, stationed amidships." Up to the last two or three years yachtsmen in this country have not availed themselves of the privileges which this wording allows, of having their yachts measured and rated without the crew, at least in the larger decked craft, and though they have not scrupled to get their men as far forward as the measurer would permit, even to the bowsprit and if possible, those who happened to be on board when the measurer boarded the yacht were not sent ashore. The rule allowed a wide scope for evasion which has been utilized in England in the small classes to a very serious extent, some of the half-raters of the flat sharpie type measuring 120 or 125 feet, while the actual length of the hull proper was only 100 or 110 feet. The most striking case on this side of "unearned increment" of valuable length was that of Vigilant last year, her actual length in sailing trim with crew aboard being over the agreed limit of 86.70ft., while when duly stripped for measurement this figure was cut down to 86.19ft.

This measurement is still in use by all American clubs, though the question of a change is now under consideration by the Y. R. A. Y. C. At the 1892 British Yacht Racing Association amended its rules so as to measure the actual load waterline in still water with the racing crew "on board at and about the mid over all length," which rule removes the inducement to build a yacht of such shape that she will shorten her waterline rapidly as she becomes immersed through the removal of her crew.

The measurement without crew is a high one, and should no longer be recognized, though its obliteration involves some serious difficulties, such as the limiting of the crew in number, and possibly a restriction in small craft on the shipping of a very light crew for measurement and a much heavier crew for match sailing.

Proceeding upward, the next possible length is that of the load waterline with racing crew on board and the yacht in racing trim, but at rest in still water. This is itself a very good measurement, and the preceding, and cannot be juggled with if the details are properly arranged; in the case of the larger yachts, the average weight of crew is certain to be fair; and, if necessary, in applying the rule to small boats sailed with a crew of two or three, a minimum weight may be prescribed to prevent the shipping of a crew of boys for measurement and the replacing of the waterline with heavy men. This measurement is a fair one, the best yet suggested, and the difficulties in the way of obtaining it are no greater than with other less satisfactory ones. The one serious objection made to it is that it is not the length on which the yacht actually sails, which she assumes when heeled and pressed by sail, nor does it bear a fixed relation to this latter length in all models.

This brings us to the third length, the actual length of waterline when the yacht is under way at average racing speed. It is quite clear that this length cannot be measured, and must either be approximated in some way or it must be assumed that it bears practically a fixed relation to the load waterline when at rest in still water.

Since the advent of Gloriana and the rage for long ends, forward and aft, most yachtsmen have set a very high value on this increase of length which under way over the measurement when at rest; in our opinion much more than the facts warrant. That there is a material gain in a seaway is undisputed, but this condition is the exception rather than the rule in match sailing, and it is hardly necessary, in American waters at least, to consider any other than smooth water. The gain in length forward must be comparatively slight, unless due to boring, by which the stern is elevated and the waterline rapidly shortened aft. Even in such an extreme case as Gloriana, the effect on gain in length at the fore end is much less than popularly supposed, and is due mainly to the slight actual increase of displacement through the vertical component of the wind force, immersing the boat bodily.

At the after end there is a decided gain of length through a long counter at a small angle to the waterline, but it must be remembered that though the water may be carried to the extreme end of such a stern it does not all represent useful length, and it is quite as likely as not to be accompanied by a certain amount of drag or eddy-making at the end. Then, too, there is nothing new about an overhang aft; the older yachts all had them, and in spite of a mean length rule they had very efficient ones, too, short and ugly to the eye, but with a low horizontal and fine curved line from the fore end to the stern, the run of the yacht. These short sterns, abruptly chopped off by an arbitrary rule, were lacking in two points—they had none of the beauty of the modern cutter overhang, and they failed to give additional deck room and support for the main sheet; but so far as the model of the yacht was concerned, every inch of the overhang was turned to good purpose for such a distance as it could be effectively immersed, and what was cut off would have been more in the air than in the water in any case.

It is our opinion that, save in the case where yachts of the old type may call for an exception, the waterline when at rest with crew aboard is quite sufficient for all purposes of measurement, and that there is no necessity for considering the lengthening of this line as the yacht attains her racing speed. The possibilities of advantage through this lengthening are open to all designers alike, no one having any monopoly, so that the rule which is now in use, and dealing with the increase of length, is not contemplated when it was framed, but merely the utilization of a certain opportunity enjoyed by all in common. We are, too, of the opinion that the gain in this direction is frequently so overestimated as to result in a positive injury to speed in the effort to utilize too much of this unmeasured length, either through excessive weight well above the water and in the ends, or excessive windage.

The general opinion among yachtsmen, however, is hostile to an extreme length of overhangs, and has found expression in various proposals either to measure the supposed advantage or to tax it so heavily that it shall disappear. The basis of these objections is by no means clear or logical, and one is often in doubt as to the exact end in view, as indicated by the proposed means. The oldest as well as the crudest and least rational method of dealing with the increase of length, is to tax it at a fixed rate, and to add the tax to the overhang, which is combined in certain different ratios—one-half, one-third or one-fifth—with the waterline, the result being known as "mean length." The immediate effect of a mean length rule is to prohibit overhangs at either end and to produce approximately a plumb ended yacht, as many sad examples show.

It has never yet been really better with square ends than with such overhangs as are now common. The modern overhang gives grace and beauty, a much larger deck for working, a form of hull that is far better adapted to rough water, and encourages a disposition of the displacement that is in every way beneficial, both in speed and general good performance; the extreme shoulders and hollows of the old models having a decided disadvantage. The construction of the hull would be an odd looking craft, inferior in all ways to the present shapely models, an exchange which no one would welcome, and with absolutely nothing to recommend it.

Unless such a change is desired, and we believe that no one wants it, there can be no justification for the employment of over all length; such a measurement cannot reach the proposed end, of fairly gauging the waterline length when under way, as distinguished from the waterline length when at rest, but can only affect that part of the yacht which sails in the air and not in the water. Under a measurement of over-all length alone, without the waterline, there could be only plumb-ended yachts, but with any practicable proportion of overhang taxed even up to 36, the designer will simply chop off the ends at the desired point, and the hull will be as far as possible immersed over the water, for the purpose of immersing the extra length when under way. Over-all measurement has fortunately had its day; it never could and never did accomplish what it was nominally intended for, and it has done untold injury in producing a poor type of vessel.

If it be deemed really necessary to measure the increase in length when under way, there is a method which is at least as good and reasonable, and sufficiently correct. This plan was introduced by the Atlantic Y. C. about ten years since, and was used by that club for some years, as well as by the Larchmont Y. C.; but it was finally abandoned in favor of the actual waterline when at rest; being diffi-

cult to measure, and in practice proving no better than the simpler method. In this case the measured length was taken parallel to the water and at a certain distance, two per cent. of the actual waterline, above it. The waterline was first measured, and supposing it to be 50ft., points were located on the stem and counter just 1ft. above the water, and the length taken on the line thus marked. This measurement took account of the increase of length where it was most effective, and measured the overhang at each end within a reasonable distance of the water; leaving untouched those portions of the hull which added to the beauty, the deck room, or the support of the spars. The measurement was a difficult one to take, and this practical objection aided the effort to replace it with the plain waterline.

In spite of all that has been said here and abroad about measuring, taxing or prohibiting overhangs, it is not likely that an effort in this direction will be made by any of the larger clubs, but should such an end be desired it must be reached by some measurement taken close down to the water, and not by a restriction on the deck length, in any form. One plan suggested is to place a limit on the angle between the edge of stem or horn timber and the water. We look upon all such schemes, however, as uncalled for, and we should advocate the use of but one length measurement, that should take account of the deepest possible loading when at rest in still water, and should be capable of being easily taken and quickly and positively verified. Whatever advantage may be possible in the direction of increased effective length when under way we would give to the designers, allowing each to make the most for himself of the same opportunities for advantage.

There is, however, one case in which it may be necessary, in fairness to all, to take positive cognizance of the increase of efficient length through overhangs; in the case, alluded to above, of the older boats that are still racing and must meet the new models. Such cases are too few to call for any action in the classes over 30ft., but there are a few of the older boats in the smaller classes, which are still in active racing, but which would have no chance on a waterline length measurement against new boats built this year or last. Where such cases are found, some concessions must be made; but such concessions should not take the form of a prohibitive tax or penalty on the new boats. Any such course can only be detrimental to the club adopting it; means which the latest fashion in racing would not allow of, and which they cannot race their boats in one club, they will go to another with more liberal ideas.

The problem of protecting the rights of vested interests in the older types without at the same time hindering the course of designing or stopping the building of new craft, is quite a difficult one; and no practicable solution has yet suggested itself. One plan that may be feasible, though we have not yet looked into figures and details, would be to arrange an arbitrary allowance depending on the shape of the ends, from the new craft to those of the old type with plumb stem and short counter. While such a plan might not be free from objection, it would offer a means for the permanent adoption of such a rule as seems necessary for the production of the best possible craft according to modern standards; and at the same time it would give a continued racing life to the many existing boats, and in the smaller classes, the existing boats would drop out year by year, as they are certain to do in time through age or through superiority of the newer class in lighter construction and better ballasting; and in a few years the necessity for such arbitrary allowance would cease.

One important point on which we have not touched at all is the actual locating, marking and measuring of the waterline in such places as the rule may require. The present method of doing this is unsatisfactory, but before any change can be made it is first necessary that the clubs shall decide finally where the length shall be taken.

## Yachting at New Orleans.

NEW ORLEANS, April 25.—*Editor Forest and Stream*: The great race between the schooner Whim and the yawl Flying Cloud, of the Biscayne Bay Y. C., of which you recently published a description, has been the chief topic of conversation here lately. All agree that if two or three descriptions of such dauntless open sea sailing as that by the Southern Y. C. could be published every season it would greatly benefit the club, as well as the sport generally in Southern waters. The race had an added interest here as the Whim came near being a S. Y. C. boat several years ago. She was purchased by Mr. W. A. Gordon, of the schooner Adrienne, but her timbers were found upon examination to be defective, so the sale fell through and the new boat was designed by Stewart & Binney. Whim was afterward rebuilt. She is now a racing boat, and is probably as good an all round cruiser of her size as can be found. She has been up and down the coast several times, and her trips from Key West to New York in eleven days in bad weather is on record.

The *Times-Democrat* of this city reprinted the account of the above mentioned race and suggested that, as the Southern Y. C. has some good seagoing yachts, a State race should be held. The race was won by the Whim, and with Annie S. of Pensacola, Annie and Zephira of Mobile and the Biscayne Bay, Florida, and the Southern Y. C. boats sailed off the Alabama or Florida coast, would mark an era in southern yachting. The schooner Adrienne, W. A. Gordon, the Burgess sloop Nepenthe, C. P. Richardson, and the New York sloop Montauk, Peter Labouisse, are all available by the Southern Y. C. for an inter-club race. If an inter-club race cannot be made for one, these three yachts may go themselves to see which is the best sea boat. It is a toss up who wins in that event, as they are all first-class. Adrienne made the voyage to Havana in the dead of winter, and the other two only lack the opportunity for as good a record.

The Southern Y. C. annual regatta will be sailed Saturday, May 26. The sloops Lufki Humma, Agnes and Caprice have been overhauled this spring; the latter was a deep keel. The Lufki Humma was sailed last season, an up to date 25ft. sloop built by home talent and very fast. Her owners, J. Wand and E. J. Glenn, not satisfied with her superiority of last season, are now fitting her with a fin.

The yawl Presto, that cruised down from New York, was sold here and is now enrolled in the club. The club has a genuine curiosity in the 22ft. yawl Tormentor that made the voyage from New York to Africa, and to the South American coast, and was made for one, these three yachts may go themselves to see which is the best sea boat. It is a toss up who wins in that event, as they are all first-class. Adrienne made the voyage to Havana in the dead of winter, and the other two only lack the opportunity for as good a record.

## The Sailing of Valkyrie.

The work of fitting Valkyrie for sea has progressed rapidly under the direction of Captain Cranfield, his crew of twenty men working with a will. When launched, prior to his arrival, the yacht's bottom was rough below the waterline, as it was left when the copper was stripped last fall, the topsides had been painted, and the entire interior had been fitted with permanent joinerwork in place of the light panelling which was removed on her arrival here. The hull was fitted with a new set of spars and rigging, and the rigging was made for one, these three yachts may go themselves to see which is the best sea boat. It is a toss up who wins in that event, as they are all first-class. Adrienne made the voyage to Havana in the dead of winter, and the other two only lack the opportunity for as good a record.

The two masts were stepped and the old short bowsprit shipped, with a stump topmast. The cruising mainboom was cut so as to just clear the mizen, and a new mizen boom was shipped. The main boom was securely fitted in a crutch, and will only be used when free, the mainsail being entirely loose on foot and clew, and sheeting aback the mizen mast. The mizen is a triangular sail, about 30ft. on the foot and 40ft. hoist. The steel tiller was replaced by a short one, only 4ft. long, and just over the end of this an ash frame was built on deck, carrying an ordinary ship's cap and wooden barrel. The tiller was rigged with tackles, the falls being led to the barrel, as in a coasting schooner, thus giving a better control of the rudder in a sea than with the long racing tiller. The whole arrangement was very compact and simple, and involved no cutting of the wooden rudder stock.

The yacht was docked in the Erie Basin and the bottom painted red, at the same time some small repairs being made to the rudderpost; and she was floated the first of last week. On Thursday, May 3, she was taken in tow by the White Star tug Pulver, her tender in the races, and towed to the Sandy Hook Lightship, where her lines were cast off and she headed on her course under full sail, mainsail, mizen, jib and foresails, gafftopsail and jibtopsail, the wind being light S.E. Mr. H. Matland McGraw went down on the yacht and returned on the tug. Capt. G. McGraw, of Gloucester, was anavigator; and she was decided to sail the coast course. The yacht carried two Yankee dories in addition to her two boats. It is expected that she will reach Glasgow in about three weeks. Under the new rig she is far better fitted for sea work than when she crossed last year, rigged as a cutter. On her arrival at Glasgow she will be fitted out for racing and will join the racing fleet.

Lakshmi, catboat, has been rebuilt by J. M. Bayles & Son, at Port Jefferson, and is now a sloop, with a new and very long after overhang.

Argo, yawl, has been sold by the estate of her late owner, David Hall Rice, to Dr. Delans Fitzgerald of Philadelphia.

Sakonniet, steam yacht, has been chartered by Fred. Sheldon to Walter Langdon, with privilege of purchase.

## YACHT NEWS NOTES.

There are nevertheless yachtsmen who, by the exercise of cunning and duplicity, manage to cruise in comparative comfort. For

Puritan is offered for sale by Com. Forbes, who has owned her since 1886. She is still in the same trim and under the same rig as in her first season, no material change having been made in her. She may be offered at auction this month if not disposed of by private sale. A few days after the last Cup race of 1885, Puritan was sold at auction in New York, being purchased by Gen. Paine for \$13,500; the bidding being very slow, in spite of her record. When Gen. Paine decided to

The Conqueror case is still in the courts, having been taken before the Supreme Court of the United States by the defendant, ex-collector Sloat Fassett.

Corsair, steam yacht, J. Pierpont Morgan, was damaged by fire on the night of May 1, while lying at Tebo's. The damage amounts to less than \$1,000.

## Restricted Classes.

Among the orders already placed for the new Larchmont 21-footers is one by W. Butler Dunbar, for a fin-keel, with the Herreshoff Mfg. Co. one by Rear-Com. Wm. Osborn, Indian Harbor Y. C. for a design by Gardner, and one by Herman B. Duryea, for a boat to be designed and built by Riddle, of Oceansport, on the Shrewsbury. It is more than likely that other clubs about New York and elsewhere will adopt the Larchmont rules for the class and that quite a number will be built. These boats will undoubtedly make some very good racing, and in this respect are better for most localities and needs than the Boston knockabouts, the latter being really cruising craft, and for rough water such as Massachusetts Bay. At the same time they will be raced about Boston, and probably a couple of dozen new craft, either keel or centerboard, are now on the stocks or overboard.

There is now a good opportunity for the New York clubs, especially the smaller ones, to build up a smaller class than the 21-footers that will provide good sport, at a still smaller expense. The number of Scarecrows is increasing very rapidly, and there will be quite a fleet on the Upper and Lower Bay, many of them spending a part of the summer on the Sound. The boats are nearly all of one model, though differing in ballasting and rig; and there is just now a very strong rivalry among the various owners; and all are ready to race on small provocation.

It is quite possible that one small class such as the 21-footers may fill the bill about New York; but as the other is already in existence, and the owners keen for racing, it may be worth the while of the clubs to at least offer some definite racing, in hopes that the result may justify the very small expenditure necessary. There is one thing about this smaller size, that it will include a boat that may be carried on a yacht's davits and quickly rigged for sailing. As yet no club has set any definite limits for the class, but this might easily be done by taking the limits selected in practice by the majority of owners. The cost of an 18ft. Scarecrow fitted for racing need not exceed \$450, or just about half of a 21-footer of the same general type. An offer of prizes for the class by any of the clubs would probably meet with a hearty response.

## Away "Up North."

(Continued from page 330.)

And how pleasant a home it is, with the cook's fire blazing and crackling, the shed tent with its tins and pans and piles of fresh bread and good things, a couple of great bass suspended from the poles, suggesting a delicious breakfast, and the kettles over the fire bubbling and foaming over with the soup and tea for the coming supper. Thirty feet away is the staff tent, with its door standing invitingly open, and the blankets rolled up at the head of a luxurious bed of balsam; dry sacks and clean towels are hanging from the ridge pole, and a goodly pile of wood is ready for the evening fire. Truly our lives have fallen in pleasant places, but there is little time to admire or reflect, for here, across the lake, are the canoes with the boys coming in for their supper, racing and chasing one another across the placid surface; and in another minute the camp is a babel of voices, laughing and chaffing and talking over the events of the day, while socks are changed, ablutions gone through, and then for a while there is quiet as the cook brings in the evening meal, broken only for a few minutes by the rattle of fireware and of knives and forks and the frequent demand for soup, tea or bacon. One by one the boys desist, the cook removes the ruins, pipes are drawn out, filled and lit. A chat by the fire, an inspection of the day's work in level and transit book, and then sleep, deep and profound, until daylight on the morrow.

Wicksteed Lake is a very large and beautiful lake, some seven or eight miles in length. Following in a swampy, winding stream entering on the east shore for about a mile, and then turning through the woods for another mile, we come out upon the reedy shores of a shallow bay of a large lake, which proved to be Marten Lake—our objective point.

On Sept. 2 we turned westward again, working more precisely over the same ground. The boys were homesick and anxious to get back to civilization, and worked hard to get through. The fine weather broke up and rain and windstorms were frequent and severe. One thunderstorm at night on Redwater Lake was something appalling in its severity, the lightning flashing and the thunder roaring and crashing incessantly for over an hour. But we pushed steadily along in the intervals, and on Oct. 13 we emerged from the woods on the shores of "Mamagami Lake." Next day a furious storm of wind and rain confined us to camp. The rain was incessant for 24 hours, but during the night wheeled round to the north, blowing harder than ever, but without rain, and fair for our homeward journey.

The three bark canoes started early, while the Nora and her crew remained to finish up some odds and ends of work, following about noon. The wind was bitterly cold, and occasional snow squalls swept shrieking through the forest, and the boys were forced to take a short haul behind her, Nora carried little for the storm, and tore down across Crooked Lake, down White Bear, and through the river out on to Rabbit at a furious pace. Doubling Rabbit Point we had a weather shore for three or four miles, then another wild rush through the open and we shot into the narrow opening, through which the river makes its exit, and about dusk we approached the first falls and concluded to camp for the night.

A dry red pine was felled and cut up into huge logs a foot in diameter and 8ft. long, and there piled up into a tremendous fire. Three or four poles served to make a lean-to, over which our tarpaulin was stretched, and a foot of moss covered by an equal thickness of balsam brush, made a most luxurious bed. The first streaks of daylight in the east found us afloat, and the first rays of the sun fell down across the patient lot to ascend, and by 9 o'clock we came out on to the summit of the great ridge overlooking Temiscaming Lake. The heavy rains had not yet dried off, and the clay hill was wet and slippery, and, after two or three narrow escapes from a bad fall, the Chief deliberately took the Nora, and his shoulders, laid her right side up on the path, and, hanging on to the stern, they were sliding down the incline together at the rate of 10 miles an hour, and arrived quite uninjured at the water's edge.

A half-hour's paddle brought us to the mouth of the Montreal, where we found the other canoes arrived an hour or two ahead of us, and by the time we had compared notes the Meteor was in sight, bound south. In answer to a signal she stood in to pick us up, and blankets, tents, instruments and canoe being hastily tumbled on board, our ragged and weather-beaten, but hale and healthy gang, swarmed over her bulwarks, as she turned her head south again for the Long Sault and civilization.

The same evening we crossed the long railway portage, and, taking to the canoes again, arrived at Mattawa about 3 P. M. next day. To our horror we found the chief factor of the P. M. next day. To our young ladies waiting to receive us at the landing, and many were the smiles which some of the costumes provoked. The Chief especially, with a red woolen tunic, a very dirty shirt, woolen belt and a pair of duck trousers which had once been white, but were now of no particular color, attracted a considerable share of attention, and was glad to sink off to a hotel and change into the more civilized apparel.

As this is intended for the canoe columns of the FOREST AND STREAM, a word about the Nora, which has figured so largely in the narrative, may not be amiss. She is an open 16ft. x 30in. Peterboro, built by the late Wm. English, of basswood. Being somewhat old and water-soaked she was a little heavy for the work, and quite a load for one man on a rough portage, but in every other way she was immeasurably more serviceable than the much vaunted bark canoes. She had many more than all the hard work of the survey and traveled probably 1,500 or 2,000 miles during the summer, but was only once broken and that through pure carelessness. The lid of a biscuit box, some stout nails and canoe gum, with four or five hours' work with an ax, hammer, awl and jack-knife, rendered her as serviceable as ever.

As for the crew, I need not inform them that a 18x30 canoe is about right for one man, or at most, two, let me inform them that the Nora's ordinary load, in addition to her crew of two, was 400lbs. of flour and bacon and any quantity of sundries, and that on one occasion she ferried seven ordinary men across a small lake without being overloaded. Bulk of cedar, with some modification of lines, there can be no craft better adapted to the many varying requirements of continuous inland traveling. I bought her for \$20 and after three months' use was

offered \$15. She was finally given as a reward to one of the men who had been especially faithful and useful, for \$10, and will probably end her career on Lake Temiscaming.

This rather crude sketch represents the manner in which loads are carried in the North woods; and which, I believe, has never been sur-

passed as far as the possibilities in the way of immense weights are concerned. A slight, consumptive looking Indian or half-breed brought up to the work, will trot gaily off with 300lbs. or more, and there are well authenticated instances of 500 to 600lbs. being carried without injury to the carrier. Several of the "boys" who went in to the woods "green," were able to carry easily on the return trip 150 to 200lbs. over a short portage; and with one another as to which could carry most. The rigging is merely a long leather thong with a broad piece in the center to distribute the weight on the forehead. The long ends are tied to the "pack," and the latter is "made up" in a variety of ways, the most popular of which is shown in the sketch.

The Indians of the country, if not a noble race, are at least interesting. They are usually characterized as lazy and shiftless, and certainly, from a white man's point of view, they are liable to appear so. The latter is likely to be true around the posts and settlements in the summer time, when life is easy and fish plentiful. The Indian has plenty to eat and drink, and a little money from his last hunt; and he does not see why he should work and save when there is no necessity for it.

But take him on his winter hunt, or traveling, and he is a different being. He is alert and quick, no sign of the wilderness escape his observation, and he will travel for hours or even days, on his line of traps without food and with very scant clothing. When overtaken by night or storm, he will make himself tolerably comfortable with the help only of his axe and blanket, and come scathless and uncomplaining through hardships which would either kill the ordinary white man or what is perhaps worse, would give him material for stories of hair-breadth "escapes" and dangers to inflict on his suffering friends for the remainder of his days.

The Indian of the North is honest, too. Provisions, canoes, axes and other wealth may be left for days and months in this wilderness

OUTLET TO RABBIT LAKE.

so long as the owner will take care to leave them stowed or piled in such a manner as will make it apparent that they are not forgotten or lost and that he intends to return for them. To his lights, a good husband and father. Angry passages and squabbles are rare, and infidelity almost unknown among them. The squaw does all the hard work merely because it is the tradition of the race that it is part of her mission on earth to do it, not because her lord and master is brutal or unkind. The Indian is seldom bold and never reckless, but he is rarely a coward, and when brought face to face with danger can usually be relied on to do the right thing, and do it promptly and with nerve and decision. He is improvident and lives for the present only, caring nothing for what the morrow may bring forth; hence his laziness and contempt for the ceaseless every-day labor of the white man. He will work for a time and be foremost with the ax and pack-strap and be always quite civil and contented. Then when he has earned a few dollars to buy the new gun or blanket he needs he will ask him to "come and I will show you how to work and obey orders when I can be free and my own master, and a promise of three-fold pay will not keep him more than a day or two longer.

The Indian is little of a poet, but a great deal of a philosopher, and he is almost invariably an artist. All his work—canoe, snowshoes, moccasins—is not only neat and perfectly adapted to his needs, but it is often richly decorated in the most exquisite taste with porcupine quills, moosehair silk or colored beads.

The Indian's worst vice, in my opinion, is his ingratitude. Make a bargain with him to perform a certain service for a certain sum, and in nine cases out of ten he will perform it; but feed him and his family when starving, or give him a plug of tobacco in his need without asking for a return, and he exhibits no sense of obligation whatever; he merely assumes that the white man has more food and tobacco than he needs, otherwise he would not give them away.

Of course there are Indians and Indians, but the average Indian differs from the average white in character as the child differs from the man—he is less developed. Intellectually he is far ahead of the tolling and molling lower orders of the whites; he has time to think and study, and numerous are the examples he has given of the acuteness of his intellect and the accuracy of his judgments.

THE CHIEF.

## The Future of Canoe Sailing.

The present condition and future prospects of canoe sailing and racing in this country are by no means satisfactory; the decline of the racing fleet of the A. C. A. from its highest point, in 1890, still continues; not only are no new racing canoes built and no new recruits made, but the small band of racing men is lessened each year. It is probable that, with a meet that is specially convenient for the great body of sailing men, the racing this year will show up quite as well, or even better than that of 1893; but last year was a very poor one, for several causes, and a little improvement this year will not indicate any permanent revival of designing, building and racing. Added to the gradual lessening of the racing both at home and at the meets, the past year or so has witnessed the introduction of a class of larger boats which decidedly are not canoes, but which answer much better than the standard 16x30 canoe the wants of those of the older canoe sailors who are located within reach of fairly open water.

The influence of La Gloria and Scarecrow within the New York C. C. is perhaps the most striking instance, but the same ideas are working in other places. It is not due to any lack of merit in the canoe, or to the special good qualities of the larger boats, that the latter are replacing the former, but rather to the condition of canoe sailing at large years, the craft having reached such a degree of perfection as a racing machine that its successful use involved a constant labor in keeping the canoe up to the latest form, and in keeping oneself in condition for the keen hard work of match sailing. This state of affairs had already operated to lessen the ardor of many old sailors, who found that even the newest and fastest canoes that could

be built or bought demanded the expenditure of unlimited time and labor in order to win at the meets.

Even before the new craft were planned, the racing canoes were lifted less frequently from the racks of a Saturday, and fewer were taken to the meets; and the decline of canoe sailing cannot fairly be laid to the positive influence of the newer and larger craft, though it must undoubtedly be hastened by them.

It is with deep regret that we contemplate the threatened disappearance of the sailing canoe, even in part, from the place which it had so deservedly held for a quarter of a century. Our first ventures afloat were in craft of this sort, and our warmest friendships have been made on short State or open cruises, in the social life of a canoe club house, a winter camp-fire and in summer camps; the canoe, and largely the sailing canoe, being the great bond of sympathy that has been the first cause of many warm and intimate friendships.

There is nothing that has worked more harm to canoeing in all forms than the specialization and over-development of the sailing canoe which has so materially increased its speed but diminished its numbers. The cause is plain enough to any one who reads the racing of Notus, Vesper, Snake, Lassie, Thetis, Pecowic and Eclipse and compares them with the successful canoe of the present day. It would be a hard matter even now, however, to say how this improvement could have been prevented; it is inevitable in all racing craft, large or small, though in the case of the sailing canoe it has been specially rapid and destructive.

It is impossible now to go back to any previous stage of development in which canoes were slower and racing more general; and on the other hand, there is little progress to be looked for in the line of the present canoe and possible improvements in design. While canoe racing is not likely to disappear entirely in this country, it has passed its most successful period, and there is little hope of any marked growth in the future. There are still many localities where the sailing canoe is superior to all other pleasure craft, and in all localities there is a charm about canoeing as distinguished from other forms of sailing which is sure to attract a certain number; but the recruits from the great body of young boating men are likely to be proportionately smaller in the future than in the past.

One reason for the great success of canoe sailing at the start is that there were then no suitable sailing craft to be had for a service or man of moderate means. In this country he was limited to just two types, the sandbag catboat, of varying degrees of badness for his use, and the small rowboat fitted with a sprit or other simple sail. The canoe, trim, shipshape, handsome in lines and finish, rigged as perfectly as a yacht, and offering a number of qualities which specially fitted it for its intimate ownership and use, was a revelation, and opened an easy and inviting way to the pleasures of sailing where none at all had previously existed.

This superiority the canoe maintained for many years, being relatively better in design, construction and equipment than the small rival craft which sprung up by degrees; but of late the superiority in these points has ceased to exist. Side by side with the canoe in excellence of design and perfection of workmanship are canoe yaws, raters and other craft by the score, of varying sizes and proportions, with keel, fin-keel or centerboard, fitted for all localities and all varieties of sailing. It is not surprising that, in competition with this large fleet, differing in size but not in quality, the smallest one of them all, the sailing canoe proper, finds fewer adherents than of old.

In America at least, the canoe is still protected by rules, and the type is likely to continue indefinitely, even though it be less generally used than in the past. Abroad, however, the conditions are such that it is quite probable that the true sailing canoe may disappear entirely, giving place to some sort of miniature yacht. The rules of the Royal C. C. now admit of fin-keels, overhangs and the features of the modern yacht, and are likely to result in the extinction of those characteristic features which have for thirty years separated the sailing canoe from other craft. The following extract from the *Times* makes a condition of the sport in England which canoeists will recognize as maintaining here as well:

"When the early type of sailing canoe was started, and rapidly brought up to a state of comparative perfection as a sailing and cruising craft, few, if any, boats equivalent to the small raters of the present time existed. The open centerboard gig; was then about the only craft, between a small yacht and a pading, which was practically useable for cruises of inland waters, or on longer cruises which embraced both river, estuary and sea work; and naturally the all-round good qualities of the decked sailing canoe rapidly found favor with the large body of men who were in want of a craft which could continue to work where the yacht, from her size and draught, had to stop, or, if persevered, when the paddling canoe dare not venture. But in these modern times small raters furnish such fine sailing that for sailing sport alone men are drawn that way; and others who seek all-round work of sailing and cruising, combined with a reasonable amount of comfort, are persuaded into the canoe-yawl fleet; while the paddlers and river cruisers remain where they were, their craft being of perfect type for the work required of the canoe."

"It is at the present time obvious that the sailing canoe is at a standstill, that the men who sailed, designed and constantly improved the canoes during the past twenty years have gone off into canoe yaws, and no new blood has come in to replace them. Partly was this caused by the late petty rules of limitations in the class which befriended, to the exclusion of useful and comfortable craft, a whitened down model—perfect, no doubt, for its work, but of no use in confined smooth water, but dangerous or useless in all real or rough water; indeed, when it was proposed at the Royal Canoe Club meeting to sail the challenge cup race this season at Erith, on the tidal part of the Thames, such a course was generally objected to on the ground that it would not be safe, and the canoes could not live in such waters if there was any strength of wind, and such statement was not even challenged. A further fact is that under the recent conditions, canoe design has been for a long time at a standstill, and no real or practical improvement either in model or fitment has been produced. We can only hope that the new rule, which practically under its rating is without limits, will be at once taken in hand to produce, as it certainly can do, an able and useful little craft."

"Six months ago, when the Royal C. C. remodeled its classification rules, and adopted practically simple Y. R. A. rating rules in place of the late microscopic canoe rules, the Royal C. C. was very generally accused of being led by yachting men rather than by canoe men, and of being in a fair way to become a boat sailing club instead of a canoe club. To some extent this was true, in that the men who really led the club are inclined to go on as the past favorite canoe. But we will such criticism now say of the Mersey C. C. the next oldest canoe club to the R. C. C. This club has just remodeled its rules of classification, and has, among other reforms, gone far away ahead of the R. C. C. in regard to canoe-yaws."

"The Mersey club has adopted 1-rating, Y. R. A., for canoe-yaws, as against 0.5-rating, the limit in the R. C. C. This is indeed a step well in the direction of improvement, and it is possible to design a 1-rater which shall be in all essential points fairly a canoe in nature or type, it is highly probable that, where racing is the intent of the design, the craft will be simply neither more nor less than a full-winged racing Y. R. A. rater. The rule does, it is true, retain the R. C. C. conditions, that the craft shall be sharp at each end, and that the rudder shall hang about the stern; but with suitable appliances the rudder can be so built as to allow the canoe to be sailed on a 0.5 or 1-rater."

"We publish the text of the new Mersey rules; and it will be seen that the club has practically adopted the R. C. C. rules; this makes, therefore, the fourth club in union, except as to the matter of 1-rating canoe-yaws, and that will not necessarily adversely affect 0.5-raters entering for Mersey Club's matches. Other canoe clubs will, no doubt, now follow in adopting rules and rating similar to the R. C. C., and finally the Canoe Racing Association, which is to be officially inaugurated this summer, will have a pretty clear course to steer in formulating rules universally acceptable to the clubs."

"But the question naturally arises as to where canoe definitions ought to make a stand in regard to size or rating? The old-time idea that nothing was a canoe if over 30in. in beam has vanished like a sea fog before a rising breeze. The ancient canoe mariner, whose expert sailing of a knowledge beyond that of a paddling canoe, and whose apron buttoned up to his chin, is confined to a pencil sketch of a comfortable 'well coming,' will find that the Canadian type, fitted up to date, has cut him out, and that the sailing canoe and canoe-yawl are floating masses of tree, to him unintelligible, and that old-time canoeing is as nearly dead as he is."

## A. C. A. Membership.

CENTRAL DIVISION: Frederick Vroom, New York; W. B. Sackett, Rochester.

## Rifle Range and Gallery.

## Williamsburgh Shooting Association.

THE Williamsburgh Corps, Capt. G. A. Schmitt, opened its summer practice shooting in Wissel's Cypress Hills Park, May 6. Owing to the rain and fog only a few members put in an appearance. The scores are appended:

G. W. Horn	194	199	208	205	174
W. H. Horn	179	186	201	183	206
F. O. Ross	232	218			
R. Meninger	181	188	168		

### Zettler Rifle Club.

The Zettler Rifle Club held its third practice shoot for the season in Wissel's Cypress Hills Park on May 6. Fifteen members were present, twelve of whom participated in the competition for the club prizes. The weather conditions were decidedly bad. Rain and fog prevailed a greater part of the time during the shoot, and at times the bullseye was hard to locate.

The scores as a whole were good. Henry Holges was in fine form, and made the highest score of the day. Plaisted and Ross tied again in a 50 shot handicap match, Ross granting his opponent 25 points. Plaisted won by a margin of 7 points.

On the main target Zimmerman and Ross tied for first prize, each with a score of 58 out of a possible 60. Scores:

Handicap match, Plaisted vs. Ross, 50 shots:

Plaisted.....	206	220	219	221	219+25=1110
Ross.....	222	218	223	217	2173=1103

Man target, 3 shots, possible 60, 5 prizes: Gus Zimmerman 58, Henry Holges 58, G. W. Plaisted 57, C. G. Zettler 56, M. B. Engel 56.

### Rifle at San Antonio.

A more enthusiastic aggregation of riflemen were hard to find than that which met on April 29 at the San Antonio range. The practice was hot and the day cool, and each man put in his best efforts in order to qualify himself for the great State contest which will come off at New Braunfels on May 5 and 6. Following are the scores, 200yds., muzzle rest, globe and peep, or any other sights desired, 10 shots:

H Degener.....12 10 11 9 11 10 11 11 8-11-104

10 10 7 6 6 8 8 7 7 5-75

J. W. HARRISON, Sec'y.

### Shell Mound.

SAN FRANCISCO, Cal., April 22.—The semi-monthly all comers' match of the Columbia Pistol and Rifle Club was held at Shell Mound Park to-day. But little rifle shooting was done. Any rifle, 200yds., standard target: J. Utshig 84, Dr. Rodgers 84, A. H. Pope 81, H. Heeth 80, L. Barrere 78. Rest shooting: Dr. Rodgers 103, H. Heeth 95.

Unusual emulation was displayed among the pistol contestants for the all-comers' gold medal with cash prizes. Usual conditions—50yds., standard American target, re-entry, 5-pound pull of trigger. Scores:

S Carr.....9 10 9 9 10 10 9 10 10-91

9 10 9 9 10 9 10 10-93

### Schlicht Rifle Club.

THE Schlicht Rifle Club held its regular practice shoot for class medals on May 1. Geo. Dorr won the champion medal, Wm. Schlicht the first class, M. Daus the second class, Ch. Meyer the third class. Scores:

Geo. Schlicht 245, M. Daus 226, Wm. Schlicht 223, J. Diehl 220, Capt. Breitenhine 230, A. Meyer 229, Geo. Richter 225, L. Dorr 225, C. Schlicht 220, P. Maw 221, A. Tribout 220, C. Stein 218, J. Bonders 218, C. Seibel 227, A. Deubine 210, F. Lambrix 220.

### The Chicago-St. Louis Telegraph Match.

The series of telegraph matches between the Pastime Club of Chicago and the Missouri Rifle and Pistol Club of St. Louis, had an auspicious beginning. When the team of the first mentioned club gathered at the gallery of L. G. Ingersoll & Sons in Chicago on Tuesday evening, May 1, there were two men less than the required ten. Four of the best shots were absent, namely, Messrs Long of Lafayette, Ind., Wills and Lake of Alton, Ill., and Hunkle of Chicago. Two of these were absent on account of business and two from illness.

It is useless to go into any extended particulars of the match, since the conditions were so violated at the Chicago end that it could not be considered a contest. Loose management prevailed throughout in the working of the Chicago team. It must in justice be said of the members of that team that individually they shot with the utmost fairness and I believe desired to scrupulously observe all the conditions of the contest. They shot well and proved themselves excellent material in a contest as well as most companionable gentlemen. The fault was in the management.

Mr. L. G. Ingersoll captained the team. He objected to the shooters standing at 43ft., since it would put him to some inconvenience, as his shortest range was 50ft.

Mr. Freeman, a Chicago journalist, was engaged to referee the match. He was in a body objected to accepting the scores credited to Messrs. Long and Tracy, and as I could find nothing in the rules permitting composite scores, and did know of rules which prohibited competitors from shooting under any but their own names, which rule was certainly violated by every contestant according to your last message, I had no other alternative but to give way to the challenge of the club. The only basis which the St. Louis Club seemed disposed to settle on is, as I wired last evening, to take the eight highest on each side, which I will, I believe, give Capt. Schaaf and his men a victory by four points.

The St. Louis Club had good grounds for their objections. The match as shot was inconclusive. There were in Chicago negligence and disregard of the conditions of the match, which saved more of expeditiously getting revenue from the shooting gallery than conducting a contest for honor and goodfellowship. B. WATERS.

### Revolver Shooting in England.

THE usual weekly revolver competition of the North London Rifle Club took place on April 18. The wind was rather troublesome, the range was 20yds. Below are the details:

Walter Winans.....77775-37 Carter.....45677-36

May Monday.....77775-37 J W Shaw.....54755-33

Capt Cowan.....77775-38 J W Shaw.....54755-33

Lieut Varley.....77775-38 Howe.....47575-33

C F Lowe.....57756-37 Maj Palmer.....66765-33

 Rand.....77567-37 Capt Jones.....27566-32 Skilton.....57775-36 |

Owing to a mistake in making a 6in. instead of a 4in. bullseye at 50yds., the scores made up to now this year have 6 in. instead of 4 in. bullseyes. The scores for the revolver championship therefore now stand:

	Long range.	Short range.	Total
Walter Winans.....	41 41 40 40	29 29	220
Carter.....	36 36 35 34	24 24	165
May Monday.....	36 36 34 33	22 22	164
Capt Cowan.....	37 37 33 33	23 23	164
Capt Coway.....	38 37 36	27 24	162
Skilton.....	40 35	27 25	128
Capt Jones.....	33 32 32	32 32	119

At the South London Rifle Club on April 17 the weather was so threatening that few shooters went down in the afternoon, though as it turned out the weather cleared up. Result at 30yds.:

Capt T W Heath.....66577-37 Howard.....66645-33

C F Lowe.....77477-37 Clement-Smith.....35567-33

Howard.....66766-36 Clement-Smith.....35567-33

Scores for revolver championship of club now stand:

Walter Winans.....39 38-77 Kemp.....36 33-68

Capt Heath.....38 37-75 Howard.....34 33-67

C F Lowe.....37 35-72

The weekly shoot of the North London Rifle Club took place on April 25 in very rough, stormy weather, which kept some away and prevented high scoring in the revolver competition, which was at 20yds. The scores for the revolver championship of the club now stand to date as below:

	Short range.	Long range.	Total
Walter Winans.....	41 41 40 40	29 29	220
C F Lowe.....	35 35 35 37	29 29	194
Carter.....	32 34 35 35	26 24	197
Capt Cowan.....	34 36 37 38	27 24	196
Major Monday.....	32 33 34 35	29 22	194
Capt Richardson.....	35 34 34 35	25 24	188
Rand.....	35 36 36 37	25 25	169
Skilton.....	40 38 36	27 25	166
Capt Jones.....	29 32 32 33	22 22	148
Luff.....	28 34	26 78	78
Howe.....	39 33	65	65
Clement-Smith.....	38 29	64	64

### Hartford Rifle Club.

HARTFORD, Conn., April 23.—Inclosed please find scores made by the Hartford Rifle Club at its regular bi-monthly shoot, April 23, standard American target, 200yds., off-hand.

H. M. POPE, Sec'y.

### Palisade Rifle Club.

THE members of the Palisade Rifle Club were present on May 1 to participate in the weekly gallery competition for club medals. The scores are appended: Geo. Dorr 243, Fred Krobatsch 233, Fred Esperer 231, Wm. Ahles 226, R. Glaser 223, Max Zeller 217, Aug. Ahles 215, L. Dumont 210, Ad. Ahles 203, C. Hemberger 207.

### Greenville Rifle Club.

THE Greenville Rifle Club entered upon its second week in the new series of gallery handicap shooting on Friday night of last week. James and Collin Boag got the first and second prizes in the first class, Agneau and Lutz the first and second in the second class and Zeiger and Borr the first and second in the third class. Scores:

First Class.—J. Boag 243, first prize; C. Boag 242, second prize; Robidoux 241, Purkiss 241, Collins 239, Scheele 224.

Second Class.—Agneau 239+2=241, first; Lutz 240, second; Dodds 255, Chavant 236, Spahn 230, Charlock 231.

Third Class.—R. Zeiger 222, first; Barr 228, second; Hill 211, Graef 252, Huelsen 210, Daniels 215, E. Wuestner, Jr., 212, F. Wuestner 202, E. Wuestner, Sr., 185.

### RIFLE NOTES.

Teams from the four prominent German-American shooting societies, viz., New York Corps, New York Central Corps, New York City Corps and the Harlem Ind. Corps will meet in Washington Park, May 22. Each team will consist of ten men, ten shots per man. The team making the lowest score will have to pay the "piper," and entertain the other teams after the contest is decided. It is reported that a match between teams representing the New York and the New York Central Corps will be arranged to be shot off in the latter part of this summer.

There is considerable interest centered in the coming match between Ross and Dorrier, which takes place in Wissel's Cypress Hills Park. The date of the match has not been decided upon as yet.

The Knickerbocker Rifle Club, of Brooklyn, Capt. Wm. L. Keppler, will hold its third annual prize shoot in C. Lederer's gallery on May 19 and 20. A prize programme consisting of ten prizes, ranging from \$10 to \$1, will be offered for our gallery experts to compete for.

The Brooklyn Schutzen Corps held its monthly practice shoot in Deckerleman's Park, Glendale, L. I., on Wednesday of this week. The scores will appear in next week's issue.

The New York Central Corps held its monthly shoot in Washington Park on Thursday of this week. Look for the scores next week.

The New York Corps held its monthly shoot on Friday of this week. FOREST AND STREAM will tell you all about it in next issue.

Don't forget the festival and prize shoot of the Williamsburgh Corps, which comes off in Wissel's Cypress Hills Park, May 13 and 14. There are \$500 in cash prizes for the winners.

### Trap-Shooting.

All ties divided unless otherwise reported.

If you want your shoot to be announced here send in notice like the following:

FIXTURES.

May 15.—Second annual tournament of the Atlantic Trap-Shooting Association, at Lynn, Mass. W. F. Brown, Sec'y.

May 15-16.—Pekin (Ill.) Gun Club tournament.

May 15-17.—Nebraska State Sportsmen's Association's eighteenth annual tournament, under auspices of Columbus Gun Club, at Columbus, Neb.; \$300 added money.

May 17-18.—West Newburg (N. Y.) Gun and Rifle Association's spring tournament.

May 17-19.—The Interstate Manufacturers' and Dealers' Association's fourth tournament, under the auspices of the Prairie Gun Club, at Garfield Park race track, Chicago, Ill. The Prairie Gun Club adds \$500 to the purses.

May 19.—Boiling Springs Fish and Gun Club, 25 bird handicap, \$15 entry, 30 per cent. to be paid on or before May 16. For amateurs only, at Rutherford, N. J. Address W. H. Huck, Sec'y, Rutherford, N. J.

May 22-25.—Knoxville (Tenn.) Gun Club's thirteenth annual tournament; first day, targets, \$1,000 added money, known traps, unknown angles; last day, live pigeons. Open to the world. No handicap. R. Van Gilder, Sec'y.

May 23-25.—Minneapolis (Minn.) Gun Club's fifteenth annual tournament.

May 23-26.—Weimer Cartridge Co's tournament, at St. Louis.

May 23-26.—Massachusetts State Shooting Association's tournament, under auspices of Hingham Gun Club, at Hingham.

May 29-30.—Big Four Gun Club tournament, at Sheldon, Iowa.

May 29-30.—Janesville (Wis.) Shooting Club, third annual tournament; targets and live birds.

May 30.—Eastern New York League tournament, at Canajoharie, N. Y., under the direction of the Canajoharie Gun Club. Charles Weiss, Sec'y.

May 30.—Central New York Trap-Shooters' League, third tournament, at Utica.

May 30.—Nitro Gun Club's second annual tournament, at West Pittston, Pa.

May 30-31.—Central New York Trap-Shooters' League tournament, at Rochester.

May 30-June 1.—Interstate Manufacturers' and Dealers' Association fifth tournament, and second annual tournament of the Michigan Trap-Shooter's League, under the auspices of the Valley City Gun Club, Mason. \$300 added money.

June 27-28.—Interstate Manufacturers' and Dealers' Association's sixth tournament, under the auspices of the Elwood Gun Club, at Elwood, Ind. Elwood Gun Club will add \$300.

### DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any new notes they may care to have printed.

With a combination formed of the Interstate Manufacturers' and Dealers' Association, the Michigan State Trap-Shooters' League and the Valley City Gun Club the fifth Interstate tournament, to be held at Grand Rapids, Mich., on May 30 and 31 and June 1, is bound to be a grand success. The Valley City Gun Club will provide the grounds and \$200 to the purses. The events of the first day are one at 10 targets, novelty rule, \$1.50 entry; two at 15 targets, novelty rule, \$2; three at 15 targets, unknown angles, \$3; one at 20 targets, novelty, \$2.50; one at 20 targets, unknown angles, \$2.50; two at 6 pairs, \$3. There will be \$10 added to each of the six events. Second day, same as above, except that in place of the 20 targets at unknown angles there will be shot a 25-target event for the individual State championship, open only to members of the Michigan League. Third day—three 15-target event, novelty rule, \$2; three 15-target events, unknown angles, \$2; one 20-target event, novelty rule, \$3.50; one event at 6 pairs, \$1.50; one 20-target event, \$2.50. The Morton House will be the headquarters for all the sportsmen. The Valley City Gun Club will hold a banquet at the above house on the evening of May 31 at 8:30 o'clock.

About thirty sportsmen went to Al. Heritage's Marion grounds on Saturday, May 5, with the expectation of seeing a 50-bird exhibition shoot between Brewer and Morfe, announced to take place at 2 P. M. They were doomed to disappointment, however, as neither of the principals materialized, nor did they condescend to send any reason for their non-appearance. After considerable and justifiable grumbling had been indulged in the shooters present decided to shoot off the birds provided for the exhibition. The first event was at 5 birds, \$3 entry, two moneys; the second at 7 birds, \$5 entry, two moneys; and the third a \$2 miss and out. The results were:

SPRINGFIELD INTERSTATE.

SPRINGFIELD, O.—*Editor Forest and Stream:* The Springfield tournament of the Interstate Manufacturers' and Dealers' Association, held May 2, 3 and 4, under the auspices of the Springfield Gun Club, must be classed as one of the successes of 1894, although the attendance the second day was not fully equal to the anticipation of the members of the Springfield Gun Club as several promised delegations failed to materialize. The weather was all the most exacting could have asked the first two days, there not being so much as an indication of possible rain, and the absence of strong wind added much to the advantage under which the shooters contested. The third day opened dark and cloudy with a slight rain in the morning, but this did not deter the shooters from being on hand at the grounds promptly. The grounds of the Springfield Gun Club are admirably located, situate on the Landsdowne Park Electric line south of the city of Springfield. Standing upon the club porch and looking due south one may see Landsdowne Park, its pretty fields fringed with timber. Due east lies the beautiful woods of Lefel, while to the north lies the city of Springfield. All this attractive scenery adds to the location of the gun club grounds.

The club house is a building of about 12x20 ft., and the location of the traps for the best possible results in shooting has been carefully attended to. The house and platform front due south, and shooting can be carried on rain or shine, as a large canvas fly is stretched, completely covering the score, and thus protecting the shooter from the sun or rain.

The club has occupied these beautiful grounds for the past three seasons and have lately received a valuable addition to the grounds in the form of a large tract of land recently sold off for building purposes; so in all probability this will be the last shot on these grounds.

Manager Elmer E. Shauer had everything arranged and in order for the opening of the tournament promptly at the advertised hour. The tents of the subscribers to the Association were pitched to the right of the club house in the following order: American E. C. Powder Co., U. M. C., J. B. Sharkey & Son, Standard Standard Keystone Co., T. H. & S. Bros., LeRoy Shot and Lead Works, Smokeless S. S. Powder Co., and FOREST AND STREAM.

The handsome display of the U. M. C. Co. was the attraction for all shooters, and Mr. W. M. Thomas was kept busy explaining the many good qualities of their goods.

The first two days of the tournament were devoted to target shooting exclusively, while the third day was live bird day, and a team race of 20 men a side between the Springfield and Dayton gun clubs. Springfield proved too much for Dayton and came out victorious by 8 targets in a total of 500 a side. The conditions of the team race were 20 men per team, 25 targets a man and for a purse of \$80. The live birds were a mixed lot, there being some extra flyers among them which required good judgment on the part of the shooter to bring them to ground.

The Interstate Manufacturers' and Dealers' Association's rules governed all contests. Following are the scores:

First Day, May 2.

The Central New York League.

UTICA, N. Y., April 26.—Inclosed find scores of the second tournament of the Central New York Trap-Shooters' League, held here April 24 and 25. It was at first intended to hold the shoot May 1 and 2, but owing to the enforced absence of many out-of-town shooters, the dates were changed. Rochester again proved an easy winner, and it looks as though they have a "lead pipe clench" on the trophy. E. D. Fulford, of this city, again carried off the honors for individual shooting, and won honor as well as cash by his fine work. He shoots now exclusively U. M. C. factory-loaded ammunition and E. C. powder. The shooting was very hard, owing to a high wind and targets being thrown exceptionally hard. Appended are scores:

Tuesday, April 24.

ANSWERS TO CORRESPONDENTS.

J. J. B.—In Minnesota you will find good bass fishing in Aitkin county, in the waters reached from Aitkin on the N. P. R. R. Also in Lake Sally, and others reached from Detroit City.

H. G. N., Long Island City.—Will you please inform me through your columns the make of a rifle that Mr. Alfred Bisson uses as illustrated in the issue of Feb. 10, 1894. Ans. A Winchester repeater, 22cal., model 1890.

SPORTSMAN, Quebec.—I have been recommended by different sportsmen to oil my shot. Others laugh at the idea. Please let me know if there is anything in it, and the reason and benefit of it. Ans. We do not know of any possible advantage that could arise from oiling the shot.

Dr. JES. Douglas, Wyo.—Is there any satisfactory method of measuring one's self for a proper stock for a shotgun? Ans. Stand in front of a mirror placed flat against a wall. Throw the gun into position to aim. It is a fit if the gun always comes into position so that you can see your eye just above the rib, and also the upper surface of the rib.

A. B. C., Chicago.—1. Is there any hunting rifle manufactured in this country using the new .30, same as adopted in Mannlicher or Jorgesson rifle? 2. If not how soon will such be on the market? 3. What can Mannlicher carbine be bought for? 4. And where? 5. What State will be the best to settle in to live the life of a hunter for a number of years? Ans. 1 and 2. Yes, the Winchester Company lists in their new catalogue a single shot rifle for the U. S. Army .30 cartridge. 3. We cannot say. 4. Berlin, Germany. 5. Probably some of the north-western States.

IRONTON, O.—In reading over the rifle matches in your paper I wish to ask you: 1. What caliber is the standard use? 2. What is the regulation distance? 3. Size of the targets? Answer in your query column in your next number. Ans. 1. Various calibers are used, the .38-55 and .32-50 being most often seen. 2. 200yds. is the distance at which most non-military, outdoor, shooting takes place. 3. Various targets are used. The ring target, in vogue with German shooters, has a black measuring 12in. (for 200yds.) and the entire target is divided into circles 3/4in. apart, counting from 25 down. The standard American target, which is more widely used, has an 8in. black and counts from 10 down.

C. F. W., New York.—Kindly tell me in the correspondents' column of your valuable paper: 1. What is the flight of a duck, how far per minute? 2. What kind of duck is the speediest, and (3) if there is any other bird which can fly long distances in less time than a duck. 4. What is the greatest distance known to be covered by a duck in a night. Ans. 1. Practically nothing is known about the speed at which birds fly. The average flight of wild ducks has been guessed as 90 miles per hour. Mr. Cross in his book gave the speed of certain species as from 60 to 80 miles. 2. No one knows. The blackhead is a very swift flyer. 3. The passenger pigeon has been said to fly at the rate from 70 to 100 miles. They have been killed in the Middle States with their crops full of undigested rice, which must have been gathered in Georgia. 4. We cannot answer, just think for yourself what it means.

W. E. Newark, N. J.—1. I would like some information in regard to the fishing and shooting at or in the country surrounding Long Lake, Hamilton county, N. Y.? What kinds of fish are caught there and are they very plentiful; also the kind of game? How does it compare in the amount of game to be found with the best game country in New York State? Is there any duck shooting to be had on or near Long Lake? 2. Are there any restrictions placed on the number of deer one person may shoot in a season, and if so does it apply to a resident as well as a non-resident of the county? Ans. 1. In the immediate neighborhood of Long Lake is to be found some of the best fishing and shooting in the Adirondacks. Long Lake affords bass and pickerel, while brook trout are found in near-by waters. Ducks are fairly abundant in season, and deer and small game are plentiful. 2. No one is allowed to kill more than two deer during the season.

H. D. C. Brompton Falls, Can.—Would you please give directions in your paper for making (1) standard American, and (2) German ring targets for 100 and 200yds. off-hand? An answer would oblige many persons, as there are a number of rifle cranks in this vicinity. Ans. 1. The standard American target for 200yds., off-hand shooting, is 4x6ft. in size; with a black 8in. in diameter, within which are included the 8, 9 and 10 circles. The diameter of the circles is as follows:  
10 circle..... 3.6in. 5 circle..... 19.68in.  
9 "..... 3.54in. 4 "..... 26in.  
8 "..... 3in. 3 "..... 34.22in.  
7 "..... 2.11in. 2 "..... 46in.  
6 "..... 1.48in. 1 "..... Balance of target.  
2. The German ring target has a bullseye 12in. in diameter, and the whole target, including the bullseye, is divided into circles 3/4in. apart (the center circle being 1 1/2in. in diameter), counting from 25 down. For 100yds. reduce the measurements given one-half.

**YALE MIXTURE**

A GENTLEMAN'S SMOKE.

WE COULD NOT IMPROVE THE QUALITY if paid double the price. It is the choicest Smoking Tobacco that experience can produce or that money can buy.

MARBURG BROS., BALTIMORE, MD.

It will give us great pleasure to forward a copy of our catalogue to any one who "goes a-fishing." Some people charge for their catalogues, some charge for the postage, some charge for both. We are more than willing to give away our catalogues and prepay postage on them. No angler, after looking at the catalogue, can resist buying from us or from our trade-customers all the fishing-tackle he can afford to pay for. That is where we get back a good deal more than cost of catalogue and postage.

ABBEE & IMBRIE,

18 VESEY STREET, NEW YORK CITY

Notice to Fishermen! Cut Prices for 1894.

I am with you again with lower prices for Fishing Tackle. I find by experience that putting down the prices and not decreasing the quality, it increases my business every year.

One lot of Split Bamboo Fly and Bass Rods will be sold at \$1.58 until all are sold. Rods are all nickel mounted, solid reel seats, silk wound, complete in wood form and will give satisfaction.

Length and weight of the Fly Rods are: 9ft., 6oz.; 9 1/2ft., 6 1/2oz.; 10ft., 7oz.; 10 1/2ft., 7 1/2oz.; 11ft., 8oz. Reel seats below hand.

Length and weight of the bass rods are: 8 1/2ft., 9oz.; 9ft., 10oz.; 9 1/2ft., 10 1/2oz.; 10ft., 11oz.; 10 1/2ft., 12oz.; 11ft., 12oz.; 11 1/2ft., 13oz. Reel seats above hand.

A special lot of Hard Rubber and Nickel, Raised Pillar, Multiplying Reels with Balance Handle and Side Spring Click, 40yds., 90 cts.; 60yds., \$1.00; 80yds., \$1.10; 100yds., \$1.20.

Any of the above reels sent by mail for price and 10 cts. extra for postage.

Brass Click Reels, 40, 60, 80 or 100yds., 28 cts. each; 5 cts. extra for postage.

One lot of Multiplying Raised Pillar Reels with Balance Handles and Lifting Drag: 40yds., 38 cts.; 60yds., 48 cts.; 80yds., 58 cts.; 100yds., 68 cts.; 150 yds., 78 cts.

A special lot of Trout Flies at 30 cents per dozen assorted, sent by mail 1 cent per dozen extra for postage.

A special lot of Bass and Pickerel Spoons at 5 cents each sent by mail, 1 cent extra for postage.

All kinds of Hollow Point best quality Hooks snelled to single gut 10 cts. doz.; double gut, 15 cts. doz.; treble, 20 cts. doz.; four ply, 25 cts. doz. 1 cent extra per dozen for postag

300ft. Braided Linen Reel Line on Block, 41 cts.; 300ft. of Hand-Made Linen Reel Lines on Block, 9 thread, 38 cts., sent by mail 3 cts. extra for postage.

The FOREST AND STREAM is put to press on Tuesdays. Correspondence intended for publication should reach us by Mondays and as much earlier as may be practicable.

## "GENERAL" COXEY AND PRESIDENT HYDE.

If there were any one thing in this merry month of May that could afford us more genuine satisfaction than the actual fishing of a well stocked trout stream, it would be to pause at the noonday interval, with half-filled creel, and to lie in the shade and play eavesdropper, while Mr. Henry B. Hyde, President of the Equitable Life Assurance Society, discussed political economy with a disciple of "General" Coxe.

At first blush—if, indeed, we can conceive of the eminent New York financier as reasoning with the tramp—at first blush, it would appear that Mr. Hyde would find it a simple task to demonstrate to his misguided friend the fallacies of Coxeism.

But what if the Coxe Army man were posted? What if he had heard a thing or two?

Suppose, for instance, that he knew these facts: That after the fashion of New Yorkers of abundant means, Mr. Hyde maintains a town house and a country house. That among the attractions of Mr. Hyde's summer home on Long Island, there are some well filled trout ponds. That to stock these ponds Mr. Hyde does not buy trout from private breeders, but applies to the State hatcheries for them, and receives them free of charge. That while they cost Mr. Hyde nothing, the people of the State of New York provide them out of funds raised by taxation. Suppose that being posted up to date, the Coxe Army man knew that Mr. Hyde had asked for trout this year, and that the State had given him 10,000. Suppose that being particularly well informed the tramp should know whether to believe the whispered reports, which say that when Mr. Hyde has been given all the trout assigned to his private ponds on his own application, he gets still more fish on applications signed by other people. Suppose, in short, that the peripatetic philosopher had at command all the ins and outs of this established system of lading public fry into private waters, this bestowing of public funds for private benefit; and that knowing all this he should resort to the *argumentum ad hominem*—the personal application—what would the life assurance society president have to say for himself? Would it not require all the wisdom of even so profound a master of political economy and all the wit of so keen a dialectician as Mr. Henry B. Hyde, to convince the tramp that what was sound doctrine for the Islip clamorer for free fish was not sound doctrine for the Coxeite clamorer for free money? If the eavesdropper were to linger until the tramp should be convinced, would he not lie there till dewy eve, and until after dark, and contract perhaps a stitch in the side or a crick in the back? For tramps are such perverse, cantankerous and obstinate creatures, scorning logic and making light of reason.

And yet Mr. Hyde might be right; there may be some

fine distinction between the principle of free bonds and that of free fish, between Coxeism and the Hyde system. For while the Coxey's fail to receive their bonds, the Hydes do get their trout. Will not some one who is versed in political economy explain the distinction in simple terms, so that we may all understand it?

It would be unreasonable to blame the President of the Equitable Life Assurance Society for so successfully putting into practice for his individual profit the doctrines of Coxeism. As a thrifty citizen Mr. Hyde is to be commended for seizing the main chance, getting all he can and asking for more. He would be justified as well could he ask and receive from establishments maintained by the State treasury funds Jersey heifers and high-steppers. But the serious question which the public is beginning to ask itself is this: Why should the President of the Equitable Life Assurance Society, or any president of any society, or any other man anywhere, be supplied by the State with cans of trout, while the "General" of the Coxe Army is hustled from the steps of the Capitol?

The last Legislature of this State passed a bill providing that private ponds or streams stocked wholly or in part from State waters or from State hatcheries should be exempt from the provisions of the trespass law. Gov. Flower vetoed the bill on the ground that it would be an unwarranted interference with private property; and he was quite right in doing so. The introduction of the measure, however, was significant of the fact that the taxpayers of this State are beginning to tire of providing funds for the maintenance of a Fish Commission and trout hatcheries and hatchery superintendents, to supply fish for the private ponds of citizens who are as abundantly able to buy their trout as they are to buy their groceries and their collars.

## SNAP SHOTS.

On Tuesday of last week, May 8, a Canadian revenue cutter seized two American vessels, off Pelee Island, in Canadian waters of Lake Erie. On board the vessels were forty bass fishermen from Cincinnati, Dayton, Springfield and Decatur. The vessels, the Visitor and the Leroy Brooks, were towed into a Canadian port; and the fishermen were afterward released. The press dispatches state that the arrests were made because the Americans were fishing in Provincial waters without a permit. But the existing law of Ontario does not require non-residents to take out a license for bass fishing with rod and line; nor was this fishing in the close season; the Ontario close season for black bass now runs from May 10 to June 30; and the seizure was made on May 8. Formerly the close season began on April 15 and ran to June 15. The collector of customs on Pelee Island, Dr. F. B. McCormick, has for a number of years kept a fisherman's home at the south end of Pelee, where the Dayton Club have been quartered each spring, while the house of the famous Pelee Club is located at the extreme north end of the island. Dr. McCormick has always been largely instrumental in obtaining from the Canadian Minister of Fisheries the annual special permit which has heretofore permitted the opening of the rod fishing for Pelee bass on May 15, instead of June 15, as provided by the general law, and the Dayton and Pelee clubs have always been careful to observe the Canadian regulations, never making any attempt at fishing till the morning of the 15th.

The new system of licensing dogs and taking up stray animals is attended with admirable results in this city under the control of the Society for the Prevention of Cruelty to Animals. The ruffianly dog-catchers have been abolished and the pound is a thing of the past. The Society has established a shelter for lost, strayed and homeless animals, to which place stray animals are taken and held forty-eight hours, to allow owners to redeem them. Lost dogs bearing the license tag of the Society, found by its men, are taken to the shelter, the owners are immediately notified, and upon proving ownership may resume possession of their dogs without charge for redemption. The Society offers a reward of twenty-five dollars for the arrest and conviction of any person found stealing dogs bearing license tags, which reward is also a protection to the owners. The men employed by the Society to remove from the streets un-

licensed dogs, and cats without collars, have a distinctive uniform of brown Bedford-cord and a badge bearing the familiar initials of the Society, "S. P. C. A.," the number of the wearer and the words "Shelter for Animals." This is a vast improvement over the old system; and to President Haines are due unstinted credit and warm appreciation for his public service in having secured legislative action to establish the new system, and for the efficiency and satisfaction with which he is administering the work.

It is probable that before very long some steps will be taken to inclose a large pasture in the Yellowstone Park, where some specimens of the wild animals of the Park may be kept to be seen by the hurrying tourist. This action was recommended by the superintendent of the Park in his last annual report, and the wisdom of the recommendation is obvious enough. However tame elk, deer and buffalo may become under the protection which the new law will give them, they will never change their habits so far as to leave the cool shades which they affect in summer, and come down and camp by the side of a hot and dusty road merely in order to expose themselves to the inspection of the tourist. It is well known that most of the large herbivorous animals of the mountains are easily kept under fence and the only expense attending such a project would be the erection of the inclosure and the providing them with food in winter. The average tourist who passes through the Park on a limited ticket has little opportunity to see anything of the interesting and varied fauna which inhabits this beautiful region, and there are few things which interest people more than wild animals. It is extremely desirable that all practicable means should be employed to make the Park attractive to visitors, for the reservation needs all the friends that can be made for it.

Now that the yarn about Mr. O. C. Guessaz and his companions having killed 800 and odd ducks in two days on a Texas lake has been shown to have come from the lively imagination of Mr. Max J. Luther, of Corpus Christi, it is sad to reflect upon the flood of virtuous indignation which has been lavished upon the case. The one who has come out of the affair with the most credit is Mr. Guessaz himself; and every fair-minded person would feel genuine regret if the vindication of our San Antonio correspondent were not as widely published as was the original charge. As for Mr. Luther, we advise him to bask while he may in the sunshine of his fame as a teller of tales that are tall. His hour is short; for the Forest and Stream Publishing Co. happens to have in press for early publication a volume recording the experiences of "A Man from Corpus Christi," whose shooting stories are so much more ingenuous, expansive and spell-binding than Mr. Luther's best efforts that they will positively make that gentleman jealous and weary.

Mr. J. B. Battelle sends us a copy of a bill which was adopted by the Ohio Legislature last week, forbidding the killing of quail at any time for exportation from the State or for sale within the State. "Plain, practical legislation in the line of FOREST AND STREAM's platform," writes Mr. Battelle. The fact is that many people think our platform plank regarding the sale of game to be more advanced than it is. For as a matter of fact the sale of game is prohibited in a number of States; and legislation is tending in that direction. Public sentiment is shown by the letters we have published from week to week, in support of the plank. Such indorsements are given to-day from Nebraska, Ohio, Maryland, Indian Territory, New York, California, New Hampshire, Wisconsin, Tennessee and Nova Scotia. The two papers that gave rise to this discussion have been reprinted as a tract, and will be sent to any address.

Change the subject. Leave off the chit-chat. Break the chain. Get out from the humdrum. Go fishing. There are waters persuasively purling for you. There are violets blowing for you in the meadows, and anemones and star-flowers glowing for you in the shade of the hemlocks. There are fish gleaming for you in the streams. Go fishing.

The American Fisheries Society met in Philadelphia on Wednesday of this week. A report of the meeting will be given in our next issue.

## "Forest and Stream's" Yellowstone Park Game Exploration.

No. 2.

### ACTUAL INTERVIEWS ON SEGREGATION.

#### All About Calmness.

CHICAGO, Ill., May 5.—In many past issues of *FOREST AND STREAM* there have appeared editorial articles handling the question of the proposed division of the Park by a railroad from Cinnabar to Cooke City. *FOREST AND STREAM* has opposed that railroad and all other railroads through the Park, and has made the one consistent and unfaltering newspaper fight to keep the Park as it is—unhurt, untouched, as the people of America have by their representatives declared it should be kept. In doing this *FOREST AND STREAM* has acted in the name of honor, of sportsmanship and of public decency. It has kept faith with its constituency and its principles. In doing this it must needs have given the subject of the proposed segregation the most thorough and careful attention, and have acquired a most intimate knowledge of the matter in all its bearings, not only from extended readings, but from a various familiarity with the entire region in question.

I recall that a Chicago paper, which claims to be published in the interest of sportsmanship but is really open to the use of any man or men with an axe or axes to grind, once published an article by W. S. Brackett, who held forth that the occupant of a "far-off Eastern sanctum" could not possibly be so well posted on Park matters as those living near the Park. This is a trifle amusing, when one comes to it. "Col." Brackett has lately bought a little ranch on the Yellowstone, between Livingston and Cinnabar, where he and his family pass a part of the summer. I don't know where he spends the rest of the year, but it is my opinion that he is not very closely identified with property interests about the Park. (If he is, then he is taking an unfair advantage of the so-called Sportsman's Journal and Miner's Friend which he favors with his stories on segregation.) Yet I happen to know—what no one else would ever know through the editorial page of *FOREST AND STREAM*—that the gentleman who has written the *FOREST AND STREAM* editorials is a ranchman owning property in Wyoming, who is in cattle and horses for revenue and not for summer resort purposes; that he has spent years in all the phases of Western life, and that he knows not only all of the Park and its environs but most of the Montana mountains as well, no doubt a good deal better, if I could commit the impoliteness of so direct a comparison, than Mr. Brackett or many of his neighbors do. I do not doubt that Mr. Brackett feels himself a Montana citizen when he is in Montana, and that he says he has "come to stay," and that moreover he catches a warm flush of generous sympathy from the talk of the interested men about him; but he is unjust to himself when in ignorance he accuses a courteous opponent of an ignorance that does not exist. One must not accuse Mr. Brackett of demagoguery in this, but only of bad generalship in not learning the enemy's forces. This lack of forethought leaves *FOREST AND STREAM* quite in position to say, suavely and calmly—if it ever could be so impolite as to do such a thing—that probably it is Mr. Brackett who doesn't know such a frightful lot more about this subject than he ought to, himself.

It all comes of not being calm. With calmness, I should think Mr. Brackett would make a very good advocate of just the doctrine *FOREST AND STREAM* maintains, and not the fire and sword tenets under which the local Cooke City and Livingston contingent propose to wipe the Park and the military off from the face of the earth, to mutilate Capt. Anderson and even burn up the geysers, the falls and the Yellowstone Lake. I wish Mr. Brackett would be calm, because I saw him on the Cinnabar train one day, going up to visit his ranch (he didn't know any *FOREST AND STREAM* man was there) and he is a mighty nice looking man and appeared intelligent looking, too. I should think a great deal could be made out of him with care. If he will only be calm and think this thing over as a man and as a sportsman he will come out of this epoch of fire and blood pretty near to the *FOREST AND STREAM* position in belief. He will be welcome. *FOREST AND STREAM* will be in just about the same position, or maybe a little further ahead. It is a great deal nicer to be on the side of good judgment, good sportsmanship and good citizenship than to be a left-handed Marco Bozzaris or Toussaint L'Ouverture, or One-eyed Riley, or any of those martyr fellows. I wouldn't be any martyr if I were Mr. Brackett, I wouldn't burn up the geysers or disfigure Capt. Anderson if I were Mr. Brackett, as in his article he suggests will be done. I wouldn't do that. I would be calm.

*FOREST AND STREAM* being therefore in full possession of the facts in this case, as it is in most cases which it undertakes to handle, it would ill become me to attempt to add any weight to what has already been better said, and I should not touch on this matter at all did I not hope that some of the actual little interviews I had with segregationists and others might prove at least amusing if not instructive.

J. G. Sax, of Livingston.

Mr. Sax keeps a fruit store and newstand. He does not keep *FOREST AND STREAM* for sale. I asked him why not. "I've got no use for that paper," he said. "Why not?" said I. "It's all the time fighting us," he replied. "If it hadn't been for that dash-bing paper we'd have had a railroad to Cooke before this through the Park. The fellows here are all down on *FOREST AND STREAM*, and won't have it. I see you are at it again this fall." "How do they know we are fighting you if they don't read the paper?" I asked him. "I carry what there is a demand for," said Mr. Sax, stiffly, ignoring the conundrum.

W. F. Sheard, of Livingston.

Mr. Sheard is a taxidermist, and no doubt buys more furs and trophies at all sorts of seasons than any other man in that part of the country. He is the man who wrote to one of the winter keepers in the Park, asking him

to poison animals in the Park and send out the small skins by mail to him. This letter, which was written on Mr. Sheard's own letterhead, was, I believe, published by *FOREST AND STREAM*, which has often spoken very frankly and understandingly about Mr. Sheard and his practices. Of course, I was innocent and ignorant of all that when I called on Mr. Sheard, and Mr. Sheard, thinking, no doubt, that I had never been west of the River before, gradually thawed out and after a while became positively entertaining. He introduced me to several friends, showed me around, and took me through his really magnificent collection of furs and trophies. He showed me a little bit of timber up on the mountain side above town, and said he never had to go further than that to kill deer. "I killed six up there one day," said he, "I got the whole band." (I think he said he killed them all at oneshot, but a little thing like that should not matter.)

Mr. Sheard disclaimed that he had ever bought a Park buffalo head. He thought, perhaps, some of the other taxidermists had done such a thing. They were wicked men. He wouldn't buy such a head. Dear me, no.

Mr. Sheard told me confidentially that "the military up at the Park was all a fake—didn't amount to anything; that it didn't protect the Park and was no good; that the Park would have to be opened some day." Mr. Sheard also assured me that the road to Cooke City should be built through the Park; that all it could cut off would be a little bit of rocky hills of no value whatever and a region where the game never came at all. He said that if this road were built Livingston would blossom like the rose and every citizen would have a smelter running on the Cooke City ores. I told him I thought it more likely that Livingston would get up in the night and go to Cooke, or that the smelters would go up near Cinnabar, or at Horr, where plenty of coal was at hand. Mr. Sheard couldn't think so. He pictured to me the wrong done by Congress to the Cooke City mine owners, who had waited twenty years without having the way to fortune opened to them by act of Congress. I told him that I had been waiting twenty years to get rich too, but Congress hadn't done anything for me and I didn't believe it was going to. Mr. Sheard couldn't see the parallel. No man in Livingston or Cooke City can see the parallel. Yet it is a perfectly just and fair one. The disappointed Cooke City men are just the same as those disappointed in any other line of life and the world is open for them to go into something else if they are not satisfied where they are.

Mr. Sheard took me to a map, and explained to me that only by one route under the shining canopy of heaven could a road be built to Cooke City, and that was through the Park. "But all we want," said he, drawing a nice mark with his pencil, "is to go into the Park for about a half mile south of the Yellowstone, for just a little way, then right out along the hills just above the north line. There is no game in there, not a geyser and not a single object of natural interest." Yet later I found that even this statement would cut off forever the entire band of antelope in the Park, which has only a little winter range right along the Yellowstone Valley. I knew the statement was inaccurate by about fifty miles in length and by some thousands of feet of rocky, vertical walls in height, and later I learned by my own eyes that there are more elk in winter time in just the part of the Park proposed to be cut off than in any one section of it whatever.

I don't remember any specific statement to that effect by Mr. Sheard, but I gathered the impression that he was going to burn the Park up next week, and I presume that he has done it. I don't see why he did it, because the Park must have been a source of revenue to him especially.

The Press of Livingston.

I met the editors of the leading Livingston paper, a prominent and radical advocate of segregation and the Cooke City road, and as members of the "perfesh" we had a pleasant talk. Mr. Wright unrolled a map, and I must say that I listened to a very fair statement of the local side of the case. I am able to see how personal interest can blind a man to national interests, though unconsciously, and I told my newspaper friends that had my lot fallen in Livingston, and had I never known the doctrines of *FOREST AND STREAM*, I would no doubt have done as they did. On the other hand, I asked them to be equally fair, and to realize the folly of *FOREST AND STREAM*, by profession devoted to the preservation of the forests and the game, leaving its own field to go into a field of an absolutely foreign interest. I told them that *FOREST AND STREAM* did not claim to be a mining journal, but a sportsman's journal, and that as such the only course was to do what it thought was right, and so try to preserve the Park and the Park game. Mr. Wright thought perhaps *FOREST AND STREAM* did not know all the facts—that it did not know how little the Park would be damaged, etc., and that really there was little game in the country proposed to be cut off. In this I personally learned later that Mr. Wright was misinformed, and that Capt. Anderson's report (which the *Livingston Herald* ridiculed), was correct when it stated that large herds of game wintered in that very part of the Park. Nevertheless, I am obliged to my friends of the Livingston newspaper fraternity for a statement of the case, which I think was meant to be fair, and we are all obliged for the later editorial in the *Enterprise*, on the poacher, Howell, in which it was said that "Howell's act will find few apologists in this section."

Mr. Wittich, of Livingston.

The Wittichs are taxidermists, two sons and their father. Only one of the sons was in the business when I was there, and I think the firm was Wittich & Son. Here I received very nice attention. Young Wittich has Cooke City property, and is a very ardent segregationist. He has often had occasion to go through the Park on the trail to Cooke City, and rebelled against the regulations. He told me how he compelled Capt. Anderson and the Secretary of the Interior to yield to his imperious demands for the privilege of bearing arms in the Park and going where he pleased. (Capt. Anderson's account of this is a shade different. I haven't heard from the Secretary of the Interior.) Young Wittich was hotter-headed than his father, who held the same beliefs, but was temperate in them. Young Wittich said the soldiers ought to be abolished and was of the belief that the Cooke City road must be built through the Park peacefully if it could, by force if it must. He pitied the poor Cooke City miners, who had been developing their propositions for twenty years and were still broke because they couldn't get their ore

out of the camp. He couldn't see the sense of my renewed remark to the effect that I also was mostly broke in Chicago, and that Congress wasn't going to build any railroad for me.

"The men of this country will burn the whole Park up, if something isn't done," said young Mr. Wittich, impressively.

"Oh, no they won't," I said, "you don't really mean that, now do you?"

"Well," said he, cooling down a trifle, "it ought to be burned."

Old Mr. Wittich was not so radical. We all three chatted pleasantly for a while, and the old gentleman invited me to go fishing with him when I came out from the Park. I am sorry time was too short for me to do so, for I know we should have had a good time.

Young Mr. Wittich said that everybody knew that heads of Park buffalo, thirty or forty of them, had been offered at the taxidermist shops around the Park, at Livingston and elsewhere, "within the last two or three years." Other taxidermists of Livingston had maybe taken some of these heads. He wouldn't dream of doing such a thing.

F. B. Tolhurst, of Livingston.

Mr. Tolhurst is another Livingston taxidermist, and is an honest workman in my belief. Mr. Tolhurst was busy and I could not talk with him much. Mr. Tolhurst thought maybe the other Livingston taxidermists might buy a Park buffalo head once in a while, but as for him, he wouldn't dream of it.

Matt. Black, of Bozeman.

Mr. Black is a newsdealer at Bozeman. He doesn't handle *FOREST AND STREAM*. Says he hasn't any use for it. (The other Bozeman dealer doesn't have any Cooke City mining property, so he handles *FOREST AND STREAM*.) Mr. Black was the most rabid segregationist I met in my entire trip, and was more violent in his expressions of hatred for *FOREST AND STREAM* than any one I talked with. He allowed the *FOREST AND STREAM* man was a tenderfoot. We will let it go at that. Evidently I got myself disliked by Mr. Black by venturing to work for a paper which doesn't run a mining department or a free-for-all editorial page. "It's a blanked noble mission *FOREST AND STREAM* has in life, ain't it?" said Mr. Black, "trying to stop the development of the resources of this country! Here's men who have been holding valuable claims over at Cooke for 20 years, before the Park was ever heard of, and you fellows want them to waste their entire lives!"

"No, we don't," I ventured to say, "but if they don't like it at Cooke, why didn't they go somewhere else?"

This made Mr. Black jump up and down, and this was where he allowed I was a tenderfoot. (I lived in a mining camp before I ever saw a copy of *FOREST AND STREAM* and we wanted a railroad in our camp and never got it. Congress never did anything for me.)

"There'll be some killing done up around that Park some day," said Mr. Black with an awful impressive air, which should probably have curdled my blood, "and if it happens, *FOREST AND STREAM* can just blame itself for it. What business is it of yours, meddling in the affairs of this country and trying to stop the growth of one of the richest camps on the range?"

(This, however, *FOREST AND STREAM* has not done, but has editorially shown that a road could much better be built in from the east. I cited the letter of Mr. P. M. Gallaheer.)

"There's only one way to get into Cooke," said Mr. Black, in a tone as of one who intended to settle the question forever, "and that's through the Park. That's the only route we can raise capital for. We could once have got capital for that, but I don't believe we could get capital to build the road now if we had the right of way. You fellows in the East are a blanked nice set of men, ain't you. You've raised such a hurrah over this that I don't believe we'll ever be able to do anything now."

In this latter statement I believe Mr. Black is practically correct, but I can not avoid the belief that the now dead segregation scheme had no enemies more deadly than its own friends, who too often have indulged in just such wild talk as the above. Such talk displeases the American people, which after all is practical and fair.

Mr. Black claimed that the poacher Howell did not belong at Cooke City. He disapproved of Howell's action in killing the Park buffalo, and said Howell ought to be hung, and that he would like to help hang him, as he had injured the spotless record of Cooke City. I recommend this to Mr. Howell's attention.

They Should All Be Careful.

They should all be more careful how they talk, all these rabid segregationists who have been making utterances like the above. I have quoted them all fairly and without garbling, to the best of my knowledge and belief, and have given the statements because I believe the cause of segregation is most hurt by telling the truth about it, and by making public the ill-tempered and unreasonable methods by which these men seek to gain their purely personal ends.

There is no call for a road through the Park to Cooke City but a personal call. There is no public demand for it. There is on the contrary a public demand for this great national preserve, a heritage to be kept unchanged and inalienable. The Government can not give each child what it wants, but it can give all its children a great gift that will be good for all of them.

By no means should it be understood that the above utterances represent the feeling of the great State of Montana. On the other hand, they come from but a very small section and from only a few men in that section. To build this road through the Park would be the death blow to Livingston. It would benefit Cooke City alone. It would be also a death blow to the Park. Is the benefit to the few greater than the benefit to the many? Therefore, is the position of *FOREST AND STREAM* on this matter selfish, illiberal or unfair? Who is there who can think so?

It will be a great pleasure in a later article to give the reverse of this sordid and distempered view, and to show the other side of the picture, and I shall then quote engineers and railroad men of authority in support of the *FOREST AND STREAM* belief that the Cooke City men are subserving their own best interests in insisting on this road through the Park. If *FOREST AND STREAM* held it in its hand to forever seal the fate of a prosperous community, to kill its future, to prevent the happiness and suc-

cess of many families, I do not think it would do so. But it is not determined that the matter amounts to this. If FOREST AND STREAM can keep the Park intact, and yet by calm and temperate counsel show to these few inconsiderate and hard-talking men that Cooke City can still be opened to the world, it has done a wise and good work. This latter it has already shown, more ably than can be done here, although further interviews may be interesting as additional proof and will therefore be submitted.

Additional News of the Park Buffalo.

Later.—Since the above was written I have received a letter from Mr. E. Hofer, at Gardiner, Mont., dated April 30, which is given below. The additional news that Howell admits having been in the Park on the Pelican Valley for three winters, and that he says there are only a few buffalo there, can only point to one conclusion, namely, that the total number left alive in the Park are even less than the FOREST AND STREAM expedition of this winter would make out. Capt. Anderson has always thought it likely that a good number of buffalo had moved over to winter in the Pelican hot country, but no report has been made of buffalo in that little-visited portion of the Park, and no expedition has gone in there to investigate. Howell has been investigating for three years in a locality where it was next to impossible to find him, and his statements made to Mr. Hofer, no doubt, made in candor, constitute the best available report of facts as to the buffalo supply in the Pelican country. Outside of this there remains practically only the Hayden Valley herd, the largest count of which is 103 head. Congress has done well to act speedily in passing the protection act. It was time if any of the buffalo are to be left. These facts, and the facts which I picked up after I left the Park lead to only one possible belief—the Park buffalo can not be counted for even 200 head this winter. There may not be 150, perhaps not 125. This is not mere alarmist talk. We may hope and may even believe that there are 250 buffalo somewhere in the Park, but how shall we prove it? The Park has been better scouted this winter than it ever was before, but by whose report shall we place the number of buffalo actually seen at more than 125?

On the heels of this sickening conclusion note the statement that Howell is again at large, free to go in again and complete a fourth year in the Park, free to kill the remainder of the herd now left so sadly out down in numbers, free to finish up the rest of the great animals which we found panic-stricken, timorous, running till exhausted in the deep snow, in terror for their lives.

Mr. Hofer's letter follows:  
"Howell is out of the guard house as per order from Washington. Capt. Anderson was away when the order came. Howell was held about two weeks longer.

"Howell called at my cabin to see me and the papers that had an account of his arrest. He is pleased to know he made such a stir. He says they can thank him if they get laws passed to protect the game and the Park. He says, too, that he had seven buffalo, not five, killed when they found him, one was over a ridge, the boys did not see or find it at all.

"Howell has been in there three winters, and knows all about the buffalo on the east side of the river, says there are only a few there. I suppose you know the reason. He spoke about the picture you made, and said he supposed he ought to have let you take it, but you was so fresh he did not like to. [Thanks, but the picture I got anyhow will do very well.]

"The snow is getting off the first hills and higher tablelands, one can see a bit of green here and there. The antelope are scattered over more ground now. They can go to the top of the hills and get grass, until they get on the eastern side of the hills, where they find snow. I have been out and had another whirl at the antelope with the camera."

Mr. Hofer's letter is the last word obtainable on the grave question of the numbers of the Park buffalo. FOREST AND STREAM can well claim the credit of an exclusive presentation of these important facts, unwelcome as they are to the people of the United States and their representatives in Congress.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

Natural History.

A WEEK WITH THE BIRDS.

FRIDAY, March 31, was a very warm, spring-like day. About half-past two I went to the Fresh Pond grove with a friend. At the foot of Gurney's Hill a purple grackle swung, now and then uttering his strident note. The robins strutted about on the leaves as naturally as they did last summer. We soon reached the cedar-lined avenue that runs to the hill overlooking Fresh Pond. Looking in through the cedars we saw about twenty robins bathing in the gentle sunshine, now and then regaling themselves with an angle worm. Further on we saw song sparrows singing their customary *cher-wit, witter, witter, witter!* At the foot of another line of cedars I noticed a great mass of feathers. Looking more closely, I distinguished them as those of a crow. Some half-dozen sparrows flew among the pines, and apparently frightened at sight of us, hid in a pile of brush where we had seen some song sparrows.

While lying on our backs we saw three birds anywhere from 16 to 20 in, long fly hurriedly away. They circled far above us, showing some of their characteristics very plainly. They flew with great ease and strength. The wind now grew stronger and they drifted sidewise. Underneath they were of a uniform white, with perhaps a tinge or shade of light gold, which may have been only reflected light. For an instant one turned his back; I thought it was a very light chestnut. The bill and neck were very long, while the tail and legs were comparatively short. The latter were stretched out in a straight line as the birds flew.

We walked a little further when we saw a flock of about a dozen juncos flitting about showing their conspicuous white tail feathers. A little further on about the same number of bluebirds twittered and swung in the highest twigs of an old apple tree. We turned home after looking around to see if the unknown birds had returned. At Gurney's Hill we saw three purple grackles, one red-winged blackbird and a flicker. Lastly, in the Botanical

Garden I saw some half-dozen chickadees. During the afternoon's walk I had seen eleven kinds of birds.

The first of April opened with clouds, but at 7 o'clock the sun drove them away when I went over to the Observatory grounds. Robins filled the air with their varied and interesting songs. In each of the two large elms on Linnean street a flicker was alternately "drilling" and "wicking." Two purple grackles flew noiselessly over the Botanical Gardens; soon three crows flew silently away to the north. Several chickadees were feeding in the beach hedge.

Easter Sunday opened very sunny, but with a stiff northeast wind which blew more or less all day. The air throughout the day was extremely clear. About 10 o'clock I set off to seek an interview with the birds in the Fresh Pond Grove, now identified as night herons. Last winter about Jan. 4 I saw four fly from their supposed temporary abode. From the top of the reservoir several grackles wound their spiral course in the air. A few juncos flitted cheerily about. Song sparrows were heard in all directions. I had scarcely entered the grove when one night heron flew away uttering his peculiar note. I scared up three more later. They flew in the same direction as those of last winter did. My attention was now drawn by a herring gull which sailed far above me. In a row of pines skirting the grove I saw several beautiful fox sparrows. On turning my back a red squirrel betrayed the locality of her nest in a small elm.

Monday was warm, but for the most part cloudy. The sun, however, burst out occasionally through the day. The only birds seen were a few sparrows and robins.

Tuesday, the 4th, was a warm rainy day, an excellent one for robin music, for the birds do not seem to dislike a warm rain. All day long the pair of robins in my back yard, which I suspect is the pair that nested here last year, sang almost without cessation the whole day through. For a few minutes in the late afternoon a flicker announced the appearance of the sun for a short time by "wicking" vigorously.

Wednesday's weather formed a great contrast to that of Tuesday. The sun and wind disputed for the mastery. The sun, however, conquered, and the afternoon was as still as a July day. As the weather was so agreeable I took a train for Concord in company with two friends, determined to procure a large list of birds. Near Hastings three crows flew heavily across a neighboring hill, and at Baker's Bridge we saw several grackles. After leaving the train we soon came to the High School building, where we saw a pair of bluejays. Song sparrows filled the air with their twitterings. Soon after dinner we went along Thoreau street to "Fairlyland," near Walden. Purple grackles, song and fox sparrows, robins, chickadees and thirteen crows constituted the list for two of the party. The third, however, left us for a time, and at last met us with the news that he had started a great horned owl out of its roosting place and flushed a grouse. On our way back to the village we saw a beautiful sunset.

Thursday morning a little before half past four we went out in a driving snowstorm after birds. We were rather disappointed to see over an inch of snow. The birds, however, were out, robins, song and fox sparrows, red-wing and crow blackbirds sang merrily. We hastened to Nashantuck Hill and took shelter from the icy wind and sudding snow on the piazza of the only house on the hill. A few chickadees walked along the stone underpinning of the house which the snow had not yet reached. A flock of juncos flew hurriedly past us. We now were warm enough to ascend still further. At the tip-top a northeast view showed us that the water produced by the melting of the late snows had overflowed Great Meadows until they looked like an inland sea. Nearer by, the natural bed of the river could be distinguished from the overflowed region adjoining by an occasional bordering tree or by low shrubs, growing on the latter. We now went down the hill and crossed the bridge near F. B. Sanborn's ancient-looking house. Here we met several fox sparrows. Bluebirds flew around us and a few crows attracted our attention by loudly cawing. Soon a bluejay sounded his shrill scream. Juncos had made themselves very conspicuous all the morning. Now it stopped snowing, and as the sun came out we saw several snipe on the wing. Just before 9:30 we took a boat to go up the river. A flock of about thirty black ducks flew into some neighboring pines. A little way above the railroad bridge a muskrat was espied swimming rapidly down the river. After meeting the muskrat we ran around on a submerged cranberry meadow.

The innumerable submerged cranberries looked like jewels. We managed at length to push the boat into deeper water, but the channel was hard to find. Soon we found that there lay a sand bar between us and the main river, but we rowed vigorously and were soon on the right course. While looking up into the sky we saw a red-tailed (?) hawk sailing gracefully along. Soon we espied a great horned owl in a birch about half a mile away. Crows, sparrows and juncos were angrily flying around it. A white-bellied swallow skimmed over the river above our heads. Phoebees were occasionally heard. Having come to another shallow I jumped out of the boat and walked about; here I saw the first turtle I had seen this year swimming lazily along. Taking to the boat again we saw a red-shouldered (?) hawk a little down stream from where we had seen the first one. We frequently heard that note of the crow which so much resembles the "gobble" of a wild turkey. After dinner we walked to a point near the river beyond the Battle Ground. Along the sunny side of a stone wall some bay-winged buntings flew up, and I thought I distinguished a peabody bird and a chipping sparrow. While we were looking at these sparrows I saw the shadow on the ground of some bird in the air. Hastily looking up I saw a pigeon (?) hawk sail into a grove of young white pines. The juncos, sparrows and robins made as much commotion as at sight of the great horned owl.

After tea we took a walk up to Battle Lawn to see a friend interested in birds. About half way up Lowell street the sound of snipe came to us from far up in the air. We had heard meadow starlings all day at intervals.

On Friday morning the sun struggled to shine out, but the utmost he could do was to reddens the clouds in the east for an hour or so. At 5 A. M. we found our way to Nashantuck Hill and from there to the Lowell track. Grackles, robins, white-bellied nuthatches, meadow larks, song and fox sparrows sang on all sides. We thought we saw a cowbird. The redwings distinctly repeated their *oklee-e-e*, or *kugree-e-e*, as it may sometimes be translated.

At 9 A. M. we started for home by way of the picturesque Concord turnpike. A little way toward Cambridge from Emerson's house a pair of jays flew near us, one alighting in an apple tree on one side of the road and the other in one opposite. During our homeward walk we encountered perhaps a score of these brilliant birds, and often heard their shrill scream, of which Thoreau says, "It is as if it blew on the edge of an October leaf." In three places along the turnpike flocks of robins varying from twenty to fifty were seen. By the way, our list for this common thrush for the day was 174. About two miles from Concord we struck what seemed to be a bird caravansary, or, more scientifically, a regular point of migration for sparrows, snowbirds and robins. Here I saw a flock of about a hundred juncos, who were warbling and trilling by turns. The trees around us were packed close with fox, song and bay-winged sparrows. There were doubtless other species that I did not notice. A meadow starling or two were heard here also. We estimated that the number of supposed migrants was not far from 300. About four miles further two birds flew past that were ducks, probably black. We got to Belmont just in time to escape a driving snowstorm which had threatened us all day. My list for the trip was twenty-seven different species of birds, one muskrat and a turtle.

THOMAS D. BERGEN.

CAMBRIDGE, MASS.

BUFFALO IN TEXAS.

ABOUT four years ago Mr. H. S. Canfield, formerly managing editor of the San Antonio *Daily Express*, painted a vivid account of the killing of a buffalo on Devil's River in west Texas, at the hands of Geo. W. Fulton, a wealthy ranch man of San Patricio county.

Mr. Fulton is perhaps one of the best known sportsmen of Texas and his ranch is at all times open to legitimate sportsmen who hunt and fish purely for pleasure. Any one who has ever been fortunate to come within the radius of Mr. Fulton's warm-hearted hospitality, will readily testify to the truth of these lines. He is so popular with people of all classes, however, that his name has been prominently mentioned in connection with the gubernatorial chair of this State, and as far as the writer is concerned, no better man could be chosen by the people of Texas.

But as to the buffalo. Mr. Fulton did kill a buffalo in Devil's River about four years ago out of a herd of about 40, but the statement of the killing was generally discredited.

On April 27, Mr. C. H. Moreau, a sheep man of Val Verde county, brought news of the discovery of a herd of about forty wild buffalo in the remote mountainous region of that county near the Rio Grande border.

Upon being interviewed by a representative of FOREST AND STREAM, Mr. Moreau stated that he received the information from his foreman, a Mexican by the name of, Leal Martinez, who returned a few days ago from a trip across the country from Mexico, where he had visited his parents.

"Martinez told me," said Mr. Moreau, "that he found the herd in a small valley between two ranges of big hills, many miles from any settler. That part of Val Verde county is very remote and it is possible that the herd has been there for several years without being seen by anybody. Martinez stated that he counted the herd and that there were between forty and fifty buffalo in it. He is a truthful man and I believe his statement is correct. It has been rumored for several years that a herd of buffalo existed in that section of the border, but these rumors were never verified to my knowledge. About four years ago a wild buffalo was killed on the Devil's River, where the recently discovered herd is said to exist."

The buffalo that was killed by Mr. Fulton must have been the one spoken of above by Mr. Moreau, and that undoubtedly was out of the same band seen by the Mexican, Martinez.

The publication of the above in a San Antonio paper has called forth the following letter from Dr. J. B. Taylor, of San Angelo, Tex., who writes as follows:

Perhaps you will remember that some four years ago Geo. W. Fulton, of Rockport, killed a buffalo on my ranch on Devil's River, and that quite a long account of it appeared in the *Express* subsequently. I know that Fulton never told of this to any one, as he is far too modest to brag, and although I have the head of the buffalo now in pickle and can show the place where the buffalo ranged, I am satisfied that many who read the statement doubted its truth.

As George is now our candidate for Governor, I, as one of his many friends, am anxious to see this calumny from which he may have suffered all these years set at rest forever. I find in an article in the San Antonio *Express* of the 28th inst., which I indorse, a complete verification of the original statement made by the *Express* at that time. We supposed that there were about thirty buffalo in the herd in which Fulton did the killing, and I expected to hold them in the pasture, but by some means they all escaped. Twice since I have located them. I shall take steps at once to bring them back to the pasture, and I hope you will do all in your power to vindicate the character of our friend as a hunter of large game.

The publication of the above has served as a vindication to Hon. G. W. Fulton, who undoubtedly saw the same herd four years ago. Dr. Taylor was the first of Mr. Fulton's friends to extend an apology for having harbored any doubts as to the genuineness of Mr. Fulton's claim that he had actually killed a buffalo, and his letter has called forth the following feeling effusion from the facile pen of Mr. Fulton:

GREGORY, Tex., May 3.—*My Dear Doctor:* Truly, modesty, as well as virtue, is its own reward. For four long years I have waited patiently for the removal of the doubts that have been cast upon my title to the well-earned cognomen of "Buffalo George."

And it has come at last! Many sleepless nights have I spent in wonder that my best friend, with indubitable proofs of my prowess with bow and spear in his possession, should have stood mute while a doubting world cast sidelong glances at his friend who, for so many years, had enjoyed a State-wide reputation for the fleet foot, the stealthy tread, and, above all, the unerring aim that go to constitute the truly great hunter of the monarchs of forest and plain.

If I rejoice for myself at this somewhat tardy vindication, what shall I say for my veracious chronicler, our beloved Canfield? Truly, my heart rejoices and is glad at the thought that the only suspicion that ever rested upon him as a builder of sensations has been fully and finally removed.

Not the least of my joys in this connection springs from the fact that, through my humble instrumentality, the testimony of Mr. Moreau and Sr. Don Leal Martinez has been corroborated to a degree of certainty which leaves nothing to

hang a doubt upon, and it can no longer be questioned that the shaggy King of the Plains still roams at will over a portion of our great State.

But alas! There is ever something to dampen the ardor of our keenest joys! I have a most lively recollection of numerous libations that were poured upon the devoted head of the buffalo—at my expense. These be hard times!

Alcohol enjoys the reputation of being a great preservative. If this be so, I am quite certain that the head of the buffalo in question is in a fine state of preservation. Faithfully yours,  
G. W. FULTON.  
Dr. J. B. Taylor, San Antonio, Tex.

The fact stands that reputable witnesses have established the existence of a herd of about forty buffalo in the mountainous regions between Devil's River and the Rio Grande. The country is very rough and the mountains and hills of that region are alternated by cañons and valleys rich in luxuriant grasses and limpid springs.

O. C. G.

#### Zoological Society of Philadelphia.

THE twenty-second annual report of the board of Directors of the Zoological Society of Philadelphia was read at the annual meeting of the members and loan holders of the society, April 26. From a financial standpoint the report is not so encouraging as in previous years, since the hard times have affected its attendance and so its receipts. The total attendance for the year ending Feb. 28 was 215,549, as against 234,311 for the previous year, a decrease of 18,762. The decrease in receipts for admissions for year is \$873. As usual, the greatest number of visitors were present at the garden on Sundays, and the next greatest on Saturday, Friday being the lightest day of the week.

It would have been impossible for the society to have met the financial strain of the past year if it had not been for the liberal action of the commission of the Fairmount Park, who requested the City Council to appropriate the sum of \$10,000 for the purpose of maintenance of the collection. This is in addition to the sum of \$5,000 which for several years has been appropriated to the improving of that portion of the Park.

The report of Mr. Arthur Erwin Brown, the superintendent, is interesting. From it we learn that the accessions to the collections during the year were 83 mammals, 135 birds, 410 reptiles and 12 amphibians, a total of 639. Among the interesting species now exhibited for the first time are a pair of black partridges from India, a pair of Chapman's zebras, a giant tree frog from South America, an example of the rare Guayaquil parakeet and some other birds and reptiles. A pair of ring-tailed bassaris, an interesting Japanese dog, some South American mammals and a fine male orang are among the other additions. During the year there were born in the garden a bactrian camel, Virginia deer, fallow and axis deer, elk, bison, llamas, two red-headed ducks and a number of pheasants of various species.

#### A Flock of Wild Pigeons.

WHITEWATER, Wis., May 7.—A flock of about 150 wild pigeons flew over this city last Friday, the largest we have seen in ten years, and this used to be their best country. If the shooting of them, and the molestation of them in their meeting places could be absolutely forbidden for ten years all through the country, is it not possible that the scattered remnants of this most attractive of the bird races in our old American forests might be reproduce something like their old numbers? Is it not a worthy subject for the National Legislature to consider? G. D. C.

### Camp-Fire Flickerings.

"That reminds me."

Witch Ducks.

Editor Forest and Stream:

I would be glad to learn whether any shooter can be found who ever saw such an object as a witch duck. Objects have frequently been seen in the headwaters of the Chesapeake Bay by gentlemen whose truthfulness can not be doubted.

I made it my business to call on Mr. William H. Dobson, who lives in Havre de Grace, and by the way is considered the best duck shot in Maryland, who was kind enough to give me his experience with three of those remarkably strange fowl. Mr. Dobson relates that one beautiful morning in the gunning season he and a gentleman of the name of John Brown double-stooled together. This means that two sinkboxes and two sets of decoys were joined, making about 500 decoys, which make a big show and draw the ducks from a long way off. After they had killed about fifty canvasbacks, and as they were talking about the prospects of a good day's shoot, Mr. Brown called Mr. Dobson's attention to three female canvasbacks sitting among their decoys only a short distance from them. Dobson says, "Hold on, Brown, and see me kill all three of those ducks with one barrel." Dobson says that he took deliberate aim and fired, and when the smoke blew off to his great surprise the ducks still sat there undisturbed. He and Brown shot eight barrels at them, and while they were getting ready to shoot again they disappeared. Very shortly there came a flock of canvasbacks and they killed seven of them. After they had loaded up their guns and were making fun at each about not killing those three ducks, Dobson looked among the decoys and to his great surprise he saw those same three female canvasbacks. "Brown, there is something wrong. Look, there are those same three ducks." "Don't shoot at them any more," said Brown, "let's see if we can't scare them away." So they both stood up in their boxes and hollered *shu shu*; but the birds still sat there just the same. When they both commenced to shoot at them again they disappeared and that was the last they saw of them.

E. B. GALLUP.

#### A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's famous "Ducking Scenes" (price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$8).

### Game Bag and Gun.

#### IN CAMP ON WILSON'S POND.

WE were camping on Wilson's Pond.

Our guide had been engaged by letter, but disappointed us, and we of necessity engaged an eighteen-year-old boy, who knew nothing of the woods, but could be made available as a "hever of wood" and "toter of bread."

On the second morning the Parson and I took a canoe and paddling to the north shore proceeded to hunt the hard wood ridges.

It had been very dry for several days, and the leaves were so noisy that although signs were plentiful, it was about 2 P. M. before we caught sight of a deer. Then a good-sized buck jumped from behind a huge rock, about 150 yds. to the left. He seemed in a tremendous hurry, and so was I, for I shot four times as he dodged among the trees. Suffice it to say we never recovered any of these bullets.

We now worked back to an old lumber road leading down to the lake, and as the day was warm the Parson hung his coat and vest here, and we separated, agreeing to meet in the same spot about sundown to watch at a deer path. Arriving at the appointed time, I heard a shot and shout away off to the north. I tried to answer, but owing to a strong north wind did not succeed in making myself heard. I tried to go to him, but he traveled so fast that try as I might I could not get near him. At last, hearing nothing more, I returned to the lake and back to camp, which I reached about 10 o'clock.

The poor Parson held a novel "watch meeting" that night. About dusk he brought up on the shore of a lake which proved to be Prong Pond, but as this was our first trip to Maine, he failed to recognize anything more than that it was not Wilson's.

Preparing to camp we stripped a piece of birch bark and gathered an armful of dry branches, when feeling for matches he realized for the first that he had to find his vest or go without a fire. The mist arising from the lake chilled him to the marrow. A loon laughed mockingly out in the darkness, the weird sound echoing from hilltop to hilltop, till each point seemed occupied by a special "hobgoblin" sent to taunt him. Half clothed, without food or fire, he stamped and tramped, beat his arms and danced unclerical jigs to keep warm.

"Whiles glow'ring round wif' prudent cares  
Lest bogles catch him unawares,"

and constantly murmuring "You old fool, why didn't you stay in Jersey?"

Next morning I started at daybreak, and at sunrise the Dominie got his bearings, and traveling south we met near the lake and hurried to camp for breakfast, where the boys full of congratulations and curiosity "killed the fatted calf." We found them entertaining Louis Annance, an old Passamaquoddy Indian. Opening the way to good fellowship by swapping knives, where I got considerably the worst of the bargain, I inquired the best place to find deer. Pointing to the east he said, "Right over there; kind o' bog hole. Best place I know." He also made the remarkable statement that he was seventy years old, and would have been eighty, but "tree fall on um an' ketch um." Evidently some one had told him the accident would shorten his life ten years. He also said "Moose fraid man. Caribou fraid like the devil railroad train. Deer, him ain't fraid anything."

The Dominie not feeling in trim for a long tramp, we paddled down to the portage and crossed over to Upper Wilson's Pond, skirting the shore till we found an old lumber landing in the south cove, where we pulled out the canoe. What was once a log road leads up the mountainside from here; now overgrown with brush and briars and obstructed by windfalls, it is not over inviting. However, after shooting the heads off a couple of partridges, we followed the road about two miles, and suddenly came to a beautiful little lake nestled in a depression at the mountain top. To grace the scene two fawns stood on a flat rock about 50 yds. away. One looking over the neck of the other; a well directed bullet would have killed both. Startled by our appearance they gazed for fully a minute, then wheeled and whisked into the bushes. A black duck swimming lazily along the opposite shore turned his head and eyed us curiously. The margin of the lake was so trampled by the feet of deer that had come to drink that we concluded we must have stumbled on Sam's "big hole," though a less romantic appellation for so beautiful a spot would be difficult to find.

The sun shone red through the treetops, and having come provided with an axe and coffee pot, we retired half a mile and felling a hemlock soon had a comfortable brush house erected and firewood collected. Before sundown we posted ourselves, the Parson at the outlet and I at the broad end of the lake. Soon I heard a stick snap, then saw the head and neck of a small buck directly across the pond. He acted suspicious and disappeared for a few moments, then walked boldly out and began to drink. While I hesitated about risking a shot—I judged the distance to be 300 yds.—bang! bang! came from the outlet. My buck imagined he was the target, and jumped into cover, where he stopped to snort. Down the lake three white plumes waved adieu! adieu! adieu! as their bearers jumped high over the bushes and disappeared in the woods. I hurried down to the Parson and found him "beside himself" with vexation. He said, "I knelt behind this little cedar. A doe and two fawns came out. The doe walked into the water a few steps and lowered her head to drink. I pushed my rifle through the tree, and resting it on a limb pulled for the shoulder. She threw up her head, but stood perfectly still, and I knew I had not touched her. Taking plenty of time, I worked the lever and shot again. Then she jumped away unharmed." And turning, he shouted, "How did I miss?" I assured him that I was ignorant of the reason. We paced the distance—35 yds.; and this from a man who has killed lots of running antelope at 200 yds. and over.

We built a rousing fire at the bough house and running green sticks through the partridge roasted them over the coals. This is the only camp I ever occupied where the deer were numerous enough to come up and snort at the fire. I am sure I do not exaggerate when I say that during the evening a dozen deer came within a short distance; on all sides we could hear them, from the hoarse bark-like snort of an old buck to the shrill, short snort of a young

doe. I do not know whether they were following their usual runway, or were attracted by the light of the fire.

We spent two weeks in Maine, thirteen nights I shivered in a tent, while the night spent in the bough house we were comfortable without bedding or blankets; at least I was, but I think the Parson was troubled in spirit, for periodically would come the refrain, "You old fool, why didn't you stay in Jersey?"

Next morning we killed a yearling as he came to drink at the wide end of the lake about 200 yds. away. We had venison enough and returned to the tent to feast our friends and tell our story. Last night the Parson called at my office and pointing to a head over the mantle said: "Doctor, if I had missed a fellow like that I would feel bad! but I am thankful every day that I did not kill that doe and deprive those poor little things of a mother."

HAMILTON VREELAND.

#### THE GRAY SQUIRREL.

OF our small game, the gray squirrel ranks with the foremost of our sport-giving denizens of the woods. Early in the fall of the year, when the nuts are freed from their husks by the sharp morning frost, and the leaves of the chestnut and hickory blend with the color of the earth, the inquisitive "gray-back" may be seen running along the branches of the trees, prying into every nook and corner, and feeding on the sweet kernels of the hickory and other nuts, which fill out his sleek sides, and gives his delicate flesh a fine flavor.

As an angler has said, "It is not all of fishing to fish," it may be equally true to say "It is not all of shooting to shoot," for an early morning spent in the woods, sitting on a log and waiting for the furry little rodent to appear, as he is sure to do when the sun first shows his face over the surrounding hills, is full of enjoyable thought, and if a person is lucky enough to bag only one squirrel, he will not be disappointed in his morning's work, if he be a reasonable man and finds enjoyment in observing nature.

Well, I remember the early morning outings spent in the woods of the picturesque Catskill Mountains! Arising from sleep at 4 o'clock in the morning, I would fill my pockets with some light food, and donning my sweater shoulder my little 18 gauge gun, and commence my pleasant tramp over the hills to a favorite "stamping ground" of the squirrels. The keen mountain air being delightfully evident at that early hour, made brisk walking a necessity, and the contents of my pockets were greatly relished as I trudged along.

Arriving at the destination, it was my custom to find a fallen tree in the midst of a clump of chestnuts, lay the gun across my knees, and drink in the beauties of the surrounding landscape, withal, keeping my weather-eye open on the lookout for squirrel.

Now the sun has showed his warm, genial face between the hills, and as his beams glint on the trees, there begins a chattering chorus of the voices of the busy folk of the wood, as they arise and commence their foraging for breakfast. Sh! there on the limb of that chestnut right in front, is a fat "gray-back," how pretty he looks as his sharp eyes glance restlessly around, to see if there are any interlopers! Now is my time. As I rise to shoot, he sees me, and with a "chir-r-r!" of fear, he darts off towards a thick bunch of hemlock tops, to find shelter in their thickly covered branches, but I am too quick for him; as the sharp voice of my gun speaks out, he tumbles down from the lofty limbs, catching in vain at the branches in his way, and lands at my feet—a prize which amply repays me for my early rising.

After admiring his glossy form, I changed my location and secured two more squirrels, but with decidedly more ammunition and some tall chasing to retrieve them. By this time, my "inner man" proclaims the breakfast hour, and so, shouldering my gun, I trudge home, not overladen with game; but with a clear, contented mind and a healthy appetite, which does full justice to the ample country meal, which I find awaiting me at the old farmhouse.

WM. G. CHAPMAN, JR.

#### A VIRGINIA BUCK.

AMENIA, N. D., April 21.—It was a beautiful day along in the frost of November, and as I had unfortunately shot away all of my shells for my .44 (used in preference to any of the later sized calibers), I found myself up in the Massanutten Mountains, in Shenandoah county, Va., about twenty miles from Harrisburg, on a deer stand using an old-fashioned squirrel rifle (about 130 bullets to the pound) with one bullet in my gun and one in the bullet pouch. It was cold and frosty and I had built a small fire of dry drift wood to warm my aching toes. Then a long time of waiting took place, first fixing my fire, then relighting my pipe, as one always succeeded the other, until at last I heard that music never forgotten by the true sportsman or the man who can't even shoot a gun—the hounds in chase of a deer. At once that queer sensation commenced to run up and down my back bone (no one unless he has been in the same place can realize how it feels), and I excitedly cocked my old-fashioned rifle and every nerve became as intense as a fiddle string.

The glorious music drew nearer and nearer and my respiration grew longer and longer and seemed almost to stop, when at once there came a crash and something that looked bigger than Barnum's Jumbo sprang lightly down the bank and waded into the shallow water of the river; while I, I—with my mouth open, my gun cocked, stood like a last year's hornet's nest, apparently dead, but needed only a good shaking to arouse to life. When the deer suddenly caught sight of me, he gave a snarl and commenced to stamp his feet and retreat for the other shore, did my scattered senses return to me and I raised my rifle and sent the tiny ball on its deadly mission. At the crack of the gun I saw him spring or rather the spot where the bullet struck him contract as if you had hit him with a rock; but it did not stop him. He cleared a high clump of laurel at one jump and disappeared. I slowly and sadly reloaded my rifle and wondered what Uncle Bill and Jim Payne would say when they came in and found that I had lost my deer, and without even a drop of blood to show that I had hit him, when suddenly the old spotted hound broke through the brush, making a desperate effort to keep ahead of her year-old son, came tearing towards me. I hastily ran across the river and called them down to where the deer had left the water and put them on the trail. They ran about 20 rods and then stopped, and I hurried down and cut the throat of the first deer—a spiked horn buck—that I had killed in "Old Virginia."

We found very good hunting in the valley and in

Franklin county, W. Va., many deer, but very hard to get, as the settlers will let the deer go and shoot the dogs, especially if they belonged to a stranger, while they are running their own dogs directly against the laws of West Virginia. But such is life. We fared sumptuously and our thanks are always in order to Uncle Bill Minnick, New Market, Va., for his kindness to us in our six weeks' hunt. FLICKERTAIL.

IN SUPPORT OF THE "PLANK."

A PLATFORM PLANK.—The sale of game should be forbidden at all times.—FOREST AND STREAM, Feb. 10.

LINCOLN, Neb., May 5.—*Editor Forest and Stream:* I believe the position that you have taken, that the sale of game should be prohibited during all seasons of the year, is correct. My observation has satisfied me, that so far at least as the game birds of this State are concerned, the market-hunter is responsible for their destruction. He hunts for profit, and if you can destroy his market he will be compelled to turn his attention to some other pursuit. The greater portion of the game killed goes to the large cities, and is there distributed to other points. Nearly all the game killed in this State by market-hunters, goes to Chicago, and it would seem that if the law prevented the handling of game in Chicago, St. Louis, New York and a few other of the large centers of population, that the matter of game protection could be brought to a successful issue.

Of one thing I am certain; and that is, we need a more general reading of the FOREST AND STREAM. The man who can read this paper for any length of time and see the efforts being made by the better class of men throughout the country to propagate and protect the game, and then wantonly destroy it himself, is, to say the least, a very peculiar animal.

In northwestern Nebraska, on the line of the C. B. & Q. from Lincoln, Neb., to Deadwood, S. D., is a strip of country extending from a point 25 miles west from Broken Bow, westward to Alliance, about 150 miles long by 75 wide, embracing four or five counties, that is composed almost entirely of what is called sand hill country. This country is the home of what are commonly called prairie chickens, and they breed here by thousands. This country is the heaven of market-hunters. At every station along the railroad and they are about ten miles apart, we find from two to five men who do absolutely nothing the year around but hunt. These men start hunting early in July, when the birds are not larger than quail, and hunt several days in the week until midwinter, when what few birds are left have become so wild that they cannot be successfully hunted. They then loaf until the hunting season commences again. All these men use the repeating shot-guns, commonly called "pump guns," and become so expert in their use that they will sometimes kill seven birds at one rise. When they commence hunting the birds are such weak flyers that they almost invariably get every bird in the flock before they hunt for another. Early in the season they will average 75 birds per day to the gun, and they frequently make \$100 a month per man, above expenses.

I talked with one of these hunters last fall, who, by the way, is only a boy of 18 years, and was told by him that he had not hunted much, as he was obliged to clerk in his father's store most of the time; but that he had killed 2,800 during the season. He also bought and shipped birds at the station where he lived, and said he had paid out over \$4,000 for birds during the season. I am personally acquainted with many of these men and know just what they are doing. The birds are put in small barrels; a layer of ice is put in, then a layer of birds, and so on until the barrel is filled; then it is headed up and shipped to some commission house in Chicago, billed "Country Produce."

It is of no use to try to prosecute these men under the State law, as there is scarcely a person in these counties not interested in this illegal slaughter of game. Unless there is some way to prevent dealers in Chicago from handling this game, there is no remedy. These men will not work and so long as they can find a ready market for their game they will do nothing but hunt, until the game, in what is one of the best natural preserves, is exterminated.

Yours for preventing the sale of game during all seasons of the year. K.

HALIFAX, N. S., April 14.—*Editor Forest and Stream:* I am much interested in the articles from FOREST AND STREAM inclosed in your letter. The matter has been in my own mind for some time, and I believe that to put a stop to the sale of game as an article of commerce is largely to solve the great question whether game is to remain on this continent or not. C. S. HARRINGTON.

BALTIMORE, Md.—*Editor Forest and Stream:* I am greatly in favor of your "Platform Plank," as I think the sale of game should and must be prohibited if we wish to save what game is left throughout the country from the murderous hand of the market-hunters. I am sure this class of men are mostly responsible for the rapid decrease of our game. I have noticed the great amount of game that is shipped to this city and I presume the greater amount of it is killed by market-hunters. I think your paper will do a great deal in bringing about a change in favor of the new platform plank, and I wish it much success. M. P.

CLEVELAND, O.—*Editor Forest and Stream:* For some weeks I have been wishing to add my word in favor of the "Platform Plank." I am delighted with the stand FOREST AND STREAM has taken in regard to the sale of game.

The game is the property of all the people, and should no more be reduced to possession in large quantities and made an article of merchandise than air or sunlight. Prohibiting its sale would work inconvenience or injury to but three small classes of citizens—the rich who buy game for their tables, the dealer, and the market-hunter. None of these classes has shown itself so heartily on the side of game protection and preservation that its convenience should for a moment be considered, particularly to the detriment of the rights of the whole body of citizens.

It will be universally conceded, I imagine, that the wild game of a State rightly subserves two purposes; that is, it supplies food to those in newly-settled districts, while its pursuit furnishes recreation and health to all citizens who care to hunt and fish. Neither of these functions

will be impaired by the passage of a law prohibiting the sale of game, but both will certainly be extended.

The city which furnishes its citizens with a public park where they may enjoy fresh air and sunshine, and the State which provides a forest preserve, offering the same blessings on a larger scale, are but doing their duty by the community. So, too, a State which, by proper laws, makes it possible for its citizens to pleasantly take a reasonable amount of game for their own use, is but protecting the large majority of its members from the greed and rapacity of a few.

By all means let us have a law which shall prohibit the sale of game and its possession in large quantities. F. M. C.

EUFAULA, Indian Territory, April 24.—*Editor Forest and Stream:* By all means let the sale of game be stopped in every State and Territory. And while we are working against the market-hunter let us not forget to rebuke some of our own members who profess to be true sportsmen, yet kill inordinately. On Sept. 1 last, when the season opened, 1,000 ducks were killed on Horicon Marsh in one day, 75 by one man. See FOREST AND STREAM report. I should not want such sportsmen to visit my section of the country, and I should never let them shoot over my land. Such wholesale slaughter of ducks has thinned them out until we have almost none in this country where they once were plentiful. The whole number killed by me from Nov. 1 to March 1 was 25. How does that look beside 802?

Gentlemen, it is time that you were being a little more moderate in your shooting, and when you have killed a dozen ducks or two dozen quails in one day you should be satisfied and go home. Do not try to kill everything you see just because you can kill it, and manage in some way to dispose of what does not spoil. There is little game here in spite of reports to the contrary. G. R. R.

ARDONIA, N. Y.—*Editor Forest and Stream:* I am with you in your efforts to stop the sale of game. If there is not something of the kind done soon we will have no game to protect. Yes, stop the sale of and limit the quantity of game any one person may take in a season. And as to the farmer's boy being so destructive to game, I think he is not half so bad as the boy of the small town who has nothing to do and can run with a pot-metal gun in season and out. B.

SAN FRANCISCO, Cal.—*Editor Forest and Stream:* I desire to add my vote in favor of the universal adoption of your Platform Plank, regarding the sale of game. A few relatively worthless fellows may be thrown out of their usual occupation, and hence be compelled to follow some more prosaic calling for a living. A gourmet here and there may be compelled to content himself with just the common domestic fowl and lamb instead of wild duck and venison; but the rights of these and similar classes, when placed over against the enjoyment, the welfare and the incentive to healthful exercise on the part of the great mass of men are not for a moment to be considered.

The prolonging of the existence of game in our country is a matter to be considered now. Inevitably in the course of years the hunting of game will be confined largely to the wealthier class of every community, for only they will be able to afford the means of feeding and breeding wild game. There is, happily, in my own State yet abundance of game in its natural state, and with our present population, with short open seasons, and with total suppression of the sale of game and of the skins thereof there will be good shooting here for generations to come for both rich and poor.

I have hunted the black-tail in central and northern California more or less for twenty-seven years, and can say that this deer is still quite abundant in its favorite haunts, notwithstanding the vast numbers that have been slaughtered annually by professional skin hunters previous to the last two or three years.

We are happy to announce to co-workers in the common cause that the sale of venison and deer skins is now prohibited by law in this State at all times. As a consequence deer are increasing in numbers every year.

In anticipation of the meeting of the State Legislature this winter a large number of representative sportsmen from throughout the State were called together last week in this city for the purpose of discussing and recommending certain more rigid laws for the protection of game. There proved to be a strong sentiment existing in favor of the suppression of the sale of game; but of course it was deemed unwise to attempt too much at one time. The work of the convention, however, was on the right lines, and if its recommendations become laws, California sportsmen are to be congratulated.

I wish to advert to one specious, but fallacious argument used by our opponents, which is unfortunately assented to by too many right-minded sportsmen. That argument which I would like to see "scotched" is that the so-called "game hog" is worse than the professional hunter. Now, I venture to say that a score of the latter gentry will, in any given year, destroy more game than all the so-called "game hogs" in the entire country. Again, the amateur, even though he be habitually greedy for a big bag, will be found advocating short open seasons, and other measures for the perpetuation of his favorite game, he stands ready with both head and purse to further these ends—something the stolid professional never troubles himself about. ROEEL.

CHARLESTOWN, N. H.—*Editor Forest and Stream:* Let me claim the privilege of the old proverb, "Better late than never," to drive a spike in the "No Sale of Game" plank in your sportsmen's platform.

It is the sale of game, for the purpose of replenishing the pockets of those who are too lazy to work for an honest living, which is robbing our forests and streams of their great attractions. Nor is the much pitied and sympathized with "farmer's boy" to be excluded from the list, for he is usually the "chief of sinners."

Living out on the hills, near the brooks, he usually spends his Sundays on them, catching anything that will bite, as long as the season or the trout last, and driving in to the village tavern in the evening to sell those which are above the legal size, and, I suppose, eating the little ones at home as they do the small potatoes! Nor do they confine themselves to their fathers' farms, for I have met them miles away from home, on a wet day, when they could not plow or hoe, stripping all the brooks within walking distance. The ruffed grouse suffer too from their

snares, and I find delight in occasionally destroying one or two of the latter in my woodland rambles.

I know of no way to prevent the utter destruction of our game, except to prohibit its sale as an article of merchandise. VON W.

MADISON, Wisconsin.—*Editor Forest and Stream:* I am very much pleased at the stand FOREST AND STREAM has taken in regard to the sale of game. I have long believed it to be the only solution of the problem, and sincerely hope the step will be a successful one.

The other day while walking through the markets of one of the neighboring cities, I saw many hundred ducks, most of which were redhead and bluebill with a sprinkling of canvasbacks among the lot, for sale at the different stalls. The greater part of these ducks had been shipped to the proprietors of the stalls for sale on commission and were the result of a three days' trip by three local market-hunters. The birds were in such poor condition that they could hardly be disposed of at any price. When one sees canvasbacks and redheads offered at 50 cents a pair and finding but few takers because of their poor condition, I think it's about time to call a halt, and I say most earnestly "Stop the Sale of Game." G. K. T.

NASHVILLE, Tenn.—I am most heartily with FOREST AND STREAM in the effort to protect the game of this country, and believe that nothing short of such a drastic measure as the absolute prohibition of the game traffic will accomplish the desired result. A. A. W.

RIFLES FOR SMALL GAME.

*Editor Forest and Stream:* It is to be regretted that the .25cal. shell suggested by your correspondent, W. L. Carpenter, in FOREST AND STREAM of March 10 and May 18, '93, does not seem to be appreciated by the manufacturing companies in the States.

A straight shell is certainly superior to one of bottle shape for general purposes. It is less liable to stick in the chamber, it does not require swedging even after long use, and it can easily be loaded with reduced charges when less power is required than that given by the full measure of powder. The sole advantages of the bottle-shaped shell are its comparative shortness and its capacity for retaining a certain amount of fouling which might otherwise be deposited inside the barrel.

That the straight shell proposed by Mr. Carpenter would be extremely useful for small game shooting there can, I think, be no doubt, judging by the success of a cartridge of very similar pattern brought out in England at the latter end of 1892 by a Mr. Leeson, a gunmaker at Ashford in Kent. Many American sportsmen are probably aware that the favorite small game rifle in this country has, for some years past, been one of .30cal. taking a straight shell which will hold 12grs. of powder, with a wad and a bullet weighing 82grs. (or 72grs. when hollow-pointed), seated over the cannellures. This is, on the whole, a very satisfactory weapon for all animals on the British Islands that can fairly be classed as small game. It can also be used with much success for killing seals and roe deer, but for such purposes, and for stalking game like bustard, wild geese, etc., in other countries, it is defective through having too high a trajectory. Mr. Leeson has therefore had a .30cal. shell manufactured, perfectly straight like the old pattern, and taking the same bullet, but long enough to hold 24grs. of black, or the equivalent of smokeless, powder. It can also be loaded with reduced charges which make accurate shooting up to 75yds.

The rifle is chiefly made for foreign sport. It weighs 6lbs., has a detachable barrel with side lever action and is often fitted with the Lyman sights. I may here remark that for game rifles of this description it is difficult to find a nearer approach to perfection than Lyman's ivory-head fore sight and his smallest sized folding rear aperture sight.

(Composite guns are likewise made which form splendid collecting weapons for naturalists. They weigh 5½lbs., have one barrel chambered for the same cartridge as the rifle and the other for the .41cal. brass shot shell, which is loaded with 28grs. of black, or 14 of smokeless powder, and ¾oz. of shot.)

The editor of the London Field, after superintending a trial, reported that this small charge gave a pattern and penetration sufficiently good to kill rabbits with certainty at more than 30yds. His trial of the rifle showed that it would put seven successive shots at 150yds. into a ring 6 or 7in. in diameter.

Here I think an improvement in accuracy might be obtained by a somewhat diminished powder charge both in the English .30 cartridge and in the .25 described by Mr. Carpenter. However valuable a flat trajectory may be, it does not pay, especially in small game shooting, to gain this at a sacrifice of minute accuracy. If the express principle be carried to excess, not only will small animals be often missed but, what is far worse, will often escape with broken limbs or wounds not immediately fatal, or else will be so badly mangled as to be unfit for the table. Some American sportsmen complain even now of the .25-20-77 cartridge tearing game too much.

Numerous experiments at targets have proved clearly that with the projectiles at present in use there is a marked diminution in regular accuracy when the powder charge exceeds about one-fourth the weight of the bullet. This proportion of the black rifle powder as made in England gives 1,600ft. a second initial velocity and a trajectory curve 2in. high in the 100yds. flight. With some of the milder brands of powder made in America, a little more may perhaps be used, but the velocity above mentioned seems to give the best combination of accuracy and trajectory for game shooting.

Practical sportsmen will, I am sure, admit that three-fourths of the small game actually bagged is killed within 50yds., and most of the remaining fourth within 80yds. It is evident therefore that a rifle with a trajectory of 2in. can be sighted so that no allowance need be made for the distances at which it is advisable, with rare exceptions, to fire at small animals, and it is not worth while to sacrifice even a slight amount of accuracy for the sake of making the bullets curve a little flatter. These very small bore rifles are more liable than the larger gauges to have their shooting spoiled by a trifling increase in the amount of powder, and I doubt whether the 86grs. bullet will do its best if the charge exceed 20grs. J. J. MEYRICK,

SOUTH DEVON, England.

## WYOMING BIG GAME.

LAKE BARROWS, Wyoming.—*Editor Forest and Stream:* I wrote some game notes for FOREST AND STREAM last year from this same locality (headwaters of Green River, Wyo.), referring to the big game as passing through the winter in good condition. The weather outlook was rather discouraging at the beginning of this winter, but proved to be very favorable. Not so many elk stopped here as the winter before, but there were more mule deer (or black-tail as they are called here). The elk were driven down early in the season by the first storms on to the Colorado desert. The mountain sheep are doing well. I killed one in February that was in fine condition.

The big game is holding its own quite well now, excepting the antelope, and if we could be fortunate enough to keep the Indian hide hunter out of the country we could save them. There has been very little hide hunting for the last three or four years by any of the whites, and we hope it may continue so. As far as sportsmen coming into this country to enjoy themselves and killing game to a reasonable extent, there should not be any objections; but at the same time I think they can go to extremes. A friend of mine passing through the Jackson's Hole country south of the Yellowstone National Park, went into a camp of a hunting party of sportsmen that had twenty-two elk heads and horns in camp. He took a snap shot at the whole outfit with his camera. Now, we all know that it does not decrease the game so much by killing the males as the females; but it seems to me that this was more than one party of hunters (who call themselves sportsmen) should be allowed to kill at one time. Nearly all the Eastern sportsmen hunting in northwestern Wyoming come by the way of Montana, engaging their guides and outfits up there. The game is getting nearly all killed off up there, and some of those guides coming down here with such parties help destroy it. This very same party referred to above paid their guide \$10 royalty for every head they got, besides his wages, which would encourage him to hunt up all the game he could for them. Some of the residents here are trying to preserve the game here; and if there is any benefit to be derived from sportsmen coming in here they ought to get it.

Big game is not all we have in this country for a sportsman to enjoy himself with; we have quite an abundance of small game, and better waters for mountain trout I think one cannot find anywhere. And if anybody can live on mountain scenery they ought to do it here, as we have it in perfection and in all styles. MOUNTAINEER.

## Proposed Pennsylvania Law.

PENNSYLVANIA STATE SPORTSMEN'S ASSOCIATION, Altoona, Pa., May 12.—*Editor Forest and Stream:* Permit me through the columns of your paper to call the attention of the sportsmen of the State of Pennsylvania to the fact that the State Sportsmen's Association will, at its annual meeting, to be held at Wopsononock, Blair county, Pa., on Aug. 21 of this year, consider and adopt, if possible, a bill for the better protection of the game of this State with a view to urging its passage at the next session of the State Legislature. At the last session a bill was reported to the House of Representatives by the committee on fish and game, which in an amended form passed the House, but was, perhaps luckily, pigeonholed in the Senate.

Taking this bill as a basis to act upon, the Association has had a limited number of copies of the same printed. Copies will be furnished to all organizations which are members of the State Association, for consideration by them. All suggestions, etc., will be carefully scanned by the members of the legislative committee of the Association, for the purpose of framing a bill that will meet as nearly as possible the views of the majority of sportsmen in this Commonwealth, the said bill being presented at the Association's meeting to be held as above.

If the secretaries of any clubs which are not members of the State Association, will write me, I will gladly furnish them with copies of the bill for the consideration of the same by their respective organizations in order that as wide an expression of opinion as possible may be obtained.

EDWARD BANKS, Sec'y.

## PUBLISHER'S DEPARTMENT.

Welch & Graves, Natural Bridge, N. Y., have a new artificial bait. The Wyandotte Boat Company, of Detroit, have purchased the plant and good will of the late Davis Boat and Oar Company, and will carry on the business on the same lines as heretofore.

Buffalo Bill with his peerless aggregation of rough riders is once more with us. The Wild West gives two exhibitions daily at Ambrose Park, South Brooklyn, which is easily accessible from New York.

The Winchester Repeating Arms Company are prepared to supply revolver shooters with .38 S. & W. smokeless cartridges. This new ammunition will prove a boon to gallery and other shooters who are bothered with smoke.

The Richmond & Danville R. R. Company have removed their general Eastern passenger office from 229 Broadway, New York, to the corner of Broadway and Chambers street. The new location is central and directly opposite the recently opened office of the Grand Trunk Railway.

We have received from the author, Mark Samuel, an attractive little manual on the care of fish and aquaria. "The Amateur Aquarist" gives simply expressed instructions to equip and maintain a self-sustaining aquarium and also particulars for obtaining and selecting the best fresh water fishes and plants, and how to keep them in health. It is instructively illustrated, and is a thoroughly practical and valuable book.

The Ideal Hand Book No. 5, which supersedes all previous lists, is at hand. This little manual is steadily growing in size, and the present number contains 80 pages of useful information for shooters.

A new tool which will appeal to sportsmen generally is the Universal powder measure. This machine can be set instantly to measure any charge of black or nitro powder for pistol, rifle or shotgun. It is graduated for grains and drams, and is guaranteed to be accurate.

## New England and the West.

GRAND RAPIDS, Mich.—I lived in Vermont about ten years and can assure you that "Danvis Folks" brings the Green Mountains nearer to Michigan than they appear on the maps. And "Von W." if he could be a few miles north of here May 1 could get something larger than "fingerling trout," but he would soon get homesick for the beautiful scenery around "Number 4," and vote the fishing better there than here.

DEL.

## As Dear to the Heart as Ever.

FOREST AND STREAM, as dear to the hearts of the sportsmen of this city and State as ever, is growing better, if anything. It is especially devoted to topics that are dear to the heart of the angler and sailor, and the hunter of large game, and the fowler is by no means forgotten. Its illustrations are a special feature, and there are none better, or as good, in any journal of its class.—*Davenport (Ia.) Democrat.*

## Only One Missing in Sixteen Years.

FREMONT, Ind.—FOREST AND STREAM No. 12 (Vol. XLII.) has some friends failed to arrive. This is the only number that has failed in sixteen years. Please send it. I am anxious to have my FOREST AND STREAM all filed in regular order. They are treasures.

W. N. McKENNA.

## Sea and River Fishing.

## SOME CARP LAKE NOTES.

*Editor Forest and Stream:*

As the Kentucky contingent of the "Kingfishers" entered the Little Miami depot at Cincinnati in the summer of 1892, equipped for the annual outing to Michigan waters, their glances sought in vain for "Old Kingfisher" himself, who was to meet us there. Only his shadow lay before us at the baggage end of the depot in a big truckload of bags and boxes—camp equipage—the boxes glistening in a new coat of green paint. How familiar they seemed—the old frog box with its wire netting, the tool chest, the canvas bags of tents and tent pins, the torpedo-shaped minnow bucket, and the boxes of groceries of varied sizes.

Strolling to the sidewalk fronting the main entrance, we almost instantly caught sight of the belated head of the gang, making tracks for the depot with that same automatic motion of his lower limbs that used to bring moisture to our brow to keep them in sight during a long Michigan tramp.

"Got them worms, Charley?" said he, in his idiomatic style, as soon as he got in talking distance.

"Of course," replied Charley. "What do you take us for?"

"Shake!" said he; and we shook.

"Shake again," said he; and we shook again. The hand clasps were hearty and genuine.

"Kingfisher" had written us to bring along some Kentucky worms—barnyard-hackle, as he called them—with which to beguile the unsuspecting trout from hidden places and to keep up the minnow supply; provided that Culbertson, the disciple of Cuvier, didn't purloin them to feed the bluegills, for which he had a tender attachment. And indeed when grasshoppers were scarce, clam bait infrequent and the overhanging bushes prevented the use of the fly, "worms wuz worms" for the agile trout, especially a good, flat, luscious Kentucky worm.

That afternoon we erected the "den" of Culbertson—the Cuvier magnate (another of the Kingfishers that was to join our procession), and later had the pleasure of taking tea with "Kit," one of the two charming heroines of a camp out in Michigan, as related in former numbers of FOREST AND STREAM.

That night we took sleepers for Walton Junction on the G. R. & I. Railroad, headed for the deeply fascinating waters of Green Lake, fourteen miles south of Traverse City. Next day, reaching Walton Junction, Hickman ("Kingfisher") was seized with sudden fear that the Traverse City train would fail of connection with the next Michigan train, that left about 1 o'clock P. M. for Interlachen, a small station near Green Lake.

"I'll fix it," said he—"Clay, got any cigars?" and receiving a handful from Culbertson, he sauntered in his guileless way toward the engineer of the Traverse City train—somewhat as a spider approaches a fly, with side steps. Getting close enough, he offered the engineer a cigar, which was accepted. "Take 'em all," said Hickman, and the cigars were transferred to the pockets of the engineer, with thanks. The cigars were "ten-centers."

"Can't you speed her up a little, so we can catch the south bound train at Traverse City?" inquired Kingfisher, in his gentlest and most persuasive tones.

"Oh yes," replied the engineer, "we'll get there in time to catch the 6 P. M. train, but will miss the 1 P. M. train about twenty minutes." He was right, we missed it. The smile and confident expression that lit up "Kingfisher's" face as he started for the engineer, wasn't there as he returned to our party, but, instead, a sort of hopeless look, somewhat like the boy whose captured rabbit had suddenly left his hands. He stood our jokes upon his persuasive powers with commendable patience—explaining that Culbertson had given him some of the "give way" cigars and not the genuine "ten-centers."

At Traverse City our party, consisting of Hickman, Culbertson and Mack Barney, the cook from Cincinnati, and Furr and the writer from Frankfort, Ky., were joined by Foulds and Gooder from Cincinnati, and Thurston (Kelpie) from Central Lake, Mich.

The hours of waiting were spent by us in taking in the town or sauntering along the wharves, watching a three-master unload coal by horse power with block and tackle, or following the movements of the ring perch and suckers that loafed around the grimy edges of the dock. A ragged lad with five-pronged spear with long handle was watching his chance to assassinate the suckers.

About 6 P. M., as predicted, ourselves and baggage were stored aboard the south-bound train, and shortly landed at Interlachen in the midst of a driving rain. This necessitated a conference on the subject of going out to Green Lake and making camp in the wet. There was such a deep and powerful attraction about its waters, that Hickman and Furr could not resist the temptation to get there as quickly as possible, and piling the tent baggage and some groceries on the only wagon at hand, they mounted on the top and drove off to make camp, leaving the rest of us to follow in a wagon that had been sent for.

Gooder and Foulds warmed themselves by paying the railroad agent \$4 extra charges on a boat they had prepaid 80 cents for as transportation charges from Traverse City, fourteen miles. The agent was guileless and bland, but he got the money. It was simply a case of "hold-up."

The wagon arriving, we got aboard and drove the short distance to Interlachen and up to the door of the principal (and only) hotel, a two-story wooden structure. The rain was falling in torrents. Gooder and Thurston concluded to stop. Foulds, Culbertson and the writer felt it incumbent to go on in search of camp, which we were told was near the "bowery." Our driver was an amiably wicked chap of conversational, liquor tendencies. He knew the woods like a book, knew all the roads, knew where the "bowery" was, knew everybody, including "the resorters" that lived in ten miles round, but especially did he know, as we subsequently found out, that his "dad" kept the only, and, of course, the principal hotel at Interlachen.

Under the clouds and in the falling rain, the night was dark as pitch, the bushes dripping with water overhung the doubtful road, and logs, sinks and side hills were no obstacle to our experienced driver. The only case of actual stoppage was when the horse leaped a 3 ft. fallen tree and attempted to take the wagon along with him. Culbertson was on the front seat, with umbrella, and when the collision occurred he sailed off with it, full

spread, evidently trying to show how, in times of danger, it could be used as a parachute. No doubt it would have been a successful effort and landed him easy, but the amount of avoidupois overcame the cubic contents of inflation, and he came down straddle of the tree, and rather hard.

Mending the harness, and after divers adventures, we reached the "bowery." All was dark and silent. No camp in sight. We yelled and shouted. No answer. After twenty minutes of vain search, in discussing our drowning situation, some one casually remarked that our camp was to be close to the edge of Green Lake.

"Green Lake," ejaculated our driver, "why, this ain't Green Lake! This is Duck Lake. They told me the camp was to be at the 'bowery,' and there ain't no 'bowery' on Green Lake." The "bowery" was a wooden pavilion, or dance shed, erected in the woods on the edge of Duck Lake.

The discovery of our mistake filled us with emotions too varied to be explained. There was only one thing to do—retrace our steps to the "principal" hotel. The driver, mindful of his daddy's ownership, and the advantages of patronage, had suddenly lost some of that vast knowledge of the roads he had earlier professed, and vehemently denied all knowledge of the road to Green Lake. Next day we found the road there so broad and plain that a blind man could have felt the way. Back to the hotel we went, but Culbertson was so much chagrined, and so disliked the idea of leaving Hickman and Furr to make camp by themselves, that he offered a Swede, who knew the place, \$3 to show him the way afoot. As it proved but little over a mile out, the offer was tempting enough, but fear of the landlord evidently prompted the Swede's refusal to accept.

We passed the night as comfortably as the circumstances would admit. Retiring, Culbertson, in no pleased mood, threw himself down on the bed. The slats broke and he struck the floor. The bed was in V-shape, the broken slats holding up the sides, himself in the hollow; but accepting the situation he lay there till morning. The only trouble, he said, was in turning over for a change.

Next day we went out to camp and found Hickman, Furr and Barney, the cook, with two tents up and getting camp in order. From a pile of straw, ordered beforehand, they got enough that was dry to make a comfortable bed, and passed a good night under the first tent up.

Of the glories and magnificent fishing qualities of Green Lake, "Kingfisher," in his own inimitable style, has furnished a description for previous pages of FOREST AND STREAM. We don't care to attempt to add anything to his vigorous painting; if we did we would paint the whole thing "red," or a shade of "invisible green." We hunted bass for three days—diligently, earnestly, hopefully, tried all kinds of bait and only caught a glimpse of one solitary three-pounder (we guess he was a three-pounder). I hooked him, he flopped around a stake and departed. We caught a few bluegills. Kelpie tried his hand on them but wasn't a success. When I explained to him that it was easy enough—by a simple twist of the wrist—he said that was sufficient, he would know how forever afterward.

Concluding to emigrate to Carp Lake, we struck tents and departed. At Traverse City Foulds and Gooder left us for Omena on Grand Traverse Bay. Coming up the day before they had engaged wagons for us, which we found waiting at the depot, ready for the ten-mile trip to Carp Lake. Stopping a bit at the "Last Chance" on the edge of Traverse City, then taking lunch at the bridge on the bay, passing Cedar Lake and sundry so-called trout streams, we reached Carp Lake at "Robin Nest Camp," one mile above Bingham, and three and a half miles from Nolans, our old camp ground of the year before, on the other side of the lake.

OLD SAM.

[TO BE CONCLUDED NEXT WEEK.]

## A DAY OF SOLID COMFORT.

THIS was the angler's ideal morning, warm and misty after a night's gentle rain. Every blade of the emerald-hued grass was tipped with the pendant rain drops, glistening like a carpet of diamonds in the warm rays of the morning sun, which ever and anon gleamed through the drifting banks of mist. As we walked along the green carpeted lanes we passed between long rows of blossom-laden apple trees and inhaled their fragrance which lay heavy on the cool fresh air. It was a morning to inspire those joyous feelings which thrill the lover of nature.

"Well, old comrade, once more we have a day of pleasure before us, and if we go home with empty creels we may as well give up angling forever," said Freezy, this ideal May morning, as we jointed the rods on the bank of as pleasant a stream as ever God created. "Certainly we have an ideal day and somehow I feel confident we shall beat the record," I made reply.

Chum shortly checked our conversation for making the initial cast, and he was soon engaged with a lively half-pound trout, which he landed, and I was lucky enough to follow suit with one of the same pattern.

We were at the edge of an open maple wood, where the stream flowed with rapid current between banks of clayey soil thickly set with the odious skunk cabbage. So erratic here is the stream's course that the uninitiated angler while traversing the banks is liable to an involuntary bath in the icy water, which gurgles over sandy shallows and then dashes into one of the countless elbows scooping a deep hole beneath the root-bound banks. And there are good trout in these eddies, as Chum and I well know. I well remember my exciting interview that day with an educated trout at one of the eddies. Knowing from bygone events that the gentleman chose this as his private residence, and the omens being good I determined to try him anyhow. Standing in a shallow just above the pool, I made the cast and the current soon carried the bait down into the circling foam, where with a whirl it disappeared under the bank. In a moment I knew that old Speckled Sides was at home, for the fact was well proven by sundry lively demonstrations at the end of the line. The antics of this old settler were in direct opposition to the well known tactics of trout in general. Instead of the usual long runs and wild leaps he just hung in under the bank, sulked and yanked at the line savagely. Knowing that he was a "whopper," Freezy danced around on the bank and offered the advice customary on these occasions. At last, becoming reckless of consequences, I headed him my way, stepped out on the bank, and trusting to my tackle gave a heavy surge, intending to bring him ashore, willing or not, but alas for human

calculations and to perdition with poor tackle. The hook and gut parted company; the straining line came back with a twang and I sat down in the moist earth. But never mind. It was only one more case of "the biggest one got away." I recovered in time to catch these words of sympathy from Chum: "Served you right; ought to have shown more sense," and other consoling remarks. We reached the meadow with a gooey lot of trout in our creels.

There is one object to be found along the stream deserving the pity of all who lay claim to manhood. Picture the drunken angler lurching along the mossy banks, where song of birds and fragrance of flowers are mingled with the glint of sunshine through the whispering leaves. Is not this sacrilege on these chosen spots? Hearing loud voices from a clump of alders as we entered the meadow, we drew nigh; and closer investigation discovered two pilgrims, whose rods, reels and general make-up marked them as (Heaven save the mark) members of the fraternity—both loaded. Aside from the aversion naturally arising from such a condition, their antics were comical in the extreme. There was soon a tacit understanding between Freezy and me to dispense with this charming company at the earliest opportunity; but this we found no easy matter, for ever and anon, as we followed the stream's winding course, we were confronted by this precious pair, who, forgetful of all previous greetings, would meet us with a howl of recognition and a pressing invitation to "take suthin." All this was annoying enough and coupled with the uproar, made angling a fruitless occupation; but at last the climax was reached when we came suddenly upon one of them sitting in the overflow of the stream, in water waist deep, industriously fishing underneath an old log without a vestige of bait on his hook. This was a little too much even for his friend, whose disgust found expression in the suggestion, "Come, you old fool, let's go home." Pulling the old man from the water we started them off to the nearest road, and away they went.

The pleasures of the next hour effectually soothed our ruffled feelings. The alder-arched stream wound across a charming meadow, its many abrupt turns causing numerous little eddies flecked with patches of whirling foam. Numerous openings in the brush gave ample opportunity to make the cast and nearly every cast was productive of a trout, not large but high colored, plump and gamy fighters.

While we were eating lunch, a long mooted question once more came under discussion, and we determined to fish a choice bit of water just below. Freezy slid over the wall, and as he let his line drop down between the alders into a shady pool, I saw by the quick firm grasp of the rod and the expectant look in Chums eye that he had on hand a battle with a gamey trout. I watched the contest with bated breath. The fish made the reel fairly smoke as he started off at a Nancy Hanks gait, but when he had run the proper distance a strong pressure of the drag stopped his little game. Finding himself thus balked, he made a rush and shot into the air a foot above the surface. But it gained him nothing, for Freezy quickly pulled him over into the stream and started him shoreward. Several times he made a break but a reminder from the drag brought him back, and as he came skating in Chum lifted him out of the wet.

Next we entered Palmer's big woods, and here I had the laugh on Freezy. In the woods is a charming pool, overshadowed by a venerable leaning maple, beneath whose gnarled roots under the overhanging banks lived a wary old trout, the hero of many an engagement with the tempting fly or plebeian worm. Now, Chum had come especially "well heeled" to try conclusions with this cunning old veteran; he had secured a choice tidbit, which surely must fetch him—a young wood mouse, which "Seneca" says is a killing bait for large trout. All day had Chum carefully guarded the little rodent, which lay in a bed of cotton incased in a perforated box. Stretched at ease on the ferns, I watched the contest. Freezy tempted the trout with a variety of flies, bugs and worms; but no; he would have none of them. "Well," said he, "by Jove! I have something that will do it," and proudly drew forth the box. Lifting the cover, he peered in with a blank look. Mousey was dead and cold, from fright no doubt. Well, Chum's sunny disposition soon overcame his disappointment; and he left the pool with a vow that he would have its occupant if he had to start a mouse farm to accomplish it.

The remainder of the afternoon was a pleasant ramble. We followed the stream with thoughts wholly abandoned to the surroundings, now stopping to examine a meadow flower of unusual beauty, or to listen to the clear notes of some wood warbler, or pausing at some well-known eddy to draw forth a mottled dweller of the stream. Ah! these are days worth living, days of pleasure on which the thoughts linger lovingly, which bring rest to the tired brain. At last the lengthening shadows now warned us that the day was nearly done, and we plodded home in the twilight, the weight of our creels giving ample proof that my predictions of the morning were fulfilled.

E. M. B.

PRESTON, Conn.

#### New Hampshire Trout.

CHARLESTON, N. H., May 10.—I am glad to see the letters of my old friend, "Mascomy," and wish to tell him that a young friend of mine went to that Acworth brook last week, and returned with one trout! I have not been out myself yet. The weather is very bright and clear, and the brooks very low, and we are in need of a good, long, warm rain before the water will be in proper condition for fishing.

We need a change in our game laws. The trout season should be restored to May 1 or even May 15, instead of April 15, as it now stands, which is too early for any region north of Pennsylvania or southern New York, unless it be on Long Island and the seacoast of Massachusetts and Connecticut.

All northern New York, north of N. Y. C. R. R. should adopt the same date. The letters in FOREST AND STREAM of May 5 clearly prove this.

I cannot close this without a word to express my delight in my good friend, R. E. Robinson's "Danvis Folks," and my hope that for years to come he may continue his graphic descriptions of the simple, honest folk and the quiet, happy life of "New England in the olden time."

VEN W.

The pickerel has a large mouth, but not large enough to swallow some of the stories that are told about him.—Ex.

## THE MOUNTED COLLECTION OF FISH

At the U. S. National Museum.

SECOND PAPER.

ONE of the most interesting fresh-water fishes in this country is the bowfin (*Amia calva*), and the Museum has in the collection a very beautiful cast of one, which has been faithfully colored to imitate the natural specimen.

Science thus far has knowledge of but one species of bowfin in the fresh waters of the United States, it being the "dogfish" or "sawyer" of the Great Lakes; the "mud-fish" of certain parts of New England; while where it occurs in the South it is known as the "Johnny Grindle" or "bowfin."

In 1883 I saw negroes capture this fish, with hook and line, in the bayous south of New Orleans city. They used

SKATE (*Raia erinacea*).

small frogs and minnows for bait, and the fish took them most voraciously. Negroes in the South are very fond of the bowfin, but beyond them they are not otherwise held in any esteem. They are a beautiful fish when caught, especially those that possess the large black and orange eye-spot at the base of the tail above. I have seen them caught over 2ft. long, and weighing as much as 12 or 15lbs. Sportsmen troll for the bowfin, and many consider him a gamy fish, well worthy of their skill. The young make capital bait for pickerel. Bowfins are voracious fishes, exceedingly tenacious of life, and the very small ones are great favorites in aquaria. But they will

BOWFIN (*Amia calva*).

not tolerate other species in the tank with them for an instant, as the savage fry, with their sharp teeth, will make away with anything, save a snail, in very short order. It has been observed that the young bowfins must arise to the surface every once in a while to breathe. Dr. Estes has said, "While the parent still remains with the young, if the family become suddenly alarmed, the capacious mouth of the old fish will open, and in rushes the entire host of little ones; the ugly maw is at once closed, and off she rushes to a place of security, when again the little captives are set at liberty." ("Sportsman's Gazetteer," 1877, pp. 324-326.) Nothing of this kind has

LARGE RED DRUM (*Sciaenops ocellatus*).

ever been observed by the present writer, though no doubt other fishermen than Dr. Estes have both seen and described the habit.

[The drumfish in the collection are represented by a fine cast of the large red drum (*Sciaenops ocellatus*). As in the case of several of its congeners, the red drum may be distinguished by its short, though spiny, dorsal fin, which is followed behind by an unusually long and soft-rayed one, which is carried down to near the base of the tail. This species also has the power of giving vent to loud drumlike noises, which is accomplished by a peculiarity in the structure of the air bladder. On our coast the species is found from Chesapeake Bay to Galveston, being abundant in many localities, especially on the coast of Texas. More properly this fish should be called the redfish, as suggested by Goode, while in many parts of the South it is known as "bass," or bass with various prefixes attached

to it. It may attain a length of 5ft. and weigh over 40lbs. The Washington Market specimens I have examined are usually not nearly as large as this. Professor Goode has said, "The food is similar to that of the striped bass, which it seems to resemble in habits. It preys upon small fish and the crustaceans with which Southern waters are filled. They swim in scattered schools at times, probably in the spawning season, and may be heard spring above the surface while feeding. At this time the fish are taken in large gill-nets, which are set around them by the fishermen. This species undoubtedly gathers much food from the bottom, although it cannot be so much of a grubber as many other members of the same family, better provided for this kind of foraging by the tactile organs under the chin, and a set of grinding teeth with which to liberate the shells of mussels and barnacles. An accurate observer describes them as swimming along close to the bottom, with head down and body obliquely upward, wriggling through the water, rooting up the weeds and grass, among which it finds quantities of shrimps and crabs. Their enemies are sharks, porpoises and sawfish. The power of uttering sounds is also shared by this fish, but probably not to any very great degree. No one has reported observations upon this point." With regard to this last statement, it may be added that practically we know little or nothing as yet of the migrations and breeding habits of this interesting species, and ichthyologists will be very grateful for any that may be forthcoming. As long ago as 1864 the present writer recollects the catching of this fish by the fishermen inhabiting some of the cays of the Bahama Banks, and I have a drawing of one of the specimens which I made there during the latter part of that year.

One of the most satisfactory casts in the entire collection is that of a skate, and this specimen has been beautifully reproduced. Rays and skates and their kin are invariably regarded with abject horror by every taxidermist who has ever made the attempt to preserve them by the ordinary methods of skinning and stuffing.

During the drying process the specimen warps all out of shape; the incision made by the taxidermist for the purpose of removing the body, gaps wide open in a most hopeless manner; and the entire specimen in a few weeks comes to be fit only for a bonfire in the rear of the naturalist's quarters. This being painfully true, it is all the more fortunate that we possess the means of preserving the forms of these otherwise intractable specimens, which we do by the methods of casting in plaster of paris, or the still more elegant one, in gelatine.

The skates and rays belong to a very interesting group of fishes, more or less nearly related to the sharks. It contains such remarkable forms as the electric ray or torpedo fish, and the sting rays and whip rays, the eagle rays and sea devils. Speaking of sea devils, or the devilfish as it is better known (*Manta birostris*), I will not soon forget the one I once saw in Key West Harbor, Florida. I was aboard a man-of-war anchored some distance off old Fort Taylor. Near us there lay at anchor a small Government gunboat, she being about three times the size of an ordinary steam tug. She was so close that everything going on on board of her could easily be seen. While looking out from where I stood on the deck over the stretch of water that separated the two vessels I presently saw a great fish slowly come to the surface and head over toward the gunboat. It took but a glance to recognize the fact that it was an enormous specimen of the far-famed devilfish, and the marine on guard on the gunboat saw it nearly as soon as myself. As it was swimming quite rapidly, in a few moments it was close to and resting itself on her starboard cable, which was down with her anchor. By a wave of his hand I saw the officer of the deck give the sentry permission to shoot at that ponderous fish, though I wager he had no idea of the kind of a row he was to raise thereby. After receiving the shot, the devilfish for a second or two was not seen to move, but immediately after broke out in all his fury, and lashed the sea about the prow of that gunboat into one seething mass of bloody foam. It by no means improved matters when two of the seamen pinned him with two large whaling harpoons. This simply infuriated the brute still more. He became tangled up in the cable just as the entire marine guard gave him a volley from the fore-castle. This was more than any fish could be called upon to stand, and plunging forward and apparently dragging the vessel from her moorings he put both cable and harpoon lines on the stretch. At this point, when the very safety of the vessel seemed to be endangered, he received a second volley from the marines, and then the lines parted, one after the other, like two pistol shots, and the huge creature tore over the surface of water seaward, to soon disappear.

I shall always believe that that devilfish was 40ft. from tip to tip and weighed at least a half a dozen tons.

R. W. SHUFELDT.

#### NEWS FROM FISHING WATERS.

THREE LAKES, Wis., May 7.—The lakes have been open for some time. Muskallonge, pike and bass fishing will be good by May 15. Deer, partridge and rabbits are very plentiful; they wintered well. J. R. FRENCH.

SPRING LAKE, Flagstaff, Me., May 5.—Douglass & Savage shot a large bear here Saturday, the 4th, after a smart brush. The bear had got free from the clog that had been attached to the trap, giving him considerable liberty as well as temper. Fishing promises well. A. B. DOUGLASS.

POTSDAM, N. Y., May 9.—Chas. F. Heaton returned one day last week from Kildare Pond, his father's preserve, with about 50lbs. of as fine trout as has been brought into town in a long time. The catch represented one day's fishing.

#### Fishing in Louisiana.

NEW ORLEANS, La., May 10.—The fishing season has opened for all fish in our waters except black bass, which our law protects until May 15. One of the pretty catches made last Sunday at Lookout was 11 redfish, 8 sheephead, 1 croaker, 2 speckled trout, caught by Mr. P. Mallard, of the Marshall Club. Mr. Mallard also caught 28 black bass, which he threw back into the water in accordance with the law.

Mr. T. Lyons, of Lookout (Club, with Mr. Pinkard as invited guest, also spent a very pleasant day and both made a good haul. ANODRAC,

## MAINE FISHING WATERS.

BOSTON, May 11.—The trout fishing season is on in good earnest, and Boston fishermen are having some good luck in the Maine waters. Thus far the water in the Maine trout lakes is most remarkably low, especially in those lakes where there is a flowage for the purpose of running the mills below. The water was drawn off last winter as usual, and the snow melted away without filling the lakes. Since then the weather has been unusually dry, and the result is very little water in the lakes. Moosehead is reported very low. Some good catches of trout are being made there. At the Rangeleys the fishing is reported to be excellent; the result of the remarkably low water. Mr. J. R. Marble, of the Rangeley Lake House, writes the following account of the catches of his guests for a couple of days: May 5, Dr. E. M. Whitney, of New Bedford, Mass., with Rufus Crosby as guide, took a trout weighing 3 lbs.; 7 trout of 1½ to 2½ lbs., and 2 trout of 1 lb. each. Willard Nye, of the same town, with Geo. D. Hutton as guide, took a trout of 2 lbs. weight and 6 trout of from 1 lb. to 1½ lbs. A. E. Mann and Gilbert Tolman, of Boston, with Dan Haines as guide, took 2 trout of 2½ lbs. and 9 trout averaging over 1½ lbs. May 7, the same gentleman took a trout of 4½ lbs. and 9 averaging 1½ lbs. The same day, J. M. Tompkins, of Brooklyn, N. Y., made a score of 2 trout of 3 lbs. weight, 1 of 2½ lbs. and 1 of 2 lbs., besides 7 trout of about 1½ lbs. each. A large number of trout have also been taken of smaller size and returned to the water. S. H. Jones, of Lowell, Mass., caught the first 2 trout of the season at the South Arm; 1 weighing 7 lbs. and the other of 7½ lbs. This he thinks is a good beginning. The water in Richardson Lake was unaccountably low at that time, and has continued so up to the time of this writing.

The beautiful camps of the Oquossoc Angling Association at Indian Rock, head of Mooselucmaguntic Lake, are to be better occupied this year than last, when the World's Fair drew many of the association members away. A happy fishing party is to start for that location on Tuesday, May 15. The party is made up of C. S. Roberts and wife, E. S. Pickard and daughter, H. B. Sprague and wife of Lynn, Mass., J. W. Daniels and wife of Providence, Mrs. H. H. Roelofs of Philadelphia and Jas. B. Field of Boston. Mr. Pickard is one of the older members of the Oquossoc Angling Association, and has done much to keep up the interest in the association. He is a great lover of fishing, and thoroughly in love with the country. On Monday, May 21, the above party is to be followed by another of the association's members and friends. This second party is to be made up of Mr. H. H. Roelofs of Philadelphia, James A. Williamson of Wyoming, N. J., Dr. Appleton of Philadelphia and four friends.

The Stevens party started for Camp Five Vale, Narrows of Richardson Lake, on Saturday. The party is not a large one this year, being composed only of Mr. C. P. Stevens and his nephew Frank H. Stevens. Mr. E. J. Shattuck, who has generally been a member of this party, will make his fishing trip this season to a new location on the line of the Bangor & Aroostook R. R. Mr. Stevens has been putting his camp in fine shape the past season. He has built a brick fireplace among other improvements, with a new guide-house, besides as fine a landing as there is on the lake. A noted party left Boston for the Upper Dam on Friday. It may be termed the insurance party from the fact that some of the leaders are prominent in that business. Mr. B. G. Akerman, of Brooklyn, N. Y., with Mrs. Akerman, head the list. They have visited the same location, usually the Upper Dam, for a number of years. This year they take their son Charlie with them. Mr. and Mrs. C. E. Hayes, of Boston, with Carl Hayes, their son, are also of the insurance party. Mr. and Mrs. Watkins, of New York, are in the party, as they have been for several years. Mr. George L. Wakefield, of Wakefield, Mass., is also of the party this year; he is a young man and will thoroughly enjoy the trip and the fishing with the other boys of the party. All the ladies of this party are experts with the trout rod and the FOREST AND STREAM may hope for a good record of their catches hereafter. Mr. Partridge, of Boston, also well known in the insurance business, will follow the party later.

Senator W. P. Frye, of Maine, is not expected at his camps on Mooselucmaguntic this season till the tariff debate and adjustment in Congress is completed. Doubtless it will be hard for his Honor to be thus confined to legislation, and possibly he may yet "steal silently away." Gen. F. D. Sewall, of Bath, and chief of one of the divisions of the revenue department at Washington, will doubtless be at the Senator's camps in season. Mr. Samuel Hano, of Newton, Mass., has gone, with his wife, to his new camps at Quimby Pond, in Rangeley. Mr. Harry Dutton, of Boston, has started for his splendid camps at Pleasant Island, Cupsuptic Lake.

Fish Commissioner Brackett, of Winchester, Mass., has just shipped 30,000 young brook trout to Sutton. The Winchester hatcheries have recently placed a large number of young trout in Lake Quinsigamond, at Worcester. Hereafter a large number of eggs will be taken to Winchester for propagation, and the brooks and ponds in the northern part of the State will be drawn upon for these eggs. The defeat of the Gilbert trout bill has given the propagators of trout extra courage. The last heard of that measure was the prompt refusal of the Senate to pass it over the Governor's veto.

Ex-Governor Russell and party is expected to leave for Birch Lodge, head of Richardson Lake, soon. The party will also doubtless visit the splendid fishing lodge at B Pond, built a year or two ago by the Hon. John E. Thayer, who was a member of the ex-Governor's staff during a couple of his terms of office. Both the Governor and Mr. Thayer are real sportsmen and fond of the woods and waters. Mr. Bayard Thayer, the owner of Birch Lodge, has been in Japan for a year, but report says that he will be back in season for a stay at Birch Lodge, this year.

The Maine people are growing to love the sport on their own lakes and streams more and more. More prominent Maine citizens go fishing every year. A recent letter from Farmington says that a party of legal notables left that town for Rangeley on the 11th. In the party were Senator J. C. Holman, Clerk of Courts E. E. Richards, ex-Sheriff Alonzo Sylvester, ex-Deputy Sheriff Nelson Gould, Editor J. M. S. Hunter of the *Chronicle*, President G. W. Wheeler, Dr. E. C. Merrill and Frank E. McLeary. Senator Holman's camps will be their objective point, and they are to stay for eight or ten days' fishing.

Brook fishing in Maine is reported very poor indeed. The brooks are most remarkably low for the time of the year. There has been very little rain in May, thus far, and April was an extremely dry one. A rise of water is needed to make brook fishing worth anything. The lakes also continue remarkably low. So dry is the weather, prominent lumber-land owners greatly fear forest fires; and campers and fishermen should use the greatest caution. A fisherman to whose carelessness could be traced the destruction of a tract of beautiful Maine forests, would have something to be sorry for the rest of his days.

SPECIAL.

## ANGLING NOTES.

## Live Fish in Sealed Jars.

MR. C. A. OVERMAN, of Salisbury, N. C., writes: "I have heard that putting minnows in a jug hermetically sealed will preserve them alive on a trip of three days to a week, and when taken out they will be lively for bait. Will you kindly inform me if this is so, and the process for packing them in jars, and if any chemicals are put into the jars."

Fishermen in this country and in England have recorded that bait fish have been carried by them in the manner indicated in the query, in bottles and jugs three-fourths filled with water and then sealed. No chemicals are used in the water. In FOREST AND STREAM, Dec. 2, 1893, page 476, under heading, "Transporting Fish Fry in Hermetically Sealed Bottles," I quoted from an official report of the New South Wales Commissioners to the World's Fair, describing how trout fry, and brook and brown trout 4 in. long, perch and carp, have been transported in sealed bottles or jars by the authorities in that country. I would refer Mr. Overman to this article, as it bears the official stamp of the Commissioners to verify a method of transporting fish that has been questioned. This method of transporting fish fry in sealed bottles proved so successful that it superseded the old method of transportation in open cans. It is related that fish have been carried in that manner a distance requiring more than three days to cover. It is obvious that the temperature of the water in the bottles must not be allowed to go above the point that would kill the fish in open cans.

## Bright Rod Mountings. Fine Gut.

MR. H. B., of Worcester, England, writing from New York City, asks: "Can you kindly inform me of any means to dull the excessive brilliancy of nickel-plated goods? I have a rod the fittings of which are nickel-plated, also a reel, fully plated; both of these on a sunny day throw several flashes of light at a time, which frighten the fish considerably. I should also like to know why it is that in this country, where they excel in the making of rods, reels and lines, it is almost impossible to obtain fine (i. e., thin) gut? In England we have to be content with a Castle Connell 17s. 6d. rod, or a £1 1s. Ogden, or others of like price, and a reel costing about 5s., but our tackle must be of the best quality, and fine. Our casts are made of fine drawn gut. The undrawn gut is stronger, but is very difficult to procure in good long lengths, and round, which is most essential. These casts are sufficiently strong to land a 3 lbs. trout. Most of our flies are tied on eyed hooks, the best hooks being 'Pennell's' turned down eye upturned shank,' which are attached to the cast by what is known as the 'jam knot.' With the flies tied on gut, all fishermen knot the end fly to the cast; this necessitates breaking the gut to change the fly, but this can be done two or three times before the gut becomes as short as that on the average fly over here, after which it can be looped and used as a drop fly. 'Fine and far off is our maxim.'"

In the first place we are not so particular over here about flashing rod mountings as the fishermen are in England, and so use bright reels, ferules, etc.; and really I think fish are not, as a rule, in a position to know the difference. That reflections from the bright metal of rods and reels frighten fish, I put down in the same class as that antiquated idea that one must lower the tip of the rod when a hooked fish jumps at the end of a long line, and still we stick to it, some of us, as if it were the gospel of the Christian religion. Nine hundred and ninety-nine times out of a thousand a jumping fish has slack line when it jumps (by slack line I mean that the strain is not directly on the rod; either the current makes a sag in the line or the fish rushing from deep water produces the same result), and if he has not, the slack given by the lowered tip could not be transmitted to the fish before the fish has made the jump and is back in the water. I know that this will be received as rank heresy, but so far as I have been able to test it I have found it true.

As to flashing rods and rod mountings, there are various reasons why I believe fish are not affected by them, and the chief of them is that the fish do not see the reflections on the water. In fly-fishing few anglers think of casting a fly under a glaring sun when the surface of the water is like a mirror, unruined, and our streams are not like the clear, placid, unsheltered chalk streams of England. In fly-fishing and in bait-fishing, in stream fishing and lake fishing, we think we must have a ripple on the surface of the water, and that late afternoon and evening are the best parts of the day to fish. In fly-fishing the fly is cast, under these conditions, sufficiently far away and in a direction not to alarm the fish by any movement of the angler. Instinctively an angler avoids casting a shadow on the surface of a shallow stream, and doubtless this caution operates against flashes of light from the rod metal, for light and shadow are caused by the same agent.

In bait-fishing the same conditions, distance and agitated water, obtain to the same end.

Admitting that our unsophisticated trout will shy at a shadow and buck-jump at a flash from a reel, anglers have been taught from the time they were suckling babes that fish must not have cause to do either, and they conduct themselves accordingly from habit, but I am being led away from a direct answer to the question.

The very best way of treating reels and bright rod mountings to dim their lustre, so that no flashes of light will come from them, for I assume that the desire is to do it well while about it, is that which is fully described by Mr. Henry P. Wells in "Fly-Rods and Fly-Tackle." First, get a glass jar with a wide mouth and a glass stopper, and the mouth must be wide enough to admit of reel-plate, and the jar deep enough to take a rod ferrule, and in it put a pound of commercial nitric acid; into this put a ten cent silver piece and leave the jar in a warm place with the stopper loose until the silver is dissolved. Then add a

piece of copper wire the size of an ordinary knitting needle and four inches long, and when it is dissolved the solution is ready for use.

Clean all oil from the metal with ammonia or soap strong with lye; rinse and dry. Fasten the metal to be colored to a piece of copper wire and the wire to a poker and dip the metal below the surface of the solution; withdraw it at once and heat in the flame of an alcohol lamp. Watch the piece carefully. It will first turn green, then a black speck or two will appear on the surface and this will quickly spread until the whole surface is a dull, dead black, when the piece should be removed from the heat. The change takes place at the temperature at which tinman's solder melts, and hotter than this no soldered ferrule should be heated, lest it anneal and lose its stiffness.

It may be cooled at once in water or allowed to cool naturally. In the first case scrub with a brush while the metal is wet and in the second scrub with a brush with the metal dry, which gives the best results. After being scrubbed and rubbed with a dry cloth to remove any remaining crock the metal will be a beautiful soft dead black. The expense will not be more than fifty cents.

This is the finish that I have seen on rods made by Forrest & Son, of Kelso, Scotland, and by Malloch of Perth. I now have one of Malloch's rods and the mountings are as black as when I got it, five or six years ago.

Why English anglers have to be content with the rods mentioned by the correspondent is not clear. Ogden makes wood rods up to £2 and £3 each. Foster, Hardy and Little and others make split-bamboo rods from £4 to £5, and even more, and Leonard and other American split-bamboo rods are sold on the other side.

There are several reasons why we in this country do not get any considerable quantity of fine undrawn gut in long lengths. One is that the English dealers, as a rule, have the first whack at it and buy up the most of it. It can be procured in this country if one goes to the right place for it. I now have some leaders of this kind of gut as fine and as perfect in every way (made in this country), and equal to the fine undrawn gut leaders tied by Mrs. Bulmer in London, who, I think, cannot be excelled in this respect by any one in the world. Another reason is that for the average fishing in this country such leaders are not required any more than we require the fine drawn gut leaders so much used in England. The character of our streams is different from those in England. There they have grass and weeds to contend with, here we have in our wilder streams roots, snags and debris that would smash the finer gut. Of course in the limits of this note I cannot go into the differences in detail, but for a final reason I quote from one of the last English exchanges in regard to this very kind of gut: "This year, in addition to the gossamer drawn casts we have extra fine whole gut tapered gut casts. A few years ago it was almost impossible to get such casts at any price."

Eyed hooks are slowly coming into use in this country. Hall's turn-up eyed hook, and Cholmondeley-Pennell's turn-down eyed hook, both find favor, although I think the latter, in Pennell-Limerick, the better shape. When Mr. Pennell first designed the improvement on his old square bend, straight-point hook, he sent me samples, and I wrote an article about them, illustrating the hook and the jam knot. What the correspondent means by "upturned shank" for Pennell-Limerick, I fail to comprehend, unless it is the "loop-eye" in which the wire is returned up the shank after forming the eye, which renders fraying of the gut impossible. These hooks, however, are made only in salmon and grilse sizes. I believe that the Pennell-Limerick is the best fly-hook made, but for bait-fishing, or flies smaller than No. 5, new scale, or No. 10, Redditch scale, the points should be kerb'd instead of straight. What is better still for bait-fishing is the Pennell-Sneck hook, and this also is made with kerb'd or straight point.

I think the methods of England and this country are as much alike as conditions and circumstances will permit, and we fish "fine and far off" when such fishing is necessary, at other times just fish to get them.

## From the Adirondacks.

I have a tender place in my memory for the "Seven Chain Lakes," partly in Essex county and partly in Hamilton county, New York, for my earliest Adirondack fishing was done in these lakes in 1859, when it was more of a task to get there than it is in these days of steam cars and mail coaches. When my friend, Mr. Charles H. Wilson, came to see me just before starting for Harvey Bonney's, on the third lake of the chain, I asked him to write me about the fishing, and this is his letter:

"BONNEY'S, May 6.—I write you as per promise of the doings of our party since coming here. So far we have found plenty of trout, and with but two exceptions of the speckled variety. The weather has been delightful, and the leaves, prompted by an occasional shower, are making their appearance. The ice went out of the lakes the 19th of April, as against May 10 last year. Our success may be shown by the following statement: May 2—21 trout, 13 lbs. (largest 1½ lbs. May 3—10 trout, 6 lbs. May 4—29 trout, 16 lbs. May 5—41 trout, 28 lbs. (largest 1½ lbs.).

"On the 4th and 5th the fly-fishing was satisfactory, notwithstanding the largest trout caught was taken on a minnow. I had the pleasure of killing one on a black-gnat that weighed 1 lb. 6 oz. Yesterday Messrs. Wright and Viles had the good fortune to see a water spout crossing the Seventh Lake. They describe it as being about 10 ft. high, and at the base about the size of an ordinary water pail, increasing in size as it went up until about as large as its height, and then dissolving into spray, very much like the single pipe fountain in Union Square.

"I took a little trip down Chain Lake stream, and in nearly all the set backs I saw an immense number of small trout about 1 in. in length. This stream is the spawning ground of a great number of trout from the First Lake, as you are well aware.

"I think we have struck this place at its best, or nearly so at least, and while I am not getting as many trout as the rest of the party, I am getting what I am really here for—health and rest."

To reach Chain Lakes, go up the Adirondacks R. R. from Saratoga Springs, to North Creek, then take stage to Indian River and walk in to Bonney's nine miles, with a horse to pack in the duffie.

—A. N. CHENEY.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

## OUR SUMMER OUTING.

ADRIAN, Mich.—We had talked and planned all winter where we would spend the summer, whether to take a trip away or spend a month or two at one of the many lakes near home, and finally we had decided to go several miles further and take a cottage for the month of August at one of the lakes in Jackson county.

There were four of us, my husband and myself, our boy Wilfred and his friend and playmate Charlie. With us were our two faithful dogs, Little Budge and old Dick. We had written to ask about the fishing and game. The reply came, "Bushels of fish being caught every day, and plenty of woodcock." That had caused us to make our decision, for we all wanted to fish, while the men wanted to hunt the woodcock after Aug. 15.

We found our cottage ready for us; it consisted of dining-room, kitchen and three bedrooms, with a broad stoop running across the front and facing the lake. When I first saw it I called it beautiful, but now I can think of no name more appropriate than Snake Hollow.

Now, while I have no fear for rats and mice, and being my husband's fishing companion, have witnessed a great many sights that would naturally make one timid. And having been on the lake with him in the worst of rain and wind storms, when we expected every moment our boat would capsize, while others were upset and one drowned, yet snakes are my one great horror, whether they be poisonous or harmless. What was my surprise, on going around the cottage, to see one or two stretched out in the sun. I knew then that my fate was settled, and that I should confine myself mostly to household duties.

Next morning we were up with the sun, and all started out for a fish. And how we did fish! The lake was long and deep. But if there were any fish there they evidently were not for us, for day after day we fished from sunrise till sunset, with the same success; and as the visions of fish gradually faded, the snakes began to appear. Never in my life had I seen so many. They lay at the back of the cottage, and in front, and under the stoop, and in the paths, and there was no place that we started to go to and did not see one or two crawling out of the way.

But we had all agreed when we went not to be put out at anything, for we were all usually good-natured, and it helped to make it interesting.

Our supplies of meat were beginning to get low, for we had caught no fish, when we were all startled by two men landing with two large pickerel, each weighing from 6 to 8 lbs. I need not say that the sight of those fish caused the greatest excitement. Every one ran for their trolling lines and hooks, and in a short time there were from ten to fifteen boats all trolling for pickerel.

Just as our party were ready to start in our boat the boys came running in with the information that there was a big blacksnake in the boat. With this news, it did not take me long to make up my mind to remain in the cottage and prepare some kind of dessert for dinner. I now think that this was a scheme planned to make me stay at home, as there were four others to go in the boat. One went to row, one to troll, while the other two went to see the large pickerel and bass pulled in. But if it was a scheme it worked well. Nor was I sorry, when just as I had my dinner ready, they tramped back up the hill from the dock, kicking at one or two luckless snakes that happened to be crawling about, and carrying between them a small perch that weighed in the neighborhood of 30z.

That night, and almost every night while we were there, the proprietors and the "old sports" about the place would gather on our stoop and talk about the large catches made just before we arrived there of 4 and 5-pound bass. These stories would increase our ardor and raise new hopes; and we would try it again. We fished with worms, frogs, flies, minnows and every kind of bait we could suggest to one another; but all with the same success. The lake had just been fished, and not replanted, until there were none left.

The next morning there was another startling occurrence. Screams were heard from the dock. This brought the people out from all the cottages to see what it meant. A little boy had been out fishing the night before until dusk, and his hook and line having fallen over and become entangled in the weeds and rushes, had been left until morning; when on his going down in the morning he had pulled it up, he found a large bullhead on the hook. Every one was greatly excited at the sight of a fish. And that night as darkness came on, our cottage being nearest the dock, we could distinctly see dusky figures moving down to the boats and carelessly dropping in poles and lines. But there were no more bullheads caught, and all agreed that that was the only one, and that its being caught was purely accidental.

It was nearing Aug. 15, and for this date my husband and Mr. G. were waiting patiently to go woodcock hunting. Signs being up in all the woods and grounds around forbidding trespassing, they were in a state of perplexity as to what they would do for grounds. We had been buying our milk and eggs and potatoes of a milkman near by who had splendid grounds for hunting. They decided to make the acquaintance of the milkman's son and invite him to go out hunting with them. The next morning when he brought the milk they went out and made his acquaintance, ordering more potatoes and asking him if he did not want to go hunting with them the next day, as they had a dog that worked splendidly on woodcock. The fellow was delighted, and it was all settled that they should go the next day.

All that day my husband and his friend spent in rubbing up their guns and loading extra shells for fear of running out and getting ready for the great day. That evening the milkman's son came over to see if they were all ready and to bring the potatoes, which he said had risen a dollar a bushel. It did not matter if they had risen to five; the men would have paid it gladly, so anxious were they to start for game on the milkman's land.

The next morning they set out. The milkman's son had resurrected an old army musket from somewhere, that had not been cleaned for years. He would also insist in walking on ahead with the muzzle pointed directly in their faces, so anxious was he to see a bird. The first thing they had to do was to caution him and to show him how to carry his gun. This he took all good-naturedly, hollering in his delight at having a chance to use it. "I see one," he shouted, and taking not very good aim he blazed away at the only good cock ever seen in that part of the country. As he fired the gun kicked and he would

have fallen backward had not Mr. Tucker, who grabbed him by the collar, pulled him on his feet again. Miles and miles they tramped that day without seeing a thing but snakes. Of these there were plenty—black snakes, striped snakes and blue racers. Some of these they shot, some they stamped on. One blue racer, after his head was shot off, measured 6 ft. Tired and hungry they started back, walking some seven or eight miles to reach the cottage, their appetites sharpened by the imaginary odor of broiled woodcock.

That night we were to take our last fish. So we all went out in the old scow used to carry the baggage over to the hotel. Now there was an old man called Uncle Sampson, whom the boys were having a good deal of sport with in a harmless way. He kept a little store just across from our cottage where he sold ginger ale, root beer, peanuts and also worms for bait. When we first went there it was understood that we were not to dig anywhere on the grounds for worms; and Uncle Sampson said he sent off and got his worms. So there was nothing else to do but to buy a dime's worth of worms when we wanted them. But the boys had watched him take a shovel and pan and start early every morning for a fresh supply; they had threatened Uncle Sampson that if he did not tell them where the good fishing beds were they would dig their own bait. So that night after we had anchored in deep water, and each one of us in the old scow had thrown out a rod and line, Uncle Sampson came across to open his store after supper. "Say, Uncle Sampson," the boys hollered, "Tell us where the good fishing is." "All right, I will. Go on. Keep going. That's right. A little farther. There. Now anchor. Throw out your anchor, I tell you. Quick. You're drifting. There, you got past the spot." These and sundry other exclamations came from Uncle Sampson, who was drifting himself while we sat perfectly still, almost bursting with the laughter we were trying to suppress.

"Why didn't you anchor where I told you to?" he said that night, when we went in after our usual success. "If you had you would have got something." "Yes, got left," the boys mumbled, saying out loud, "Uncle Sampson, can you remember the time when there were any fish caught here?"

That night the boys went down to the boats after dark and fastened a large stone to Uncle Sampson's boat, and then waited for him to get in. They kept hold of the rope for a while after he was in pulling him back when he had got nicely started and causing him, I am afraid, to think some pretty bad words. Finally they let go and he started, saying, "My, what hard pulling it is to-night." But after he got across we heard a splash and loud laughing, and the next day Uncle Sampson would not treat the boys to musty peanuts.

Our month was nearly up, and there had been no fish, no woodcock, but with plenty of snakes to make camp life interesting. And had we had a good time? We all agreed that we never had had a better one. We had all had the good rest we went for, and although there had been no fishing nor game, we had seen the comical side of everything, and we all felt well paid for our trouble, voting then to all go again the next summer if we could; and I think that Mr. Tucker, now away off in his California home, where quail and all game are plenty, would be glad to join us for the sport we all had. Mrs. H.

## ON THE NORTH SHORE OF LAKE SUPERIOR.

(Continued from Page 102.)

WE remained in camp until after dinner, which interval gave Ned an opportunity to overhaul his tackle with a view to repairs, if needed, and probably the building of a new fly for the especial trout we so dearly longed for. As he went over fly after fly, he finally selected two which he thought very attractive, and these he attached to his leader without delay. I had an idea that he intended to go again for the trout in front, as soon as dinner was over, for nothing had been said about alternate angling at the noon hour. I concluded, however, to take the initial for that work, and if the question should then arise about precedence, to let the toss of a nickel decide it. We each seemed so eager for that particular trout, that the courtesies of the craft were in great danger of infraction. The most self-sacrificing principles generally governed us in all other relations, but for this special trout such earliest rivalry had developed, that there was eminent danger of resorting to tactics not in the angling code. I was not sure but what Ned might covertly drop the trout a bait, and he might have the same suspicion of me. At any rate, I determined to make the first advance on the rock.

At dinner I noticed that Ned fairly bolted his food, while I was a good second in the race. This satisfied me that there was to be a contest for the rock, so long before my appetite was appeased I abruptly left the table with the remark:

"I believe I'll try for that trout."

"That's my lay exactly," said Ned, and suiting action to word, he was alongside of me with his rod, and both trotted under the wire neck and neck, and both our flies fell within a few inches of each other. At this juncture we burst into hearty laughter, so truly comical the situation.

"Ah, Ned, you cunning old fox; I divined your crafty intentions."

"Well, I guess I was on to your sly raid."

"It's an even bout," I concluded, and then my fly dropped for the second time and no sooner had it rippled the surface than a gleam like a starlight shaft shot through the water, instantaneously followed by a terrible splash around my lure. I struck and missed, and as I lifted my fly—having on but a single one—Ned sent his into the exact spot where the monster had appeared, but without responsive result. Once more my lure drops, and this time another savage disturbance of the water takes place, followed with the quick and gentle twitch, and then I had an impaled monster cleaving the water like a rocket, direct for the islands opposite.

"You've got him this time," cried Ned, and being no longer a rival stopped his casting and gave me a fair field, and sincerely hoped that I would kill the gallant trout that he would have given a crown to have caught. He was his whole-souled self again, an angler true, now that the little face had every appearance of being concluded in my favor.

After I had arrested the first dash of my lovely victim he came with a sudden movement to the surface and then vaulted high in the air, showing his lordly proportions to

fine advantage. Again when he reached his element the hum of the line and the buzz of the wheel were heard, for he still panted for liberty and felt that he had the vigor to obtain it in the race he was now making. But a moment, however, sufficed to convince him that he was not yet master in his domain, for there came a steady strain on the line that made him pause and reflect and then it was that he felt he was in the toils of some mysterious being in another world who was leading him he knew not where. It maddened him into a perfect frenzy and then he started into a furious lunge and finally brought up at the surface, and for the second time leaped up into the bright sunshine, which had now dissolved the fog, and shook the pearly drops in a generous shower from his lovely contour.

"He's a fighter," says Ned.

Ah! he now attempts one of his old tricks by "doubling," but the slack is taken in as fast as it is made, and then the battle rages near the ragged rocks with desperate fierceness and with the odds in favor of the patient angler. The little bamboo, true as steel, bends to every movement of the impaled trout, and at no time did he have an opportunity to strike the leader with his muscular tail, a trick they cleverly accomplish when opportunity offers. His dashes and plunges, which he so frantically repeated in a very despairing manner, avail him not, and he is now doubtless thinking of the lovely life he once led in crystal streams of azure depths where the soft air drifts through solemn pines, and yearning again for those lovely lurking places gathers a superhuman vigor and rushes onward to the dim distant, intent only on ridding himself of the fatal lure that clings so tenaciously to his reddened jaws. Gallant warrior, you are again cleverly foiled; for no sooner does he pause after his wild break for freedom than he feels that he is once more being drawn to his wily adversary above him. Bewildered with the perilous situation, his strength slowly ebbs and his tactics uncertain and without motive, and full well he knows that destruction surely awaits him unless he severs the tiny thread that holds him such a close prisoner. With this depressing thought he once more draws upon his vital forces and with a bound like a panther darts away with the music of the reel as an accompaniment. It was his last break from his cruel foe, and was as grand a failure as it was a noble effort, for his speed soon slackened and then he was carefully brought to the rocky intrincements significant of his sad farewell to his charming trysting place where amid the sweetest flowers that in the forest grow it

"Lies, a deep and darkened pool,  
Whose waters are crystal, clear and cool."

The flush of proud success is unmistakably with his relentless foe, for he assuredly knows the battle is about over, and as the skillful netter is poised at the water's edge, the rodster, ever on the alert, draws his trophy quietly along as if he were of priceless value, and when at the feet of the trusty half-breed the direful signal is given and the fatal sweep of the woven twine is made. Over the flinty rocks bounds the delighted netter with the glistening prize and a triumphant smile upon his broad and bronzed features. He was a 4-pounder, and as he was placed on the gray rock with his rainbow dyes flashing in the bright sunlight was incomparably the perfection of symmetry and one of the most delicately tinted beauties that ever swam the icy waters or sprang for fly artistic.

Ned declared he was a shield of pearly silver and crinkling crimson, the radiance of which should be sung in mellifluous verse. I suggested further casting, and in pleasant vein said, "It is the perfect fly and the skillful fluter that attract."

He looked askance at me as if there were a subtle meaning in the remark, and then without reply went steadily to flogging the waters, while I stood quietly by, desirous of giving him a chance for an inning. When he began to waver in his faith and enthusiasm I stepped forward and smilingly said, "Ned, there is at certain times as much luck as skill in the angle. Let me demonstrate," and then my single fly, the attractive jungle-cock, again lightly kissed the swelling waters. A snap, a miss and a disappointment were the result. Once more the dandy jungle-cock reaches out for game, and this time the persistent trout called with dire results on Mr. Jungle-cock, for he was immediately taken in charge and soon joined the beautiful 4-pounder who was in deep repose on a flinty couch.

Ned, at this second success of mine, scratched his head out of sheer perplexity, and then duly acknowledged there was something in the particular fly after all. I insisted on his going over my book and selecting some that would approach in color and make-up my jungle-cock, it being the only one I had. He looked in vain, for he found nothing that at all approached anything like it. He finally concluded to resort to some of his old Nipigon flies, which were really excellent, though I advised him to examine thoroughly the gut at the shank of the hook where rust is liable to weaken it. If ever I make another trip to this lake a full dozen of these gorgeous flies, the jungle-cock, will go into my portfolio.

I am not allied to any favorite fly, but the vagaries of trout in rising to a certain fly at one time and then at another under the same existing circumstances, are to me an unsolvable enigma. I believe it best, however, always to change the flies when the trout are not rising well till you finally fall upon one that has the seductive qualities. Two years ago, when fishing on this shore at "Split Rock," I had a satisfactory experience of this kind. Having been left by my companions on a lovely islet where I had always found the trout in great abundance, I climbed to the apex of a towering rock that had an elevation of about fifteen feet, and commenced casting, having as lures a silver-doctor and royal-coachman. To my first cast and flutter a half dozen magnificent trout came lazily from their retreats and about as lazily followed the flies—which were drawn over a mirrored surface—till they had come within about a foot of them, and then deliberately wheeled around and returned from whence they came. I made a second cast, resulting in only two reappearing and repeating the same tactics. A third and a fourth were complete failures, as not a fin came to the surface. I then made a change of lures, putting on a black-hackle for my stretcher and a Montreal for my dropper. On the very first cast I had a fine strike at the black-hackle and secured a 3 pound trout. The second cast brought another victim to the same fly, while the subsequent casts failed to meet with a single response. This is only one of similar changes that I have successfully made.

Mr. D. S. Kimball, a noted angler, in a very creditable and interesting article on fly-fishing published in one of our magazines some time ago, gives the following example in the same line. He says:

"I remember one August day in '84, when I had taken my guide, Wm. Smith, and gone below the dam to fish as far down as the falls, and, in my haste, had carelessly put the wrong flies in my pocket, so that when I had reached the first pool where flies could be used, found I had a lot of dark and refuse ones. The only thing I could do was to make the best of a bad job, and tried my stock faithfully, and with not a single rise. As a last resort I put on, as a stretch-fly, a dilapidated yellow Sally which had seen very much better days—wings eaten off to a stump, legs gone and body moth eaten—and yet the trout rose to it at almost every cast, until I was "broke," and lost poor Sally. At any rate, I got quite a few trout, and this on a hot morning, with a bright sun, and the water clear and without a ripple. In July, '90, I had somewhat the same experience with bright flies on the same river, at the head of the meadow just below the Alders, where, on a hot, a very hot day, and the water as smooth as glass, my scarlet-ibis, red-backle and yellow-dollie were risen to continually, and I have found that a white-miller or a coach-is as useful, when the fish are on, throughout the day as they are at other waters morning or evening."

My advice to all anglers is to have their fly-books well filled with a choice and varied assortment. My bill for flies last season—and this was only for re-stocking—amounted to over \$50, and though I used but few I found it a great satisfaction to know that I could offer Mr. S. *fontinalis* a bill of fare out of which he could assuredly find something to suit either his greedy or fastidious palate, be it on a bright or dark day, in storm or calm, and furthermore, in such mouthfuls as he desired, for the size of the tempting lures ran from the minimum to the maximum, from a No. 12 to a 2-0 spout. Stint yourself in anything else but your tackle, and let that not only be ample but of the very best, "and don't you forget it."

After the capture of the last trout we returned to camp, Ned declining any further attempt to lure. He was satisfied I had caught the one that had broken away with our flies, and therefore his interest in the contest had entirely ceased. There are few better or more unselfish anglers than Ned, and if he would only drop his idiosyncrasies relative to flaming and bushy flies, would make an incomparable record, but as he delights in his own handiwork, as did Tubal Cain who, it is said, fashioned the first fish hook, we will leave him to his feathery idols with our best wishes in his attempted rivalry of the artistic fly-makers.

ALEX. STARBUCK.

[TO BE CONTINUED.]

#### The Channel Catfish in Texas.

WACO, Texas, April 28.—This is one of our gamiest fishes. It is in all our waters southwest of the Red River of Texas. It is equal in fighting qualities to the black bass. It is with us much superior to the bass in edible qualities. Many do not know of the characteristic difference between the channel cat and the blue catfish. The channel cat has a distinct lateral line, above which the color is light blue. The fins are nearly white. The sides are light bluish. The abdomen is of a satiny white. The head is narrow for a catfish. Mouth one-half as large as of an ordinary catfish. The eyes are not elevated above the orbital bone. The contour of the body is more delicate or slender than that of an ordinary catfish. Tail very forked. There are small black spots both above and below lateral line all along the body of an inky color, about one or two lines in width. When you capture it, it utters several croaky grunts. On skinning it there is revealed a salmon color layer of flesh on each side of spinal column, which is characteristic. It never in our waters weighs over 6 lbs.

It feeds mostly on the bottom, and will take either worms or minnows or grasshoppers. At the head of swift-running, narrow pools is the best place for its capture. It does not rise in its play above the water as does the bass. But in staying fighting qualities it is equal to the bass. It never stays in lakes or lagoons, but is found always in running water. If you will compare the fish with our blue cat the difference is at once apparent. The blue cat does not grunt or croak on capture, runs in weight up to 20 lbs., has a deeper blue color, with lateral line less distinct, the eyes are larger and are elevated above the orbit bone, head is broader and mouth twice as large and has not that delicate or feminine appearance of the channel cat. Its tail is less acutely forked. There is no golden color to the layer of flesh along the spine, and the flavor is rather rancid, somewhat similar to rancid butter.

I have never known the channel cat to take the fly, but it will often strike the spinner.

To call more attention to this much neglected because unknown fish is the object of these few lines.

J. WALTER COCK, M.D.

#### California Fly-Casting Tournament.

SAN FRANCISCO, Cal., May 4.—The Midwinter and Exposition fly-casting tournament was held to-day under very successful weather conditions on Stow Lake, in Golden Gate Park. Many spectators were present; indeed, the public interest shown was such as deserved a more numerous attendance of competitors. Col. George C. Edwards managed the affair, assisted by Messrs. W. J. Golcher and E. T. Allen. Judge Hunt was referee. The records are as follows:

Single-handed fly-casting for distance.—Hooks not larger than No. 5, single gut leader, 5 to 9 ft., rod not exceeding 11 ft.: Harry Babcock, 74 ft.; R. R. Flint, 81 ft.; H. Skinner, 75 ft.; H. Batter, 70 ft.; Geo. C. Edwards, 70 ft.; George Cumming, 74 ft. Tie: Babcock, 70 ft.; Cumming, 64 ft.

Distance and accuracy.—Rods 11 ft. and under 8 oz. Scores: Skinner, 73½; Flint, 71½; Babcock, 67½; Edwards, 64; Cummings, 45.

Distance, accuracy and delicacy.—Rods 10 ft. and not to exceed 6 oz.: A. Cumming, 68½; Edwards, 63½; Skinner, 49½; Batter, 48½.

Salmon-casting for distance.—J. S. Benn, 105 ft.; Edwards, 75 ft.; A. Cumming, 91 ft.

Line-casting for distance and accuracy.—A. D. Ayres, longest cast, 120 ft., average 65 ft.; G. W. Strell, longest cast 51 ft. 8 in., average 41 ft. 2 in.

The FOREST AND STREAM is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable.

## Fishculture and Fish Protection.

### Protection for the Mississippi River.

DUBUQUE, Ia.—*Editor Forest and Stream:* An association has lately been incorporated in this city under the name of the Mississippi Valley Game and Fish Protective Association, of which I have the honor of being president.

Knowing, as all of us do who live on the banks of the great river, the reckless, wanton and utterly useless destruction of food fishes by every cunning and murderous device, both ancient and modern, in and out of season, that goes on every day, we believe that public sentiment has at last been educated up to a point where it would favor the enactment of restrictive legislation and the due and proper enforcement of law to prevent the use of seines and other murderous devices for the capture of fish.

It has been a popular but erroneous belief that the Mississippi and Missouri rivers were under the exclusive jurisdiction of the Federal Government for all purposes, and under this impression the game and fish laws of several States appear to have been enacted. This is especially true as to Iowa, for I find that a section of the fish law reads: "Nothing herein contained shall be held to apply to fishing in the Mississippi, the Missouri or the Big Sioux rivers nor so much of the Des Moines that forms the boundary between the States of Missouri and Iowa."

This extraordinary exclusion leaves about 400 miles of the Mississippi River extending along the east coast of Iowa without any law or protection whatever, so far as the laws of Iowa are concerned, and permits outrages of every kind to be carried on with impunity; and to such an extent is seining and pound netting carried on, that the so-called professional fishermen have arrived at the same termination as the old woman who killed the goose that laid the golden eggs.

To settle the question of jurisdiction and bring the boundary rivers within the purview of the Iowa laws, this Association procured the introduction into the Iowa Legislature of two bills, one for the repeal of Section 11, above referred to, and another prohibiting the use of seines, nets, explosives, and all other devices except the hook and line in Iowa waters, boundary rivers included. These bills failed of passage.

The following correspondence explains itself, and is of such general interest to sportsmen and others that you may deem it of sufficient importance to give it the benefit of your large circulation:

#### Jurisdiction Over Inland Waters.

U. S. COMMISSION OF FISH AND FISHERIES, WASHINGTON, D. C. Feb. 16, 1894.—Hon. D. B. Henderson, House of Representatives, U. S.: Dear Colonel—I am very much obliged to you for your letter of the 14th inst. with inclosures indicating the activity of the sentiment in Iowa in favor of the protection of fisheries. My judgment is that the practical way to secure proper protective measures for the Mississippi River is by co-operative laws between the States lying along the east and west banks of the river. Up to this time no attempt to exercise control over or regulation of the fisheries of our interior waters has been made by the general Government. In the case of the Great Lakes, the States bordering on them exercise jurisdiction and enforce State laws up to the State boundary line. A year or more ago the question of joint regulation by this Government and that of Canada over contiguous and international waters came up in reference to the fisheries of the Lake of the Woods, a proposition having been made to the Canadian Government looking to the concurrent regulation of the fisheries in this body of water. The conclusion acquiesced in by the State Department was that the Lake of the Woods, so far as it lay within the boundaries of the United States was within the territorial limits of the State of Minnesota, and that it was the province of the State to regulate its fisheries. Very truly yours,

M. McDONALD, Commissioner.

I have only to add that large sums are appropriated by the States of Illinois, Wisconsin, Minnesota and Iowa for the maintenance of fish hatcheries, stocking streams, etc., within their borders. Large numbers of fry and small fishes are placed in the rivers of those States by the various fish commissioners, the large majority of which ultimately find their way into the waters of the Mississippi River, where they fall an easy prey to the professional pirate, who for every marketable fish he catches, beyond question destroys 100 small ones, and such fish so captured are not of the game variety, and not so readily salable, he leaves upon the bank to rot and pollute the air.

Twenty years ago the Mississippi River, from St. Paul to Davenport, at any rate, and I don't know how much lower down, abounded with black bass, silver bass, wall-eyed pike, sunfish, and in fact almost every variety of food fish, game and otherwise, and an angler could always count upon a royal day's sport. Now they are all but exterminated, and your angler can scarcely get a nibble, even if he have all the modern improvements in the way of tackle.

The remedy for all this is the total exclusion of all kinds of seines, nets, etc. Could this be accomplished the Mississippi would soon be restored to its former attractive condition, and would afford sufficient sport and pleasure to thousands residing on its banks to whom such boon would be a luxury and a blessing beyond compare, and go far to make pleasure resorts, and infuse new life into the towns and villages along its banks, which at the present time seem to be almost beyond hope of resuscitation. It seems to me that if these towns would turn their attention to protecting the fishes and birds, providing sportsmen and pleasure seekers with fair accommodations at reasonable prices, it would go far to restore in some measure their vanished prosperity.

ALFRED HOBBS.

#### The Defeat of the Gilbert Bill.

BOSTON, May 8.—*Editor Forest and Stream:* The Gilbert bill has again been defeated. In addition to his usual following Mr. Gilbert had a special advocate this winter in the House and in the Senate.

The Committee on Fisheries and Game has always been made up in the interest of his pet scheme in part, and in part in favor of various other interests. Never in the last four years has there been a committee ready to give an impartial and candid consideration to the arguments that have been presented every year by the representatives of the Massachusetts Fish and Game Protective Association.

In one of our dailies, Senator Atwood is reported as saying, "The Governor has listened to the alluring strains of the sirens and been led astray. He was caught by the aristocratic amateur sportsmen who set their net, and the Governor was secured in the meshes. The bill, however, will not down. The members of the Massachusetts Game Association are responsible for the Governor's veto."

The Association, I think, is not disposed to deny the soft impeachment.

Your readers may be interested to know the relative strength of the opposing interests. The bill was fought in the House with a good deal of effect, but the opponents of the bill, who were chiefly members from the western portion of the State, accepted an amendment by which the four western counties were to be exempted from the application of the bill. The adoption of this amendment practically put an end to opposition in the House.

In the Senate, the amendment offered by a member of our Association, Senator Gray of Walpole, received eleven votes in favor to eleven against, and President Butler decided it lost. When the bill came up for enactment Senator Gray

moved to strike out the enacting clause. The vote on this proposition stood eleven to sixteen. Three senators who voted against the bill last year voted against striking out the enacting clause this year. One of these is thought to have been influenced in favor of the bill by the support given the measure by our newly-appointed commissioner, Mr. Buffington of Worcester. Another represents a district in one of the counties excepted by the House amendment. Had the three members alluded to voted as they did last year the bill could not have been enacted.

Too much praise cannot be given to Governor Greenhalge for the noble stand he has taken. Our Association and all friends of game and game fish are justly proud of the triumvirate of governors of the old Commonwealth who have conspicuously served the interests of all true sportsmen in sustaining the principle of protection—Governor Robinson, who secured for us the iron-clad statute for protecting trout in 1876; Governor Russell, who in 1892 vetoed the Gilbert bill; and last, but not least, Governor Greenhalge, who has so grandly recognized the stability of the principles we advocate, and the soundness of the arguments put forward by our Association.

Permit me to ask your readers to recognize in the result of this contest the necessity for organization, and to urge upon them, if they have not done so already, to ally themselves with some sportsmen's organization.

Individual effort is good so far as it goes, but in these days, when organization and combination and pooling interests is the rule in all enterprises, whether of business, social, or moral movements, or what not, the individual should associate and ally himself with those holding the same views and purposes if he wishes to carry out his cherished aims in any direction. Let every sportsman, then, become a member of some association, if there is one in his neighborhood, if not, let him start one, even if he can not get more than a dozen members.

One of the most encouraging signs for us is the constantly increasing number of such organizations. Let the good work go on.

HENRY H. KIMBALL, Sec'y.  
Mass. Fish and Game Prot. Ass'n.

#### Minnesota Fishing Interests.

DULUTH, Minnesota.—State Game and Fish Warden W. P. Andrews, of Minneapolis, was in this city recently from a trip of inspection in the northern part of the State and said that the strictness with which the fish laws have been enforced during the past year has had salutary effects, and that in the northern part of the State where fishing had begun it is reported better than before. At the trout hatchery in St. Paul a new battery has been added and now 50,000,000 eggs can be hatched. There are about 44,000,000 now hatching. The bass hatchery at Brainerd is proving a success and the commission expects in the course of the next two years to be able to stock all the lakes in the State which have been depleted.

The Duluth hatchery is beginning to ship fry. Four million whitefish were shipped last week—1,000,000 to Iron River, 1,000,000 to Flag River, and 2,000,000 to Raspberry Bay, all on the south shore. The balance of the 10,000,000 hatch will be divided between Bayfield, Isle Royale and Willy's Island, all on Lake Superior. About 30,000,000 pike-perch spawn were brought down from Tower, Minn., by Supt. Wire's assistants.

Since the mistake of the last Legislature, which practically permits duck shooting at any season, the sentiment against spring shooting of any kind, with the exception of snipe, has grown so strong that Mr. Andrews expects it to be entirely shut off at the next session.

## The Kennel.

### FIXTURES.

#### DOG SHOWS.

May 30 to June 2.—Alameda County Sportsmen's Association, at Oakland, California.

Sept. 4 to 7.—Des Moines Kennel Club, at Des Moines, Iowa. M. Bruce, Sec'y.

Sept. 10 to 14.—Toronto Industrial Exhibition Association, at Toronto. C. A. Stone, Sec'y.

Sept. 18 to 21.—Rhode Island State Fair Association, at Cranston, R. I. W. W. Dexter, Sec'y.

#### FIELD TRIALS.

Sept. 5.—Manitoba Field Trials Club, at Morris, Man. R. J. Gallaugher, Winnipeg, Sec'y.

Nov. 5.—United States Field Trial Club, at Bicknell, Ind. P. T. Madison, Indianapolis, Ind., Sec'y.

Nov. 6.—International Field Trials, at Chatham, Ont. W. B. Wells, Sec'y.

Nov. 23.—Eastern Field Trials Club, at Newton, N. C. W. A. Coster, Saratoga, N. Y., Sec'y.

Nov. 23.—Philadelphia Kennel Club, at Newton, N. C. Dr. G. D. B. Darby, Philadelphia, Pa., Sec'y.

## LOUISVILLE DOG SHOW.

May 9 to 12. Entries 548, Dogs Benched 511.

If the Louisville Kennel Club never does another thing for dogs, it has conclusively shown that the month of May is too late to hold a dog show so far below the Mason and Dixon line. Another year the same date may be a cool one, but it is a mistake to invite exhibitors to run such a risk again. The first show held by the recently organized Louisville Kennel Club must be chronicled as a success. From the time the show opened, May 9, till a late hour Saturday night the people of Louisville showed their appreciation for a good dog. The first night an excellent representative crowd of Louisville's best society people filled the Armory building. Handsome women predominated, and dressed in their best bib and tucker the scene was a brilliant one. On Thursday night there was a thunder storm and the audience was restricted almost entirely to men, but on Friday evening the crush almost beggars description; it reminded one of the New York show on Washington's Birthday, and many who managed to squeeze in scarcely got a glimpse of the dogs. The management did not care but simply hugged themselves and Mr. Mundy wore a smile as large as himself. Mr. Mundy is the secretary, and to his untiring exertions from the time the show was first thought of until it closed, its success is due in no small measure, for he has worked hard in its behalf. He assumed too much or found that he had to, for he received little help the first two days, excepting from Messrs. D. P. Ritchey and Norvin T. Harris. The heat was very trying the first two days, and Mr. Mundy remarked that he must have lost 40 lbs. in weight, and as he only weighed about 47 anyhow, he looked on things from a serious point of view.

The local entry was a heavy one, and in many classes more than held its own with the visiting teams. A glance at the prize list will show that the quality in many breeds was excellent.

The Armory building was small for such a large number of dogs, but the benching was well arranged, though many of the smaller breeds were benched along a gallery. One ring was pitched in the center of the hall, and in this Major Taylor judged his classes. From a side door one entered a large inclosed lot, and here Mr. Mortimer did his work in the open. Mr. Williams also availing himself of the unusual opportunity. The rings, especially Mr. Mortimer's, were not

well served. There seemed to be attendants enough, but they were kept at Major Taylor's ring most of the time, and the secretary had to run after the dogs himself for the non-sporting ring. The attendants took on quite a military aspect, as most of them were men connected with the Legion and wore their undress uniforms. Mr. Geo. Hill was superintendent, and if he had been allowed to post the entries he would as usual have had everything ship-shape. Owing to the great heat the dogs were kept constantly well supplied with water, and the "slopping" over made it next to impossible in many cases to keep straw and flooring dry. There was some grumbling at first at the want of clean straw, but this was remedied, and the dogs were comfortable enough.

Austin & Graves dog biscuits were used, and under the manipulation of John D. Walker the food was well and appetizingly served. Austin & Graves had a small stand where a dog biscuit in a neat case was given to almost every visitor. The dogs, even the dainty ones, ate this food with a relish.

The catalogue was neatly and plainly printed, and considering it was a first attempt, there were few errors. The great Danes got a little mixed with the mastiffs, but that was the only serious mishap. Mr. Hill was attentive to his duties as superintendent and as obliging and courteous as ever.

Judging was completed about noon on Thursday. The officers of the club devoted much time to the show. Dr. Yandell and Mr. Davis Bryson, D. P. Ritchey, H. L. Means, M. J. O'Bryan and A. F. German were constantly on hand, while Mr. J. Clarke, Jr., busied himself with swinging the gate. There may have been a veterinarian, but we did not see him. The club will come out whole there is little doubt, and dates following Chicago will be claimed for next year. "Sanitas" was freely used as a disinfectant, but owing to the heat and low roof, it was a difficult matter to keep offensive odors down.

There was quite a gathering of field trial men, Mr. D. Bryson, J. L. Adams, N. T. Harris, Dr. Alexander, J. Taylor Williams, D. E. Rose, who should have had the Blue Ridge Kennels dogs, but they were absent; P. T. Madison, "Dick" Merrill, J. B. Castleman, etc. Among other well-known exhibitors were Mrs. Lee and Mrs. Meacham, James Robinson, E. B. Elliott, Ben Lewis, Geo. Thomas, Al. G. Eberhart, Arthur Trickett, John Stokes, etc. Mr. Geo. Bell should have judged great Danes and spaniels, but the action taken by the A. K. C. last week of course prevented him. Mr. Smith, disappointed in not winning, rushed his great Danes from the show in spite of the management, and will be disciplined and forfeit his third prize. There were several disgruntled local exhibitors who forcibly stated their views and opinions of the judges, but this must be expected from those who know no better. One man kicked like a native mule because the judge did not attach sufficient importance in his opinion to the fineness of his smooth fox-terrier's coat; and things looked pretty rough for a time.

**Mastiffs.**

James Mortimer, Judge.

When it is almost impossible to get a decent entry in the Northern shows it did not seem likely that here we should find anything better. When it is known that Tiger, that black faced characterless mastiff that was at Chicago was the principal winner here, the quality of the others may be imagined. Ethel was absent. In open dogs Tiger won, he has few redeeming features, but showed more type than the other two of which Tiger, second, is a light boned leggy specimen with ears thrown back and flat feet. Duke, third, has a long flat face, fair sort of body but little bone to support it. A snipy weak-faced one in Jewel was given third in open bitches; she was the only entry. The Louisville Tiger won in novices over a brindle, light all through. In fact there was nothing worth criticising.

**St. Bernards.**

James Mortimer, Judge.

The classes while not very strong contained here and there some animals of exceptional merit. For instance, Sir Bedivere appeared once more in the challenge class and really looked better than ever this season, in spite of the extreme heat which seemed to tell upon his more excitable kennel mate Rustic Beauty. Aristocrat was wise and stayed at home. In bitches, with Sunray absent, Rustic Beauty had no competitor; she has fallen off just a little in coat and flesh, the former is shedding freely. Open dogs (5) proved a good thing for the typical Grandmaster, who was shown in summer condition and looked well. Fernwood Arden, second, has not a true expression, a blaze would improve his head, stands on good legs but his owner should know that it does not enhance A. St. Bernard's appearance to part its coat carefully down the back. Carlo, third, is a short bodied orange

H. L. KREUDER'S BEAGLE LONELY.

brindle dog, weak in muzzle, faulty ears but plenty of coat. Chauncey M., reserve, boasts a fair body and good bone and legs, but head shows little quality or type. Grover Cleveland, vhc., while standing on fine legs, is a little light in bone, should be deeper in muzzle and coat is rather wooly. Lee, hc., is a tall yellow red dog with no white and less character, looked tucked up and flatribbed. The catalogue was a little mixed here owing to the wrong placing of the heading. Warda took first in a class of seven; Keystone Beauty and Florette were absent. Outside of the winners, they were a poor lot. Uarda was a trifle thin, but excelled the others completely in character. Chesterford Lady, second, is shedding her coat, has a fair shaped head if deeper and good body and legs, loses to winner principally in head properties; Nelly G. is curly, flat and narrow in face, so cannot be a good one. The others really do not merit comment; light, snipy heads predominated.

Scottish Leader was absent in challenge smooths. Open dogs saw some better quality, as the smooths generally show us wherever we go. The typical little dog Lawrence Garza won again over the Arkansas traveler, Argyle Alpha, who loses to the winner in head and body. Lord Keeper, third, is an average dog whose otherwise fair head a blaze would improve; excellent front and fair body; muzzle should be deeper. In open bitches a pretty competition was brought out by the meeting of Sunol and Lady Judith, their fair "controllers" showing their points off to the best advantage in the bright sunlight. Sunol won, being better in condition, coat and action but losing in stop and slightly in squareness of muzzle and volume of skull. Judelle, third, an ordinary

sort, standing on weak pasterns, was not in the ring at the time but was brought in afterward and given third. The novice class (5) provoked the keenest competition so far. A nice smooth in Cathedral, from Mrs. Lee's kennel, that would not show itself, scored over Empire State, better type of head, deeper and better body and shows more character. Empire State is well known; an active dog whom more white would improve. Lord Keeper was third and Lord Richmond vhc.; his head is long and narrow and stop should be better defined. In puppies Nicode, a big, lumbering pup by Altoneer out of Judith, bids fair to make up into a noticeable dog if his ears were not so bloodhoundy; he is all in embryo yet. Grover Cleveland was second. The Swiss Mountain Kennels had Eboracum and others entered but dreaded trusting the dogs by express in the prevailing heat. Argyle Kennels won most of the specials, of which cases of whisky formed no inconsiderable share.

**Great Danes.**

James Mortimer, Judge.

With the exception of the challenge winner, Stanley, the whole lot were not worth their collars and chains from a standard point of view. In open dogs (5) a bright red and St. Bernard-marked dog, white blaze and collar, won; it has a weak, snipy head and little character, a stop over one inch deep, and light, shelly body; the white alone should throw him out. A fat harlequin was considered next best but

SOUTH BEND KENNELS' GREAT DANE MAJOR MCKINLEY.  
First, Challenge Class, New York Show, 1894.

showed more quality and proper shape than the others, but is wide as a church in front. The rest were a coarse-headed, butcher-looking, down-eared lot which Mr. Bell should feel pleased he had not to judge after all. Lady was the only bitch; shown fat, has a fairly typical head, but weak in muzzle for her strong skull. Novice prizes were withheld, and so were those for the puppies, from a very "tacky" lot.

**Newfoundlands.**

James Mortimer, Judge.

These were of course poorly represented, the usual number of black nondescripts coming forward. None of them had much pretension to type. The winner, Ringer, was the best. If there was one; he is small, snipy-headed, fair coat and body. Nell and Ponto were second and third.

**Russian Wolfhounds.**

Roger D. Williams, Judge.

Almost the same faces again, and no dog show committee need grumble this season at the support these classes have received from the big kennels. Poor Leekhoi tried to face his old conqueror once more, but the heat proved too much for this grand dog, who, in the minds of many, filled the eye with what they believe is the true type of these hounds. That he was an aristocrat and a handsome fellow, there is no gainsaying, and the fancy will sympathize with his owner in this severe loss. Argoss, looking lusty, had no competition, as Col. Dietz was absent, and Vinga's absence also let Zerry in for another walkover. Open dogs proved more exciting, and the black young dog Odrooskie succeeded in beating the new dog Optimist from the same kennels, which he does in forelegs and feet, and hind parts. When in condition Optimist will give a better account of himself, as he is a well put up wolfhound of the Leekhoi type. Sorvanets, still cloddy-looking, came third. A surprise awaited us when Olivia once more downed the cracks. She certainly showed better in front, but there is no denying her crookedness; behind this she is a good one. Riga and Irma followed in order, with Zmeika, faulty behind, reserve, and Krimeana, vhc., faulty in front, but showing lots of quality. The two types were plainly shown in this class. In puppies, Lady Dietz, narrow as she is herself, has more substance than Suddarka, for whom treatment for worms would appear to be needful. Mr. Hanks was crippled by the death of Leekhoi, and the team prize fell easily to the Marlborough Kennels.

**Deerhounds.**

Roger D. Williams, Judge.

Only two, and these not such as would interest a good judge more than passingly. Hillside Rinaldo beats her competitor Claymore in coat, rib, better knuckled feet and a body of better symmetry and proportion, Claymore's being long cast.

**Greyhounds.**

Roger D. Williams, Judge.

These classes were much better, some of the old champions showing up, such as Gem of the Season and Wild Rose the challengers; neither are looking so well as I have seen them. Open dogs had ten entries, seven of which were absent, Cheeky Charlie among them. First went to Rome Marble, a splendidly formed dog behind the shoulders, which are a little bossy and placed scarcely oblique enough, feet could be improved, a little pinched before the eye, but has a good head. This dog won a 10-dog stake at Brentwood Park, St. Louis, last week. Jack of Clubs has not the quality of the winner, although a well put up animal whom a little more rib would improve. Prince Delmar is no doubt some one's pet, but is plain and faulty in front and ribs. In bitches in the absence of Little Climber and Mine-ha-ha, competition dwindled down to two entries, of which Maud Marion, gon of a little in front, but in splendid condition, and who from shoulders back is very hard to beat, easily defeated Beauty, who was simply "out of sight" but whose merits the judge felt compelled to recognize. Little Climber was the only entry for the coursing record prize, but failed to appear.

**American Foxhounds.**

Major J. M. Taylor, Judge.

There was some little disappointment at the comparatively few entries in this section, as one had been led to believe

over a hundred hounds would be put down. The exhibit, however, if not large, was choice, with few exceptions, and showed that the exhibitions already held at Lexington have done some good as "weeders." The hunt for prizes opened with Commodore striking a challenge gait alone. A scratch pack of six couple was rounded up in the open, two of which, Dickens and Gallant, were lagbards and did not follow. After a long run, in which the judge came very close to the ground several times, Argonaut was found to be in the lead, and picking up the trail of a blue ribbon was never headed. Miller II. and Roxie are two hounds the antithesis to the winner, who is a smart, well put up hound with just enough bone and a typical head, whereas the others are very large, gaunt, characterless headed hounds, neither one thing or the other, and not well made in body or legs and almost as heavy boned as English hounds, long in the back and altogether of different type. Judges should be more consistent if any progress is to be made in sortness and uniformity of type. Lee, reserve, a very nice headed hound with good bone, but a little leggy and scarcely so well ribbed up as the winner, should have been second, while Deacon, another of the same stamp, should have been third, and Ramsey, vhc., reserve; he is a little plainer in head, especially muzzle, and not quite so good in front; but here would have been four hounds of the same type, sorry, and approaching the standard just evolved. Clipper, hc., is too long cast and not ribbed up enough; he is of the style so generally met with in American hounds, and which the new standard seeks to improve; no doubt a good hunter, but a "scratch" dog nevertheless. King Lee has a long, weak head. Hindoo is the best-headed one in this pack, the Iroquois; he might have taken Clipper's letters. Four couple turned out in bitches, and the Boston winner, Bowsprit, finished in the lead; second to Swift, another of the Miller-Roxie type; then the Major harked back to the Williams type, and to Flossie, a sweet, hound-headed bitch, a little down in stern, but well-made all round. Joya, reserve, I liked almost better, barring head, for her body is of a truer hound shape, with excellent legs and feet, and good straight back and loin. Fanchon vhc., is light in muzzle, but other parts good. Lillian Russell, hc., is a very promising little bitch, nicely made, and of better type than others in Mr. Means's pack; ears are thrown too wide and flat from the head; they should fold to the cheek. In novices Miller and Roxie were winners, with Clipper third. Swift carried off the honors in the corresponding bitch class, with Fanchon and Lillian Russell in order named. Taking type, I liked Fanchon, Lillian Russell and Cora, and then Swift. Mr. Roger Williams has certainly the most sorry pack of American foxhounds I have yet come across. They show quality, are clean run, and there is really little to choose between any of them. I wish they could be often seen on the bench. Individually, I know of one or two better specimens, such as Rock, but take them as a pack they are hard to beat. If Mr. Williams has done this why cannot other foxhound breeders do the same, and in five years from now we could hold our own anywhere on bench or field. They took the pack prize.

**Chesapeake Bay Dogs.**

Major J. M. Taylor, Judge.

The two entries, Cleveland and Rough, are too well known to need comment.

**Pointers.**

Major J. M. Taylor, Judge.

A rather mixed lot. In challenge dogs Duke of Kent II. won, but in view of the way he stood out at elbows and his crooked front he should have given way to Ridgeview Tenny; Ben Lewis had them both in excellent trim. Tribulation was absent. In open hoavy dogs (7) Stanley, the winner, should be better bent in hocks, head well shaped, but trifle heavy and expression might be pleasanter, a well ribbed, stylish dog, with good back and loin, fairly good in front. Gamester came second, loses in quarters to the other, shows plenty of quality. Franklin's (third) field qualities are better than his bench merits, his head is nearly flat, scarcely any stop, but otherwise he is fairly well built, coarse stern. Ightfield Upton is leggy and flat-ribbed and broad in skull. Glen Wildwood, vhc., has a wide, round skull and is cheeky, good muzzle, plain long body, which would do with more rib. Don Ritchey, who beat Strideaway in the field last fall, is faulty in front, should be deeper ribbed, deeper in chest and muzzle, is a bit leggy, otherwise he is a nice smart looking pointer. In the bitch class four came up and a Louis-

"ADMIRING HIS BULL PUPS."

ville entry, Mag, took the ribbon, her muzzle is plain, but she has a nice head on the whole, one foot and pastern turn out. Emblem, described before, came next, more stop would improve her, nice body well ribbed. Telie Kent was fat, is a bit wide in skull and carriage of ears, but has a good body well ribbed up. Light-weight dogs had nine in the class, two being absent. The well known field dog Lad of Rush won, but is beaten in head and expression by Twinkler, second, who is also better in legs and body. Kent's Prian has a short, coarse head and neck. Ridgeview Cavalier, reserve, I did not see. Chance, hc., is faulty in front among other things, flat head and with little character.

This seems to be always the way when field dogs try for bench show honors. While their owners affect to despise bench shows they enter into the competition with zest when occasion offers. There is no reason why good-looking, typical dogs should not be good field dogs but somehow very few of the noted field dogs are good bench dogs, and the placing of such ahead in the prize list because they are good in the field is an anomaly that should not be fostered. This more particularly applies to the English setters at this show. A more weedy, snipy, slab-sided lot than many of these fielders, and especially young stock, I never saw; still they are from working stock, and as such must be respected, I suppose, irrespective of any standard there may be for the breed. At a bench show the standard should be the criterion, not field merit or promise.

In bitches (8) Ightfield Blithe won; she shows quality if expression were better, has a good head, stands on good running gear and body is well furnished; a good bitch. Fanny

Kirk I could not find. Fan Fan II. is an old face. Tula, reserve, loses in head and front to a good one. Trickett's Nell seemed heavy in whelp, ears broad and out, nice front. The puppies were not very promising, weak muzzles and faulty fronts being noticeable, excepting the winner, Gilt Edge II., who has a fair head and is promising.

Duke of Kent II. won the field trial class ribbon with Lad of Rush next, Ighfield Blithe third, who can beat Lad, and Don Ritchey reserve. C. G. Stoddard took the kennel prize.

#### English Setters.

Major J. M. Taylor, Judge.

The exhibit here was essentially a field trial gathering for bench honors, and plainly demonstrated the fact that the standard for English setters is being completely lost sight of in the race for nose and pace for field trials and field work. Typical-headed dogs were few and far between, and dogs were prized and commended that had no more type than a broom handle and with just about the same substance. If more care is not exercised we shall have the majority of English setters of so many types, sizes and assortments of weediness as the American foxhounds that have been allowed to run to nose and speed. Monk of Furness, a little lighter in flesh than at Boston, won in challenge dogs. In the open class for dogs seventeen came forward, and a really good dog in any company, Paul Bo, rightly won; he is one of the few exceptions that have made a reputation in both spheres. Jack Berwin, second, is a nicely made dog that should have a deeper muzzle. Noble Lit, third, well shown, has a fairly good head, is a little drooping in stern, body well ribbed. Paul Hill, from the same kennels, shows his breeding, but is a bit straight-faced. Roddies, vhc., is faulty in front, flat feet, not in shape and decidedly lucky. Chesterford Surprise has a rather well-shaped head; at any rate he has some type about him. Jim Lay is fat and leggy. Livingston, is not quite straight in forelegs, ribs should be more sprung. Dan Roderigo, also he, has little shape or character of head, but probably got his card for running gear. Several well known bitches were found well up with the ribbons in the bitch open class. Belle of Riverview proved the winner; her muzzle should be squarer, otherwise she is a nicely made little bitch. Flight of Riverview is well known. Then came Toledo Queen, third, who could to advantage be better ribbed up, is back on pasterns and head should have a deeper stop. Daisy of Riverview, reserve, is a nice little bitch all round, in whom no prominent fault could be found. Bessie Hill of Riverview, vhc., is rather plain in head and feet are not true. Fire Fly is houndly headed. Mary W., vhc., has a rather nice head, more typical than any other in this kennel. Lizzie B. is fat and a bit plain headed. Cincinnati's Pride is a promising pup with good type of head. Bay B. is another nice headed one if a little squarer in muzzle, good body and legs. The rest were poor and did not deserve their cards. In the field trial class Paul Bo rightly won with Fingal second, and Glean's Pink third—anything but a "fancy" dog. J. Taylor Williams got the kennel prize with a nice even lot.

#### Irish Setters.

Major J. M. Taylor, Judge.

Pride of Patsey and Finglas were placed as named. This is Finglas' first challenge appearance I believe. The other beats him in type of head, Finglas's being too heavy for an Irish setter and he is none too good behind. Laura B. had no difficulty in scoring over Bessie Femore, losing in head and front; Laura never looked better in late years. In open dogs (9) Young Tim rightly won, followed by Kildare Duquesne who should be better ribbed and finer in skull. Red Chief, third, is a big, heavy-headed dog, good color. Satan, reserve, has a rather coarse head and is white chested. Ship, vhc., is another plain headed one, but has good legs and that goes all the time. In bitches (5) first went to Ruby Glenmore II., whose condition should have acted against her. Delphine came second, repeatedly described. Jennie, third, is a nice headed one, though a little lumpy in skull, good body, legs and color and might have beaten Delphine. Queen Madge deserved her cards. In puppies Kildare Neville proved the most promising. Finglas took the field trial class specials and Seminole Kennels the kennel prize.

#### Gordon Setters.

Major J. M. Taylor, Judge.

After the little Boston flurry we are down to the old style again, for Leo B. and Duchess of Waverly farmed the prizes. In open dogs (2) Homer S., in spite of an indifferent head beats Highland Kent and better in body and bone and front. Bitches had a larger entry (4), and Thelma won, nice tan markings, fairly well ribbed and shows lots of quality. Belle of Waverly is beaten in head and condition. Belle of Waverly, h.c., hocks turn in, and is short of coat; nice head and markings, might be truer in front. One puppy was shown, Reginald's Girl, but I could not find it. Dr. Dixon took the kennel prize.

#### Spaniels.

James Mortimer, Judge.

These classes were assigned to Mr. Bell, but in his absence Mr. Mortimer passed judgment upon them. The entries were not large but the quality was excellent. Most of those shown have been commented upon recently. Irish water spaniels had two entries, Kitty of Cork and Trouble, and Kitty in better coat had no difficulty in winning. Field spaniel challenge dogs had one entry, the well known Newton Abbott Torso. The specialty show sensation Staley Baron, was the only open class representative, and seemed to have put on flesh since last week. In cocker challenge dogs, Jay Kay was absent and thus left Middy a bloodless victory and Miss Wagglies experienced the same easy win in her class; I say not putting in an appearance. With one exception the open black dogs are well known, King Raven, Jr. and The Fashion were divided by the much abused Donovan. The Fashion is small but more typical than Donovan, who is coarse headed. Raidy, h.c., loses in front and muzzle and length of body. King Cole and Wildfire were absent. In bitches (3), Kathleen beat Phonise II. in bone, head and cobbiness, is also straighter and flatter in coat. Miss Chloe and Fashion did not turn up. Cherry Punch, although coarse in head, won from Hamilton Beauty, being shorter in body, better bone and truer in front. Beauty's feet turning out; her frail muzzle spoils an otherwise good head and expression. Red Justice was absent. The Swiss Mountain Kennels won all the specials, and their dogs were well shown, especially considering the extensive traveling they have done this season. They have now earned a merited rest.

#### Collies.

James Mortimer, Judge.

These classes were fairly well filled, and there was some quality. Our old friend, Charleroi II., came on from St. Louis and took the challenge prize on a walkover. He was looking fairly well, but has grown wide and coarse in front and head. In open dogs it was keen work between Chesterfield Hero and Toronto Wonder; the little dog was shedding, but beats Wonder in head and front, but Wonder was in better coat and is stronger in hindparts. Robbin, third, is a light, weedy little thing, with a nice long head, heavy ears, good straight coat, dense and long. Pete is coarse-headed. There was plenty of quality in bitches. The two winners, Glen and Flora May, were at the Specialty show. Glen beats in head, carriage of ears, style and action. Sparkle, third, was out of coat, fair head. Duchess of Fife, reserve, has gone coarse, and Maud Marion might have come in there; Maud heavy in ear, short-headed and with little coat, won he. Topsy C. is a plain-headed one, and has not the quality of former entries from this kennel. Robbin and Pete divided

novice dog honors, and in bitches Glen and Flora May and Chesterford Lilly, the well-known white-bodied bitch, took the corresponding ribbons in the bitch class. Woodlawn Belle scored easily over Maud in head, ears and coat in the puppy class, with Pete vhc. Woodlawn Park Kennels took the specials.

#### Poodles.

James Mortimer, Judge.

Quite a big entry for a show like this and some good ones were on hand. Milo and Miss Chloe did not turn up for the challenge prizes. In open class cards, Black Jack, in spite of his long body, was in so much better shape than Bismarck, that he deserved his first. Bismarck was looking brown and matted in cords, but is truer formed than the other. Curlies had an entry of seven with two absentees. Sidi, Snowball and Girofa were the money winners for their new owner, who starts well. The winner is not in such good curl as I have seen him. I preferred Girofa for second, stronger in loin and better in front and hind action than Snowball. Ithel, reserve, is a smart, long headed one. Queen Zip, vhc., was at Chicago and Stella, h.c., is a little slack in back. Monghlow has not the head quality of the others, being coarse, and light eyed, good curl and bone.

#### Bulldogs.

James Mortimer, Judge.

Walhampton again beat Romance in challenge dogs and the Graven Image was the only one in the corresponding class. Found it had little difficulty in scoring over Rustic Sovereign, who is plain headed and loses so much at shoulder to the other. Rustic King II. was absent. The puppy Juno had matters to herself in the bitch class and had a similar victory in puppy bitches. Found it took the special for best easily enough, and Woodlawn Park Kennels the kennel prize.

#### Bull-Terriers.

James Mortimer, Judge.

Like all shows in new countries, these classes were a little mixed and the colored dogs were in evidence. Champion Crisp, fairly well shown, and Attraction, who never looked better, won in their respective challenge classes without effort. Open dogs had eight entries, with one absentee. Principio, in much better shape than at Chicago, scored pretty easily from Top Sparkle, who loses in front and cleanliness of head to the older dog. Prince Gully, getting cheeky and a bit wide in front, came in for third, while Jim Corbett, with a dash of tan on ear and side of head, was given vhc.; his head is short and thick. The others were of the business order. Jeanne D'Arc and Lansdowne Thelma, two well-known bitches, scooped up the money in this class; neither one very good, and Thelma looked a bit thin and leggy; Jeanne beats her in body and forelegs. Miladi, third, should be closer in toes, muzzle plain, body well formed. She afterward won in puppies, followed by a nice-fronted one in Wild Rose.

The Boston terriers did not show up.

#### Dachshunds.

James Mortimer, Judge.

The challenge winner, Fritz K., is getting coarse in head. In open dogs two black and tans, Moritz and Max, came forward and were placed as named; neither are up to date and are more on the terrier order; the winner is out at elbow and short-bodied. Max is light in chest, not let down enough, and is too broad in skull and of the short-eared type. Maus, first in bitches, was alone; her muzzle is weak and skull too broad; fair length, but not enough crook nor depth of chest.

#### Beagles.

Major J. M. Taylor, Judge.

Several well known winners took the long trip from the North and profited by it at the expense of comfort. Forest Hunter won in challenge dogs, Adam being absent. In bitches, Twintwo, looking heavy in whelp, scored, alone. Nippo II., a local dog, proved the winner in open dogs (3) but I thought Bowman more entitled to the position, though a bit wide in front and "toed" in; the other is no better in front, being faulty in other points, while Bowman scores in expression, shape of head and body and carriage and true type. Grover, third, has a poor front and is a sort of mouse-color with light tan marks. In bitches the Boston winner Molly L. won again, followed by Vic R., well known. Fanny, third, is plain in head and long cast, fair front. The others had little true type. In novice Ring and Dolly Varden were the winners as named; neither are typical; Dolly's head is the best but she loses in front to the other and in body. Vic R. won in the field class, nothing being against him. Forest Beagle Kennels took the kennel prize.

#### Fox-Terriers.

James Mortimer, Judge.

There were some good ones on hand and others that were far from correct. In challenge class Grouse II. won again. Open dogs (4) saw a rather mixed lot, but the winners are well known. Arrondale Mixture scored well in head from Lansdowne Triton, with the well-known Poverino third, second was beaten in head, coat and rib. The winner looked in fine shape. Reserve went to Boaster, rather coarse in skull and too domy. Hillside Royal has a rather nice head, ears too high, light bone, fair front. Van K. Parr is coarse in head. Smartly, Forest, c., is domy in skull. In bitches a very smart, nicely made one, in Chicago was placed over eighteen others, Lansdowne Trin, came next, big in ear, fairly in feet, weak face, nice body. Ripon Regina, third, was rather lucky, as she is coarse in skull and has too much stop. Bonaly Belle has a rather coarse and short head, good ears and body and coat. I forgot to mention that Richmond Jessamine, well known, was reserve, and might well have scored over Regina, nice long head, but skin condition probably put her back. Lansdowne Dimity, vhc., we have heard of before, a most terrier-like bitch. Swan Parr is cheeky, ears carried wide and is a little out at elbow, otherwise she is good. In novices (15) a rather motley crowd came into the ring, short, thick heads predominating. First went to Raby Nettle, a smart sort, head could be a bit longer to advantage and more coat would improve her. Ripon Regina, second, and Kate Parr third. Raby Jim, vhc., too much stop, faulty in front, a little more rib wanting, and fine in coat. In puppies (11) Driftwood Rambler was lucky, as his front is very poor, out at elbows and bowed, and ribs are flat. Maple Leaf, second, has a nice ear, good bone and front, but is not clean enough in neck and top. Green's Trimmer is a terrier all over; beats the winner in front, character and has a longer and better shaped head. Green's Pearl gets her feet out a bit, ears rather large, nicely formed in other points. Flip Parr is too prominent in brow yet, but has length enough to improve.

In wire dogs Undercliffe Coronet, a little coarse, won over Hillhurst Piper. The winner's hocks turn in, good coat, ears well carried and plenty of bone. Piper is weak in muzzle, but has a longer, narrower, cleaner skull than winner. Jess Frost won in bitches with Hillhurst Rose, second, head should be longer and stronger in muzzle; other parts good. My Own, third, is coarse-headed, but good in forelegs and coat. Dixie, Jr., is a pretty little thing, but weedy. Leinster Kennels took the kennel prize.

#### Irish Terriers.

James Mortimer, Judge.

Jack Briggs had a walkover in Jackanapes's absence for challenge honors. Brick Bat, Jr., won easily over Bruce, who is coarse in head and his front is not above suspicion—a little bowed. In bitches (2) Judy won; she is out of coat now. Chancery Lass, second, is better in front, but is not

clean enough in head, too much hair on skull and sharp in muzzle, also has a cloddy sort of body.

#### Scotch Terriers.

James Mortimer, Judge.

The winners are all well-known. Scotch Hot beats The Colored Preacher in head and front. Merry Call was the only bitch shown and won.

In Sir Thomas's absence the Skye terriers were poor and the prizes were withheld from the four local entries in open class.

#### Yorkshire Terriers.

James Mortimer, Judge.

Not a good one among them, all being too light and smutty in tan, and light in body color, with heads as big as black and tans nearly.

#### Black and Tan Terriers.

James Mortimer, Judge.

Rochelle Oolah was fortunate in finding Sultan and Prince Regent on the absent list; he now scores at a 500 dog show for the champion title. Gypsy Girl, as usual in the pink of condition, was also alone in her class. In open dogs Chesterford Victor was the only entry; his good front and body and fairly good markings entitled him to his blue ribbon; he gets his tail up and is slightly breeched, and has a little too much stop. Chesterford Park Kennels took the kennel prize.

#### Pugs.

James Mortimer, Judge.

An excellent entry, but quality, on the whole, was not very good. Bob Joy scored nicely over Drummer for the challenge prize. In open dogs (3) the well known Al Von beat Patsy Boliver, who has the best head but does not carry his ears so well and is dark-faced. Ivy, third, has also been out before; he has the best front of the lot.

In bitches (6) first went to the well known Philadelphia winner Pansy G., over Miss Decima, between whom there is little to choose. Pansy beats Decima in skull, carriage of ears, better front and toenails and condition. Queen Zitka is making up into a nice little sort. Hooker, reserve, was at Chicago, and so was Lady Verne, longer in muzzle than she should be. In novice dogs Young Penrice beats Leo in head and body and curl. La Belle Sonora, good nails and trace, won in novice bitches (4). Hooker second and Satine II. vhc. She carries her ears back, is light in eye but fairish in head; light body. Jersey is h.c.; her ears almost prick. Puppy prizes in dogs were withheld and in bitches Zola P. won, too narrow and long in face. Mildred, second, has big ears and a long muzzle.

#### King Charles Spaniels.

James Mortimer, Judge.

Only two rather nice specimens were shown; first to Dominion Prince and second to Rose, both from the same kennels in Canada.

#### Italian Greyhounds.

James Mortimer, Judge.

A nice lot. Sprite was the challenge winner. In dogs, Adonis a fair headed one, took first over Tip Top; good long head, ears fairly, but an active, smart little thing, that seemed to be at home wherever he went. Taglioni, third; has been seen before. Snowball is a white one. In bitches a nice little one in Dainty Lass scored over Dolly and Nellie; faulty in ear, carriage and skull. Perfection was the only whippet and was awarded the blue.

#### Miscellaneous.

James Mortimer, Judge.

In dogs (4) first went to a fluffy, small Pomeranian, and second to another one, Barneth, with a better and longer head. Devr (the Welshman) claimed third; traveling seems to agree with him. In bitches (2) a Chihuahua and small Mexican hairless took the money in the order named and this ended the judging at Louisville's first bench show under A. K. C. rules.

#### LIST OF AWARDS.

MASTIFFS.—OPEN.—Dogs: 1st, Eberhart & Heywood's Tiger; 2d, Wesley Williams's Tiger; 3d, S. M. Lemont's Duke. Bitches: 1st, D. White's Jewel.—NOVICE.—1st, Wesley Williams's Tiger; 2d, Bessie G. Griffith's Alfred V. Oldham.

ST. BERNARDS.—ROUGH—CHALLENGE.—Dogs: 1st, C. A. Pratt's Sir Bedivere. Bitches: 1st, C. A. Pratt's Rustic Beauty.—OPEN.—Dogs: 1st, Alta Kennels' Grand Master; 2d, J. G. Reess's Fernwood Arden; 3d, Mrs. John L. Deppen's Carlo. Reserve, J. W. Fry's Chaucer II. Very high com., Mrs. J. M. Vaughan's Grover Cleveland. High com., T. M. Averitt's General Lee. Com., F. G. Holtheide's Romey. Bitches: 1st, C. A. Pratt's Warda; 2d, Chesterford Park Kennels' Chesterford Lady; 3d, P. Glenn's Nellie G. Reserve, Mrs. J. G. Reess's Lady Theano. Very high com., J. E. IRISH SETTERS.—CHALLENGE.—Dogs: 1st, Seminole Kennels' Pride of Patay. Reserve, W. L. Washington's Finglas. Bitches: 1st, Seminole Kennels' Laura B. Reserve, W. H. Eakin's Bessie Fenmore.—OPEN.—Dogs: 1st, Seminole Kennels' Young Tim; 2d, W. L. Washington's Kildare Duquesne; 3d, R. P. Thompson's Red Chief. Reserve and very high com., J. Clark, Jr.'s Satan and Ship. Com., J. McNab's Roy. Bitches: 1st, W. L. Washington's Ruby Glenmore II.; 2d and very high com., Seminole Kennels' Delphine and Queen Mado; 3d, Chesterford Park Kennels' Jennie. High com., J. Hart's Music. Puppies: 1st, W. L. Washington's Kildare Neville; 2d, D. E. Pierson's Daphragh Bragh.—FIELD TRIAL CLASS (for dogs and bitches that have been placed at any recognized public field trial).—1st, W. L. Washington's Finglas.

GORDON SETTERS.—CHALLENGE.—Dogs: 1st, Dr. S. G. Dixon's Leo B. Bitches: 1st, Dr. S. G. Dixon's Duchess of Waverly.—OPEN.—Dogs: 1st, W. O. Lindley's Honer S.; 2d, Highland Kennels' Highland Kent. Bitches: 1st, R. B. Parks's Thelma; 2d and high com., Dr. S. G. Dixon's Maid of Waverly and Bell of Waverly. Puppies: 1st, Highland Kennels' Reginald's Girl.

IRISH WYVER SPANIELS.—1st, B. F. Lewis's Kitty of Cork; 2d, Mrs. E. G. Flak's Trouble.

FIELD SPANIELS.—CHALLENGE.—Dogs: 1st, H. L. Jones's Newton Abbot. Torso.—OPEN.—BLACK.—Dogs: 1st, Toon & Thomas's Staley Barrow.

COCKER SPANIELS.—CHALLENGE.—25LBS. AND UNDER.—Dogs: 1st, Swiss Mountain Kennels' Middy. Bitches: 1st, Swiss Mountain Kennels' Miss Waggles.—OPEN.—Dogs: 1st and 3d, Swiss Mountain Kennels' King Raven, Jr. and The Fashion; 2d, W. C. Payne's Donovan. High com., Mrs. J. C. Davis's Raidy. Bitches: 1st, Swiss Mountain Kennels' Kathleen; 2d, W. T. Payne's Phonsie II.—ANY OTHER COLOR.—1st and 3d, Swiss Mountain Kennels' Cherry Punch and Hamilton Beauty.

COOLIES.—CHALLENGE.—Dogs: 1st, J. A. Long's Charlierio II.—OPEN.—Dogs: 1st, Chesterford Park Kennels' Chesterford Hero; 2d, F. S. Anderson's Toronto Wonder; 3d, R. E. Roberts's Robin. High com., T. H. Sherry's Peter. Bitches: 1st, Chesterford Park Kennels' Glen, Flora May and Duchess of Bife; 3d and very high com., Chesterford Park Kennels' Sparkle and Maud Marion. High com., E. Huidekoper's Maud and Topsy.—NOVICE.—Dogs: 1st, E. H. Roberts's Robin; 2d, T. H. Sherry's Pete. Bitches: 1st and 2d, Woodlawn Park Kennels' Glen and Flora May; 3d, Chesterford Park Kennels' Chesterford Lily. High com., and com., E. Huidekoper's Maud and Topsy. Puppies: 1st, Woodlawn Park Kennels' Woodlawn Belle; 2d, E. Huidekoper's Maud. Very high com., T. H. Sherry's Pete.

POODLES.—CORDED.—1st, Mrs. R. J. Carter's Black Jack; 2d, Dr. Duer's Bismarck.—CURLY.—1st, 2d and 3d, Jallapa Kennels' Sid, Snowball and Girdola. Reserve and high com., J. E. Ellison's Tied and Stella. Very high com., and com., Eberhart Pug Kennels' Queen Zip and Moughlow.

BULLDOGS.—CHALLENGE.—Dogs: 1st, Woodlawn Park Kennels' Wainhampton. Reserve, Toon & Thomas's Romance. Bitches: 1st, Woodlawn Park Kennels' Graven Image.—OPEN.—Dogs: 1st, Miss Byrne's Found It; 2d, Woodlawn Park Kennels' Rustic Sovereign. Bitches: 1st, Woodlawn Park Kennels' Juno.—PUPPIES.—Bitches: 1st, Woodlawn Park Kennels' Juno.

BULL TERRIERS.—CHALLENGE.—Dogs: 1st, Luzboro Kennels' Champion Crisp.—Bitches: 1st, F. F. Dole's—OPEN.—Dogs: 1st, Wentworth Kennels' Principio; 2d, F. F. Dole's Top Sparky; 3d, Toon & Thomas's Prince Gully. Very high com., N. T. Harris's Jim Corbett.—Bitches: 1st, F. F. Dole's Jeanne D'Arc; 2d, Lansdowne Kennels' Lansdowne Thelma; 3d, J. M. McCormick's Miladi. High com., E. W. Linderman's Grace.—PUPPIES: 1st, J. M. McCormick's—FIELD TRIAL CLASS.—Dogs: 1st, Toon & Thomas's placed at any recognized public field trial; 1st, Forest Beagle Kennels' Vic R.

FOX TERRIERS.—CHALLENGE.—Bitches: 1st, C. S. Hanks's Grouse II.—OPEN.—Dogs: 1st, H. Le Roy Jones's Arradale Mixture; 2d and 3d, Lansdowne Kennels' Lansdowne Triton and Lansdowne Poverina. Reserve, W. S. Applegate's Boaster. Very high com., J. F. Bell's Hillside Royal. High com., E. Parr & Son's Van K. Parr. Com., N. T. Harris's Hurstbourne Boy. Bitches: 1st, Leinster Kennels' Chicago; 2d, Lansdowne Kennels' Lansdowne Trim; 3d, Woodlawn Park Kennels' Ripon Regina. Reserve, Mr. Walker's Richmond Jessamine. Very high com., Lansdowne Kennels' Lansdowne Dainty and Hamon Fox-Terrier Kennels' Bonaly Belle. High com., E. Parr & Son's Swan Parr. Com., Hamilton Fox-Terrier Kennels' Maple Leaf.—NOVICE.—1st, Leinster Kennels' Ruby Nettle; 2d, Woodlawn Park Kennels' Ripon Regina, 3d, E. Parr & Son's Kate Parr. Very high com., W. C. Rambler; 2d, Hamilton Fox-Terrier Kennels' Driftwood and very high com., W. C. D. Green's Greasy's Tipple. Reserve, E. Parr & Son's Flip Parr. Com., J. F. Bell's Columbia and N. T. Harris's Hurstbourne Sam.—WIRE-HAIRED.—Dogs: 1st, Hamilton Fox-Terrier Kennels' Undercliff Corine; 2d, Hillhurst Kennels' Hillhurst Piper. Bitches: 1st, Woodlawn Park Kennels' Jess R. D. Green's Greasy's Tipple; 2d, Hamilton Fox-Terrier Kennels' My Own. Very high com., W. W. Webb's Dixie, Jr.

IRISH TERRIERS.—CHALLENGE.—1st, Toon & Thomas's Jack Briggs.—OPEN.—Dogs: 1st, Toon & Thomas's Brick Bat, Jr.; 2d, Woodlawn Park Kennels' Bruce. Bitches: 1st, Toon & Thomas's Judy; 2d, Woodlawn Park Kennels' Chancery Lass.

SCOTCH TERRIERS.—Dogs: 1st, Toon & Thomas's Scotch Hot; 2d, Chesterford Park Kennels' The Colored Preacher. Bitches: 1st, Toon & Thomas's Merry Coll.

SKYE TERRIERS.—Prizes withheld.

YORKSHIRE TERRIERS.—Dogs: 1st, A. G. Ormsby's Josh; 2d, J. Foster's Actor; 3d, S. Newman, Jr.'s Tody, Jr. Very high com., Miss L. Dersch's Rags Ormsby. Bitches: 1st, J. A. Zimmerman's Flo II.; 2d, O. Stewart's Cain's Ethel; 3d, W. Lindsey's Flo.

BLACK AND TAN TERRIERS.—CHALLENGE.—Dogs: 1st, Chesterford Park Kennels' Rochelle Oolah. Bitches: 1st, Toon & Thomas's Gipsy Girl.—OPEN.—Dogs: 1st, Chesterford Park Kennels' Chesterford Victor.

TOY TERRIERS.—1st, Dr. F. Rele's Petite.

PUGS.—CHALLENGE.—Dogs: 1st, Miss E. Cryer's Bob Ivy. Reserve, German-Howard Pug Kennels'—OPEN.—Dogs: 1st, German-Howard Pug Kennels' Al Von; 2d, Eberhart Pug Kennels' Patsy Bell; 3d, Miss E. Cryer's Ivy. Bitches: 1st, Miss E. Cryer's Pansy G.; 2d and reserve, German-Howard Pug Kennels' Miss Decima and Hooker; 3d and very high com., Eberhart Pug Kennels' Queen Zitzka and Lady Verne. High com., Mrs. J. Losey's Jersey.—NOVICE.—Dogs: 1st, German-Howard Pug Kennels' Young Fenrice; 2d, Mrs. E. M. Marsh's Leo. Bitches: 1st, Eberhart Pug Kennels' La Be Sonora; 2d and very high com., German-Howard Pug Kennels' Hooker and Satine II. High com., Mrs. J. Losey's Jersey.—PUPPIES.—Dogs: Prizes withheld. Bitches: 1st, Mrs. F. W. Furdere's Zola P.; 2d, German-Howard Pug Kennels' Mildred.

KING CHARLES SPANIELS.—1st and 2d, Ben Davis's Rose and Dominion Prince.

ITALIAN GREYHOUNDS.—CHALLENGE.—1st, Joe Lewis's Sprite.—OPEN.—Dogs: 1st, Mrs. W. G. Benham's Adonis; 2d, Mrs. H. B. Dunbar's Tip Top; 3d, H. E. Keough's Taghioni. Very high com., J. Moerlin's Snowball. Bitches: 1st, Ben Davis's Dainty Lass; 2d, Mrs. J. D. Sharp's Dolly; 3d, K. Taylor's Nellie.

WHIPPETS.—Bitches: 1st, Toon & Thomas's Perfection.

MISCELLANEOUS.—Dogs: 1st, W. S. Pate's Snow (Spitz); 2d, Miss Annie Varalle's Barneth (Pomeranian); 3d, Woodlawn Park Kennels' Dewr (Welsh terrier). Very high com., G. Keil's Werra (Russian wolf spitz); J. Moerlin's Swan's Down. Bitches: 1st, H. B. Dunbar's Nita (Chihuahua); 2d, Miss Minnie Sherley's Topsy (Mexican hairless).

#### SPECIALS.

MASTIFFS.—Best in show (2), Tiger.

ST. BERNARDS.—Best in the show, Sir Bedivere. Best smooth dog under 18 months, Argyle Alpha. Best kennel (2), Argyle Kennels. Best bitch in the show, Rustic Beauty. Best pair, Sir Bedivere and Rustic Beauty. Best puppy, Nicola.

RUSSIAN WOLFDOGS.—Best kennel, H. W. Huntington. Rest in the show, Argoss. Best pair, Argoss and Zerry.

DEERHOUNDS.—Best in the show, Hillside Rinaldo.

GREYHOUNDS.—Best brace in open classes, Rome Marble and Maud Marion. Best in the show, Gem of the season.

AMERICAN FOXHOUNDS.—Best bitch in the show, Bowsprit. Best couple, Arrowhead and Bowsprit. Best pack, Roger D. Williams's.

CHESAPEAKE BAY DOGS.—Best kennel, B. Alton Smith's.

POINTERS.—Best dog with a field trial record and his record and dog show qualities to be each considered, Duke of Kent II. Best in open classes with a field trial record, Lad of Rush. Best bitch in the show, Ighfield Blythe. Best pointer or setter in show, Duke of Kent II. Best bitch under two years old, solid color, black, white or liver, Mrs. Bos's La Belle Kate. Best kennel, C. G. Stoddard.

ENGLISH SETTERS.—Best brace, Noble Lit and Belle of Riverview. Best dog in open class with field trial record, Paul Bo, also best in those classes. Best kennel, J. Taylor Williams's.

IRISH SETTERS.—Best that has been placed at any public field trial in America or Europe, Finglas. Best dog, same conditions, Finglas. Best brace, Pride of Patsey. Best in open class, Ruby Glenmore II.

COOLIES.—Best in open classes, bred or owned by member of Collie Club, Chesterford Park Kennels' Glen. Best brace, Glen and Flora May. Best kennel, Woodlawn Park Kennels.

POODLES.—Best in the show, Black Jack.

BULLDOGS.—Best in the show, Found It. Best kennel, Woodlawn Park Kennels.

BULL TERRIERS.—Best in show, Attraction. Best under 30lbs., Principio. Best kennel, F. F. Dole.

DACHSHUNDS.—Best pair, D. J. R. Eller.

BEAGLES.—Best brace, Nipps II. and Fanny. Best pack, Forest Beagle Kennels.

FOX TERRIERS (Smooth).—Best bitch entered in open or novice classes, Ruby Nettle. Best pair entered in open classes, Lansdowne Triton and Lansdowne Trim. Best Kentucky bred dog or bitch in the show, Hurstbourne Boy. Best in open or novice classes, Arradale Mixture. Best kennel, Leinster Kennels.

BLACK AND TAN TERRIERS.—Best kennel, E. B. Elliott.

PUGS.—Best get of Drummer, Zola P. Best entered and owned by a lady, Miss E. Cryer's Bob Ivy. Best kennel, German Howard Kennels.

KING CHARLES SPANIELS.—Best brace, Dominion Prince and Rose.

ITALIAN GREYHOUND.—Best, Sprite.

#### POINTS AND FLUSHES

[By a Staff Correspondent.]

##### Field Trial Dogs vs. Shooting Dogs.

THERE seems to be a general belief that the new stake instituted by the Eastern Field Trials Club is for "shooting dogs" in contradistinction to field trial dogs. It is unfortunate that any act should be interpreted as a formal distinct classification of the dog for field work and the dog for field trial competition, one a racing machine, the other for utility. There is no sound reason why such a distinction should be made by clubs. Even from a commercial standpoint, no such distinction can be justly claimed.

The field trial dog should be the most perfect dog for field work. If he can do good work to the gun in actual field shooting he deserves better than to be classed as a "plug shooting dog." If the "high-class" field trial dog can not do the work of the "plug shooting dog," wherein then lies his excellence?

Too much money in times past in the way of prizes, in trial after trial in the circuit, specialized the sport into a business. It gave a handler an opportunity to win \$8,000 or \$4,000 in one circuit, which was out of all ratio as between the value of the business and the value of the winning. The feature of sport was gradually eliminated. Clubs vied with each other in giving the biggest purses for competition. With what result? Nearly every club which retired gave more in prizes than it could afford. Then came that unpleasant result, a deficit. That was followed by the needed assessments, after which came the inevitable resignations, loss of interest and dissolution.

The aggregate value of the prizes was so great in the circuit that, instead of improving the dog in general, it narrowed the improvement down to very narrow lines. The same strings of dogs would appear in one trial after another, and many of the dogs would appear in the trials year after year. There being no handicap of any kind, it became what is colloquially known as a cinch for two or three handlers who could control a select string of dogs. It became a fixed business.

Gradually, under the management of several clubs, field trial practice drifted away from that of field work. Great speed was rated as paramount in importance, and disobedience and a disregard of the gun were condoned on the assumption that the dog was not fully broken. When such an ill-broken dog won, he was copied as a model till at last a well-broken dog at a field trial was the exception. Indeed, a well-broken dog then was seriously handicapped. Judges have given more attention to breaking and better field work, in their judgments in the past two or three years, and there is a consequent improvement. Still, there is room for a great deal more. But all the departure from the true standard of work was an injury to the cause. It is wise and proper to return to the standard which is good both in the field and the field trial. Make the field trial dog the ideal shooting dog, one which can be handled without the handler running, whistling and shouting simultaneously, which have sometimes been a feature of field trials.

On the subject of "shooting dogs" and the new stake, Mr. Thomas Johnson writes me: "Will you tell me what a shooting dog is? Is not the best dog for a man to shoot over, the best dog for a field trial? Are they intending to have a trial for 'dog and man' combined, or will the prize go to the fellow who has the most 'bird sense' and finds for his dog the most beavies? If shooting dogs can beat field trial dogs, as I understand them, in any kind of competition, viz., bird finding, working to the gun, style, pace and nose, and all the concomitants of a pleasant shooting dog, that has all the essentials which make the poetry of shooting to dogs, if such is not a shooting dog and a field trial dog as well, then I want to see a plug shooting dog. But the kind of dog I trial dog is not a gentleman's shooting dog, and if a field trial dog is not a gentleman's shooting dog, then I have wasted quite a little time in breeding without getting a full measure of the pleasurable effects which shooting to dogs affords. It will be a farce, or else there is a kind of dogs I have never seen."

While chatting with Mr. Thomas a few days since, he mentioned that his orange and white setter dog Ned was stolen again. Ned is seven years old, weight about 70lbs., dewclaws on hindlegs, one eye a bit affected, and nose rough. Any information of this dog will be gratefully received by Mr. E. Thomas, 195 East Randolph street, Chicago.

Mr. Thomas also told me of the tragic end of another setter which he prized much. He has two fox-terriers which were apparently on friendly terms with the setters, and all were

kennelled together. One direful night the setter had an unpleasantness with the fox-terriers, or vice versa. The casual bell will never be known. The dead body of the setter was found in the morning with such marks of violence on the body as denoted a violent death. The fox-terriers were as calm and matter-of-fact as if a violent death was a mere incident of every night. They have now exclusive night time quarters of their own.

##### Bicknell Glimtings.

From a correspondent at Bicknell, Ind., I received a letter in which he says:

"I think more satisfaction will be derived from the United States field trials at West Point, Miss., than if they were held at Grand Junction, Tenn.

"Birds are pairing off. Golden plover have been here by the thousand. They were never known to be in this part of the State before.

"Mr. A. J. Gleason will be over here this week. He and Mr. George Gray start for Minnesota on May 1."

##### On Breeding.

Mr. A. J. Gleason, of Alma, Kansas, gives the following interesting remarks on breeding, etc.:

"In reference to the bull in the demand for newspaper dogs, I am not at all surprised. It always appeared to me as unaccountable that men possessing ordinary horse sense in an ordinary transaction could be so easily hoodwinked into the belief that the progeny of certain dogs, bred by certain individuals, apparently having a 'pull' with those vested with prestige through the sporting press were superior to thousands of other dogs identical in blood and likely superior in individual merit.

"I am glad to know that gentlemen with money to gratify their desires are awakening to a realizing sense of the situation. It looks as though honest breeders and trainers would eventually reach a parity with the fraternity who look upon the dog merely as a medium of exchange, a sort of bait to catch suckers with, and with the aid of gushers and paid assistants, they surely have reaped a great harvest and I don't wonder at the scarcity of victims.

"If you will guarantee me \$5 each for puppies at the weaning age, I will supply a stockyard full annually from any blood you can mention, and accumulate a fortune on the short-order plan.

"Any breed of puppies can be shelled out like corn off the cob. All that is necessary to success is to find purchasers with more money than brains to pay for the output when ready for delivery."

Mr. Edward Odell, at one time an owner of the best kennels of setters and pointers in the South for field work or field trials, among which was old champion Bow, has decided to make his home permanently at Philadelphia and devote his attention to his large stable of fine horses.

##### The International Derby.

The entries of the Derby of the International Field Trials Club's field trials close on June 1. The trials will commence on Nov. 5, and as heretofore will be held at Chatham, Ont. Forfeit \$2.50, second forfeit \$2.50, payable Sept. 1; \$5 additional to start. First, 40 per cent. of entrance; second, 20 per cent.; third, 15 per cent.; fourth, 10 per cent. Forfeit and breeding certificate should accompany each entry. Address the secretary, W. B. Wells, Chatham, Ont.

B. WATERS.

909 SECURITY BUILDING, Chicago.

##### Type and Field Trial Dogs.

Editor Forest and Stream:

When so lucid, experienced and courteous a writer as Mr. W. W. Titus says anything, you may feel assured it is based on knowledge and solid sense; yet I must disagree with his conclusions and definition of "type" as applied to dogs. Type, as I understand it, is identical with "standard," and if breeders do not adhere to some recognized type or standard, our beautifully-formed setters and pointers will assuredly lose the characteristics which have made them so much admired. The plan of making a standard to fit certain monstrosities which are very feeble apologies of the breeds they were named after, has proved a lamentable failure. Mr. Titus says that good dogs, like good horses, come in all sorts of forms. This may be true in a few cases, but let Mr. Titus recall the best dogs and horses that the world has produced, and I think he will admit that a large majority were typical specimens of their breeds. My contention, therefore, is that breeders must have a "standard" or "type" to breed to, or we may as well do away with names of breeds and just call them dogs. I not only disagree with Mr. Titus in his opinion on type, but on his ideas of what constitutes a field dog. He says he intends running some "shooting dogs" at the Eastern trials.

Will some one tell me the difference between a "shooting" dog and a field trial dog. My own idea has always been, and is, that the best field trial dog is the most perfect dog to shoot over. Assuming which I infer that the dogs Mr. Titus intends running, in this particular stake, are dogs not quite good enough to win an open all-aged stake. Are there any rules to prevent any other handler from entering any dog he pleases? How will the judges draw the line between the shooting dog and the A1 field trial dog? Mr. Handler No. 2 may enter and further will enter, and I would wager long odds that Mr. Shooting dog of No. 2 quality gets left.

But whisper, is not this stake inaugurated by the Eastern Field Trials Club because they have come to recognize that the bolter and self-hunter, which they so much encouraged a few years ago, are neither shooting dogs nor field trial dogs? A personal experience at their trials proved that I was all astray as to what I had in my simplicity imagined should constitute an A1 field trial dog, viz., a fast, snappy, brainy, industrious, well broken bird finder, that worked to the gun. The dog to win, and which did win, was the one that kept the judges busy hunting the dog; but the most farcical portion of the trials was that after reading the rules "to give greater credit to the dog that works promptly without noise," etc., and, immediately the dogs are cast off, the handlers reminded me of boys who give a tin whistle imitation of how an Orange life and drum band start on the 12th of July.

I said to one of my conferees: "For goodness sake, do not permit that perpetual toot, toot!"

"Why, yes," he said, "that's the way the dogs are trained 'to keep out at their work.'"

I suggested that the handlers should hang a few cow bells to their belts, which would not probably make as much noise, but would save considerable wind. But, pshaw! no one knows better than Mr. Titus that the dog that should win a field trial is the *best ideal* perfect shooting dog.

Mr. P. H. Bryson says that breeders of high class English setters are much agitated to know how certain named sires are to be replaced. With a majority of American breeders that is no doubt correct, but the question that does not receive its meed of thought, but which to my mind is of paramount importance, is, Are we not paying too much thought to over-studded sires at the expense of good dams? I frankly admit that the sires he mentions have reproduced themselves in numbers of instances. Yet I venture the assertion that much of the credit given the sire was due to the dam, who is rarely given her share of credit. There are few sires that have stamped all their progeny with their own excellence. Yet I could enumerate numbers of dams that are so entitled, whose names are lost in obscurity.

To mention dogs in which my own kennel is closely identified would leave me open to the charge, which is only too

The sea terms in use during the fifteenth and sixteenth centuries have in some instances descended to us unchanged, others are so altered as to be scarcely recognizable, while many have become altogether obsolete. It is obvious that words transmitted from mouth to mouth, will in course of exchange become distorted; the longer they remain unwritten the more extensive will the changes be. In the passage of the sea-terms from the verbal to the written form they undoubtedly suffered radical alteration. Dropped from uneducated lips they fell to the task, ears of the learners who dimly felt themselves by harmonious combinations of sounds; the latter, unhappily ignorant of the profession that employed them, were incapable of conceiving their perfect import, and introduced them into their chronicles in a garbled or inexpressive form. It is not strange that the ignorant, writing at the dictation of the ignorant, should mar and misrepresent things; this accounts in a measure for the gross errors we find in old books of sea adventure and discovery. As vivid and correct narrators, the scribe drew from a pen that is servant to a mind thoroughly master of its subject.

It was the poet Falconer who first endeavored to unravel the tangled skein and lay the threads of nautical nomenclature side by side in their proper places. In 1769 this gifted and unfortunate man published his *Universal Nautical Dictionary*. Enriched and amplified by the task, he was able to give an intimate knowledge of the profession whose terms he so skillfully defined and so elaborately collated. But even in Falconer's time a large number of the terms used by seamen of the days of Hawkins and Drake had become obsolete. The rig of the vessels had changed, the form of their hulls, the matter of their armaments had all been altered. The sharp commands that rang so unpleasantly on the ears of the Spaniards, were now softened by the gentle and mighty Armada, and the change with his diminutive ships, was not the language of Vernon at Porto Bello or of Hawke in his glorious action off Toulon. The cool orders which Sir Humphrey Gilbert issued to his terror-stricken crew when ice and gale threatened death upon Newfoundland's fog-taunted banks, would have fallen like a strange tongue upon the ears of the men who weathered the stormy Horn with the invincible Anson or circled the globe under the pennant of the sea-master of the Commodore.

And despite these changes, Falconer's work was invaluable to the seaman; for the first time his language found harbor. No longer the victim of every careless tongue and erring pen; no longer to drift like loose weed upon the stream of time, the sport of ignorance, the plaything of scholastic affectation, it was anchored safely in that great port to which all who would traffic in the priceless merchandise of knowledge must resort.

Since Falconer's day, many glossaries have invaded the market with their wares. The older books are mere copies of his publication, varied by the whims of the compilers; the newer are modernized versions of the same, or else very indifferent original compilations. There is not to-day an accurate or all comprehensive nautical glossary. Russell, who probably knows as much about sea methods and sea manners as any living man, has given to the world a work, in its jacket of which, I suspect, he is by this time heartily ashamed. It bears every mark of being made to order at short notice.

Some day a man filled with that deep love of the sea which makes all that relates to it, all that belongs to it, a joy to the heart and an inspiration to the mind, will sit down, and heedless of time and gain, give his life to the task. Then, and then only, will we receive a work worthy of the subject. For be it remembered that the words of the sailor's tongue are not the language of a sea-going nation, but the language of a sea-going world.

Born of Teutonic parents, it was cradled in mediæval French, received adornment from the lips of the soft-voiced Latins, but its commanding strength, its striking brevity, its wild and enchanting beauty it owes to no nation, it has derived from no human tongue. From that element whose unknown expanse its first speakers traversed, whose calmness and perils it has known, it has derived its powers, its conciseness and its grace. As the restless ocean has, in its wild play, from the debris of continents built up those isles whose white beaches flash, and whose verdant slopes hang on the misty borders of its most desolate stretches, so from the materials derived from many tongues has the language of the sea been wrought out and shaped to its present beauty and purpose by the old English seaman whose tongue was the heart and the hand of the sea.

On commenting on a letter in a recent issue of *FOREST AND STREAM*, the *Field* says: "Dr. Grant correctly points out that the term has been used in this country, and traces the origin of the word to *musca*, fly and *mosquito*, and that the word has been in use for many years on the Devonshire coast, the great port for them being Dartmouth; and we can remember witnessing a match between the trim little yacht like barks at least thirty years ago. We have now before us the regatta programme of the Royal Western Yacht Club for 1886, and the third event is scheduled as follows: 'Prize of £6 for the mosquito fleet of pleasure boats.' There were no entries and Mr. R. Martin's Swallow was the winner, with Mr. Lander's Bantam second, Mr. Hudson's Butterfly third and Mr. C. Hamilton's Boomerang fourth. We do not know when the term mosquito fleet first came into use in this country, but in 1859 'Vanderdecken,' in an article published in *Hunt's Yachting Magazine* said, 'The mosquito fleet may be justly esteemed the nursery of our yachtsmen; the little yacht leads on to the handy 25, the latter which is the sturdy son of 300 tons.'"

Mr. Dixon Kemp has also sent us an old programme of the Royal Western Y. C. and Port of Plymouth Royal Regatta of 1866, in which "A prize of £6 for the mosquito fleet of pleasure boats," is offered, with nine entries. Mr. Kemp alludes to these boats as cutter rigged, and of about 20ft. l.w.l.

### New York Yacht Racing Association.

The special committee of the New York Y. R. A. has prepared the following report:

New York May 19, 1894.—To the Clubs Composing the New York Yacht Racing Association: At the last meeting of the N. Y. Y. R. A., a committee of five was appointed to revise the constitution, by-laws and sailing rules of the Association, and report any changes which would, in the opinion of the committee, benefit the Association. This committee has held several meetings and has carefully considered the matters referred to it, and after a full discussion of the matter, makes the following report:

The principal object for which the Association was organized was for the purpose of the adoption of a uniform set of rules to be used in all races in which two or more clubs of the Association participated, and the committee find that the recent amendment to Sec. 2 of the constitution permitting open races to be given under other rules than those adopted by the Association, provided notice is given that such race will be under other rules, is in direct conflict with the object of the Association and will in future lead to confusion and the same troubles which existed prior to the organization of the Association, and they therefore recommend that Article 2 of the constitution be amended so as to read as it was adopted when the Association organized, viz.: The objects of the Association shall be, to encourage yacht building and yacht racing; to establish and enforce uniform rules for the government of all clubs in which two or more clubs, members of the Association, compete.

The success of the Association depends largely on the interest taken by the delegates sent by the clubs to represent them in the meetings and deliberations of the Association, and it is important to the successful administration of the Association that every club should be represented at all meetings held by the Association, but the committee find that some of the clubs are seldom represented, although they believe that it is the intention and expectation of the clubs that their delegates should be present; but at present no provision is made for giving notice to clubs of a failure of their delegates to perform the duties expected of them. A due for failure of clubs to be represented at meetings has been proposed, but the committee feel that this would not be approved of and should not be necessary. But if the attention of the clubs is called to failure of its delegates to attend the meetings of the Association, such club will take such action as is necessary to cause a better representation in the Association, and therefore the committee recommend that Article VII. of the constitution be amended by adding at the end thereof the following words, viz.: "And the secretary of the Association shall notify any club failing to be represented at any meeting of the Association of the failure of its delegates to attend such meeting."

In past years there have been occasions on which clubs belonging to the Association have given open races and regattas in violation of the principles and sailing rules of the Association, and the Association has found itself without power to take any action against such club; and while the committee feel that all clubs belonging to the Association should uphold and abide by its principles and rules, yet the committee believe that it is the intention and expectation of the clubs that their delegates should be present; but at present no provision is made for giving notice to clubs of a failure of their delegates to perform the duties expected of them. A due for failure of clubs to be represented at meetings has been proposed, but the committee feel that this would not be approved of and should not be necessary. But if the attention of the clubs is called to failure of its delegates to attend the meetings of the Association, such club will take such action as is necessary to cause a better representation in the Association, and therefore the committee recommend that Article VII. of the constitution be amended by adding at the end thereof the following words, viz.: "And the secretary of the Association shall notify any club failing to be represented at any meeting of the Association of the failure of its delegates to attend such meeting."

As to the sailing rules of the Association as printed and distributed by the Association, the committee can offer or suggest little improvement. They are practically the same as used by all clubs. But objection has been raised, both within the membership of the Association and by outsiders, to the rule of measurement for time allowance which the Association has adopted and used since its organization. This is a subject that has been discussed and agitated as long as the memory of yachtsmen can carry them back, and no measure satisfactory to all yachtsmen has yet been arrived at and probably never will be. The committee feel that the rule of measurement for the Association should be one that is satisfactory to the largest number of clubs in the Association, and by examining the roll of membership in the Association the committee feel that should the Association be at this time disbanded the majority of the clubs now belonging to the Association would continue to use this same rule of measurement, and should this rule be at this time radically changed it would not meet the approval of the majority of the clubs, and would seriously interfere with the frequency and popularity of open regattas among the clubs. At the same time the committee are met with the argument that if the rule was changed other clubs would seek the benefits of membership in the Association and its membership would be extended. But our answer is that the Association is for the benefit of the present members, and to change the rule for the benefit of prospective members would cause many present members to give up their membership. We recognize that all clubs in the Association wish to see the Association increase its membership, for thereby the benefits to each club are increased, therefore this committee, after a careful consideration of the question, have decided to recommend that no change in the rule of measurement be made, but that the Association be allowed to adopt two different committees believe it will be practicable to adopt two rules of measurement for time allowance, one to be the rule now used in the Association and the other to be what is now known as the "length and sail area rule," and thereby give the clubs in the Association the choice of the two rules in giving their open regattas, and thus the value of each may be demonstrated. At the same time the matter must be so arranged that in all races a distinct understanding must be had of which rule is to be used in a race, and due notice given of it by the club giving an open regatta, and by the choice between these two rules it will soon be demonstrated which is the most acceptable to the clubs belonging to the Association, by the success of the open regattas given, and at the same time this will remove what is claimed to be the obstacle which stands in the way of a number of clubs joining the Association, who it is claimed, under the present rules, the measurement rule is changed. The committee believe that after a careful consideration of this proposed addition to this rule by the several clubs of this Association, that this proposed change will not be in conflict with the expressed objects of the Association, but is a step forward toward the solution of that very vexed and yet unsolved problem of proper measurement for time allowance, as it will enable yacht to meet on equal terms and thus demonstrate the actual difference in the result from the use of either.

In deciding the question of what should compose the elements from which the sail area measurement should be arrived at the committee have examined the rules used by various other clubs and have chosen that which is thought to be most fair for the class of boats owned by members of the clubs forming the Association, and they therefore recommend that Rule 1 of the Association be amended so as to read as follows:

SECTION 1. All races or regattas given by any club a member of the Association or by the Association open to one or more clubs members of the Association shall be sailed under the rules of the Association, and the measurement for allowance for time shall be given by one of the following rules, to be chosen by the club respectively, viz: "the 'hull measurement' and 'length and sail area measurement,'" which are as follows:

**HULL MEASUREMENT.**  
The length on deck, measured from the forward part of the stem to the extreme stern over all; to this add the length of the load waterline measured when in sailing trim and divide the total by two, and the result thus obtained shall be the sailing length.

**LENGTH AND SAIL AREA MEASUREMENT.**  
Yachts shall be rated for time allowance according to the following measurement:

To the load waterline length add the square root of the sail area, and divide the sum by two.  
The load waterline length shall be the distance in a straight line between the points furthest forward and furthest aft where the hull, exclusive of the rudder stock, is intersected by the surface of the water, when the yacht is afloat in racing trim, with all persons on board when the measurement is taken amidships. The measurer, at the time of taking his measurements, shall affix a distinctive mark at each point.

The sail area shall be ascertained by taking a perpendicular along the after side of the mainmast, from the under side of the gaff to the boom or to the lowest part of the upper side of boom, when resting on the saddle, or on the lowest part of gooseneck, the distance of which point from the main deck or house deck shall be recorded by the measurer, together with the other points used in measurement.

In all yachts the forward point of measurement of the base-line shall be midway between the intersection of the bowsprit and jibpost sail stay, and the center of the tack cringle, the club giving jib shall add the length of the bowsprit to the length of the spinnaker boom exceeds the distance from the forward side of the forward point of measurement, such excess shall be added to the base line. The length to be measured for spinnaker boom shall be the extreme distance, when in use, of its outer end from the center of the foreside of the mast on which it is carried.

The after point of measurement shall be the end of the mainboom in masted yachts, cutters and sloops, and of the mizenboom in yawls. In all schooners, cutters and sloops the mainmast shall be measured from the bounds of the lower mast to the lower side of the top-sail halyard block or sheave, and 80 per cent. of this length shall be taken from the extreme length of the main gaff measured from the inside of the jaws to the after end, the remainder being added to the base line, as measured above.

The area of the sail shall be obtained by multiplying the corrected base by the perpendicular and dividing by two.  
To be square root of the area, as ascertained, add the length, as ascertained, and divide the product by two; the result is the measurement for time allowance.

In boats which carry no headsail, the forward point of measurement for the base line shall be the after side of the mast, or of the foremast if there be two masts.

In vessels which carry no topmast, the upper point of measurement for the perpendicular shall be the center of the eye in the upper peak halyard band. In such vessels, for the purpose of measuring the base line, the distance between the center of the eye in the throat halyard band and that of the upper peak halyard band shall be used in the same way as is the length of the topmast where one is carried.  
In all yachts the forward point of measurement of the base-line shall be midway between the intersection of the bowsprit and jibpost sail stay, and the center of the tack cringle, the club giving jib shall add the length of the bowsprit to the length of the spinnaker boom exceeds the distance from the forward side of the forward point of measurement, such excess shall be added to the base line. The length to be measured for spinnaker boom shall be the extreme distance, when in use, of its outer end from the center of the foreside of the mast on which it is carried.

Sec. 4. Allowance for time shall be figured according to the table of N. G. Herreshoff

In the regattas given by the Association and by clubs of the Association it often occurs that there may be only one yacht entered in a class, and thereby the yacht so entered, although prepared for the race, is prevented from competing in the race. This seems to the committee to be an injustice, and many clubs have objected to this by allowing such yacht to compete in a larger class, and so that this may be done the committee recommend that such a provision be made in the sailing rules by adding the following words at the end of Rule 5: "In any race or regatta in which only one yacht shall be entered in a class, such yacht may race with yachts of the next higher class to which she belongs by assuming the minimum measurement of such higher class; provided notice of intention of racing in such higher class be given to the regatta committee having charge of such race before 10 A. M. of the day of such race."

In adopting the length and sail area measurement, the committee would recommend the following classification by load waterline length:

**SCHOONERS.**  
Class 1—70ft. and over waterline.  
Class 2—50ft. and under 70ft. waterline.  
Class 3—Under 50ft. waterline.

**SLOOPS, CUTTERS AND YAWLS.**  
Class 4—70ft. and over waterline.  
Class 5—61ft. and under 70ft. waterline.  
Class 6—53ft. and under 61ft. waterline.  
Class 7—46ft. and under 53ft. waterline.  
Class 8—40ft. and under 46ft. waterline.  
Class 9—35ft. and under 40ft. waterline.  
Class 10—30ft. and under 35ft. waterline.  
Class 11—25ft. and under 30ft. waterline.  
Class 12—20ft. and under 25ft. waterline.  
Class 13—Under 20ft. waterline.

The committee have spent much time in considering the matters re-

ferred to it, and have sought to recommend such changes as will benefit the clubs of the Association, and they now submit the result of their labors. It is the wish and intention of the Association that each club at its meeting during the next month, or at a meeting specially called for that purpose, shall carefully consider the suggestions made by this committee and express their approval or disapproval of the different amendments submitted; and the committee trust that all clubs in the Association will direct their respective delegates to report to the Association the action taken by their clubs on this report.

The next meeting of the Association will be held on June 15, when this report will be submitted and the proposed amendments acted upon.  
A. J. PRIZE, Chairman of Committee.

### Seawanhaka Corinthian Y. C.

A regular meeting of the Seawanhaka Corinthian Y. C. was held on May 8, with Com. Hill presiding. The following amendment to the racing rules was adopted, the new wording being merely to make the intent of the rule more plain, without changing the existing method of measurement:

"The load waterline length shall be the distance in a straight line between the points furthest forward and furthest aft where the hull, exclusive of the rudder stock, is intersected by the surface of the water, when the yacht is afloat in racing trim, with all persons on board when the measurement is taken amidships. The measurer, at the time of taking his measurements, shall affix a distinctive mark at each point."

On motion, the regatta committee was requested to consider the propriety of offering the Roosevelt memorial cup in the 21ft. class, as being the principal class of the year in the Sound. The following resolutions were unanimously adopted:

Whereas, On April 15, death took away from us Mr. Walter Cary Tuckerman, one of our oldest and most valued members; and

Whereas, By reason of his death the club has lost a life member, who ever had at heart its best interests and always loyally and efficiently sought to promote its advancement, and who, as its rear commodore, gave us abundant evidence of the value of his services and the wisdom of his counsel; now therefore be it

Resolved, That as a mark of its affectionate respect for his memory and its appreciation of its loss, the club requests its trustees to make no nomination to fill the office of rear commodore, but that the same be left vacant until the close of the current year.

Whereas, It appears that during a recent cruise in the West Indies, Mr. Lloyd Phoenix, a member of this club tendered his auxiliary steam yacht Intrepid to the Government of the United States for the purpose of recovering certain relics of the U. S. S. Kearsarge, recently wrecked on Roncador Cay in the Caribbean Sea, and

Whereas, By reason of the prompt and generous action of Mr. Phoenix, the log book and bell, together with the plate recording the engagement between the Kearsarge and the Alabama, were recovered for the benefit of the nation;

Resolved, That the Seawanhaka Corinthian Y. C. make a formal record of its satisfaction and gratification upon learning of the patriotic and graceful action of Mr. Phoenix, and congratulate him upon the success which attended his self imposed mission.

The club house at Oyster Bay will be opened on May 30. Com. Hill has appointed ex-Sec'y Leon F. d'Oreumieux as fleet captain for the year. Mrs. G. B. Thompson, sch'r. Lenore, has been tendered by the trustees the privilege of honorary membership for the year.

### The Mediterranean Races of 1895.

THERE is every promise of some real racing in the Mediterranean next spring, in contrast to the meagre sport of this year, in which Britannia had to fight her own way to the top of the list of other yachts of her class. It is quite likely that a really good turnout of yachts, both American and British, may be seen at Nice, including such craft as Britannia, Valkyrie, Vigilant and some new ones of like size. The conditions as announced by Capt. Pryce Hamilton, secretary of the Mediterranean International Yacht Races, are as follows:

First Race—For sailing yachts of over twenty tons belonging to any recognized club, to be sailed under Y. R. A. Rules, with time allowance and over the usual course. Entrance fee, 100 francs. First prize, a cup of the value of £500, plus 500 sovereigns, offered by James Gordon Bennett; second prize, a cup of the value of £300, offered by Baron Arthur de Rothschild.

Second Race—For steam yachts of over 100 tons belonging to any recognized club; to be contested over a triangular course, twice around, making a total of fifty-three miles; no handicap; entrance prizes offered by James Gordon Bennett and Baron Arthur de Rothschild.

Third Race—A handicap for steam yachts of over 100 tons belonging to any recognized club; no vessel to enter unless it runs in the second race. Prizes the same as in the second race.

The winning yacht is to hold the cup as a challenge cup, which is to become the property of the owner of the winner of two successive contests; the race to be held either at Nice in April, at Cowes during the regatta week, at New York a week before or after the June regatta, or when the America's Cup is contested for at Newport in August during the squadron cruise of the New York Yacht Club, as may be decided by the yacht first holding it. The cup may be challenged for in the next year after it has been won by giving six months' notice.

The sailing committee includes the Grand Duke of Mecklenburg-Schwerin, Duke George of Leuchtenburg, Baron Arthur de Rothschild, James Gordon Bennett and Capt. Pryce Hamilton.

### YACHT NEWS NOTES.

The judge, Mr. Dixon Kemp, has awarded the prizes and etc., in the *Model Yachtsman and Canoeist* competition as follows: First prize Kathleen, Mr. Geo. S. Armstrong, 37 Warwick street, Heaton (a fashionable yacht type with deep lead keel, in sheer draught like Britannia), second prize Blue Flag, White St. Andrew's Cross, Mr. Harley Mead, Hale, Cornwall (in sheer draught not quite so fashionable as the preceding, but quite up to date in body form, 24.4lb. weight); third prize Marchessa, Mr. Allan Clark, 75 Armadale street, Dennistown, Glasgow (bulb keel suspended on two fins, weight of model, 19lb.); fourth prize Gem, John R. Philips, Kensington House, Acacia Grove, Coombe Malden, Surrey (conventional type; weight of model, 21.3lb.); fifth prize Blue Nera, Mr. H. Nutter, 37 Wittington Road, Whalley Range, Manchester (fin and bulb; weight of model, 17.9lb.). Highly commended: Rosebud, Mr. James Stow, Shoreham (bulb keel, long bow and good buttock lines; weight of model, 23.6lb.); Nora Creina, J. G. Kelly, 9 George's place, Kingstown; Pocahontas, Thos. Wilkinson, 8 Rochdale street, Walsend-on-Tyne. All these drawings were well executed—some, indeed, highly finished—and most accurately were they made by a naval architect's point of view. There were 21 designs in all.

A meeting of the executive committee of the Corinthian Mosquito Fleet was held last week, at which the following fixtures were decided on: May 15.—Opening of the club house, Echo Bay. June 15.—Ladies' Day regatta. July 14.—Special race for new 21-footers and cabin catboats under 25ft. waterline. August 25.—Regular annual regatta. Com. Pryer has offered a handsome silver cup to be raced for by the 21-footers, under the rules as adopted by the Larchmont Y. C. All clubs wishing to be open to various races entered in the following regattas: Seawanhaka, Larchmont, Riverside, Knickerbocker, New Rochelle, Atlantic, Corinthian of Staten Island, New York Athletic Club, Indian Harbor and American. The regatta committee includes E. H. Sturgis, chairman; H. G. O. Dunham and T. T. Richards. The club has sixty-six yachts enrolled, with a membership of seventy-five.

Intrepid, steam yacht, Lloyd Phoenix, reached New York on May 8 from Hampton Roads, after a cruise of nearly three months. After leaving New York on Feb. 17 she stopped at Bermuda, St. Kitts, Guadalupe, Martinique, St. Vincent, St. Thomas, St. John's, Antigua and Nassau. The yacht brought with her the logbook, bell and part of the memoria l tablet of the wrecked Kearsarge, which were shipped from Fortress Monroe to Washington. She will at once refit for the summer, and Mr. Phoenix will use her herself, the rumor that he had chartered her being without foundation.

Lasca, sch'r., John E. Brooks, arrived at Gourock, Scotland, on May 9 at 12:15 A. M., her time being from Sandy Hook to Fastnet Light, 15 days 12 hours and to Gourock 17 days 6 hours. Mr. Brooks made the passage in the yacht.

Puritan, sloop, will be offered at auction at 4 P. M. on Monday next at Lawler's yard, South Boston. The old cut defender has been well kept up by Com. Forbes, and is now in excellent condition.

Hope Leslie, sch'r., has been chartered through Waterhouse and Cheesbrough to Jas. A. Garland, of New York.

Eleanor, steam yacht, was launched at Bath, Me., on May 8, in the presence of her owner and a party of friends.

Glendora, sch'r., designed by H. J. Gielow for A. K. Dimock, was launched at Brown's yard, Tottenville, on May 12.

Phantom, sch'r., built in 1855, will be broken up by order of her owner, Com. Paine, of the New Haven Y. C.

Sycamore, steam yacht, Edgar L. Scott, was at Rangoon on April 2, bound for Penang, Singapore and Hong Kong.

Banshee, sloop, has been sold by Arthur Scribner to Mr. Doscher, owner of Wacoandah.

Penguin, cutter, has been sold by Q. M. Conolly, to John M. Clark, of Marlon, Mass.

Vigilant.

THE work of preparing Vigilant for her ocean voyage is now going on at the Erie Basin dry docks and the yacht will be ready to sail early in June. After sandpapering the bottom last week an attempt was made to launch her from the railway at Mather & Woods yard, Port Jefferson, on May 10, but the tide was too low, and after an attempt to tow her from the ways failed she was left until next day, when she floated on the morning tide at 5 A. M. After her spars and sails were taken on board at Darling's wharf she was towed to the Erie Basin dry docks, at South Brooklyn, where the hull will be strengthened under the direction of N. G. Herreshoff and her sea-going rig will be shipped. Mr. Herreshoff visited the yacht on Monday, and decided to strengthen her by bilge stringers, from which braces will be run to the deck beams, as was done in Dacotha. Messrs. Wilson & Silsby are making the new sails and altering old ones, the dimensions being: Topmast 48ft., mizenmast 30ft., bowsprit 18ft., main boom 60ft., main gaff 42ft., mizen boom 30ft., hoist of mainsail 56ft. 6in. The mizen will be a jib-headed sail, as in the case of Valkyrie.

Vigilant will be sailed across by Capt. Leander Jeffrey, of the schooner Columbia, and Capt. Hall will cross in the steam yacht Atalanta, joining the yacht on the other side. Mr. George Gould will go with his family by steamer on May 16. Atalanta will carry the racing spars and gear, and Howard Gould will go in her.

The Canadian Canoe.

THE Canadian canoe is now known throughout the United States and also abroad, great numbers being exported, to England in particular. The purpose for which they are most used is well indicated by the nickname given them some years since of "girling canoe," many being used by ladies, and even when manned solely by the sterner sex they are used mainly for easy paddling, light cruising and canoeing of the dilettante sort.

Excellent as they are for such service it is not the work for which they were originally designed in Canada; in part for hunting and fishing but largely for such useful service as is so graphically described in the story of "Away Up North," concluded last week. This plain, practical narrative of work done in canoes shows the essential qualities, some of which are missing in even the best of the Peterborough craft, the typical "Canadian canoe."

The author of the article in question, Mr. H. K. Wicksteed, is known to our readers as a skillful amateur designer, and he has also had a long and thorough experience in canoeing, both in the wilderness and in civilized waters, and in all varieties of canoe, from the Indian birch to the lightest and most elaborate of the Peterborough craft. The accompanying design is one of several made by him for service canoes of various sizes within the past four or five years, this particular design being for his personal use in the event of another expedition like that to Lake Temagami. Two canoes of this type were built about five years ago for an exploring expedition, being 18' long, 3' 6" beam, and 1' 6" depth, with a camber of 4" in 12', the weight being but 90lbs. The canoes were very successful, being superior to any of the ordinary craft. Two similar ones are now building, one a lapstrake, by Knapp, of Kingston, and one a smooth-skin, by Dey, of Ottawa. In describing them Mr. Wicksteed says:

"The philosophy of the design is that the requisites are, in order of importance: First, lightness; second, carrying capacity; third, structural strength to resist the strains due to unequal loading; fourth, handiness and seagoing qualities, and lastly speed. Having a given volume of displacement to provide for, of course the least weight is to be obtained by adding to the depth as much as is consistent with moderate draft, and next to the beam as far as may be without getting too much to squeeze between rocks in narrow channels and between trees on portages.

"An Indian canoe is seldom more than 3ft. wide and the more unfrequented portages are cut to very little more. So that 3' 6" is about the limit in this direction.

"The Peterboro canoes are decidedly too straight on the keel and too hard to turn quickly, a most important requisite, so I have given considerable camber to the backbone. Being built for shooting and extreme light draft, they are also very flat in the floor—causing them to drag in shallow water and making them very weak in the bottoms. In my experience neither extreme light draft nor initial stability are very important requisites in a cruiser, so I have introduced a little deadrise and a comparatively easy bilge. It will be noticed that the waterlines are very fine fore and aft, judged by modern standards; this is not done so much to secure easy diagonals as to give needed strength to the knuckle of the stem, which is to receive very severe blows; and secondly to give plenty of place and lifting power above water.

"I have suppressed the customary little deck fore and aft because it is useless unless cambered like that of a lifeboat to throw off a sea, and it adds very much to the weight. I expect the 18ft. canoe to weigh from 75 to 85lbs.—an easy load for one man.

"The 16ft. boat will not weigh more than 40 or 45lbs., but these canoes, it must be remembered, are intended to be handled like bark canoes, with the most elaborate caution and care, and not to be knocked about as some of the A. C. A. boats are. They are always to be lifted in and out of the water, not 'drawn' upon the beach; and as soon as the bottom is taken in a shallow rapid every mother's son of the crew goes overboard in the twinkling of an eye. Further, every chance abrasion is smoothed over at once with canoe gum or some kindred material."

Apart from the gain in quick turning over the long straight keel, the rocker and rounding up of the ends serve another important purpose; rapids are almost invariably shallow on the crest of the fall, and the bow and midship of a canoe may pass safely, but when the bow strikes the surge at the bottom it rises quickly and the stern dropping strikes the rocks. The rounding up prevents this and allows the canoe to pass easily in places where it would otherwise stick, or at least strike hard. In this connection the form of the bow should tend to freeboard rather than flare, keeping out the water without lifting too quickly in the wave at the bottom of the rapid. The stern, on the contrary, may well be flared out considerably with much less freeboard. The only limitations on this form are the necessity for using a steering paddle well aft, which is interfered with by the wide stern and the desirability at times of using either end first, according to circumstances. A 16ft. canoe, from the design, will weigh but not over 45lbs. and will carry two or three single paddles. The design is admirably adapted for a decked canoe of the river cruising type of either wood or canvas construction.

TRAVELING CANOE—DESIGNED BY H. K. WICKSTEED, 1894.

### The Sport of Rifle Shooting.

When I call on the editor of *FOREST AND STREAM* he shows me much attention, asks me what I know, and being acquainted with my localities weakness, lets me no most of the talking. This is flattering, but it is not for the reason that I have asked him to make the *FOREST AND STREAM* more popular by writing something for it. "Thank you," has been my answer, but now I will be more obliging. Writing, however, is more trouble than talking, and although you feel that posterity will be benefited by your efforts, you do not feel repaid unless the ancestors of posterity appreciate you also. I hope this may be the case.

If I were good at fiction, I might start off with a story about quail in Connecticut, or our trout-burdened streams, but I will write in a serious and instructive mood, on a matter that needs mending, i. e. the sport of rifle shooting. My definition of this sport is using a rifle in a general way; shooting at various objects, stationary, moving, animate and inanimate; shooting with deliberate aim or with a rest or at long range being the exception.

There is a very common notion that rifle shooting is mostly a gift, and that few can excel in this art. Also that it requires considerable strength, and perfect vision.

There never was a greater mistake than this idea, for there is hardly any kind of skill acquired more easily than this, if it is learned in the right way. Any one who has the strength and nerve to hold an umbrella, or eyesight good enough to see the object that needs hitting, can become a good shot in a very short time. A few hours' practice each week will make a good marksman in one season. If the person is young, and has not picked up awkward habits already, or if a few weeks' practice will do wonders. The trouble with the sport is that there are few instructors to teach it properly, and as people take it up without instruction, they waste a great deal of time before they become skillful, if they ever are.

When we excel in any sport, the interest continues, but if we do not get on well we are apt to give it up. So it is with many shooters, they do not succeed very well and finally tire of it. It is no wonder that they tire, for they are not shooting in the right way. They are not using the right rifle, or they are not using the right ammunition, and perhaps they are not using the right method. Although they carry their rifle about a great deal, they do very little shooting, and that is done in a careless manner. Any sport needs practice, and is learned much quicker by proper coaching. This is especially the case with rifle shooting.

As I am not writing a book I can do no more here than give a few hints and suggest that it may be of what course to pursue to be a good shot and enjoy the sport.

Use only such rifles as are, to your mind, fairly accurate, for few shooters can hold a rifle well if they have no confidence in it. The position should be the same as in shooting a shotgun. Keep your attention on the object you wish to hit, and while bringing up your rifle decide where you wish the front sight to be in relation to it and shoot quickly. If the object is stationary at ordinary distances the sight should be in the center of the target, and if the object is moving, if the object is moving, the sight should be ahead of it. When shooting, never flinch, for this is fatal to good work. Do not take your eyes off the object until the shot is fired. Pull the trigger so that the rifle is fired when the sight reaches the right place, for it will never do to hesitate and try for a second aim. Very soon the eye and hand will work instinctively together, so that the shooter will not be troubled by any flinching or thought about using his shoulder, which will become automatic like walking. Thus before he is aware of it, he finds himself to be a reliable shooting machine. The deliberate hold, such as most shooters do at the 200yds. range, can be easily learnt afterward if the shooter desires to do so. It is a disadvantage to commence with this kind of practice.

Use a repeating rifle, because time is one of the most important elements in shooting, and with a repeating rifle the shooter is not limited to time in aiming. It is most sufficient to be able to make a good score at the target, but it should also be done rapidly.

The matter of ammunition is of the utmost importance, and this is where shooters make great mistakes. The most accurate ammunition are those cartridges which have moderate charges of powder. Although the trajectory of such cartridges is not very flat, they can be depended upon to shoot with great regularity. For short distances the trajectory need not be considered in any case.

Another essential advantage in this ammunition is that quite a number of shots can be fired without leading the barrel, consequently little cleaning is necessary.

When shooting use a wet cloth wiper on a wooden cleaning rod after twenty-five or fifty shots. When through shooting, clean first with water, then with a dry cloth, and lastly with an oily cloth. The use of using any lubricant or thought about using the shoulder as much force to the ammunition. The moral effect on the shooter if he thinks his ammunition is good is in favor of his doing his best holding.

Do not economize in ammunition until you have learned the art of shooting. Fortunately the kind of ammunition best adapted for this purpose is some of the cheapest. In any event buy it by the case, and then mind to the necessity of using a considerable amount before you can be an expert.

The .22cal. short cartridge is the best for a beginner, and will always be needed for a great deal of practice. The usual distance for this cartridge is 25yds. or less, though it can be used up to 50 yds.

After considerable use of this cartridge, take up the .32 W. C. F. The .32 W. C. F. is the best of the .32 W. C. F. and proportioned cartridges in use for general shooting, and is very accurate, even up to 200yds. If the weather conditions are good. It is better to do most of your target practice at 50yds. Use moving targets, so, if possible. Some of your best practice will be that of the range, at several targets placed at different distances, from 25 to 100yds. Shooting objects thrown in the air, and other fancy work, can be indulged in afterwards with the .22 short cartridge, which, on account of its short range, is safer for this practice.

The best "all round" cartridge for a hunting rifle is the .44 W. C. F. Though if the hunter is not doing anything as large as deer, the .32 W. C. F. is rather better. If the hunter is only after large game, or the distance is considerable, the .45-70 with the 350 or 330 bullet is a better cartridge.

It is unnecessary to say that the repeater for hunting has a great advantage. The single shot rifle is one of the worst parts of the World people use slowly, and are not yet alive to its usefulness. Repeating rifles were spoken of in a London shooting paper not long ago in a very amusing way. It is so very English, that I copy it:

"This being so, if a man is out with a double-barreled rook rifle, and cripples a bunny with his first shot, he has a fine opportunity of putting in his second bullet without such a loss of time as would be caused by reloading his rifle. In fact, when the possibilities of the rifle are understood, the great variety of attractive shooting that can be done with it will always give it the advantage over the shotgun."

To Americans, the repeating rifle for sporting is not "a novelty," and we can only be sorry for so many of our English neighbors who deprive themselves of the pleasure of using them through ignorance of their merits.

In conclusion, I must criticize our rifle clubs of the present day. Why is there so little interest in these clubs? It is because we have no adequate practice at our rifle ranges. The main thing that is learnt there, is steady holding for deliberate shooting. The practice is essentially the same as in the days of the muzzleloader.

Repeating rifles and even for single shot muzzleloaders, such practice is to be limited. It is better for military men than for sportsmen.

The great trouble with our target shooting, is that the time element is left out. We should introduce repeating rifles at the range and use them as repeaters, making our rules so that the rapidity of fire shall be as important a factor as accuracy. Some shooters have contended that the single shot rifle is more accurate than the repeater. There was some truth in this in the early days of the repeater, but it cannot be said of our best modern repeating rifles. My own experience with the Winchester repeaters is that they are as accurate as any single shot rifles. Target practice should be to the hunter with the rifle, what trap-shooting is to the field shooter with the shotgun. Then we can look forward to the time when the number of shooters at the range will be as many as at the traps. In fact, when the possibilities of the rifle are understood, the great variety of attractive shooting that can be done with it will always give it the advantage over the shotgun.

WILLIAM LYMAN.

### New York Central Schuetzen Corps.

The New York Central Corps, Capt. D. Meers, held its third monthly practice shoot of the season in Washington Park on May 13. The weather was clear and the atmosphere tempered just right for outdoor sport. There was a good attendance of the shooting element of the corps, and as a consequence some good scores were made. Henry D. Muller made the most flags in the champion class; John Eisenhardt in the first class; Jos. Jordan in the second class, H. A. Ficke in the third class, and J. N. Tonjes in the fourth class. On the main target John Eisenhardt was first with 59. H. D. Muller and Fred Schmidt tied for second place with 55 each. The medal winners on the

ring target were as follows: Henry D. Muller, champion class; C. Pletz, first, first class; Emil Berckman, second class; Marten Ficken, third class; Fred. Jutgens, fourth class. Scores, ring target, 3 shots per score, 2 to count, possible 125:

Champion Class.		
H. D. Muller.....	64	F. Schroder.....64 54
F. Schmidt.....	63	D. Meersse.....55 63
F. Schell.....	59	G. Reilwiesner.....52 56

### Texas State Rifle Association.

A HUNDRED riflemen, a fragrant ozone bounding from the billowy green of a field of waving corn, three illegitimate targets (125, 175 and 225yds.), a thousand of the prettiest girls in Texas—these were the conditions at the fifth annual meeting of the Texas Association of Riflemen which took place at the beautiful city of New Braunfels on the 5th day of May.

Any man who can hit a well regulated bullseye under the circumstances stated above three times in succession without having a rabbit's foot in each pocket is a great shot. The writer tried it, first at the 125yds. range. Two 9s same easy. Then came the 175yds. butts. The rifle was pointed for a 7 low left as it cracked out a 30grs. bullet and out came the flag. The next shot was still further in the target frame, when came the long range. It was a real test, for the target was rather hard to find. Men who had made good scores at everything else, were horrified at the antics of the pointer's stick. The shooter (falls a 12 and with breathless anxiety is mortified into a statue to see the stick point to a 6 high. Another rifle sang out and the handler thereof yelled that he had "pulled off," when out came the flag.

At any rate it is hard shooting to shoot matches of two shots each at 125, 175 and 225yds. There is really no reason for it, as there seems to be plenty of room for 200yds. range. Ordinarily, when one who has enough room for a 250yd. range there is room enough for one of 200yds.

Mr. Ernest Gruene, of New Braunfels, was on hand. He is tall, powerful and the best single handed "arguist" in this section of the country. There was a vexed question concerning certain restrictions in sight to be used in the New Braunfels club prize shoot which some of the riflemen did not like. Judge Gruene, of course, sided with his club and in a masterly manner disposed of the matter. But then the judge is a good shot withal, and your correspondent slept on a bed of roses and was fed at a most sumptuous table for two days, for all of which the said correspondent desires *FOREST AND STREAM* to raise its hat in thanks.

There were about fifteen clubs represented by about 400 shooters. The accommodations were good, the service excellent and the weather all that could be desired. The contest for the individual championship of the State was won by A. Altmann, a very modest young gentleman of San Antonio, who makes no extended speeches about his performance, but who always has been a dangerous man to meet in rifle competition. When he points the business end of a rifle at a bullseye, you see it wink, but only once, for it is soon knocked out by the unerring bullet. This contest consisted of 5 shots each at 125 and 175yds. off-hand and 5 shots each at 175 and 225yds. with muzzle rest, 20 shots in all. Score:

Off-hand Rest. Total.				Off-hand Rest. Total.			
E Steves.....	73	85	158	G Altmann.....	80	95	175
G Giesecke.....	72	90	162	O Koehler.....	65	65	130

A. Reiningher.....	87	Wm. Tags.....	79	Wm. Brummer.....	76	76
W. Fey.....	77					
Wm. Herpel.....	73					

Two prize shoots were included in the above, one being the rest and the other the off-hand prize shoot. As will be seen, Mr. Arthur Guenther, of San Antonio, was a close second to Mr. Altmann. He had shot his score out with a splendid total of 174, and Altmann had only 95 in his rest score, and had to make 80 points on two ranges in order to win, which he did in the most approved style. Following are the winners in the rest prize shoot:

Rest prize shoot, 5 shots each, at 175 and 225yds.: A. Uhl 100, A. Altmann 95, A. Guenther 95, G. Altmann 95, F. Scholl 94, Wm. Herpel 93, H. Syring 93, O. Heilig 90, G. Giesecke 90, E. Mittendorf 90, S. V. Pfeuffer 89, Dr. Herff 88, A. Steves 88, E. Dosch 88, E. Seffel 87, A. Reiningher 87, P. Mehn 87, E. Steves 86, S. V. Steuve 86.

Off-hand prize shoot, 5 shots each, at 175 and 225yds.: G. Altmann 80, A. Guenther 70, G. Hays 70, S. V. Pfeuffer 74, Texas Field 73, Wm. Knepper 73, A. Uhl 73, E. Steves 72, G. Giesecke 72, J. Leyler 71, E. Mittendorf 71.

Team shoot, 5 men to each team, muzzle rest, any sights desired, two shots each at 125, 175 and 225yds.:

New Braunfels		New Braunfels		San Antonio		San Antonio	
No. 1.	No. 2.	No. 1.	No. 2.	No. 1.	No. 2.	No. 1.	No. 2.
E. Gruene.....	51	P. Mehn.....	45	A. Herff.....	55	G. Altmann.....	58
S. V. Pfeuffer.....	51	J. Corett.....	34	A. Uhl.....	53	E. Steves.....	47
L. Simon.....	52	J. Schnabel.....	39	E. Seffel.....	53	A. Steves.....	46
E. Mittendorf.....	49	W. Brummer.....	49	A. Altmann.....	56	A. Guenther.....	56
O. Heilig.....	44	W. Fays.....	49	G. Giesecke.....	49	Texas Field.....	56

198	187	266	263
-----	-----	-----	-----

Team shoot, 5 men to each team, off-hand, two shots at 125, 175 and 225yds.:

San Antonio No. 1.		San Antonio No. 1.		New Braunfels.	
E. Seffel.....	55	A. Altmann.....	51	E. Gruene.....	26
A. Uhl.....	42	G. Altmann.....	46	S. V. Pfeuffer.....	42
Texas Field.....	40	A. Steves.....	45	L. Simon.....	40
A. Guenther.....	41	E. Dreiss.....	38	E. Mittendorf.....	51
E. Steves.....	48	G. Giesecke.....	35	J. Corett.....	27

Sweepstake No. 1, 2 shots each at 125, 175 and 225yds., any sights desired, muzzle rest: Texas Field 57, E. M. Seffel 50, S. V. Pfeuffer 56, J. Sigler 56, G. Altmann 55, F. Marquart 54, Dr. Herff 54, O. Heilig 54, A. Altmann 54, J. Schabel 52.

Sweepstake No. 2, same as above: A. Uhl 61, S. V. Pfeuffer 58, O. Heilig 57, A. Guenther 57, Dr. Herff 56, G. Reiningher 56, F. Marquart 55.

Sweepstake No. 3, off-hand, 2 shots at 125, 175 and 225yds.: E. Dreiss 48, A. Guenther 45, Texas Field 40, A. Uhl 39.

Sweepstake No. 4, rest, 2 shots at 125, 175 and 225yds.: W. Conrads 60, E. Gruene 60, S. V. Pfeuffer 60, H. Weidner 57.

Sweepstake No. 5, same as above: J. Fey 62, O. Voges 60.

Only the winners are given as the itemized scores would make the report too voluminous. One winner to every five men is the proportion.

Prize shoot, 4 shots each, at 125, 175 and 225yds., open sights: J. Schnabel 115, H. Weidner 114, G. Reiningher 114, W. Knepper 112, E. Mittendorf 110, Jos. Fey 107, S. V. Pfeuffer 107, Aug. Reiningher 107, Wm. Conrads 105, F. Scholl 105, A. Hartmann 104, O. Voges 104, Wm. Kellermann 103, E. Gruene 102, L. Simon 102.

As will be seen by the above score, the San Antonio contingent was conspicuous by its absence. They refused to shoot open sights, as they thought the restriction was a violation of the State Association law, and—they didn't shoot, that's all.

At the meeting of the association, held on the evening of the 5th at Heilig's Hall, Capt. Ernst August Dosch, of San Antonio, was elected president; Mr. O. Voges, of Vogel's Valley, was chosen vice-president, and F. W. Steuve, of the above place, was returned as secretary.

The next meeting of the association will take place next year at Vogel's Valley, where all riflemen who will attend will be given a good time. Thus closed one of the most pleasing events of the kind that ever took place in this State. The riflemen were all happy and contented, and the State Association received a favorable boost that will push its existence away into the future.

O. C. G.

### How Do They Do It?

MORGANTOWN, W. Va.—Editor *Forest and Stream*: We have noticed lately in the rifle columns of *FOREST AND STREAM* certain scores made at 200yds., and of such excellence, it has raised a desire on our part to know certain particulars in regard to the same, especially in regard to the rifle that would perhaps be overlooked by the beginner, but carefully noted by the expert marksman and treasured up for his own future use and comfort.

I refer to the 100-shot scores of Messrs. Dorrier and Ross. It is my opinion that the majority of the rifles in the hands of the marksmen of New York city and vicinity (I wish to be understood as including each and every rifle that would be found at a big shoot at Union Hill or Cypress Hills Park), if used as the marksmen owning them usually use them during their shooting, and placed on a machine rest, are incapable of making such fine scores as referred to. Then how is it the two shooters can do so finely, and shooting off-hand, too. Their rifles must be perfect and their manner of manipulation must be uniform. Do they clean their shot? Do they use paper patched bullets? Do they weigh their powder? Is the bullet seated in the chamber or in the barrel? What make and grain of powder does each one use, etc. These are points of interest to the hundreds of your readers would be glad to know. Will your "Rifle Notes" editor tell us all the particulars? W. MILTON FARROW.

### How They Do It.

In another column in this week's issue will be found a communication from an old time acquaintance and expert rifleman, W. Milton Farrow, a man who a few years ago, if not at the present time, stood at the head of the rifle fraternity in America. This old veteran and champion in many individual and team contests with the musket and target rifle in the years now gone, and whose record is now a part of the history of the best records made by our American riflemen heretofore, in order to keep in touch with the new developments of the sport, he has retained his affinity for the *FOREST AND STREAM*, and through a perusal of its columns he finds some matters recorded there in reference to high scores that are past his belief. He refers to the fine work which has lately been done by Messrs. Dorrier and Ross in their practice, and expresses his personal opinion that the rifles used by a majority of our New York riflemen could not be made to record such totals if the same rifles were shot from the machine rest of experts, and queries how can these two shooters do such fine work in off-hand shooting? He combines the entire group of riflemen and their rifles in his doubt, and then singles out the two men who are the most expert of the whole group, and envelops them in his mantle of personal doubt.

Of the men mentioned by Mr. Farrow, one of them, Mr. Dorrier, is well known to Mr. Farrow, for he has met Dorrier in many a match before the latter, and he should know the caliber of the latter as a marksman at the 200yds. range. He is now shooting in more perfect form than ever. His rifle (Ballard action) with a specially made Remington barrel (.35-55), 32in. long, is probably as near perfect in its shooting qualities as any breech-loader that has ever been turned out by any factory up to date. He uses a patched bullet made and patched by himself, the bullet weighing slightly over 55grs. His rifle is .32cal., chambered for the Ideal Co.'s powder; he uses no oil upon his cleaning cloths, but leaves his barrel perfectly clean and dry inside. Mr. Dorrier claims that his rifle when properly field will (barring wind) place 100 shots within a 4in. circle at 200yds. As regards Mr. Ross, he is one of the younger group of experts who have come to the front within the past five years. He is a disciple of the late Geo. Shalk system (a breech-loader with the bullet seated from the muzzle), his rifle is .32cal., chambered for the 32-40 shell, using a bullet (grooved) weighing about 160grs.; his powder charge is 35grs. FG Hazard, loaded from the new Ideal measure. With this rifle Mr. Ross has made many fine scores, both from the machine and in off-hand shooting. In a match with Geo. Schlicht, at Union Hill Park, some three years ago, he made a total of 2,312 in his 100 shots, every one being within the 13in. bullseye. It is claimed for this rifle that under favorable weather conditions it will shoot as close as the best breech-loader with a patched bullet.

Among the other members of the Zettler Club nearly all use the lubricated bullet in their rifles, each one has his own mode of loading and manipulating the rifle, and there is hardly one that won't guarantee to group a series of shots inside of a 5in. circle.

In *FOREST AND STREAM* issue of Dec. 7, 1893, can be seen a group of 50 shots fired consecutively from the machine rest without cleaning and without manipulating the rest.

I have before me a target containing a group of 25 shots from the machine out of R. Busse's rifle and shot by Barney Zettler, lubricated bullets seated from the muzzle. Taking the center of the group from the extreme shots and dividing the target into rings as per the German ring target, the shots score ten 25s, eleven 24s, three 23s and one 22, the latter shot only the 1-32in. from the finely drawn 31-line, an average of 24.2 for each shot.

I have also before me another target containing a group of 25 shots made with the same rifle that the target referred to in issue of Dec. 16 was made with. The latter target was shot without cleaning, using 55grs. FG Hazard FG powder, lubricated bullet (ideal mould) weighing 294grs. The entire group is enclosed within a rectangle 4 1/2 x 4 1/2 in. the last 10 shots of the group was caught upon a separate card and is enclosed within a rectangle 2 1/2 x 2 1/2 in. Measuring string measure 5 3/4 in.

The above scores and targets are all the data that I have before me at this moment, and trust that these few explanations will, in a measure, clear away the doubt that befalls the belief of friend Farrow; if not, then let him do as another worthy shooter from the Far West did once upon a time: Should his rifle and kit and come down to New York and be convinced.

PLAISTED.

### Cincinnati Rifles.

CINCINNATI, O., May 6.—The Cincinnati Rifle Association held its regular practice shoot at its range to-day and made the scores appended, at 200yds., off-hand, at the Standard target; light was poor to-day and a fluctuating wind coupled with a storm made the shooting irregular and unsatisfactory:

Guindele.....	10	10	8	8	10	10	10	8	7	—91	
	10	8	7	7	9	10	8	8	8	—85

## Big Shooting on the Climax Grounds.

The Climax Gun Club scored a big success on Wednesday, May 9, when it engineered an all-day tournament in connection with the monthly prize contest of the New Jersey Trap Shooters' League. The shoot was held on the club grounds at Panwood, adjoining Benner's Road House. The grounds were in the pink of condition. The five "amateur" traps, the latest output of the Empire Target and Trap Company, were placed in such a position that at no time during the day were the shooters annoyed by having the sun in their eyes. The background, however, comprised of a heavy woodland, is rather inclined to make the shooting rather monotonous when the targets were thrown toward the side of the hill. The woods, however, is to be cleared off in the near future and then the Climax will be able to claim a sky background. The members of the club claim at present that the man who can hold up a good average on their grounds is competent to shoot in any company.

The weather was all that could be desired and the attendance of both spectators and contestants was large. "Jack" Benner, the genial host of the road house, had provided benches and chairs in such quantities as to enable everybody to take matters cozy. A good lunch was at hand, but everybody missed the hot coffee which is one of the indispensable at a trap shoot. The force of hunters was rather shorter than usual, "Dutchy" Smith being confined to his bed with an attack of inflammation of the lungs and Neaf Ager being laid up with a severe attack of malaria. This threw the work on the shoulders of "Tee Kay" Keller, but the aforesaid shoulders being fairly broad he did not stagger under the burden. Valuable assistance was rendered him by Dan Terry and Tom Brantingham. The work in the cashier's office was done by Sam Wilbur, who is a veteran at the business, having presided over the cash box during all the big tournaments of the (defunct) Middlesex Gun Club held at Dunsellen. Wilbur is one of the few men who can run a cashier's office, take entries, figure percentages, pay out money and at the same time answer any and all questions leveled at him without becoming rattled. Enoch D. Miller, the league manager, was in charge of the league team shoot which was run off quick. League secretary and treasurer Hobart was at the Ohio State shoot, this being the first New Jersey league shoot he has ever missed. There was no fault to be found with the management, as everything ran along as smoothly as could be.

Despite the fact of these not being high score grounds the shooting during the day was of a high order, and the man who struck anything below an 85 per cent. gall stood little if any chance of coming out safe. Empire targets were favorably commented on by all who watched the steady, graceful flight of the targets. If the work done by these new targets at this shoot is any criterion to judge by they should become popular.

The Maplewood team, who it will be remembered, recently raised the League team record from 117 to 118 breaks out, possibly 125, duplicated their previous performance to day, and but for the fact that J. Warren Smith was compelled to shoot a strange gun, they would have made another new record. Four of the team who shot in one squad gave such an exhibition as is seldom seen, breaking 98 out of their possible 100 targets, Yeomans, Sickley and Drake making clean scores of 25 each, and Van Dyke scoring 23.

Another surprise of the day was the fine aggregate of 114 breaks, giving them second place. This club is rapidly coming to the front as a body of hard shooters, and with continued practice will hustle some of the older clubs. They shoot on the second and fourth Saturdays of each month on Al. Heritage's Marion grounds, usually with a full turn out. There were three full scores made, these being credited to Drake, Sickley and Yeomans; Hoffman, Brantingham and McPeck got 24 each, while 23 were rolled up by Van Dyke, Collins, Creveling, Quimby, Booraen and Miller.

In the sweepstakes shooting during the day Van Dyke distinguished himself by breaking 110 out of 115 targets shot at, an average of 95.65%. He says the new Winchester ammunition was responsible.

Below will be found the scores of the day:

## California Tournament.

SAN FRANCISCO, May 1.—The Mid-Winter Exposition tournament at bluebirds held on the Exposition grounds April 28 and 29, was a pronounced success. Sportsmen were in attendance from all parts of the State. Bluebirds were used. The medal shoot was won by C. Cate, of the Lincoln Gun Club, with Wm. Carnduff, of the Redwood City Gun Club, second. The team match resulted in these scores:

Lincoln Gun Club No. 1.		Lincoln Gun Club No. 2.

# Standard Works for the Sportsman's Library.

ANY BOOK HERE NOTED WILL BE SENT POSTPAID ON RECEIPT OF PRICE BY THE FOREST AND STREAM PUBLISHING CO., 318 BROADWAY, NEW YORK.

## ANGLING.

### The American Angler's Book.

Combining the natural history of sporting fish, the art of taking them, with instructions in fly-fishing, fly-making and rod-making, and directions for fish breeding. Description of salmon runs, inland trout fishing, etc. By THAD. NORRIS. 80 illustrations. Cloth. Price, \$5.50.

### American Fishes.

A popular treatise upon the game and food fishes of North America, with especial reference to habits and methods of capture. By G. BROWN GOODE. With numerous illustrations. Cloth, 496 pages. Price, \$3.50. This is, by far, the most popular work which has ever been published on the fishes of America, and is the book that no angler who takes pleasure in knowing the fishes which afford him sport, can afford to miss.

### Book of the Black Bass.

Comprising its complete scientific and life history, together with a practical treatise on angling and fly-fishing, and a full description of tools, tackle and implements. By JAMES A. HENSHALL, M.D. Illustrated. Cloth, 470 pages. Price, \$3.00. Dr. Henshall's monograph is the standard work.

### More About the Black Bass.

Being a supplement to the "Book of the Black Bass." By JAMES A. HENSHALL, M.D. Fully illustrated. Cloth, 204 pages. Price, \$1.50. This is a supplement or sequel of Dr. Henshall's first volume, in which the author's aim is to bring the subject matter down to date.

### Fly-Fishing and Fly-Making for Trout, etc.

By J. HARRINGTON KEENE. With plates of the actual material for making flies of every variety. Illustrated. Cloth, 160 pages. Price, \$1.50. The matter of the book embraces everything which the fly-fisherman wants to know about the senses of fish, practical fly-fishing, casting and fly-making; with list of standard flies and their dressings; the feathers, silk and other material used in fly-making, there are samples of all, attached to blank sheets like pictures by way of illustration.

### Fishing Tackle.

Its Materials and Manufacture. A practical guide to the best modes and methods of making every kind of appliance necessary for taking fresh-water fish and for the equipment of the angler and fly-fisher. With 454 illustrations and explanatory diagrams. By J. HARRINGTON KEENE. Price, \$1.50.

### With Fly-Rod and Camera.

By EDWARD A. SAMUELS, President of the Massachusetts Fish and Game Protective Association, author of "The Ornithology and Oology of New England and Adjacent States and Provinces," "Among the Birds," Associate Editor of "The Living World," etc., etc. Cloth, 480 pages (7x9 1/2 in.), 147 illustrations. Price, \$5.00. The author is known as one of the most devoted and expert salmon fishermen of America. The volume is likewise noteworthy as an example of the rare possibilities of amateur photography.

### Fly-Rods and Fly-Tackle.

Suggestions as to their Manufacture and Use. By HENRY P. WELLS. Illustrated. Cloth, 364 pages. Price, \$2.50. The most exhaustive work on the subject in print.

## MANUALS.

### Game Laws in Brief.

Laws of the United States and Canada Relating to Game and Fish Seasons. For the guidance of sportsmen and anglers. Compiled by CHARLES B. REYNOLDS, Editor of *Forest and Stream*. Paper. Price, 25 cents. Gives all sections relative to game and fish seasons, limit of size or number, non-residents, transportation, etc. All in brief, but full enough for the practical guidance of sportsmen and anglers. Carefully compiled, and shorn of verbiage. Handsomely illustrated with numerous half-tone engravings from *Forest and Stream*.

### Woodcraft.

By NESSEMY. Cloth, 160 pages. Illustrated. Price \$1.00. A book written for the instruction and guidance of those who go for pleasure to the woods. Its author, having had a great deal of experience in camp life, has succeeded admirably in putting the wisdom so acquired into plain English.

### Tricks of Trapping.

Camp Life in the Woods, and the Tricks of Trapping and Trap Making. Containing hints on camp shelter, all the tricks and bait receipts of the trapper, the use of the traps with instructions for the capture of all fur-bearing animals. By W. HAMILTON GIBSON. Illustrated. Cloth, 200 pages. Price, \$1.00.

### Log Cabins.

How to Build and Furnish Them. By WILLIAM S. WICKS. Now and enlarged edition. Price, \$1.50. Mr. Wicks might have called his book "Every Man His Own Log Cabin Builder," for he has set out to describe fully and particularly each detail in the process of construction. Plans are given for cabins, large and small, with details of exterior and interior.

### Hints and Points for Sportsmen.

Compiled by "SKEKE." Cloth, Illustrated, 224 pages. Price, \$1.50. This compilation comprises six hundred and odd hints, helps, kinks, wrinkles, points and suggestions for the shooter, the fisherman, the dog owner, the yachtsman, the canoeist, the camper, the outer, in short for the field sportsman in all the varied phases of his activity.

## SHOOTING.

### Names and Portraits of Birds

Which Interest Gunners, with Descriptions in Language Understood of the People. By GUNSON TRUMBULL. Cloth, 222 pages. Price, \$2.50. The average gunner with this work at hand would have little difficulty in identifying the contents of his bag from the text alone. Identification is further facilitated by portraits of the birds.

### Antelope and Deer of America.

A comprehensive scientific treatise upon the natural history, including the characteristics, habits, affinities and capacity for domestication, of the Antilocapra and Cervidae of North America. Second edition. By JOHN DEAN CATON, LL.D. Cloth, 426 pages, 50 illustrations; steel portrait. Price, \$3.50.

### The Gun and Its Development.

With Notes on Shooting. By W. W. GREENER. Breechloading Rifles, Sporting Rifles, Shotguns, Gunmaking, Choice of Guns, Chokeyoring, Gun Trials, Theories and Experiments. Fully illustrated. Cloth, 770 pages. New edition. Price, \$2.50.

### The Art of Shooting.

An Illustrated Treatise on the Art of Shooting. With Extracts from the Best Authorities. By CHARLES LANCASTER. Illustrated with numerous drawings from instantaneous photographs. Price, \$3.00. New edition.

### Field, Cover and Trap-Shooting.

By CAPTAIN ADAM H. BOGARDUS, Champion Wing Shot of the World. Embracing Hints for Skilled Marksmen; Instructions for Young Sportsmen; Haunts and Habits of Game Birds; Flight and Resorts of Waterfowl; Breeding and Breaking of Dogs. With an appendix. Cloth, 493 pages. Price, \$2.00. There is no other man in this country—or in any other, for that matter—better fitted to teach a novice the art.

### The Still-Hunter.

A Practical Treatise on Deer-Stalking. By T. S. VAN DYKE. The information contained in "The Still-Hunter" is as exhaustive as it is possible to make it. 390 pages. Price, \$2.

### The Breech-Loader and How to Use It.

288 pages. Price, \$1.00. A book for that numerous class of sportsmen who delight in a day's shooting, but have neither the time nor the means to make the sport a life's study.

## CAMP AND HOME.

### Uncle Lisha's Shop.

Life in a Corner of Yankeealand. By ROWLAND E. ROBINSON. Cloth, 187 pages. Price, \$1.00. "Uncle Lisha's Shop" is brimful of quaint humor and sentiment, and there is an unmistakable touch of human nature in Uncle Lisha himself and his good old wife, Aunt Jerushy; in Sam Lovel, the hunter, and in fact in all the other characters introduced.

### Sam Lovel's Camps.

A sequel to "Uncle Lisha's Shop," by ROWLAND E. ROBINSON. Cloth. Price, \$1. When Uncle Lisha went West, Sam Lovel took Antoine as his partner, and the fortunes and misfortunes of the two as trappers are described with all the charm of our author's quaint style, while their friends and enemies, and all with whom they are brought into contact, in the course of the story, step on to the stage real living creatures.

### Pawnee Hero Stories and Folk-Tales,

With Notes on the Origin, Customs and Character of the Pawnee People. By GEORGE BIRD GRINNELL. Cloth, 417 pages. Illustrated. Price, \$1.75. New edition, revised. Like most Indian tribes, the Pawnees are story tellers. They have a vast fund of folk-tales and traditions, which have been handed down from father to son, and transmitted from generation to generation. Years ago, when the tribe lived in Nebraska, the author of the present volume camped and hunted with them, and joined in their village life. The nights were given up to story telling, and many of the tales told in the lodge and by the flickering camp-fire were carefully translated and written down. When published they excited great interest. They are tales of daring and adventure, weird accounts of magic, mystery and the supernatural; relations of the ways of life in the old, wild days; stories of war and the craft of war parties, the history of the tribe as treasured by the very old men. There is mother-wit in these stories, they are full of humor, sentiment, pathos and human nature.

### Blackfoot Lodge Tales.

The Story of a Prairie People. By GEORGE BIRD GRINNELL. Cr. 8vo., \$1.75. In this volume the story of the Blackfoot tribe is told by a friend, one who has hunted with them on the prairies, slept in their lodges, lived in their camps, and shared their daily life. The stories which constitute this history have been taken down by the author from the lips of the narrators, and are given without change as told to him. There is a singular and charming freshness about the stories, which give the history of renowned warriors of ancient and modern times, show how ancient customs arose, and explain natural phenomena. The account of the daily life, customs, and history of the Blackfoot presents a series of graphic pictures of savage life in peace and in war.

### Our New Alaska;

Or, The Seward Purchase Vindicated. By CHARLES HALLOCK. Cloth, 200 pages, illustrated. Price, \$1.50. Mr. Hallock's writings are always vivid and full of life.

## THE KENNEL.

### Dogs: Their Management and Treatment

IN DISEASE. A Study of the Theory and Practice of Canine Medicine. By ASHMONT. Cloth, 208 pages. Price, \$2.00. The *Forest and Stream* says that this is one of the most valuable treatises on canine management and therapeutics that has appeared on this side of the water.

### Kennel Record and Account Book.

Boards, \$3. An indexed volume of 180 pages, consisting of a series of carefully prepared blank entry forms suited to the registration of all kennel events and transactions.

### Dog Points and Standards.

First Lessons in Dog Training, with the Points and Standards of all Breeds of Dogs. Paper, new edition, 106 pages, revised to date. Price, 50 cents.

### Training vs. Breaking.

Practical Dog Training; or Training vs. Breaking. By S. T. HAMMOND, Kennel Editor of *Forest and Stream*. Revised and re-written. To which is added a chapter on training pet dogs, by an amateur. Cloth, 165 pages. Price, \$1. A book for dog owners, who, by the instructions here plainly given, can successfully train their hunting dogs.

### Modern Training;

Handling and Kennel Management. By B. WATERS. Illustrated. Cloth, 373 pages. Price, \$3. This treatise is after the modern professional system of training. It combines the excellence of both the suasive and force systems of education, and contains an exhaustive description of the uses and abuses of the spike collar.

### House and Pet Dogs;

Their Selection, Care and Training. Paper, price 50 cents.

### Lee's Modern Dogs.

History and Description of the Modern Dogs (Sporting Division) of Great Britain and Ireland. By RAWDON B. LEE, kennel editor London *Field*. Illustrated, 684 pages. Price, \$6. This is a standard work by an acknowledged authority, and is up to date. It treats all sporting breeds exhaustively. The illustrations are idealized portraits of typical specimens.

### Kennel Secrets.

How to breed, exhibit and manage dogs. By ASHMONT. The dog from the time he is conceived to the time he curls himself up for his last long sleep is treated from every standpoint that could possibly occur to a man of wide experience with dogs. Every important subject that has engaged attention has been fully discussed, generalities being held practically valueless and misleading. Illustrated, 344 pages. Price, \$3.00.

### The Spaniel and Its Training.

By F. H. F. MERCIER. To which are added the American and English Spaniel Standards. Cloth. Illustrated. Price, \$1.

### Scientific Education of Dogs for the Gun.

By H. H. Cloth. Price, \$2.50. The instructions are the result of the author's amateur practical experience of 37 years. *Forest and Stream* says: "This work is a very well written treatise upon the subject, containing some new ideas and much that is interesting and instructive to the new beginner as well as not a little that will be beneficial to even old hands to study."

## YACHT AND CANOE.

### Small Yachts.

Their Design and Construction, Exemplified by the Ruling Types of Modern Practice. With numerous plates and illustrations. By C. P. KUNHARDT. New ed., 470 pp. of type and illustrations and 87 plates. Size of page, 14 1/2 x 12 1/4. Price, \$10. This book is intended to cover the field of small yachts, with special regard to their design, construction, equipment and keep.

### Steam Yachts and Launches;

Their Machinery and Management. By C. P. KUNHARDT. With plates and many illustrations. New ed., 267 pp. Price, \$3.00. A complete review of the development and present status of the marine engine and boiler as applied to steam yachting.

### Canoe and Boat Building.

A Complete Manual for Amateurs. Containing plain and comprehensive directions for the construction of Canoes, Rowing and Sailing Boats and Hunting Craft. By W. P. STEPHENS, Canoeing Editor of *Forest and Stream*. Cloth. Fourth and enlarged edition, 264 pages, numerous illustrations, and fifty plates in envelope. Price, \$2.00.

### Canoe Handling.

The Canoe: History, Uses, Limitations and Varieties, Practical Management and Care, and Relative Facts. By C. BOWYER VAUX ("Dot"). Illustrated. Cloth, 168 pages. Price, \$1.00.

### Yacht Architecture.

By DIXON KEMP, Associate of the Institute of Naval Architects and Member of Council. Second edition. Super-royal 8vo., 530 pages, numerous plans and designs. Price, \$16.80.

### A Manual of Yacht and Boat Sailing.

By DIXON KEMP, Associate Institute of Naval Architects (Member of the Council). 750 pages, with numerous plans and designs. Price, \$10.

# FOREST AND STREAM.

## A WEEKLY JOURNAL OF THE ROD AND GUN.

TERMS, \$4 A YEAR. 10 CTS. A COPY.  
SIX MONTHS, \$2.

NEW YORK, SATURDAY, MAY 26, 1894.

### "FOREST AND STREAM" CONTRIBUTORS.

#### II.—"KELPIE."

WHEN one is found doing business under an assumed name, there is not of necessity anything suspicious about it, for the man may have reasons which involve nothing questionable. In Central Lake, Michigan, lives a merchant known to his townspeople and business associates as F. H. Thurston, whose real name is "Kelpie." We could prove this by a roll call of witnesses from those who have been well acquainted with him for years. A few hundred at the most could be produced to testify that they knew him to be F. H. Thurston, while we could bring thousands to prove that he was known all over this wide land as "Kelpie." These hosts of witnesses would be found among FOREST AND STREAM's readers, for as "Kelpie" he has long been known as one of the favorite contributors to this journal. Why he should choose to do business under another name we need not inquire. Possibly it is because he thinks that he can protect "Thurston," while it is well known that a year or two ago some pretender in Mississippi or Tennessee attempted to steal the name and fame of "Kelpie."

The writings from his pen appearing in these pages have shown their author to be a sportsman naturalist, possessed of culture, refinement, vigor of thought, and those traits of character which are esteemed both at home and in camp. Whatever the contention as to his true name—Thurston or Kelpie—among those who have known him as one or the other, there would be none as to these qualities of the man.

We are happy in having an excellent portrait of "Kelpie" to go with the pleasant words written of him by a comrade in the "Camps of the Kingfishers." There is no more searching test of one's disposition than the intercourse of camp life. It proves him for what he is. To record, as "Old Sam" does of "Kelpie," that he comes out of such a test stronger in the affectionate esteem of his fellows, and closer in companionship with them, is to say about as much of one while living as a modest man like "Kelpie" would care to hear of himself; and not much more could be said of one even in an obituary.

As for our portrait, we assert and declare it to be a true likeness of "Kelpie," however much it may differ from the thousand and one mental portraits pictured of him by his friends who have never seen him face to face. When "Von W." happened in here the other day and saw the photograph, he declared that it answered his notion of "Kelpie" completely. Others seeing it have averred that it altogether upset their mental photograph. But however this may be, the mere fact that a man does not look as others who have never seen him imagine that he does, is not his fault, and should not be made the occasion of harboring a grudge against him.

On account of Decoration Day the FOREST AND STREAM will go to press on Monday of next week, instead of on Tuesday as usual.

### SNAP SHOTS.

• EIGHT years have elapsed since we recorded in these columns the successful results of the planting of salmon in the Hudson River. It was in June of 1886 that the first comers from the sea made their appearance, and since then the fish have returned in due season, and have sought passage to the upper waters for the purpose of spawning. They have come back in such numbers as abundantly to demonstrate the adaptability of the river as a salmon stream. Provided the spawning fish could reach the headwaters, the stock would presumably in time maintain itself. But when the fish attempt to go up the stream they encounter insurmountable dams, and are balked of their purpose. The river can never be stocked permanently until means shall have been provided for the passage of the dams.

There will not be salmon in the Hudson until there shall be fishways in the dams.

There will not be fishways in the dams until public sentiment shall demand them.

Public sentiment will not demand fishways until public education shall awaken that sentiment.

Public education on this topic will not be accomplished until a systematic, persistent and intelligent presentation shall be made of the facts.

It is precisely to such a campaign of education that the Mohican Rod and Gun Club, of Glens Falls, has addressed itself. The club has set out "to secure fishways in the upper Hudson in order that salmon may have an open passage to and from the sea." The first move was to hold a public meeting at which were present the representative business men of Glens Falls, when a paper was read by the president, Mr. A. N. Cheney, giving a clear and forcible presentation of the subject. The next step was to print this admirable address in the local paper; and then to reprint it in circular form for distribution broadcast. The facts and figures and sentiment and logic of the campaign document are certain to do good work; and if the Mohicans shall follow up the work as vigorously as it has begun, the Hudson River fishways may be regarded as accomplished facts. Copies of the address may be had on application to Secretary C. H. Baxter, Glens Falls. The club invites and should receive the active co-operation of intelligent citizens everywhere. The stocking of the Hudson with salmon is an enterprise which concerns the entire State; and public-spirited men everywhere should work for it.

The question of commercial fishing methods as affecting the fish food supply came up for discussion again in the meeting of the American Fisheries Society last week. The subject is one of vast importance, and also of complexity and magnitude. To discuss it to advantage demands not only large information, but a certain unbiassed and judicial spirit, which has not been characteristic of its debate in the Society. Persuasion of either side to accept the views of the other is less likely than the stirring up of bad blood and heated tempers. Under these circumstances it may appear to be the part of wisdom for the Society to confine itself to other branches of the fishery interests, which while of prime importance are less likely to excite dissensions. There are some things which a voluntary association may accomplish, and others which would better be left to government commissions. If ever we have an adequate investigation into the subject of commercial fishing methods and the fish supply, it will be the work of a capable commission assigned to the work by State or National authority.

Last week we recorded the adoption of a new law in Ohio prohibiting the killing of quail for exportation or sale, a piece of legislation directly in line with FOREST AND STREAM's platform plank, that the sale of game should be forbidden at all seasons. Chief Game and Fish Warden A. D. Stewart, of Ontario, sends a new law of that Province which is likewise in line with the platform plank. It is an iron-clad prohibition of traffic in snipe, woodcock, partridge, quail and wild turkey prior to the autumn of 1897.

The widespread storm which during the past week has raged over the whole country east of the Mississippi caused enormous damage to industries of every description. Floods and winds have devastated shipping and farms; railroads have been washed out, mines flooded,

towns submerged, and factories stopped. Seldom has there been a storm extending over so large a territory and causing such heavy loss. Amid the damage done must be reckoned that to our game birds, some of which have already begun the work of reproduction. The nests of the ruffed and of the pinnated grouse are already full of eggs, and many of these have been chilled by the cold rains or washed away by the risen streams. On the coast the east winds have pushed up unusually high tides, the salt meadows have all been flooded, and the rails and marsh hens have been driven from their reedy retreats while their nests and eggs have been destroyed, and the poor birds are seen disconsolately wandering on the higher meadows or in the edges of the woods waiting for the waters to subside. It is better that this destruction should happen now than a few weeks later. In most cases the birds will breed again, and will successfully rear their second broods.

The New York (City) Association for the Protection of Fish and Game celebrated its semi-centennial last Monday evening with a banquet. The society was one of the pioneer organizations in this country to take up the work of game protection. The cause was one which depended then, as it does now, and as it will fifty years from now, upon the active individual and associated efforts of the comparatively small proportion of the community recognizing its importance. As a leader in the field the New York Association accomplished results the good influence of which has lasted to this day; and although its activity as a game protective force is now largely reminiscent, the Association deserves high honor and unstinted credit for its leadership and well-doing when it contended for an unpopular cause. Among the members in the past was Henry William Herbert, "Frank Forester."

Nothing definite has been learned of the case of the two American steamers, the Brooks and the Visitor, which were seized for bass fishing in the Canadian waters of Lake Erie. A report from Amherstburg, Ont., where the vessels were taken, indicates that one of them may be held on the charge of fishing in the close season of 1893. There is some ground for suspecting that, what ever may be the merits of the case, the seizure was the outgrowth of bad feeling between the local residents and the American anglers.

The organization of the Colorado State Sportsmen's Association has come at a time when its field of usefulness is extensive and well marked. The Salida sportsmen who have begun the work are in earnest; and we hope to record a generous support and co-operation on the part of the entire State. Colorado has a game warden system; that is half the battle. This new Association can work no more effectively than by holding the wardens to doing their duty and supporting them in it.

We print to-day the third paper in the report of the FOREST AND STREAM's Yellowstone Park Game Exploration. It has to do with the proposition to put a railroad through the Park, or to cut off a portion of the Park that a railroad to Cooke City may have way. It gives expression to the public sentiment in Montana opposed to the scheme, as in last week's issue was given the sentiment in favor of it. Both sides have now been represented. We invite careful reading of them both, in conjunction with one another.

Dr. Charles W. Dulles of Philadelphia read before the Pennsylvania State Medical Society last week a report on "Hydrophobia," in which he declared that only thirteen cases of the disease per annum occur in this country, or one case to 4,500,000 people. The truth appears to be that most cases thought to be of hydrophobia are of something else.

Never in Season—"His Mooseship," "His Bearship," "His Grouseship," "His Snakeship," "His Sharkship," "His Bassship," et id genus omne, which being translated means the whole tribe of beasts and birds and fishes and reptiles with maritime attachments or navicular appendages.

The Maine Sportsmen's Fish and Game Protective Association recently ordered from Sweden twelve capercaillie and twelve black game. Of these five of the capercaillie and six of the black game were received alive.

## DEER, DUCKS AND CRANE IN MEXICO.

SAN LUIS POTOSI, Mexico. — Nobody in Mexico is expected to work during the *semana santa*. But it is all right to amuse yourself. I am not quite sure why it is considered so much more irreligious to work than to play. But it is characteristic of the country. Easter comes rather late in the season for hunting, but from President Diaz down about every man in this land who loves a gun takes advantage of the last days of Lent for a little outing. Not to be out of fashion I went myself.

Eleven o'clock A. M., and the sun coming down straight and hot, found three of us at the little station of Las Tablas. The country around the lonesome station house is an alkaline flat, apparently once the bottom of a lake. It is covered with coarse marsh grass and the salt water goes wandering mysteriously about through it, now above ground forming a neat little pond and now disappearing with a gurgle to come to light a hundred yards away a limpid stream. It looks good, but it tastes "pizen." The burros and other natives drink it freely, but it doesn't combine with the interior economy of a civilized man. A big cedar brake fringes the open plain and straggles along the borders of the ponds. A mile back of the station a long rocky ridge springs from the flat some 300ft. in height and several miles in length. There are usually deer to be found on this ridge, and though rough it is open and a fairly good place to hunt them. In front of the station (north) lie the ponds, of all shapes and sizes, and scattered over hundreds of acres.

The sun was pouring down a dazzling white flood. The open spots recently covered with water were now incrustated with crystal salt-peter, white as snow. The heat was intense and quivering, but of all the cranks the hunter is the crankiest. We jointed our guns, filled our shell pockets and started after ducks. And we got 'em. A good many had left for the icy comfort of the North, but the ponds were still covered with them. They were all rolling in fat, preparatory to their long migration. The battle was hot, in more senses than one, for a little while, as they lazily flew back and forth between the ponds where we were stationed. But they gradually drifted away, under the lead of long-necked sprig-tails, to more distant waters, and we had time to compare notes and eat lunch.

My two companions decided to stay with the ducks during the afternoon. I took the string of dead ones with me to send home and went back to the station. There I rested till the up train came by at 4 P. M. and the Gulf breeze began to blow cool and sweet. The conductor took charge of the game and a note for the "wimmen folks," and I shouldered the old .45-90 cannon and started after deer. The end of March is no time for deer hunting, I know, but what would you? I had spent the winter in a benighted part of Tennessee where there are no deer, and this was my first chance.

I went down the track about a mile and started over a sort of gap in the ridge. A man's muscles get "vealy" if he stays out of the mountains too long. I had to stop often. Behind me spread the plain, mostly open, for ten miles or more. Between thin groves of mesquite and the denser copes of cedar stretched the long reaches of grass and alkali barrens. In time of heavy rains the whole plain is often under water. It has very little slope, and most of this water remains till evaporated. Occasionally I could hear the boom of my companions' guns, more than a mile away. Little groups of donkeys were scattered about, and every minute or so a long-drawn "ge-honk" from some of them would be the opening note in a general chorus, which rolled against the hillside and was taken up faint and more faintly in the misty distance. The burro's vocal apparatus would be a treasure to the railroads if steam could be applied to it. Its performance is as much out of proportion to the size of the animal as a flea's jump.

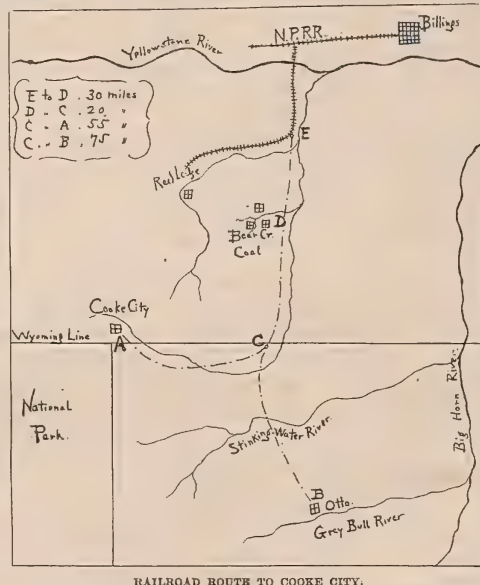

Just before turning the crest I took a final breathing spell. It was 5 o'clock, and I thought I might find something astir. Peeping cautiously over I saw that a steep gulch led down the opposite side, just in front of me. As I examined the shoulders of the ridge on either side I saw a deer wheel at sight of me and start to trot away, about 125 yds. off to my right. There was no time for nonsense, as he had only a few feet to go before disappearing. I brought the old gun around with a sweep, and caught a quick glimpse of the bulk through the Lyman sights. I never could have done it with any others. All was quiet as the smoke cleared away, and I slipped in another cartridge. Then out he came, bawling and thrashing the brush and rolling down the hill in a most disconcerted way. I couldn't get a bead on him to save me. When he got to the bottom of the gulch he stopped. My man ran along one hillside and I the other, and we headed him off and caught him. Both hindlegs were broken low down. (The shot was low, as I afterward found, because my sight had been tampered with.) I took out my knife and went to work in orthodox style. Bah! I'll never do it again. I felt like a cold-blooded murderer. As long as the game is up and alert and ready to escape at a breath, the excitement of getting possession sustains me. But once it is reduced to helplessness my heart fails. If ever I have to kill another wounded deer it shall be with the quick and merciful bullet.

My quarry was a four-point buck in fair flesh. Strange to say he still carried his horns, and though small they were in perfect condition. Can any one suggest a reason why the breeding season of deer in this country is a month or more later than in the United States? My man took him on his back and trotted off around the point of the hill. I went lounging back over the top. I didn't care to hunt any more. Going toward the station the wind was behind me and blowing hard. About half way down the hill I crossed the trail of two small deer going my way. I began to follow, but my heavy shoes crunched among the stones and the wind roared in a gale from me to them. They kept stopping just ahead of me, as I could see from the tracks, and once I caught a glimpse of one as he hopped across an opening. They were a precious pair of donkeys, and had it not been that everything was against me I should have got another scalp.

The other fellows brought in more ducks, and that night the wind blew quite cool, putting our game, which was hung up to air, in fine condition. Once game is thoroughly chilled it will keep for several days in spite of heat. Next morning we all took a round over the mountain, but no deer were seen. After following the ridge for two or three miles we came down into the valley, found a fine grove of mesquites shading a carpet of

marsh grass and had our lunch. Over a little fire we warmed the tortillas, beans, eggs, and coffee with piloncillo, which we had got from a good Mexican woman near by, and supplemented with them the canned meats and other contents of our bag. It is amazing what a vast capacity for destroying rations a single day's hunt will develop. We ate till everything had disappeared except a piece of raw bacon and some potatoes fried in a hair-lifting *chile* compound that vanquished even the cosmopolitan Spanish tooth carpenter, who was of the party.

Near by was a spring of alleged fresh water whence the railway people pump supplies for their engines. The genial pump man told us of a laguna near by where there were ducks galore and where the cranes still watered—such of them as had not departed for Canada. We found a flock of them resting on the shore when we reached it, but they promptly took their leave. The waters had dried up and left a wide stretch of bare margin all around. The ducks were plentiful but cover was not to be had. However, we surrounded the laguna, which was about half a mile long. I found a sharp point which had on it a few tufts of dried grass. At the first gun the ducks began to fly up and down and the fun commenced. Singles, double and in flocks, sprig-tails, widgeons, shovelers, baldpates, teal, they were everywhere and going in every direction. By the time they had begun to thin out a little I had quite a collection around me. I picked up the ones that had fallen on land and took them back to the shade where I had tied my dog. I intended to loose him to get such as were in the water. But while I was in the bush I heard the trumpet of a crane, and looking out saw a long double line coming across the water right toward me. They were prospecting, as they always do, to see if the coast was clear before lighting. I clawed the No. 6 loads out of my gun and reached for some No. 2s which I had in my pocket. It seemed to me that I never would get them into the chambers. As the gun closed with a

RAILROAD ROUTE TO COOKE CITY.

snap the big birds were passing right alongside about 60ft. high. I just stepped clear out into the open and put in a right and left as fast as my finger would work. The double thump on the marsh grass which followed made me grow about a foot. Uhm-m! but doesn't that kind of a shot put a good taste in your mouth!

I gathered up my slain, which made a brave show, as the ducks were getting on their spring clothes, and went back to my grass blind (?). Here I had a shot from time to time at passing ducks. I missed a good many of them. I suppose everybody does. They were at all heights and flying with greatly varying velocities, and this, in addition to their being of all sorts and sizes, made heavy demands on the shooter's experience and judgment. Occasionally I would make a shot that would cause me to hug both myself and gun in congratulation. After a good while I saw more cranes coming straight for me. It was too late to get back to the brush. I stuck my head in the grass and flattened out like a scared toad. Two loads of heavy shot that I had lying handy were slipped in, and as they came by at rather long range, I gave them a broadside. One old fellow dropped out, making a tremendous splash in the water. I heard the shot rattle on the other's feathers, but he went on. I was probably deceived by the distance and shot too straight at him. That is a fault that is hard to avoid with such large birds. But they really fly quite rapidly. The flock went on, and as they reached the upper end of the pond I saw one waver and drop out of line before the sound of Dr. E.'s quick double reached me.

That night we had a load. Four sandhill cranes and twenty odd ducks weigh a good deal when hung on a stick. And it was the fag end of a hard day's tramping and shooting. At the pump house we got help, and when the track was reached the boss of the section gang got out his little push car with true Mexican politeness and sent us all in.

Next day was Saturday, and our last. We got up early. I decided to try the deer again, and my companions to go to the cedar brake after turkeys. The hunt was a failure, though both deer and turkey are doubtless fairly plentiful. That afternoon the train was five hours behind time, and after it began to grow cool and we had rested from the morning round, we took our guns again and paid the ducks a call, P. P. C. It was a lovely little shoot. We added about a dozen to our collection, and came back to find an empty commissariat staring us in the face. There was a famine thereabouts. We had even drank up all the fresh water. The agent of the railroad had a barrel which was filled for him from the engines. It was empty, and not to be filled till next day. We had to drink pond water, with dead minnows, dirt and an original and only genuine smell for trimmings. But we survived, and the train did come at last. Moreover, the train men treated us "white" in the matter of carrying game and traps, and—and we would do it again.

## "Forest and Stream's" Yellowstone Park Game Exploration.

No. 3.

CHICAGO, Ill., May 12.—Last week I gave some expressions of opinion heard among the friends of the Cooke City Railroad through the Park, commonly known as the "segregation road" or the "segregation scheme." The latter is the better term. The project was never at any stage more than a scheme, and is now a good scheme because it is a dead scheme, thanks much to FOREST AND STREAM's repeated expositions of the facts. Facts are the deadliest medicine on earth for schemes. In the candid belief of many of the best Montana merchants and business men in general, there never was at any time any money behind the Cooke City Railway scheme except the fund raised by its adherents for the purpose of enlarging the disgraceful record of American lobbying. Actual capital to build the road is not now in evidence. Friends of the scheme say it once "could have been raised." Opponents to the scheme allege the opposite, and declare that all the pushers of the Cooke City scheme expected or wanted was to get the right of way. The right of way would of course be valuable even for the purpose of locating mineral claims, and as a salable franchise of course it would have a certain speculative value. The arguments used to back it were very plausible, very specious, very well-appearing, and especially strong in the two points most brought into play—sympathy for the industrious miners and the practical industrial development of a valuable portion of a great State. There are many Montana men who believe that behind these two masks of apparent sincerity there hides actually the visage of a selfishness and unscrupulousness which is either narrow or absolutely insincere.

It would be arrogating a very swift quality of wisdom to myself to claim that I knew all, or even much, about either side of this question, in regard to which there is so wide a local divergence of opinion, and I do not so claim. But I do claim that FOREST AND STREAM knows more about, and has gone to the bottom of it more fully, and has set forth the exact truths in regard to it more fairly and justly, than any other journal on earth, of any class whatever, and whether of Montana or elsewhere. To accuse FOREST AND STREAM of an Eastern prejudice when it is working for a Western benefit is unjust enough, but to accuse it of ignorance of the theme in hand is to show a local folly and ignorance hardly worth a good healthy contempt. It is my privilege and duty to add to the FOREST AND STREAM fund of information by telling, fairly and fully, what the men in Montana say about this segregation scheme. Last week I told what the friends of the scheme say. This time I want to quote a few men who do not believe in segregation. I think both the one and the other are going to be a little rough on the scheme itself, which is doubtless blessed by friends whose hot-headedness leads them to wild and injurious statements. Such intemperance of statement, I am bound in justice to add, I did not find among the opponents of this scheme, although I do not doubt they are just as much in earnest and just as apt to be in the fight at the end of the issue—if, indeed, the end is not already reached to-day.

## Capt. Anderson, Superintendent of the Park.

The representative of FOREST AND STREAM was entertained by Capt. Anderson at Fort Yellowstone, and one could hardly quote the unreserved statements of a host. This, however, is not necessary, for the position Capt. Anderson has always maintained as to the integrity of the Park is something too well known throughout Montana to require reiteration. The organs of the Cooke City faction have abused him continuously in the hot-headed, ill-advised fashion to which I have called attention, but in this abuse he takes a placid pride and satisfaction, regarding it as the highest possible tribute to his efforts at keeping the Park as it is, the property of the whole people and not of a few of the people. "The more they hate me, the better I shall like it," said he, "but just abusing the Park superintendent isn't going to scare the U. S. Army, and it isn't going to throw open this Park to poachers and land-grabbers. As to this road proposed, you just go over the route yourself and you will see the reasons why I or any other thinking man must oppose the idea. In the first place, any road in means all roads can come; in the second place, this road would ruin the Park and leave it without a boundary on the north, where now it has a very practical boundary; in the next place, this road is impracticable even if it were right to undertake it; and in the last place, and especially, to have that road built would be to kill all the antelope, and to practically cut off forever the thousands of elk which winter in the northeastern part of the Park. Moreover, and besides all that, this Park is too grand an affair to be touched. It is here, and let us keep it as it is. For my part, I love it, and I hope never to see it spoiled."

I suppose now I should add that I did go over the route of the proposed segregation railway, but the fact is, I didn't. Nobody ever has or ever will, in all probability. But our party kept away to the right of the white mountains that line the deep-sunken Yellowstone, along which the Cooke City road must go if it goes through the Park. We climbed the Gardiner Hill, about four miles straight up in the air, crossed the succession of hills and streams which cover that upper region, and ten miles further on ran down five miles more, steep as a house roof, into the valley at Yancey's. When it came to going back, some one jokingly proposed we return down the Yellowstone cañons, along the "railway" route. "My boy," said Uncle John Yancey, "you couldn't get down there in ten years." From this I infer that a railroad couldn't get up in ten years, also that it will not, even in a thousand years. If it ever does, it will have a good solid roadbed, sure, and plenty of snowsheds. As to the game which winters in the valleys making down the big river, I have already hinted and shall speak fully later. Capt. Anderson's reasons against the Yellowstone Valley road are patent to any one who knows that country as it actually is. Years of residence at the Park, and continuous exploration of it, would seem to give that knowledge to the superintendent of the Park.

Mr. J. D. Losekamp, of Billings.

Mr. Losekamp is a typical Western business man,

AZTEC.

shrewd, practical and quiet. To him more than to almost any other one man in his State belongs the credit of the exposure of the Cooke City Park railroad scheme. Contrary to local sentiment and local timidity, Mr. Losekamp stood out first alone and uttered the first word against the scheme to open the Park to the railroads. He wrote the first newspaper article against the Cooke City road that was ever written, and has since then seen local sentiment change and local papers adopt the side of reason all over the State. He has always been foremost in the fight against the Cooke City project in all its phases, and he has put out more information in regard to the true inwardness of the proposed deal than any other ten men together. It was he who obtained for FOREST AND STREAM the valuable letter from Civil Engineer P. M. Gallaher, published last fall, which showed the practicability of a road into Cooke City from the east, along the Clark's Fork.

"I notice that railroads are not doing things for fun," said Mr. Losekamp, "and they don't do things backward, either. Now, if there is mineral or coal to be had in that New World district, the bulk of it will have to go east for its main market. Does a railroad want to pull that stuff west over the divide through the Park, around by Cinnabar and Livingston, and then east again over the same mountains to get back toward the market it wants to reach? I don't think so. Mr. Oakes, of the Northern Pacific, didn't think so, either. He was over that western line, and saw Cooke City, and he reported that the Northern Pacific didn't want any of it. I can't see why a railroad should want to spend two or three million dollars making a road across a landscape, just for the sake of pulling its freight three times as far over grades three times as hard. Maybe they will, but I doubt it.

"On the other hand, we have the B. & M. assured for Billings. [A telegram announcing this was received by Mr. Losekamp during my stay at Billings.] This road, if once built into Cooke City, would be as good as any for that town, if it was only after an outlet, as it claims. But do they want any outlet from the west? Oh, no. Nothing but the Park route will do them. Why? Well, you just let the segregation scheme go through and you'll see why. Cooke City 'll have something to sell then, and it won't be ore, either. There isn't a dollar actually put up to build that road, though I don't doubt that the majority of the boys who have claims there are sincere in their belief that the road would be built if the bill once passed Congress. They are simply ignorant, though sincere. If the bill did pass, there would be a lot of money made before a shovel ever hit the dirt. Besides, long before that road was begun, the best of the Park would be handed out to other parties by way of other franchises. I can see no use for this. It's hard to get any road up to Cooke, and any engineer knows this, but the route from the east, up the Clark's Fork, has had the survey of a good engineer, and it can be built. No one claims so much for the Park route. If the Cooke City men have nothing up their sleeve, and are only anxious for an outlet, why should they oppose a cheaper and more practical route from the east side?

"Another thing is, strange as you may think it, after all you have heard of Chinooks, and that is, there is four times as much snow on the west side of the mountains around Cooke City as on the east side. I will leave that to your own observation. You see, the country the Cooke City road would have to cross is not west of the Continental Divide, but east, just as this is." [It was two weeks later than my Yancey's trip that I was at Billings, but the truth of Mr. Losekamp's remark was no less obvious than surprising. The snow was not there and it never is there in such quantity as in the Park. We drove far up the gentle Stillwater Valley and away up the Rosebud, but the ground was dry. On the opposite side of the range the snow was 8ft. on an average, in drifts 40ft. or more on the Blotail, when we left. It never averages so deep on the east slope at the same altitudes.]

P. M. Gallaher, C. E., Billings.

Mr. Gallaher has already favored FOREST AND STREAM with the most conclusive document ever published on this subject, and it is needless to repeat his statement as to the feasibility of the Clark's Fork route to Cooke City. Mr. Gallaher is the best known engineer in Montana. He had charge of the survey that ran the lines of the Timber Reserve of the Park for the Government, and has been all over that entire region, as probably no other one man has been except the old-time trappers and hunters. Mr. Gallaher I knew in this country twelve years ago, before he went to Montana, and even then he had a reputation. I can find no reason extant to-day for believing him anything but a conservative and accurate man, with the pride in his profession which is so singularly deep among civil engineers as a class. Mr. Gallaher said:

"So far as I know, no actual survey has ever been run over the Park route to Cooke City, nor do I think it will ever come to that, as any engineer can see the difficulties of the route proposed. Of course, you could build a road there, and you could build one anywhere, but it would cost more money than any road could pay interest on. The grades would be very severe, and the tremendous snows of that region would tie the road up half the year unless it were under shed. There must be a great incentive before such a vast outlay of money is begun, and the only incentive alleged is the mining camp of Cooke City. Certainly it has good mineral, but is that enough to show a corporation asked to put a road through such a country?

"On the other hand, on the Clark's Fork route you have distance in which to climb. Of course you know what that means. You can go any height, if you only have room to do it in. Now, you have been up the Stillwater and Rosebud valleys, and know the long grades of the streams coming down this side of the slope. The Clark's Fork is even more gentle, because it is much longer. You see the long horseshoe it makes. That gives us distance for our climb. Instead of heavy rock work all the way, we have a water grade for the greater part of the way. At the cañon of our stream we have unquestionably got a lot of expensive rock work to do; but we've saved enough money to have some left to do it with, and after you get over the cañon, you are in easier sailing again.

"Now, I'll draw you a little map. You know, there's a road already built up to Red Lodge. Suppose we call the point where this road makes its bend to the west of the Clark's Fork 'point E.' Now we will call the Bear Creek coal fields D. From E to D is 30 miles. Call the box cañon of the Fork C, and from D to C is 20 miles more. From C to A, which latter we will call Cooke

City, is 55 miles further. As I have said, there would be plenty of rock work on a limited part of this line, but it could be built—and most of it could be built on a water grade—below the heavy cuttings of the cañon. This is the natural route out from Cooke City, and the natural way for a railroad to haul out mineral—down hill, not up over the same hill a couple of times.

"A very hard part of this road would be the getting to Cooke over the last three or four miles, but while I presume this could be accomplished, the problem of an outlet is practically solved if you get steam in so near as that.

"You will observe that the road from the east slope has a double purpose to urge it to build. It has the Bear Creek coal fields—almost as useful and valuable as gold, for you must have good fuel at a practical distance in mining or railroading, or in any branch of commercial activity. You have on the east Cooke City plus the coal, plus the natural grade; on the west you have only Cooke City and an unnatural railroad proposition.

"But I have not yet spoken of the very greatest inducement for a road to go up at Clark's Fork, and this is something which the Cooke City people do not seem to think. They are sure of the wealth of their mines, but the whole world, especially the railroad world, is not sure of that. I do not say it is not true, doubtless it is true, but railroads take no chances. They must see a certain field, a country to be developed, lasting industries to be created, before they spend millions of dollars building roads across mountain ranges.

"Nothing appeals to railroad companies like an agricultural proposition. There is their certain and big money.

"Now, if you will look at this part of the country south and east of the Park and west of the Big Horn Mountains—all this section lying along the Stinking Water, Grey Bull and Big Horn rivers and their tributaries, you will be seeing what is known as the Big Horn Basin. There are millions of acres of land there lying untouched, and you can get water all over the whole of it. There is no better watered part of the West than this basin. The first railroad in there has an empire for itself. This is the largest and best body of land owned by the United States left undeveloped by the railroads, and it is the greatest railroad proposition now left open, unless we later find something to do in Alaska. All this region can be put under ditch at unusually low expense, on account of the many strong watercourses which cover it. The railroad which goes in here, builds ditches and so makes possible the settlement of this big district by an agricultural population, is going to have the best opening now left. Capital has no such chance left in America. I am not saying this from hearsay or from personal reasons, for I know that district thoroughly, although I own nothing there. There is nothing worth owning until a railroad is built.

"Now, let us call this point on the Grey Bull River, say at Otto, B, and you know we called the cañon of the Clark's Fork C. From C to B is only 75 miles. That is, the road which goes up the Clark's Fork has the Bear Creek coal and the Cooke City mineral, and for 75 miles more of road built to the south, it has also this Big Horn basin for territory, worth unspeakably more than all the rest. Perhaps this road will not be built, but it seems to me more likely than that a road will ever be put through over the rocky range from the west, with not one-twentieth the railroad reasons for existence, with ten times the railroad difficulties to overcome, and against the wish of the people of the United States, who have said they wanted the wonders of the Park preserved, and who always will want them to stay preserved as they are, so long as they have a fair and truthful showing of the actual facts put before them. Such a statement of facts these Cooke City men have not offered. In their selfishness they have been willing to offer anything, to promise anything, to do anything, to threaten anything, in order to attain their own ends. The general sentiment of Montana is that that isn't right. The case should have a just and fair and truthful showing to the public. Certainly FOREST AND STREAM deserves the utmost credit, for it is the only paper on earth that has been accurate, just and painstaking in getting all the facts on this question, and broad-minded enough to hear both sides of the case calmly and impartially."

I shall make no comment on Mr. Gallaher's clear statement of the above interesting facts. They do not need comment.

Chas. S. Fee, G. P. A. of the Northern Pacific.

Mr. Chas. S. Fee is the general passenger agent of the Northern Pacific road, and no man in the world is better posted on the Park situation in every respect. To him things must have a practical and not a theoretical value or excellence. Mr. Fee's remarks had the brevity and clearness usual with men of his calling, and their meaning was unmistakable.

"The Northern Pacific road does not want to build into Cooke City," said he, "and the Northern Pacific road and all its men emphatically do not want to see the Park divided or touched in any respect. We make our money by carrying people out to see the wonders of the greatest wonderland on the face of the earth. Throw that wonderland open to the rapacity of the few or of the many, and you have no wonders left to see. The Park would then be no better than any beaten road. I hear there is a proposition made to Congress to grant a right of way to a road down Soda Butte Creek, in the northeast corner of the Park, and to run along a part of the Grand Cañon of the Yellowstone, thence across to the Firehole Basin. I am a railroad man, but the thought of a thing like that fills me with shame. A railroad in the Grand Cañon of the Yellowstone! The idea is monstrous! No, sir, if you ask whether we want to go through the Park or any corner of it, for any purpose, my reply is, 'No, emphatically no, not for any purpose whatever.' That Park belongs just as it is, unchanged forever.

"The Northern Pacific Railway," continued Mr. Fee, "has done more for the National Park than the nation itself ever did. If we did not stand behind the hotels and the transportation, these services to the public would no longer exist. This railway has shown a spirit which the United States Congress never has. We have always stood for the integrity of the Park, and have helped protect its lines and to promote its attractiveness. What has the Government ever done? It won't pay even the cost of one additional special officer to protect the game. It shows no interest in the Park, apparently knows and cares nothing about it, while all the time people come from all over the earth to look at this most wonderful

part of the earth. It takes people from Europe to go into ecstasies over the Park. If this Park were in Europe I rather think it would be protected! The way Congress has treated the Park is an outrage and a shame. To run this road to Cooke through the Park may or may not be possible. I am told by an engineer that it would be a very difficult problem to build to Cooke from the east. But be that as it may, this road doesn't want to go through any portion of the Park, and doesn't want any other road to do so. The Park is the Park, and belongs as it is."

The above hearty doctrine may be unpleasant to some of the friends of the Cooke City scheme.

E. Hofer, Park Guide, Gardiner.

Lastly, I shall quote "Billy" Hofer, the Park guide, who was my companion in the FOREST AND STREAM winter expedition. This I do because he knows personally more about the game supply of the Park, where the game is to be found, where it is at certain seasons, and how to get to it, than does any other living man. In our trip over the Yancey trail, Billy pointed out to me the line of the proposed segregation road, as nearly as we could get to it. We did not go over it, because that cannot very well be done without a balloon, and we had no balloon. When I saw a band of elk, I would ask Billy, "Are they across the segregation line?" and he only too often replied that they were. We probably saw 3,000 to 4,000 elk on country which would be cut off if the road were built. We could not claim that we saw all there were, for our search could not be thorough on so great and wild a region; but we saw these and perhaps 1,000 more, for all I can say, the latter south of the proposed line. They all might as well be called outside of the line, for a road along the valley of the East Fork, where we saw so many bands of elk, would mean no boundary at all, and the killing would go on on both sides the same as if it all were open, because that is a region far from any patrol, and could only be patrolled by the use of a large body of men. The north line of the Park, nearest the settlements, now patrols itself, because it crosses a range too hard to get into, so rough, indeed, that no railroad could be built over it by any means on earth.

"You can see," said Billy, "just what this road would mean for the game. The antelope would all be killed or driven from the Gardiner Flats back into the higher mountains, where they could not live in winter, because they can't paw snow to any depth. The elk that now winter in the rough country along the Yellowstone, on Hell Roaring or Slough creeks, and along the East Fork and the streams coming in on the northeast, would all be killed or run out. The elk have to come in here to winter, because the country is bare. It is not 'hot country' to any extent, but it is struck by the wind along the ridges, and so has bare places where the elk can get to the feed. There is a good deal of snow on it, but the snow doesn't lie all over like a deep blanket, the way it does in the upper Park. As it is the elk are dying all through the mountains in hundreds this winter. If you drove all these elk out of this country where they are wintering, they would have to go out of the Park or out of the game, for if they had to go back into the big snow country, they would starve to death.

"They can say all they please about the Cooke City road not hurting the game of the Park, and that there is nothing in that part of the Park, but that is all nonsense to anyone who knows anything about the facts. There is no one thing that could be done to hurt the antelope and elk of the Park so much as to build that road. The worst of it is, too, that the slice taken off would be practically twice or three times as big as it measured, for there would practically be no north line any more."

Are More Facts Needed?

If the above facts, as stated in offset to the intemperate utterances of the Cooke City factionists quoted last week, are not enough to convince any one of the inadvisability and the uselessness, if not the impracticability of the proposed segregation road, then FOREST AND STREAM will give more facts and more reasons. FOREST AND STREAM will not "change its policy" on this matter, and it never will quit the fight until it has won an unquestioned victory there as it has in its other measures for the betterment or the preservation of the National Park for the people of the world. In this fight it has been alone in the newspaper world. It has spent money and taken chances to get at its facts, but it got them and has them, and can use them and will use them. The Park police bill just signed by the President of the United States and so made a law is, as one must verily believe, the result of no one cause so much as the unfaltering work of this one newspaper. The segregation scheme is the next thing. It is probably dead to-day. If it isn't will it kindly wiggle its head?

E. HOUGH,  
909 SECURITY BUILDING, Chicago.

The Dead Buffalo Find.

Later.—Under date of May 8 Capt. Anderson writes: "Burgess very carefully investigated your eight dead buffalo in Hayden Valley, and found four of them were really carcasses, while the other four were pieces of the former that had been dragged off to some distance by wild animals."

This is twice as good as we feared. We had no means of digging down to the carcasses. The strangest part of it, however, is brought up by Billy Hofer's letter to me of May 9, in which he writes: "Burgess says none of the scalps or hides had been taken, and thinks the buffalo died there, but that's too thin, for four buffalo would not have died a natural death at that time of the year and all so close together and at the same time."

Either the poacher was scared away too soon or else the buffalo were killed in wantonness. The new Park police bill will prove useful.

E. H.

Our Yellowstone Park Work Appreciated.

HARTFORD, Conn., May 7.—Editor Forest and Stream: The FOREST AND STREAM certainly deserves great credit for its successful, systematic efforts and enterprise in presenting to the public the true showing up of the needs of the Yellowstone Park. Your report is unapproachable—emphatically so. Certainly the FOREST AND STREAM (which has no rivals) furnishes a never-failing fountain of interest relating to sportsmen and the Yellowstone Park. This journal has certainly surpassed all other papers in presenting to its many readers a substantial and meritorious account of Howell's butchery in the Park. Much good must come from your up-to-date, wide-awake enterprise.

A. C. COLLINS.

## Natural History.

### Beaver in Strange Places.

PHILADELPHIA, N. Y., May 16.—*Editor Forest and Stream:* The inclosed article was taken from a Water-town daily, and may be of interest, especially if those in the locality mentioned would only verify the statement made concerning the presence of beaver in the Adirondacks on the outlet of Lake Meacham, and, the report being true, prompt and proper should the action be toward their preservation from those vagabond villains who respect neither law nor right, but go roaming through the woods with no other purpose than the gratification of selfish desires and barbarous instincts.

It has been supposed that beaver were long ago extinct in the Adirondacks, but fresh work by them has been found on the outlet of Lake Meacham, twenty-five miles south of Malone. This discovery has attracted a good deal of attention from the guides and hunters. Beaver feed on the bark of the birch, willow, alder and poplar, and it is their habit to lay by stores of food in the summer. Guides who were fishing on Meacham outlet found last week sticks of poplar of varying length and diameter, from half an inch to an inch, cut almost as neatly at each end as the work could have been done with a knife. It was unmistakably the work of beavers. It would add largely to the charm of the Adirondacks if beavers were again to establish themselves there and erect their strange habitations. The game laws now forbid the trapping or killing of these animals at any time of the year.

As for the fishing about Philadelphia, it is somewhat good—bass, pickerel, perch, bullheads and nearby trout, both speckled and salmon. But not many of the former. Near Redroad there are numerous lakes where the fish leap and grasp the fisherman's hook fit to make him dance. The real point is the beaver. Are they there or are they the idea of some newspaper man? RAYMOND S. SEARS.

The Washington *Star* of May 10 reported: "A live beaver was found on the farm of Mr. G. D. Gilbert yesterday, near Four-Mile Run, in Virginia, which makes the fact all the more remarkable. Where it came from or how it got there nobody knows, but it made its first appearance walking contentedly along on its hindlegs, taking in the sights and enjoying the landscape. Its first appearance was also its last farewell, for the hired man, who was spreading manure with a pitchfork near by, didn't wait for the beaver to present its card or credentials. He struck it with his fork in the head, killing it. Mr. Gilbert was at the house at the time, but is bemoaning his fate in that he was not there to catch it alive. He brought the beaver into the city with him this morning and took it over to the Smithsonian to be stuffed and kept as a specimen there. The animal was full grown and heavy, and would unquestionably been valuable if it had been taken alive."

### Another Albino Deer.

CHICAGO, May 9.—I read your note on the albino deer killed in Maine in a recent issue of *FOREST AND STREAM*. I noticed the other day in the Chicago *Tribune* the inclosed:

John M. Brett, Columbus Memorial Building, has a genuine white deer, which he has secured to go with his collection of animals, birds and butterflies. The deer was killed near Cable, Wis., after it had badly frightened two young men. The deer is without a single mark upon its body. Its eyes were pink like those of an albino, and in the mounting the color of the eyes was reproduced. It is 3 ft. 5 in. in height and 4 ft. 6 in. to the tip of its horns. Its age was three years. Two young men were hunting near Cable four months ago and they returned greatly excited, and reported seeing an animal in the woods which was perfectly white and of the size of an elephant. Many thought it was a ghost and a party of fifteen was made up to capture it. After two days' hunting the white deer was killed. Mr. Brett heard of it from a friend who saw the deer an hour after it had been killed. He made an offer for it which was accepted and it was mounted in Washburn, Wis. There is no doubt of the genuineness of its color.

To-day I went and saw the specimen. It is a pretty thing, though there is room for improvement had it fallen into the hands of a better taxidermist. R. D.

## Camp-Fire Slickerings.

"That reminds me."

"Ain't Them Ducks?"

THE letter entitled "Wooden Ducks," in your issue of May 5, reminds me of a parallel circumstance that happened to me in 1887. A professional call necessitated a trip to the northern limits of Illinois in October, and having learned that there were "a few ducks around," I took along my gun and a dozen of Danz's folding decoys. A pond of about ten acres area, and situated upon a peninsula between two lakes, was a favorite feeding ground, night and morning, for the few resident ducks. Here I selected a cape-like point and put out my decoys in a little bay—repairing thither early and staying late. During a week I bagged about two dozen birds. The pond was surrounded by marsh, and was immediately lined by a thick growth of very high grass, so that the approach to the water's edge was difficult and tedious, and shelter was too profuse.

One clear, breathless morning found me, as usual, at my stand before sunrise, and I waited until old Sol was marching in plain view, but never a bird came my way. When happily musing on the quiet scene, in an atmosphere of health and free from care, and contentedly watching, I espied a man's head in the high grass across the pond. My decoys rested life-like upon the placid water in front of me. The man looked toward me and then up and down the pond, and disappeared. He again appeared at the end of the pond nearest to me. I now became interested, for I knew that he was coming my way. He again passed from view, and in order to easily reach my stand from his last seen place, he would have to travel the higher ground at the edge of the marsh. This he did, and he soon appeared in view, and when opposite me he entered the pathway that I had made by successively traveling it for several days.

He had a gun with him, and on he came, and as he approached the higher grass fringe of the pond, he insensibly stooped his shoulders, and with bowed head made a bee-line for me. I heard his hammers click, and when he had crept to about half a dozen yards from me I suddenly stood up. He was surprised, halted, and with chagrin deeply depicted upon his countenance, exclaimed, "Ain't them ducks?"

A stranger to me, he said, a lady, had recently arrived at his house and had stated that she liked the flavor of wild duck, and he had started out that morning to "the

pond" to get her one. I afterward learned that he was one of the crack shots of the neighborhood and an inveterate market-hunter. When I related the experience to my host he regarded the circumstance as a great joke on an old hunter.

I have recently become a reader of your newswy and interesting journal, and I regret greatly that I have missed years of satisfaction in thus sharing quietly the pleasures of your numerous and facile correspondents—both staff and promiscuous. I wish I could personally know them. I look for the paper now, and amid its peaceful scenes I find rest from the fatigue of professional fire, and, lost for the time, I live over again with the narrators the joys of the chase, the fishing-rod and the camp-fire.

ALFRED HINDE.

CHICAGO, Ill.

### The String goes with the Gun.

*Editor Forest and Stream:*

Some time ago while fishing in the wilds of Wisconsin, my attention was attracted by the loud barking of a dog in the woods near by, and thinking something unusual was going on, I started in the direction of the racket and soon came to two men and a dog with a bear up a tree. There was no gun in the party and how to get bruin down was the question of the hour, as he was high up in the tree.

One of the men said he thought he could "borrer" a rifle of a neighbor several miles away, so he started leaving us "to watch the bar."

After a tedious wait of nearly two hours he returned with a long, heavy old-fashioned rifle and a bundle of string. The inquiry "What in the world are you going to do with that string?" was answered by saying, "The string goes with the gun," and he proceeded to explain. "Now," he says, after tying the string to the hammer and getting a good rest over a limb of a tree, "one er yur fellers pull and tuther cut the string when I say cut, so get yur knife ready." Everything being in readiness the above programme was carried out, and after a deafening report and clearing of the smoke, the bear could be plainly seen although in a somewhat altered position, having settled down into the crotch of the tree. Fourteen times the rifle was fired at the bear this way with apparently no result, when our champion of the rifle declared if "he couldn't shoot that thar bar he'd climb the tree and drive him down," which he proceeded to do. It was quite an effort, however, as the tree was bare of limbs for some distance up, but he finally reached the vicinity of the bear which he approached with caution, but the bear didn't move. Nearer and nearer. The excitement was intense, we on the ground momentarily expecting a demonstration of some kind. All at once the excitement was ended by a remark from our hero, "Say boys, the bar's dead." Nearly every bullet had hit him, and one through the brain explained the fact that the first shot had killed him. And famous to this day in all that country is the old rifle with the string attachment. H. B. J.

WABASHA, MINN., May 15.

## Game Bag and Gun.

### PARK POACHERS AND THEIR WAYS.

MONTANA, May 3.—*Editor Forest and Stream:* It was during January, 1893, that I became acquainted with Howell, the Yellowstone Park poacher of whom we have recently heard so much. He is a man of a little more than ordinary intelligence, has a fair education, is stoutly built, with dark hair, bluish gray eyes and a heavy blond mustache. His business has been prospecting and hunting for a living among the Rockies in Montana, and he has all the rugged strength and endurance that Rocky Mountain hunters and prospectors possess.

From conversations had with Howell in 1893, I learned that there were a number of hunters besides himself in the vicinity of the National Park and Cooke City, who gained a livelihood by poaching in the Park and selling elk heads to the taxidermists residing along the railroad. One man had sold 60 scalps from elk heads that were not worth the trouble of mounting at \$5 each, besides quite a number of complete heads at from \$8 to \$20 each.

I asked Howell how this could be done with Capt. Anderson and two companies of soldiers guarding the Park and the game. He said "It is the simplest thing in the world. When the snow begins to fall in September and October, we wait until a nice snowstorm has set in, and then taking a saddle horse and two or more pack horses, we start for the Park and travel fast. After reaching the ground we have previously selected to hunt over, we make a long detour and cross our tracks perhaps ten miles from camp so as to ascertain whether the soldiers are following our trail or not. If no other tracks are seen we go back to camp feeling safe, for we know that the new snow will obliterate all tracks before dawn. We then secure enough elk to load our pack horses and are soon on our way out of the Park and to the railroad. The railroad companies are glad to haul freight and we have no trouble there in getting our spoils to market."

The above is what was gleaned in 1893, and here is the substance of a conversation in 1894 since Howell became known to Capt. Anderson and others. "On the 19th of September last, I took my camp outfit and grub for the winter, and loaded it on to a toboggan and started for the Park. From that time until Feb. 10, I saw no human being. The snow was very deep and my method of camping was to build a fire at night on the snow, and after cooking, to pile logs on to the fire and let it burn. By morning a hole would be melted in the snow so deep that when I stood up by the fire I could barely see out, and if any one had chanced to be looking for me they would not be likely to see me. I had very little trouble in marketing heads. I have known eleven buffalo to be hauled in one day through the Park, and one taxidermist in Livingston has bought twenty-two heads this winter at from \$40 to \$125 each, and I know of one head being sent to New York that sold for \$275 green. There are trappers in the Park all the time during the fur season. I occasionally saw men fishing, and one of them I knew was trapping and used the fish line as a blind. The soldiers did not see through his device, for it takes a mountaineer to see all the signs. I have concluded to try other ways of gaining a livelihood, and I will let the Park alone if the soldiers will let me alone from this time on."

From what has been said and from other facts that have come to my knowledge, I conclude that a considerable number of the inhabitants of Cooke City are making a living from the sale of game from our only National Game Preserve, and that not only people from Cooke City, but others, are spending the best part of the game season dodging what Uncle Sam thinks is a sufficient force of soldiers to guard his game.

I would rather have three good intelligent, honorable men, inured to the life of a prospector and hunter in these mountains, to watch that Park, than all the soldiers now there, and I am personally acquainted with men who are educated, intelligent and honorable who will not kill a doe nor even a mother grouse, for meat when they are hungry, who have spent this whole winter alone in cabins miles away in the mountains, content to live on bacon, coffee, flour and sugar, with just a frying-pan and a tin can for their cooking utensils. Men of such a stamp are the ones that Uncle Sam should hire to look after the Park, and a good plan to hire them on is to give them a liberal salary, the privilege of shooting the first hunter they see within the Park, if he will not give himself up, and to pay a reward in hard cash for ever poacher captured.

I believe that the true way to preserve our stock of buffalo in the Park is to start a hay ranch there and build an inclosure, into which the buffalo should be put in the fall. Two good men should watch them as carefully as they would Nancy Hanks if they had her to care for, for we all know that the buffalo is little nearer extinction than it should be.

If Howell, by his desire for buffalo scalps, has aroused Uncle Sam so as to cause him to care for his game as he should, I am ready to give three cheers for Howell, and three hisses for the taxidermists that buy his game and aid him, and men like him, to evade justice. J.

HELENA, MONTANA.

[The letter which we print is from an old correspondent, a man not very long in the West, yet long enough to have learned something of life there. Much of what Howell says is no doubt true, but it is pretty badly mixed up with what is not true; for example, it would take a considerable force of men to haul eleven buffalo, or even eleven buffalo heads, and they would make a broad trail that would last all winter. We question Howell's statement that from Sept. 19 to Feb. 10 he saw no human being. He had a partner when he went into the Park, though just what became of this man is not known. We entirely agree with our correspondent as to the importance of additional mountaineers to patrol the Park. They can do work that a soldier cannot, and instead of a single scout in the Park there should be at least half a dozen. The project of rounding up the National Park buffalo and driving them into an inclosure is of course entirely impracticable, but a considerable number of calves and young might be captured and kept in confinement, and it is not unlikely that this may be done at no very distant day. The enactment of a law for the punishment of crimes in the Yellowstone Park will no doubt have the effect of largely reducing the poaching on its borders, and after one poacher shall have been sent to prison for this offense, infractions of the regulations will almost wholly cease.]

### CHICAGO AND THE WEST.

[From a Staff Correspondent.]

#### Lead-Poisoned Ducks and that Rice Farm.

My old-time market-shooting friend Billy Griggs wrote me soon after he returned from his winter's work at Galveston as follows:

"I am safe at home and was gratified to find the 'old reliable' awaiting me.

"A word as to Mr. Guessaz's discovering lead poisoning in ducks. The facts as to this strange condition of the canvassack you have stated correctly, but this condition has been noted for years and was called cholera. An increase in the number of stricken birds led to an investigation as to the probable cause and the result was the discovery of lead in the gizzard. This later and correct diagnosis took place during my first winter on Lake Surprise, four years ago. As to their shipment, it is a physical impossibility, for if packed on ice immediately after killing, in twelve hours they are green in every tissue. Long experience has taught us to recognize the symptoms, and such birds as possess them are never killed under any circumstances. As to how, when and where they contract disease is a mooted question.

"Now, as to our bribing the chief magistrate of the biggest of all States with twenty ducks per week. The genial Governor did spend a few days, all too short, at Lake Surprise and was the recipient of the same courtesy that all gentlemen receive—neither more nor less—five pairs of canvassacks graced the official bag; and if any else adorn the gubernatorial mahogany he pays for them with the current coin of the realm.

"A recent publication says Lake Surprise contains 7 ft. of water. There is as much water in it now as at any time since the storm of '75; from 24 to 30 in. is a fair estimate, but beneath the water is ooze unfathomable!

"Not being a lawyer I know nothing of the validity of Col. Moody's patent to Lake Surprise, but if his title is not clear it is passing strange that some fine-haired nirod doesn't attack it in the courts and secure for himself the 'best canvassack preserve in America.'"

The latter suggestion is a good one that would be best for both sides and, indeed, the only practical thing to do, as mere discussion is valueless.

#### Spring Shooting in Manitoba.

Mr. Thos. Johnson, of Winnipeg, Man., writes: "Some of my oldtime shooting companions have had their spring 'wavey' shoot. 'Waveys,' as we term them here, are the snow geese. They make Manitoba their resting and feeding-up point, previous to their great flight to their breeding grounds in the vicinity of Hudson's Bay. Before the advancement of civilization and cultivation the 'waveys' had a well-defined spring flight, in fact, you would rarely see them outside of a territory of five miles wide, and in some portions in less yards than that. The wavey has, like almost every other water fowl, diminished in numbers. Yet last spring there were thousands. They strike Manitoba from March 7 (the earliest I ever knew them) to middle of April and stay with us until about May 24. They are very easily 'decayed' and can be also 'called.' As you know, I never even shoot waveys in spring, yet I'll admit I don't think it any very great sin for a Mani-

toban to do so, as this is the only time of the year he sees them. Their return ticket does not read via Manitoba."

This letter is just exactly the argument used by the spring shooters of this section in regard to ducks and snipe, and it is just exactly wrong. The only right way to look at spring shooting is on the basis that a bird not killed is a bird saved, saved for itself and not for the gun. In the past local selfishness has always meant local jealousy, which has meant, and always will mean so long as it exists, local shooting. Yet all shooting must be only local. The American sportsman will never learn till the game is gone, that a bird killed in Manitoba or Dakota is as dead as the same bird killed in Texas. That problem remains ever too deep, and it is understood about alike, from Hudson's Bay to the Gulf.

The Wood Buffalo.

Mr. Johnson sends a clipping from the Edmonton Bulletin: "At the last session of the Northwest Assembly a resolution was passed calling the attention of the Ottawa authorities to the advisability and necessity of adopting some measures for the preservation from extinction of the wood buffalo still remaining in the region between the Peace and Liard rivers, and between the Mackenzie River and the Rocky Mountains. The Assembly did not ask for legislation to protect the buffalo or any other animals in the region referred to. Its references were confined strictly to the buffalo, and pains were taken to show at some length that legislation could not possibly meet the case, as the nature of the country and surrounding circumstances generally would prevent any possible legislation from having effect. The resolution stated that the buffalo could only be preserved from extinction by capturing enough of the animals for breeding purposes and keeping them in captivity. If the importance of the preservation of the species is not sufficient to warrant the expense of this method of procedure, it will be far better to say so at the start and let the animals be destroyed without interference of legislation, which can only be vexatious to hunters and traders, and cannot in the nature of things be effective in the preservation of the buffalo."

Advice to Young Men.

Mr. Wm. T. Huxter, of Newark, N. J., writes me as below, in a way which disposes me to be fatherly: "Reading 'Dixie Land' in FOREST AND STREAM, it set me thinking that you are the man who could give me a little information in regard to hunting and fishing. Myself and companion, both young men in the twenties, having saved about \$200, want to take a hunt for about two or three years steady, somewhere in the Southwest; and have hunted and fished all around here within 100 miles of New York city. We think we could do it with that amount of money if we got the proper pointer from some one who knows. At first we thought of taking a small houseboat and floating down the Mississippi River, and trust to luck to find some place where we could get a few ducks and a little game; but reading of your trip to San Antonio, it struck me a little better. You would favor us by giving your opinion of such a trip with only \$200 and necessary guns, rods and rifle. We are satisfied to live on duck thirty days in the month, or fish, and even crow if necessary in hard luck. We are tough, and not being able to stand the strain until we could scare up more money, we have concluded to go next September."

My opinion on the above is that young men in the twenties who have only \$200 ahead in the world have no business on earth to start out on a two or three years' hunting trip. That is to abandon a proper ambition in life, to take to practical vagabondage or to market-hunting and fishing. In these three callings there are plenty ahead of these young men now, and FOREST AND STREAM does not exist for the purpose of increasing either of these three classes. It exists for the purpose of showing young men how they can take \$200, go off, have a few weeks or even months of sport with it, and then go back to useful work the better for the trip. The houseboat idea is not bad for a trip of the sort, though there are better streams than the Mississippi. The Rio Grande, the Sabine, the Brazos, the Nueces, are all wilder and rougher streams, and in a better game country. I don't know whether they could be run by houseboat or not, but they could be by some boat, and the fun would be in finding out. As to a place where a man can make an easy, long living out of fishing and shooting, I wouldn't tell anybody of it if I knew. Most of the old-time trappers, hunters and market-shooters are out of a calling to-day. To work hard in the busy life of the world, to be ambitious and industrious and frugal, and then when the time comes to take a good rest and enjoy it thoroughly—that in my belief is a better ambition for our young friends than to take three years of play which is not sport. For a long camp hunt or cruise for sport, I could direct them to many places.

Quail Do Pack.

Still another reader has observed the packing of Bob White quail. Now I feel quite positive as to the packing of this bird which we thought we could say we saw in Texas. Mr. H. L. Burdick of Orange, N. J., writes me: "In your article of last week's FOREST AND STREAM there was a paragraph headed 'Do Quail Pack?' I lived in western Texas for five and one-half years, on a ranch situated in Concho county. Opposite the main ranch house, on Kickapoo, was a half section of land, which was kept under cultivation, generally sown with small grains; around this farm Bob White soon made his home."

"In the fall of 1887, I went out to kill some quail for dinner, and succeeded in finding what might be called a pack of quail within 250 yds. of the house. I killed eighteen of these birds, and having enough, desisted. Going back to the house and putting up my gun and leaving my birds, I walked back to the spot where I had been shooting. The quail did not get together until at least an hour after I had stopped shooting, and then I succeeded in counting forty-three in the 'pack' still. I killed several quail afterward from this same aggregation, but left most of these birds for seed, and hunted further from home as a rule that fall. This is the only instance that I can remember, of seeing a 'pack' of Bob White. Thinking that you might like to know of my experience, I venture to write you."

Newspaper Idiocy.

There are some good men in the newspaper business, who ought to have been presidents, and there are also some idiots, who ought to have been inmates. Some of these idiots are malevolent and hurtful idiots. The editor

of the Steubenville, Ohio, Gazette is one of these. Mr. E. B. Bishop, writing from Titusville, Fla., calls my attention to the following clippings from that journal with the comment, "It seems incredible in this age of enlightenment, and such vicious ignorance is a national calamity." The Gazette in its ignorance is trying to befriend the oppressed lawbreaker, and says:

"On excellent legal authority we advise all who are arrested for violation of the infamous fish and game laws, which disgrace the statute book of Ohio, to plead not guilty and demand the inalienable right of an American citizen, trial by jury. A man who did this last year defeated the game of the paid spotters and informers, and notwithstanding the law is especially made to convict, others can do the same. Don't yield your rights without a struggle."

"The Gazette will agree to subscribe \$10 to a fund of \$100 to be used to defeat the villainous fish law in any case brought hereafter wherein the defendant violated the law through necessity in securing fish for his own use, and is unable to furnish means for legal defense."

Now is the time to subscribe to the Gazette.

The Iowa Law.

On the other hand, the sportsmen have got too good a law out in Iowa, and a local paper says: "The sportsmen of the State are trying to have a reconsideration of the very drastic hunters' bill which recently passed both houses, or finally they will make an attempt to have the Governor veto it, but in the latter effort they will hardly succeed, writes a correspondent, for the Governor is not very much in the mood of putting his individual judgment against the judgment of the Legislature. The sportsmen say that the Iowa bill is one of the most drastic ever enacted in any country. They say that all Europe can hardly afford a parallel. It absolutely forbids a man, accompanied with a gun and a dog, to cross the lands of a farmer. He must keep in the middle of the road and can not climb over a fence to pick up a bird he has shot on the wing and which has fallen inside the fence. Of course, he can by permission of a farmer, but otherwise the rule is absolute."

Stick to your law, you Iowa men. Get a better law when you can, but stick to this and set a good example till you do. It's saving the game, or should do so, and that should be a cheerful feature of it.

Stone Dogs.

Mr. Wilbur Dubois of Cincinnati is nervous over an interview which the enterprising and alert reporter got out of him. It reads:

"To a dog fancier," said Secretary Wilbur Dubois of the post-office, "no sight is prettier than to see a pointer re-enforce. A pointer, you know, will stand with one foot held up and look at a bevy of quail. Now when there are two or more dogs on the same trail one will, of course, see the birds first. The moment one points the others, if well trained, will come to a stand and remain immovable like so many statues. There is a legend of the Miami Valley wherein a chief is stricken to stone and all who see him are likewise stricken. One by one as his followers come into his presence they are transfixed to the ground and all stand there till a white man enters and breaks the charm. I have seen a string of half a dozen pointers come suddenly to a stand as if shocked by electricity. One in particular, I remember. Two dogs were after a covey of birds and one saw them and pointed just as the other was about to leap from the top of a creek bank. This second dog saw the point and became rigid with half his body in the air and with barely enough on the ground to enable him to hold his position, and there he stood till the hunters came up and relieved him."

Mr. Dubois says he never said no such a say, but explains:

"I was explaining to the reporter of a local afternoon paper some time ago how one dog backs another. A week or so afterward he made an heroic effort to recall the conversation, with the above beautiful result. His first sentence is a jewel too rare to be lost. I suppose that at some period in his life he had had a shirt made with a double back, or re-enforced, and from that circumstance had conceived the idea that "back" and "re-enforce" were synonymous."

"Please note further, in the reporter's essay, that a dog always holds one foot up, and always sees the bevy of birds when he points; and, moreover, that it is a common occurrence for me to see a string of half a dozen pointers re-enforcing each other."

"The legend of the petrified chief is a new one to me. Is it a composite story, made up of equal parts of Lot's wife, Perseus and Medusa's head?"

"The poor dog in the last sentence, suspended between heaven and earth, is a barrowing picture. I hope we got up in time to rescue him. In fact, the reporter says we did; and if he says so, I know it's true."

The Daily Reporter in Chicago.

I think Mr. Dubois's reporter has moved to Chicago. It was probably he who allowed the exuberant press agent of the Prairie Gun Club to fill him up with the foolish story that a flock of 1,500 wild pigeons had been discovered in Indiana, and that the club had enterprisingly caught the entire flock and would shoot them at its tournament, soon to come—as unsportsmanlike a thing to do to-day as any that could be ascribed to any club, though there was no foundation for the story or for the ascription.

Diana Club.

The Diana Shooting Club at its annual meeting at Milwaukee, May 8, at the Plankinton club rooms, elected the following officers: President, George F. Peabody, of Appleton; Vice-President, U. A. Van Brunt, of Horicon; Treasurer, H. D. Smith, of Appleton; Secretary, P. F. Stone, of Chicago. The directors are the officers and J. M. Yorgey, of Appleton. The club has engaged Gen. Winkler to take charge of the various poaching suits. Having plenty of ducks, it must also have plenty of litigation, but the leases on the marsh remain a bulwark against the poacher.

Gone from Dixie Land.

In the first of my late articles I described the pleasant days we had in Arkansas, enjoying the hospitality of Mr. Calvin Pemberton, on whose plantation near Little Rock we had so happy a time. Now comes the word that Calvin Pemberton has gone from Dixie Land. He died in March. His State lost a gentleman and sportsman whom I remember as the most perfect host at house or in field I ever met. He was a big-hearted man. The papers say of him: "He was one of the biggest-hearted men in Arkansas, and though never accounted wealthy, gave liberally to every one in need, his friends say, too much for his own good. He truly loved his neighbor as himself." You cannot say much more of a man than that, and you cannot be much more of a man than he was.

909 SECURITY BUILDING, Chicago.

E. HOUGH.

Sea and River Fishing.

SOME CARP LAKE NOTES.

(Concluded from page 124.)

OF the beauties and attractive features of Robin Nest Camp, and of the days of happiness we spent there, "Kingfisher" has so delightfully written for FOREST AND STREAM, accompanied with illustration from photograph of the camp itself, that we only add some things that doubtless escaped his memory, including a proper and truthful account of that big trout matter, and of his "bull episode," which I perceive he was inclined in some of his personal parts to gloss over.

And just here it may not be amiss to draw a brief sketch of my three camp comrades of the Kingfisher tribe, jolly good fellows, whose virtues grew brighter the more they were tried in the anglers' crucible of constant association in the woods and on the waters, on the journey and around the camp-fire. J. M. Hickman—or "Jeems Mackerel," as we familiarly called him—has been long known to the readers of FOREST AND STREAM, under the nom de plume of "Kingfisher." His writings speak for themselves, entertaining in their quaint and graphic Anglo-Saxon—the home language of the woods and waters—hosts of readers, and bringing back to memory reminiscences sweet and treasured to those who love the free air and pathless woods, the lullaby of the brooks and broad vistas of the lakes. Sturdily and squarely built—tough as a pine knot—with an honest face and frank manners, plain and unvarnished, of modest mien and genial fellowship, and a friendship that stands the test of time and circumstance as well, he belongs to the race of anglers of whom "Nessmuk" was a type. Ever ready to lend a helping hand, an apt eye for the adaptation of camp life, a skillful hand at the oars, a fearless woodsman, with a grit and endurance that would make the best "tired," unselfish in act, he added to it all a skill as an angler that seldom found an equal. In emergencies he was prompt, and what he didn't know or find out about the country and inhabitants contiguous to camp, in plain words, wasn't worth knowing. Where he gleaned, even Ruth of old would scarcely find a straw. *Au fait* on neighborhood matters, he swapped experience with the fathers, "fish lies" with the sons, jokes with the girls, drank milk and talked gossip with the mothers, and bought raspberries, huckleberries and frogs from the youngsters. When he left the neighborhood there was mourning in the log cabins and shanties of the first settlers, and the youngsters dreamed of the time when "that good fisherman" would come back again. "Kingfisher" had only one prevailing vice—he drank too much—drank water only (ale of God's brewing) in reckless quantities. Some of us, who felt the weakness of the flesh came over us at times, often remonstrated with him about his perverted taste, but it did no good. He was joined to his idol.

Clay Culbertson was both angler and hunter. President of the Cuvier Club, of Cincinnati, he also gave attention to the study of what the boys were wont to call "his stuffed birds and animals." Fond of outdoor sports, he ran the rapids and fished the pools of the Nepigon, skimmed the cream of Point au Pelee island when it swarmed with bass of fatherly size and athletic strength, navigated the inland waters of Florida and hunted its wilds where seldom the silence was broken by human voice. One time following the antlered monarch of the woods, he varied the sport by angling for the denizens of the Gulf, from hard-toothed sheephead to mighty tarpons and jewfish. Much of his time was given to collecting specimens for the Cuvier Club, from plumaged ibis to the tiny waders that ravaged in the spent surf. Tiring of the larger sport, in camp his hobby was to locate a spot and angle for bluegills. One of the first to rise in the morning, he was usually the last to rake the coals of the camp-fire together before retiring at night. While the jokes and fish stories were going round, his long stick kept the fire in proper burning order. Vigorous in expression, forcible in judgment and opinion, generous in impulse, and with memory stored with reminiscences of former adventures, he was a welcome companion in all the social features of camp life; or, in fact, in any other place, in the city or in the woods.

Charley Furr was a genuine fisherman of the old school—hearty and active, staunch and reliable. Fond of rod and gun—as most Kentucky sportsmen are—he had imbibed a love of field, forest and stream from earliest boyhood. An excellent shot, he had pocketed many a Bob White in his tramp over hill and valley. Having a keen relish for camp life he gave to its necessities an added experience gained in his marches under Sherman and Thomas, following the old flag through Tennessee to Chattanooga, then to Atlanta and later on in the march to the sea. He possessed a marked store of patience and perseverance, and threading the woods' mid tangled brush and fallen trees, only "Kingfisher" could keep pace with his tireless steps. He had a natural instinct for finding the spots where the bass lurked most, and he handled the rod with a skill and precision that seldom failed of success. In making a camp bed he exhibited an artistic taste that found reward in downy ease and sound slumbers. A student of music and possessed of good voice, the camp was often brightened with his lively songs, from "I'm climbing up Zion's hill; I'm climbing—yining—yining" to "Old Kentucky Home" and the "Frog went a-Fishing." He loved a good story, enjoyed a good joke, but woe to the fellow who perpetrated a "chestnut"—his memory was unfailing.

And Thurston, or "Kelpie"—the naturalist—the lover of nature in her purest and best phases. Long acquainted with the solemnity and silence of the deep, unbroken woods and the mysteries and woods of both hidden and revealed waters, he drank in deep draughts the truths they disclosed, and drew lessons to weave in the warp and woof of life. A patient watcher for the developments of scientific problems, he seldom drew too hasty conclusions from insufficient premises. But, convinced, he accepted the result with philosophic faith, whether it accorded with his pre-existing views or not. He greatly enjoyed camp-life, often "going it alone," and while more disposed to be a listener to the talk of others, he was not averse to entering the conversation, and when he did, he usually said something worth remembering. He was indefatigable in his search for something new in the line of his favorite pursuits, and would take up the cudgel of scientific discussion at any time, at any place and with

any body who knew anything about the subject. He was fond of a good joke and was capable of telling one with a detail that covered the whole ground.

Such were the four comrades who gave to Robin Nest Camp its days and nights of unalloyed pleasure, and today invests it with the sweetest of memories.

Afterward we were joined by Mr. Sheidemantle and his son Johnnie, from Cincinnati, who contributed much to our camp enjoyments.

Our dining tent was spread under the shade of thick-foliaged trees. Everybody was free to join the varied discussions that attended the consumption of viands. The "Autocrat of the Breakfast Table" could have learned lessons by hanging himself on the back of a chair. True, the talk was mixed, involving the wisdom of the ancients—Homer, Sophocles, Euripides, Diogenes, Virgil, Horace—with the classics—botany, zoology, hygiene, fishing, philosophy, history, snakes, adventure, butter and eggs, mosquitoes, wisdom and wit, good, bad and indifferent. Nobody asserted anything dogmatically, for fear some reckless galoot would deny his statement and call on the other listeners to prove its falsity. If the dogmatist persisted, he would be so attacked that at length he was willing to escape with his life.

There was an ancient feud existing between Sheidemantle, or "Shidecker," as we called him for short, and Culbertson—not mortal but persistent, so that the air was forever full of darts flying from one to 'tother, and now and then was heard the popping of small arms or the boom of artillery in the wordy warfare. In the wear and tear of fish life, the rear of Shidecker's trousers had grown seedy and been reduplicated with a patch taken from a rubber horse blanket. To attack this armor-clad portion of the anatomy with a convenient board, when words failed of effect, was Culbertson's final *coup de main*. "A fellow who parts his hair in the middle is a dude," said he, "and a dude has no rights anybody is bound to respect." Shidecker explained that the hair grew that way ever since he was a boy, and he must respect nature; and as to the gum patch, that was placed in position to keep him from taking cold when sitting down on a pickered slyly placed under him by his enemy. Culbertson said "he could not bear to have a D.D. (Shidecker was professor in the public schools) poking around camp, hunting the best places in the shade to read Capt. Kidd's adventures, or standing around the kitchen talking French to the cook."

Shidecker replied—"those insinuations were bare-faced fish lies;" that "Clay had jaundice of the stomach," was barely able to get to his meals, but once there, danger lurked in the atmosphere.

The disposition of Shidecker to deal in puns was something horrible. When one more than usually hideous was let go without wings, even Kelpie groaned in spirit, and rising to his feet, in a voice full of calm resignation, would remark, "Isn't it about time for some of us to go a-fishing?" You could see the danger line was near by Kelpie's raising his head, the yawp of his mottled straw hat, and his vacant look into the sky above.

But if there was any one thing that could restore Kelpie's equanimity, bring a smile to his face and a rosy hue to his cheek, it was "raspberries." He always looked at them with a comfortin' glance of sweet satisfaction, and his speedy method of concealing them, from pulpy skin to inner seeds, was Herrmannian in skill. Returning to camp after luckless trips for trout or bass, weary and dispirited, no sooner did his eyes rest on a fresh bucket of raspberries than a beatific expression as of hope realized stole over his face.

Culbertson's strong point was pork and potatoes—a Chicagoist pride with an Irish instinct. He could tell the difference between an "alf and alf" side meat from a Bingham woodsrainger and the thick, juicy "all in all" of a Chicago fat porker, the moment his fork broke the outer rind. Shidecker's delight was flap-jacks flanked with treacle, while Furr and "Kingfisher" yearned for everything and anything that "went to the place" and pacified the pangs of hunger.

Queer fellows, those Kingfishers, full of fun and frolic, one moment annihilating each other with withering sarcasms and slashing smiles; the next uniting to crush some offending member as a crowd of girls would pounce on a diminutive snake. But let some incautious outsider send a shaft within their ranks, and every soul was on his feet to resent the assault, until oftentimes the intruder was ready to wish he had never been born.

After some days of camping and fishing our frog supply began to be invaded by death. Hunger was suspected as the moving cause, though food was kept in their cage. A council of war was held, to devise ways and means to preserve their lives. Culbertson suggested they be fed on red flannel; Furr wanted to have doughnuts baked for them; "Kingfisher" proposed fly tarts; Kelpie thought grasshopper pudding more to their liking, when Shidecker invaded the friendly conference by suggesting they be fed on some of Culbertson's jokes, maliciously adding, "but they won't live till morning." Here the irrepressible Johnnie interposed, "No, no; let pa dose 'em on the seat of his pants. They could chaw and chaw on the gum patch and fill up as it swelled—sorter come and go like." "Johnnie!" said Shidecker, in his sternest way, "don't you remember Peck had a bad boy?" This knocked Johnnie out, for he had a horror of being considered bad, and his pa knew this weakness and invariably took advantage of it, regardless of the difference in ages.

The council of war broke up without relief to the frogs, owing, no doubt to the side issues injected into the conference.

The best bass fishing ground was near camp, toward Bingham, and marked by two crossed pine trees on shore. It was here that "Kingfisher," one day, struck and fastened to what he asserted was a 5lb. bass. He was fishing alone. On his return to camp he described the struggle, the moments of anxiety and hope, how the line had burned his fingers as it ran from the reel, and how at last the fish had broken away, leaving him dejected. Culbertson was incredulous about the size of the fish, saying, in an undertone, "Oh, yes, big ones always get away," and after that he rigidly held to the doctrine that no fish could be a 5-pounder unless the line burned the fingers. I shall not soon forget, days afterward, when "Kingfisher" returned from a two-days' trip to the Fountain House, at the narrows of the lake, and was reciting how he had again struck a big bass, a 5-pounder at least—the look of unspeakable indignation he gave Culbertson when the latter propounded the question—"did the line burn your fingers?"

During a trip round Alexander's Point, on another oc-

casional, "Kingfisher" located another big fish—an 18in. speckled or brook trout. He and the writer had agreed to investigate a small stream that put into the lake from the woods, and from which, a year or two before, we had taken a few trout. To avoid a swamp ground near the lake, and guard against a fire that was burning the woods, we made a short detour, after landing, and reached the brook near a small road-bridge. Baiting our hooks with worms, the first cast secured each a small trout of lawful length. Several smaller ones were taken and thrown back. Moving higher up, "Kingfisher" dropped his line over a grassy bank and in less than two minutes had three or four trout of 10in. and less flopping on the grass. Changing his position and screening himself behind some bushes, he allowed his bait to float toward a dark hole under the bank. There was a jerk, a splash in the water, and an empty hook came back.

"Great airth and seas!" he exclaimed. "Did you see him, Sammy? Oh, he was a whopper; not an inch less than 18in.," and he proceeded to measure on his arm the requisite length, and to detail how the trout had deftly stole toward the bait as it floated his way, nosed it cautiously, turned back, came up again, hesitated as if suspecting treachery, then gently took the Kentucky hackle in his mouth and moved toward his nest.

"I jerked a second too soon," said "Kingfisher," "he was too sharp, one of those old mossbacks that suspect danger in every blade of grass, and was just holding the worm between his lips to see what would happen. It did happen, but not to that old cuss; but I'll get him yet," and he explained how he would get a good fat minnow, an inch or so long, and let him swallow and keep it till it was ready to digest and then snatch him bald-headed. For the present he would give him a rest.

When we returned to camp, as usual, Culbertson was sarcastic in doubts as to the reputed length of the big trout, and "Kingfisher" as earnest in sticking to the 18in., but in his anxiety to show a full measure he pointed on his arm a length of at least 2ft., causing a laugh to go

"KELPIE."

round the circle of listeners. Two subsequent trips were necessary before "Kingfisher" captured his prey. As he beached his boat, the day of his success, and announced the capture of the big trout, there was a hollowness in his voice that did not indicate an adequate amount of exaltation. Bringing the trout before the group under the shade of the trees, the tape line was laid alongside and the measure showed just 18in. "Golly a' mighty, how that fish am shrunk," we remarked, quoting the remark of the old Kentucky negro whose big catfish had been swapped for a small one while he lay sleeping in the sun. It was a singular fact that during the remainder of camp "Kingfisher" never struck, saw, nor would talk about any big fish—that is, when more than one person was present. How many of us honestly over-estimate fish that have never been out of the water? And it is no sin to do it, either, for a "fish lie," properly stuck to, without change of countenance or quiver of the lips, is more meritorious and commands more respect and commands more respect than the pitiful statement of the inexperienced Izaak Walton, who underestimates his catch. One can be and is forgiven—even before its perpetration—while for the other there is no salvation in any well ordered fish camp.

The day "Kingfisher" caught his 18in. trout, Furr and I went on a tour along the north shore of the lake, in search of small-mouth black bass. Our supply of minnows we caught among the rushes off Alexander's Point. Coasting along the shore, which was low and marshy, we fished off Catfish Point, throwing in toward the land. In a short time we hooked and landed several good-sized rock bass, a fish for which we had no hankering, especially since we had been shown previously a small grub that in summer infests its back. Black bass not showing up, we recrossed to the south side and followed in the track of Kelpie and "Kingfisher," who were going a-trouting. Here Furr had a run, and the bend of his split-bamboo when he struck indicated sport ahead. Playing his fish warily and giving no slack line, it was soon exhausted and brought to net—a 2lb. large-mouthed black bass. A shade of disappointment hovered over Furr's face as he saw it was a small-mouth, although its poor fight had somewhat toned down his expectations. Four or five other big-mouths of nearly the same size were caught in a short time, when we rowed off for better game. A quarter of a mile further down I had a bite that betokened business. After taking the bait, the fish moved round in a circle, giving me trouble to keep the line taut without prematurely alarming it before striking. Time enough elapsing, I lowered the point of the rod, tightened the line, and with a sharp stroke sent the barbed hook home. Then there was fun. The small-mouth bass, as it proved to be, made at once for some moss beds that lay under water 60ft. away. It was necessary to stop him, and his mad rush was quickly set against the resisting power of the elastic steel rod. Curved into almost a circle and nodding to each repeated dash of the bass, while I gave him a slight increase of line with thumb

acting as rubber at each frantic forward movement, the rod finally proved victor, and the bass changed direction and darted toward the middle of the lake. Singular enough he had not yet showed up above water, nor did he at any time make his appearance till exhausted and ready for the net. Headed in every dash by the pliant tension of the rod and in his attempt to go under the boat, he finally yielded and we netted a three-pounder.

At this time our attention was attracted by a forest fire in the woods on shore. The smoke rolled upward in dense volumes and the roaring and crackling of the flames were ominous of destruction. A carpet of leaves on the ground furnished a basis for the spread of the flames, aided by the thick underbrush, and they steadily crept from tree to tree, scorching and devouring with their fiery breath. At intervals, a tree rich in green foliage overtopped its fellows along the line of devastation. The destruction of these we watched, as we lay on our oars. As the hot breath of the flames would near them, the leaves would begin to curl and crisp, and suddenly a red tongue would shoot up among them, and in an instant the entire tree was an immense column of fire. I had always supposed a forest fire moved with rapid steps, but in this case the progress was slow, steady and in irregular line. The air along the lake had been for some time a dead calm, when suddenly a diminutive cyclone, caused by the fire, came sweeping down on us, tossing the boat wildly about and giving us trouble to control its movements. The flurry of wind ceased as quickly as it came.

Having added two more small-mouth bass to our score, we returned to camp, gathering some beautiful white and yellow water lilies *en route*, with a lot of bulbs not yet opened. These last, "Kingfisher" said would open if placed in a bowl of water. We did so, and set them on the dining table; but alas, for human credulity, they obstinately refused to show their pretty faces. It was only another "fish-lie."

Our camp comrades expressing a desire for a mess of trout, "Kingfisher" and I boarded the "iron-clad," as we termed the low sided black-hulled canvas boat, and started for a stream back of Alexander's Point. I had never doted on canvas boats; and the low sneaking movement of the "iron-clad" as it went snaking over the waves made my flesh crawl. I had a belief that the black water-proofing that gave it so deadly a color rotted the canvas, yet "Kingfisher" swore by its safe sea-qualities, and I believe if he had been asked by the Osgood makers he would have given them a blue-ribbon letter of credit. In fact, when I was in the quarters where these boats were shown at the World's Fair, I suspected by the stealthy way one of the Osgood representatives held his hand behind his back, when I "commended" the "iron-clad," that it clapsed a characteristic and gushing missive from "Kingfisher."

As if to indorse my views, when we approached the shore near our trout stream with snail-like movement for fear of a snag, the water began to rush in through the bottom, disclosing a vent several inches long. We would doubtless have had to swim ashore or drown but for the fortunate fact that the water there was only three inches deep. A small projecting point of bark had gently gone through the bottom without due notice to us, and for all the purposes of our return to camp we were in a condition of shipwreck. Yet "Kingfisher," with a courage that was undaunted, insisted the same thing would have happened to any canvas boat, even if its bottom was triple-plated and secret-nailed. I reserved further comments till our return to camp, where I would have proper support.

Caching our provisions in some bushes, we followed the trout stream through several open lots, and in half an hour had put in our basket nearly a dozen nice trout. With his usual agility, "Kingfisher" had forged ahead, and I was trying to decoy a trout that I had seen dart under some roots, when I was startled by loud talking, and glancing up saw "Kingfisher" engaged in a conversation with a ferocious-looking bull. They stood about twenty paces apart, and my comrade was saying something to the bull to which he evidently didn't agree, for he would lower and shake his head and paw the earth, as if to emphasize his dissent. I suspected "Kingfisher" was trying to stuff him with one of his biggest "fish lies." Finding his statements were having no effect on the bull, he changed his tactics, and began an oration full of loud declamation and gestures, accentuated by the flourish of his fish rod. I judged this was a ruse to gain time, as now and then he glanced appealingly toward the fence about 40yds. away. The bull was evidently getting tired of the poor stuff to which he was listening, and began to bellow and flourish his tail. The interview was so comical, I abandoned my trout and lay down on the ground to watch its developments and where I could laugh easier.

In a moment "Kingfisher" attempted an insidious movement to the rear, toward the fence, but so slight it seemed but a feature of his oratorical gestures. "No, you don't!" exclaimed the bull in pantomime as he gave another head shake, and stepped forward double the distance covered by the orator. His eyes assumed a fiery hue, and again pawing the earth he gave vent to a ferocious bellow that shook the ground. "Kingfisher" redoubled his efforts till his hat fell off, his hair became electrified, and his utterance would have shamed a Communist speaker on celebration day. The crisis was deepening.

"Time's up!" pantomimed the bull, and with a roar he started. To say that "Kingfisher" bravely met the foe would be deceptive. He had courage, but he was not rash. He wasn't ready to die. When the bull started, he started—the other way. I had supposed that he would have used his fish-rod as the matador his lance and stabbed the bull to the heart, and got his name in the papers. His flight was inglorious. Between him and safety lay the brook, several piles of brush and a worm fence. I have but a faint memory of that flight. There was something whizzing through the air, a coat-tail horizontal, a sheen of legs like the maze of spokes from Zimmerman's bicycle when winning a race. At intervals the incongruous form would bound high in the air as it encountered the brook and brush. How it got over the fence I don't know, only I am sure it didn't touch the top rail.

The bull was a good second. But just as "Kingfisher" landed over the fence the bull attempted to make a running pick-up on his horn of some sod—probably to throw at the escaped orator. His horn ran under a root, and so great was his impetus he turned a complete summersault,

As he rose, somewhat subdued, there stood "Kingfisher" over the fence, shaking his fist at him and calling him all the bad and uncommon names his imagination could recall or invent. Meanwhile, I was rolling over the ground and holding my sides, that ached with the laughter the scene provoked.

"Your turn next!" viciously shouted "Kingfisher." The warning startled me. Sure enough I was on the same side with the bull and further from the fence than "Kingfisher" when he began his interview. Taking a more circuitous route, and never once attempting to argue the matter with so stubborn an animal, as my friend had done, I finally climbed the fence and rejoined him, with scarcely so much as a side glance thrown my way. I never believed in attempting to show a bull the error of his ways, and in trying to induce him to repent, and I don't believe "Kingfisher" will repeat the experiment.

Further up the brook, under the roots of a big tree on the edge of the woods, we added more trout to our basket, and going to Alexander's, near by, we borrowed a boat, and stowing the "iron-clad" on board in dismantled condition, returned to camp. I repeated the bull episode to the boys, but, vary as I would, could never give a version that was satisfactory to "Kingfisher." His recital of it in *FOREST AND STREAM* has some faint resemblance to the facts, but very faint.

There was one phase of "Kingfisher's" traits that was ever constant—he was perpetually hungry. Whether born so, we cannot say, but added to that other prominent trait of adductedness to cold water, the combination proved a source of frequent comment in camp. When we returned from trouting a pang of hunger suddenly seized him when Furr casually remarked "the camp that day had feasted on richest viands—four or five courses." He began a search of the larder, demolished a pudding and was proceeding to make other things scarce, when he was vigorously informed he must curtail his lunch or hang. He said he preferred to hang.

The incidents of Robin Nest Camp were many—most of them aptly detailed by "Kingfisher's" pen—but the time came when Furr and I were due for the homeward journey, and as we left camp on the mail-wagon for Traverse City the boys gave us "three cheers and a tiger."

Joyous days have been those spent in the camps of the Kingfishers. Around them memory loves to linger as the bright spots of life—the places where all unwelcome thoughts were put aside. Some of the faces that were frequent around the camp-fires are no longer there—old Danny Sloan, Lou Snider and Billy Whetzel have crossed the dark river, and Windeler, Schroll and others have dropped into other paths. It is not likely the writer will be able to join the round-up this summer, nor perhaps for some years to come; yet as the day approaches for each Northern outing, the spirit will chafe to be free with the gang again.

OLD SAM.

#### BOSTON MEN OFF FOR MAINE.

THERE is very little brook fishing in Maine this spring. Many of the trout brooks are as dry as August. This dry weather is also hurting the lake and pond fishing. Fires are raging in the Moosehead region. So dense has been the smoke coming from the shores of Moosehead Lake, in some sections, that the fishermen have been troubled a good deal. Fires are also burning in some parts of the Rangeley region, in the Coplin Township and in the Eustis region. There are also extensive forest fires in the eastern part of the State. Rain is the only salvation for miles of forest lands; and it is to be hoped that the welcome rain will have come before these lines are read. One wholesome lesson is to be received by the sportsmen from these fires, and that is the greatest care in regard to camp and cooking fires. Such are the reports as a rule, but Mr. B. J. Akerman of Brooklyn, N. Y., telegraphs his friend Mr. Patridge, in Boston, that fishing has begun to be good at the Upper Dam. Late reports from Moosehead mention heavy gales from the northwest, as well as the forest fires, with poor fishing.

One of the best fishing parties to annually go from Boston started Thursday evening. The party is made up of L. E. Pierce, Stearns R. Ellis, Geo. A. Fales, James H. Davis, F. H. Bowles, M. J. Conant, Edward Shumway, F. W. Morrill, W. F. Robinson and Dr. Foss. This party is the same as has been engineered by Mr. Pierce for several seasons, and is justly termed the produce party, since its members are largely engaged in the Produce trade. The party is to be quartered generally at Kineo, going out in the morning on fishing excursions and returning in the evening, by steamer. The spokesman of the party, Mr. L. E. Pierce, informs me that fish stories may be expected.

The fishermen of Lake Auburn, in Maine, are delighted. Their biggest story teller has been vindicated. A big fish—long supposed to exist there—has been taken. Mr. Warren Frost, of Auburn, has established the reputation of Lake Auburn forever, besides winning for himself the championship. He has landed a landlocked salmon from that lake weighing 13½ lbs. Lake Auburn is proud, and Mr. Frost is proud, and well he may be. Here is also a vindication of the rapid growth of the salmon family, where food is plenty, for landlocked salmon have been in Auburn but a few years. Fish Commissioner Henry O. Stanley will doubtless inform the *FOREST AND STREAM* as to how long that lake has been stocked.

Mr. Charles Z. Basset, of Appleton & Basset, with his friend Mr. G. N. Smalley, will leave Boston this week for their annual fishing trip. They go to Billy Soule's, Cup-suptic Lake, as usual. They are joined this year by Mr. R. L. Everett. Good trout are likely to be taken by this party. Some of the fishermen will remember the 4 and 5 lb. trout they took on the fly there only a season or two ago. Mr. John J. Pew, of Gloucester, started on the 17th for Billy Soule's. Mr. E. S. Boss and Eugene Atwood, of Stonington, Conn., and Q. A. Atwood, have gone to the camps at the lower end of Kennebec Lake for a week or more of fishing. Mr. Herbert Dumarsq and C. B. Gookin are now at their camp at Duck Lake, in Maine. What is known as the Tuttle Party left for Mr. Tuttle's beautiful camps, Lake Point Cottage, at the lower end of Rangeley Lake the other day. In the party were Mr. R. A. Tuttle, Mr. C. A. Hutchins, and Mr. G. H. Sampson. Col. Harmon, of Connecticut, was not of the party this year. Mr. E. C. Fitch starts this week for his salmon river, the Romaine, on the north shore of the Bay of the St. Lawrence.

The first fishing party of the Megantic Club left on Friday. Among the number were Dr. Heber Bishop, Ralph Peacock, A. C. Risteen, L. Dana Chapman, M. N. Smith, Chas. A. Read, Edward S. Beach, Geo. H. Burt,

R. M. Seymes, G. P. Way, C. J. Woodbury, A. W. Sanborn, M. L. Wetherbee, F. L. Came, L. C. Hacall. It is expected that another party, mainly of New York members of the club, will leave for the spring fishing early this week. Some good catches are expected, and two or three weeks of good sport is assured there, since the waters are not being fished except by members and invited guests. Promiscuous fishing and crowds are the bane of the public Maine trout waters at the present time.

The first fishing party for the Inglewood Club waters, in New Brunswick, left Thursday. In the party were Mr. Andrew S. March, president of the club; Henry E. Cobb, Col. C. A. Hopkins, G. C. Crocker, Jacob P. Bates, the Rev. M. Slack, and others, making nine or ten in all. This may be considered a group of Boston representative men, and the Inglewood may justly be proud of it. But the large party of the season for the same preserve is not to leave till June 1.

Mr. Chas. S. Robertson with his friend John B. Viall, are to start early this week for their annual fishing trip. They go to Brockway, in New Brunswick. It is in the vicinity of McAdam Junction, and not far from Maine. They are to join Mr. Elijah Clark there and Mr. Hayden Sargent. Mr. Clark is well acquainted in the section he is to visit with his friends. Mr. Robertson and Mr. Viall have found excellent fishing there before. Their advices report that the season is unusually early, otherwise they would not be off till the first of June, since it is fly-fishing they desire. Mr. Robertson is a great lover of rod and line, and his annual trouting trips are always successful.

Some of the very latest reports from the Maine waters indicate unusually early fly-fishing. But these reports must be taken with a degree of caution. Trout are being caught on the fly. Oh, yes! But how is it? Do the trout rise to the fly? It is a cheap trick, and one that no honest angler would stoop to. But it is being practiced this season by green fishermen who desire trashy newspaper notoriety. The papers must say that the trout was "caught on the fly." One's friends must be advised that the trout was "caught on the fly." The fly is tied on to the trolling leader just above the minnow or worm bait. Bahl Give us the plain truth! Let us talk about fishing with just as much reason and truthfulness as we do about other matters of life.

SPECIAL.

#### CANADIAN ANGLING NOTES.

Editor *Forest and Stream*:

Salmon fishermen are completing their arrangements for going down to their favorite waters. Lord and Lady Mount-Stephen are expected early next month from Scotland and will fish the Metis River, as usual. The Governor-General and party are to whip the Restigouche and Mr. John Mowat has lately visited Ottawa to make all necessary arrangements for their summer outing. They will be towed up the river in a floating palace fitted up like a palace car. Lord and Lady Aberdeen will not likely visit Lake St. John for ouananiche fishing before the end of August or commencement of September.

Messrs. Frank Holloway, James L. Bell and other Quebecers have had splendid sport already on the Stadacona lakes up the Quebec & Lake St. John R. R., a number of 2½ and 2½-pound trout having been killed by them. From Lake Edward, as usual in the spring of the year, come stories of *fontinalis* safely creoled up to and even exceeding 5 lbs. in weight.

American anglers bound for the Lake St. John district are arriving here in large numbers, the first parties having come up nearly a fortnight earlier than last year. Yesterday a party of nine, mostly belonging to Meriden, Conn., passed through by private car. They are all members or guests of the Metabetchouan Fish and Game Club, and have gone to their club house at Kiskisink Station. Here they have been advised that the trout are now rising freely upon the inlet to the lake and the adjacent rapids. Some of them are millionaires bound on having a good time, and will remain at Kiskisink until the end of next week. The members of the party are Messrs. John Flagg, Samuel Dodd, John W. Coe, George A. Fay and Frank S. Fay, Wm. B. Ives, C. P. Bradley, George H. Wilcox, all of Meriden, Conn., and William P. Morgan, of San Francisco.

Mr. Frank Ross, president of the Quebec and Lake St. John Railway, has just returned from a day's fishing at the Ouitchouan, with fourteen ouananiche weighing in all close upon 60 lbs. The fishing here is likely to remain good up to the end of the month. After June 1 I would urge anglers in search of the best ouananiche fishing to cross to the Grand Discharge. A large party of New England anglers leave here tomorrow for the Ouitchouan.

E. T. D. CHAMBERS.

QUEBEC, May 18.

#### NOTES FROM MOOSEHEAD LAKE.

##### The Spring Fishing.

The spring fishing came on immediately after the ice went out, and has thus far been remarkably good. There have been several unusually calm, warm days; the water in the lake is very low for the time of year; the amount of fishing done last year was comparatively small, and accordingly larger catches are being made this year. One boat took 100 lbs. of speckled trout in less than a day's fishing.

##### At Sebec Lake.

The landlocked salmon fishing at Sebec Lake was all that was anticipated, and all that could have been wished for, so far as number and size were concerned, but the fish did not run up into the quiet water so much as usual, owing no doubt to the large quantities of sawdust and refuse which come down from the mills above. This difficulty will, however, be removed within a short time, if there is any God in Israel.

There has been a progressive increase in the size of the salmon caught at the head of Sebec Lake from year to year, owing probably to the introduction some years ago of stock from Sebago Lake. Salmon of 7 and 7½ lbs. were common this year, and two 8 lb. fish were taken, one by G. A. Bradman, of Abbott Village, the other by a Frenchman whose name was not ascertained. There was not as large a number of anglers at the lake as one would naturally expect, only a few from out of the State putting in an appearance.

Among those present were: E. H. Clark, Hartford, Conn.; Q. A. Atwood, Boston; Gen. L. Barbour, Hartford, Conn.; E. S. Burr, Williamantic; F. H. Drummond, Abel

Hunt and Dr. Hayward Stetson, Bangor; P. O. Vickery, Augusta; Hon. Wm. T. Haines, Waterville; Dr. Hill and Mr. Blake (president Kennebec Fish and Game Association), Augusta; Dr. H. C. Vaughn, besides many others from Dover, Foxcroft and the neighboring towns.

Both Capt. Crockett's Hotel and Frank Jordan's Camp were well patronized; both afford fair board at the same price—\$1 a day—both have small steamers which they let to fishing parties for \$5 a day, in fact there is little to choose between the two stopping places. One can be perfectly comfortable at either place, but of course you can't expect the earth for a dollar a day.

##### Early Fly-Fishing.

If the warm weather continues it is almost certain that the spring fly-fishing will come on at least ten days and perhaps two weeks earlier than usual, and those who intend to time their fishing trip so as to get fly-fishing should govern themselves accordingly. There are within my knowledge two ponds not far from here, accessible only by a five mile tramp, where I have, and believe others can catch trout without stint, until you are tired of it. As these are both small ponds I do not think it worth while to advertise them, but will gladly give particulars to any *FOREST AND STREAM* man, if he will write to me for them.

F. S. BUNKER.

#### CHICAGO AND THE WEST.

[From a Staff Correspondent.]

##### The Mississippi River.

CHICAGO, Ill., May 11.—Mr. Alfred Hobbs writes me from Dubuque, May 2:

"The Iowa Legislature adjourned without enacting any laws for the protection of fish in the Mississippi and Missouri, so that so far as those rivers are concerned, there is no law of Iowa to prevent any depredation by use of seine, nets, dynamite or any device whatever. However, thank heaven there are good laws in Wisconsin and Illinois, and we will do what we can under them to prevent the wholesale destruction that has been going on for the past 10 or 20 years."

The Mississippi Valley Association is doing good work, and other States than Iowa should be prominent in the work. It asks the aid and support of all States along the great river against the wanton and reckless destruction of fish life.

The Illinois State game warden, Chas. H. Blow, of Chicago, is doing a lot of good work. He has proved efficient and energetic and has a long string of scalps already. Witness the following, from the Dubuque *Herald* of April 20:

"State Game Warden C. H. Blow, of Illinois, and his deputy James First on Saturday captured three Muscatine men seining for fish in the bayou opposite that town. They were brought to Rock Island, and Magistrate Schroeder fined Dan Hoffman, William Wahl and George Hatton \$25 and costs each. On Monday the two wardens caught August Miller and Andy Hoffman, two Davenporters, catching fish by unlawful means, and Magistrate Schroeder assessed \$25 on each of them. State's Attorney Searle represented the State in each of the cases."

##### Kalamazoo Small-Mouths.

A Kalamazoo, Mich., report says:

"The bait-casters are having great luck with small-mouth bass in the Kalamazoo River. Monday, Al Rosenberg, of Kalamazoo, a fisherman known far and wide, caught forty-six of the black fellows."

##### The Fox Lake Chain.

The big-mouths have begun biting in the Fox Lake chain of lakes, and many parties have been successful.

##### "Landlocked Salmon."

The "landlocked salmon" (Mackinaw trout) of the larger upper Wisconsin lakes should begin to rise within the next ten days, if the ice is not already out. Several parties are going up for this and the early muscallonge fishing.

##### Senachwine Lake.

Bass are now rising well at Senachwine Lake, on the Illinois River, and parties should not overlook this water, which has not been so much patronized by the bait casters as it should be, for some very large bass are to be taken there. This locality is reached by the Rock Island road, to Bureau Junction and Henry.

##### Minnesota Waters.

Mr. J. I. Bamhurst writes from New York:

"Where can I find, in Minnesota, a place where I can take my sisters and spend a couple of months next summer and get some fair trout or bass fishing, or both?"

The Detroit chain of lakes still has good enough fishing for anybody. Mr. C. E. Robbins, of Fargo, N. D., will tell about accommodations there, cottages, etc. The White Bear Chain, nearer Minneapolis, offers plenty of cottages, very rural appointments, and a good many bass. Rev. Myron Cooley, Detroit, Minn., will no doubt tell about the trout and bass combination for which one must go north, probably camping. All Minnesota is full of lakes, and many of the lakes are full of bass.

E. HOUGH.

909 SECURITY BUILDING, Chicago.

##### "Rodster."

Editor *Forest and Stream*:

I read Brother Starbuck's letters with a great deal of interest. He is the equal of Holmes and the peer of many I could name in the way of poetic imagery; but, "rodster," don't you all think that is a bad term? Rod-man or rod-woman would be more easily understood, and while it might lose somewhat in poetry would convey the notion (that is Yankee) that a man or a woman was handling the rod. But "rodster"—who ever heard of such a term, and where was it born into our vocabulary of fishing? The term is not poetic, as is usually all of our brother's words, employed to express his feelings, and when I come to "rodster" the word takes all the vim out of me. But I can well forgive Brother Starbuck because of his very interesting letters.

E. S. YOUNG.

The *FOREST AND STREAM* is put to press each week on Tuesday. Correspondence intended for publication should reach us at the latest by Monday, and as much earlier as practicable

## ON THE NORTH SHORE OF LAKE SUPERIOR.

(Continued from Page 428.)

AFTER dinner had been served we sent the boys to the mountains to gather some huckleberries, and during the interim indulged in some light and pleasant reading. "In and Out of Three Normandy Inns," by Mrs. Anna Bowman Dood, interested me for quite a while, it being a picture of the country and its people. The authoress had a clever appreciation of the French character and temperament and a broad, tolerant view of the social and moral questions of the period. In one place she speaks of a young factory girl who "had been singing songs of questionable taste in a voice of such contralto sweetness as to have touched the heart of a Bishop." On the whole, the book is a vivacious and thoroughly charming volume of travels. Its individuality and freshness were deliciously delightful.

Ned's mind being of a somewhat practical turn, and doubtless looking for some new ideas in the contemplative man's recreation, took to Kit Clarke's last work, "The Practical Angler." He soon came to the conclusion that the author knew a thing or two about the gentle art. After he had gleaned the information that big trout could be taken by hooking a field mouse through the ear or tail and then letting it swim around where the "big fellows" lie, he was soon on the lookout for the little rodent, but his search that time completely failed him. I was positive he would now order out the entire camp for a grand hunt for the mischievous little pests, but other important matters crowding on his mind it was forgotten, and the boys thereby saved from the troublous scouring of grass-grown fields.

About 5 o'clock the half-breeds returned with a bucket of blueberries and then a proposition was made for an hour or two's trouting over the same grounds we had visited in the morning. The boat being put in readiness without delay we all boarded her and went along the picturesque shore with the mountains wrapped in violet haze and the savage cliffs burning in regal splendor, while the rosy light shooting through the branches of the green foliage fell upon the gray rocks that lined the shore with a strange golden glory. It was a condition that we were sure would find the carmine beauties in sportive play and eager to pounce upon what fell within their range. As I have said before, the cover here for trout in shelving ledges, deep chasms, huge rocks and the like, was unsurpassed. Ned, eager for the quarry, was soon at work, while I chose to await arrival at the "big rocks."

Coming to an abrupt crag that was in alternate lines of sunshine and shade, Ned made his first cast and quiver, but no red-coated or freckle-sided *Salvelinus* sprang upon either of the deities. Again they were elevated and again fell and fluttered with the same result. This delightful and hopeful work he kept up till he was satisfied that the place was either untenanted or that the tinted Illebs were not to be coaxed to the surface. The boat is ordered onward to another tempting spot where the shore

"—bristling fierce with towers,  
Turrets and battlements of warlike powers—  
Jagged and priestly pinnacles and spires—  
And crowned with domes, that glitter in the fires  
Of the slant sun, like smithied silver bright."

Here, amid all the grandeur of cliff and mountain beauty, flushed with every tint and hue imaginable, must dwell the courtly beauty of the ruby's gleam and the pearl's pale shade.

Ned was positive of arousing some of the dwellers in this castellated retreat, and so he sent his *avant courriers*, the scarlet-ibis and the yellow-belle, on the mission. They went time and again, and finally reported the place deserted. He wanted a victim badly and was sorely disappointed at the failure. On the warpath he went once more, and this time he stopped in front of a savage ravine radiant with the glowing light pouring through it, and grimly fortified at the top with a forest of black pines that stood like dark sentinels against a crimsoned sky. Here, after divers efforts at recognition, he secured a victim superlatively beautiful in charming tints of violet, orange and gold. Satisfied with the trophy he had snatched from the chasm at this wild spot, we hasten along until we reach a great, sloping plain, ridged and seamed, that ran in strange confusion to the lake, and then dropped perpendicularly with a ragged face to the waters below, disclosing ledge upon ledge that years of grinding ice and battling waves had formed. Here was a haunt fit for the home of a Naiad or a trout, and as the latter was our special admiration and object, the illusive flies danced gracefully over the caverned retreats. At last Ned's cunning efforts were rewarded, but it was in such an infinitesimal manner that he declined the reward, indignantly tossing back the little nursing that it perchance might be returned to him or some other fortunate angler in the future, in pounds instead of ounces. This prompted him to move without further halt to the "big rocks." Reaching this place, we promptly stepped ashore, Ned rapidly making for the upper end of the flinty islet, for such it really was, while I remained at the lower and put my little Chubb rod into immediate service.

On the second cast, my stretch, a red hackle, was gobbled, and then after a vigorous fight, a lovely darling of the *Salvelinus* family that was a trifle over 3lbs., was repenting his fatal curiosity in a deep depression on the gleaming rock. It was really a treat to see how that little 7oz. rod with cork handle worked. Its bend was the very perfection of grace, while its recovery was immediate without halt or drag. And then so wonderfully balanced and vigorous its strength, that I would have trusted it to hang and kill a muskallonge of 20 or 30lbs. With perfect confidence in this rod you can give "the butt" in turning a fish from tangled drifts or sharp-edged rocks, for it is as tough as hickory and as true as steel. I never knew what comfort and ease in casting were till I began to use the Chubb split-bamboo with cork grip and aluminum reel. To use a hackneyed phrase, "it is a thing of beauty and a joy forever," and therefore a delight to me to make note of a rod that reflects so much credit upon its artistic maker. I have three of these rods and they all show perfection in workmanship.

Ned, who had been persistently flogging the waters around his end of the rock without further success, joined me and expressed a desire to return to camp. Being in full accord with his wishes we called our half-breeds, who were after berries among the bushes near by, and then boarding the Mackinac were soon off and driving along with little rolls of snow-white foam dropping from the bow

and flashing like blinding stars as they mellowed to the surface in our wake. There was just force enough in the air to sway the branches of the dark pines and sunshine enough to paint their tops in golden hues, while the aroma from the balsamic groves rivaled the odors of "Araby the blest." Ned, whose eyes sparkled as if he had added new lustre to them, was in great good humor, and chatted as we progressed with a heart fairly overflowing. Song after song and jest after jest were constantly rolling from his lively tongue, until finally taking to the sentimental, which occasionally strikes him, gave poem after poem of his favorite Bobby Burns. The half-breeds always enjoyed such occasions and listened with wondering eyes and gaping mouths. Kenosh, who was carried away this time, said to Peter in low tones: "Great man; know heap; sing big."

"Yes," said I, moved with the spirit of fun; "he's a great man, know heap, sing big, but he can't tie a fly a little bit."

This created an outburst with the half-breeds, somewhat to Ned's astonishment, who at once dropped his Bobby Burns and asked:

"What's that about flies?"

"I said there were no flies on you."

"Oh," he replied, and went on again with his favorite poet as if he had received adulation, while the boys roared louder than ever at my equivocation.

Ned got somewhat confused again about the matter and could not comprehend why the laughter still prevailed. The sweet pathos of the Scottish bard should bring tears rather than laughter, he thought, and so he withdrew his author, but the smiles of his auditors broadened and broadened till the boat struck the sandy beach at our quarters, and then the tawny Kenosh, as he stepped out, with the humorous spirit of the occasion still within him, said, "No flies on him," and at this the laugh became louder than ever; but poor Ned was sorely puzzled over it and I presume he is to this day.

ALEX. STARBUCK.

[TO BE CONTINUED.]

## NEWS FROM FISHING WATERS.

WARREN, Pa., May 15.—Trout fishing here is about up to the standard this spring. Some of the best catches I have heard of are as follows: Mr. John Shultz 90; Mr. Acy Phillips 83; Mr. J. H. Zittle 50; Mr. Geo. Hedges 36; Mr. Isaac Hare 68; and many other large catches were made in a day's fishing.

The trout run small, generally averaging about 7in. in length. The best creels were secured the first two weeks of the open season. At the present time it is hard to secure a good number of trout without going 17 or 18 miles from town, as all the nearby streams have been fished about out. Good fishing is to be had by going to Sheffield, a small town about 16 miles south of here, and fishing in any of the small streams which flow into the head of Tionesta Creek near that place.

W.

FALLSBURG, N. Y., May 18.—The best catch of the season was made this week by Jas. P. Hall, of Jersey City, 300 in number, on the Neversink River; second best catch by Frank Freer, of Neversink, 225 in number, average size from 4lb. to 1lb. The biggest trout was caught this week by O. Barber, Woodbourne, weight 24lb. brook trout.

L. L. WALDORF.

ASBURY PARK, N. J., May 18.—This week has witnessed the first of bass fishing in this locality; fish have been taken in Manasquan Inlet, 3½, 4 and 12lbs. respectively. Excellent white perch fishing is to be had in the same river about two miles from the mouth. They are running unusually large this season, 1½lbs. specimens being frequent. A quarter mile walk from Allenwood Station, P. R. R., lands one directly at the point. Taken with lightest of tackle these fish afford A1 sport, as they are as full of game as black bass of equal weight. Taken with trout tackle a 1½lbs. fish will keep the angler and his rod both busy, if they want to stand at the head of the class when the lesson is over.

Yesterday morning I succeeded in landing a heavy-weight from our fishing pier. After two hours of patient waiting I was rewarded with a vigorous strike, instantly followed by a lightning-like rush of about 200ft. seaward. Realizing that the quarry was well hooked I gave him good, free play with moderately taut line and about twenty minutes after he made first show at the surface, lashing the water into foam. He immediately made another dive and rush but with much less vigor. Feeling that my time had now come I snubbed him hard and had the satisfaction of seeing him break clear of the water; but instead of the anticipated bass I had a 4ft. shark. I have never caught muskallonge nor tarpon, but if either of them, weight considered, can beat this shark at swift rushes, headlong plunges and cunning resistance in general, I would like to try conclusions with him.

LEONARD HULIT.

ADIRONDACK PRESERVE ASSOCIATION, Essex County, N. Y., May 18.—*Editor Forest and Stream:* The season in this section has opened very pleasantly. The weather has been bright and clear, but a trifle too blustery for continual fly-fishing, although we have had a sufficient number of still days to have good fishing. Trout seemed to have wintered well, and their excellent flavor this season is a cause of remark by all of our members who have partaken of them. The fishing generally has been good, some of our members having several times been obliged to take rods apart and leave our lakes on account of reaching the number of trout named in our rules. The large number of small trout seen in our lakes is marvelous, and not only encouraging for future sport but for a continuation of our rules, which seem to preserve and increase the number yearly.

Deer are more plentiful than ever, and are getting so numerous that they are almost daily seen from our club house windows.

Partridge have not shown up in any numbers as yet, but as the winter was a fairly mild one, they will probably be seen in greater numbers later on.

E. W. A.

REYNOLDS, VIA WOODRUFF, Wis., May 15.—Mr. G. Henry High of Chicago caught in Trout Lake, May 14, 12 landlocked salmon, averaging 3 to 6lbs. May 15, caught 5 muskallonge weighing from 5 to 20lbs. May 16.—Mr. J. Frank Lawrence of Chicago caught to-day 8 muskallonge and a 9lbs. bass; muskallonge weighed from 5 to 12lbs. Mr. Robinson of Savanna, Ill., caught to-day 24 muskal-

longe weighing from 4 to 12lbs. Mr. Joseph Downey of Chicago caught to-day 24 salmon trout, one weighing 16lbs.

JOHN B. MANN.

Mr. Wallace Durand, of Newark, N. J., the enthusiastic and successful angler, left New York on Thursday for Canada on his annual fishing and hunting trip. He will go to his club, 160 miles north of Quebec and in the heart of the wilderness, where in company with a party of friends he expects to fish for the salmon of the Lac Bouchette region.

NEWPORT, Vt., May 19.—One of our local anglers is just in from a two days' fishing trip down the lake. He brought in eleven lake trout weighing from 6 to 14lbs. each. He calls the 6 and 8lb. ones "little ones." Rob.

THREE LAKES, Wis., May 14.—Joe Swedesky and the writer caught last week 426 pike, largest 9½lbs.; 29 bass, one 4½lbs.; 57 pickerel, one 14lbs.; 2 muskallonge, one 24½lbs. The prospects look good, the water is low, and the season is much earlier than usual.

F. R. FRENCH.

## MEMPHREMAGOG LAKE TROUT.

NEWPORT, Vt., May 18.—*Editor Forest and Stream:* There are doubtless many of your readers who at some time have visited Newport and Lake Memphremagog, have taken a trip down the lake forty miles and return, enjoyed the beautiful scenery of wooded hills and shores, the lake itself with its many islands scattered here and there, and grand old "Owl's Head" standing sentinel over the neighboring mountains of lesser heights, and may be their minds had been so engrossed by all these attractions that they had forgotten to inquire what were the possibilities in the way of attractions for the angler; for, be it known, there is to be had some really good fishing in Lake Memphremagog and the streams emptying into it. Of course, we do not boast of large catches of speckled trout, land-locked salmon and such, though of the former there are some fine catches brought in here from near-by waters every season. The fishing I most wish to speak of at this time is for the lake trout which at this time and from now until mid-summer is really fine. The fish run larger in size than in any other waters in New England, with possibly one or two exceptions; but few are taken of less than 3lbs., and I think the average weight may be safely set at from 5 to 8lbs. each. The same methods are employed here for their capture that are in "common use" elsewhere, *i. e.*, trolling, early in the season, and the use of live bait later on when the water begins to get warm. Already several good catches have been brought in by our local anglers, the largest three thus far reported to me were 12, 12½ and 14lbs., respectively.

This is not all the fishing to be had in the lake, however, for after the season opens, June 15, we can offer to the bass fisherman as good black bass fishing as there is in the State, and lots of it too.

I do not write this as anything in the way of a new and important discovery, neither do I expect a great rush of anglers in this direction, but simply because I have often wondered why, among so many summer visitors who annually come here, there were not more fishermen, for I know positively of many who go to other places for fishing where they cannot get half the sport that is to be had here, and simply because the other place is advertised as a "fishing resort."

I hope, with the permission of the editor, to report occasionally some of the catches some of our local anglers bring in this season, and if any of your readers chance to come this way this summer, and enjoy fishing (as of course they do if they read *FOREST AND STREAM*), don't let them forget to take along their "tackle," for they may strike better fishing in Lake Memphremagog than they have found in other and more noted fishing grounds.

Rob.

## Salt Water Fishing at Morehead City.

MOREHEAD CITY, N. C., May 17.—There has been an extraordinary run of Spanish mackerel off Bogue Inlet for two weeks past, and trollers have had great sport. Besides Spanish mackerel there are bluefish and cero outside, and hogfish, spots, croakers, sea mullets and trout or weakfish inside the bar. Sheephead will soon be due. The Atlantic Hotel at Morehead has been opened since May 7, and parties run down from Newbern by railroad for two nights and a day and enjoy a famous outing. There is no such fishing, boating and bathing elsewhere on the Atlantic coast, and rates for sailboat and skipper are only \$3 a trip.

Beaufort and Morehead are headquarters for extensive fish and oyster interests. Quantities of packages are shipped to New York every day on ice. At low tide thousands of acres of oysters are uncovered, and millions of fiddler crabs run over the sand. A wagon driving over the beach will crush scores of them. Seines are so generally in vogue that bait is little used. Expert handliners who will come down here and try among the wrecks and reefs will have rare sport. Hotel accommodations are complete and fully up with the times. Those who want a quiet place, run over to the Davis House at Beaufort. The Atlantic, at Morehead, has 300 rooms and is lively—filled all summer long with excursion parties, military encampments, church picnics, teachers' associations and the like. This week there were three events. At the annual teachers' assembly in June nearly a thousand persons came together. Rates are \$35 to \$40 per month each person. It is a pity that such an incomparable resort were not better known outside the State. For salt water fishing there is none like it, and it costs only about \$12 to get down here from New York by steamer.

President Cleveland was out trolling on Thursday, the 17th, with Capt. R. D. Evans, in the Violet. It was almost too rough for sport.

CHARLES HALLOCK.

## Needham Rod and Gun Club.

NEEDHAM, Mass., May 14.—At a meeting of gentlemen interested in shooting and fishing, an association was formed, to be known as the Needham Rod and Gun Club, with the following officers: Pres., Dr. F. P. Hudnut; Vice-Pres., W. H. Cook; Treas., Geo. H. Hassam; Sec'y, C. W. Hedenberg; Directors, J. N. Bethel, J. W. Jones. The club starts with sixteen members.

C. W. HEDENBERG, Sec'y.

## SURF FISHING ON THE JERSEY COAST

## And Other Things.

FOUR years have passed since "Big Reel" published his notable article on "Surf Fishing for Striped Bass on the Jersey Coast," in the issue of FOREST AND STREAM of April 3, 1890. I am one of the many who owe him a debt of gratitude for that article. I have just re-read it, and with the experience of four years surf fishing with a big reel, I find it as interesting and instructive as I did when it first reached me. Prior to the publication of that article a number of fishermen in the neighborhood of Belmar and Asbury Park, New Jersey, had done good work with rod and reel in the surf, and it is possible that Harry Quick, Cy, Detre and their friends at Asbury Park could even in 1890 have exchanged points on even ground with "Big Reel" at Belmar; but we dwellers south of Barnegat Inlet knew little of the art of surf fishing, and "Big Reel's" article, perfect in its concise summary of all

BLACK DRUM, WEIGHT 80 LBS.

points, was a revelation to us; it stands as a fishing classic, a summary as complete as any article from Frank Forrester in his best days. On reading it, I immediately sought out "Big Reel" in the spring of 1890, and found him the genial companion and good fisherman that his article bespoke him. Thanks to his instructions, I was soon provided with an outfit, and in the four summers of fishing since then I have cottoned more and more firmly to his theory that for our latitude the 5in. big reel, of the best workmanship, is the best and only reel to use for all

HARRY'S TARPON.

Length of fish, 6ft. 3 1/2 in. Length of boy, 5ft. 2 in. Weight of fish, 140 lbs. Weight of boy, 85 lbs. Time, 2 hours and 25 minutes.

around fishing in the surf, or from surf boat or yacht in the ocean. In the bays undoubtedly smaller reels and lighter lines meet the situation better.

My fishing has been done at Anglesea, New Jersey, in the spring, and at Beach Haven, New Jersey, in the summer. At Beach Haven, I am satisfied that the conditions are so far different from those prevailing on the beach further north that surf fishing for striped bass is not a profitable amusement. I tried for them faithfully, under all conditions of weather and tide, and with all obtainable kinds of bait through the summers of 1890, 1891 and 1892, without success; but on the other hand, I

have had such pleasure and such good results from casting in the surf for blue-fish with this rig, that my two oldest boys and I look forward to it annually as our chief summer pleasure.

My oldest son (etate 13 1/2 years) and I both use No. 5 Vom Hofe reels, the younger boy (etate 11 1/2 years) a No. 2. Up to this spring, we have used steadily the Belmar line mentioned by "Big Reel" in his article. While, however, this is unquestionably the strongest line for its weight, and amply strong for drumfish and striped bass—I incline a little since my recent Florida experience to Hall's No. 15 for squid-casting, as less liable to snap in the inevitable over-runs that are certain from time to time to occur with the most careful fisherman, in the hurry incident to rapid casting as a school of bluefish pass along the shore.

As to drumfish, though a somewhat logy fish, it is great fun in May or even in the latter part of April, to go down to Mrs. Blakemore's cottage at Anglesea (no more comfortable fishing rendezvous was ever found), and spend a couple of days with Capt. C. Ludlam fishing in the surf with rod and reel alongside of the native fishermen with their heavy hand-lines. The light line and rod and reel generally make the best record. The fish run from 10 to 40 lbs.—sometimes up to 60. They are caught on clam or razor bait, and give good fun and healthful exercise.

In the spring of 1890 I remember taking at Anglesea a 3 1/2-pound striped bass on a second hook, baited with shedder ocean crab, that I fastened on just to see what it would bring out.

For the information of fellow readers of FOREST AND STREAM I would say that Anglesea is about ten miles north of Cape May on the West Jersey Division of the Pennsylvania Railroad, easily accessible from either New York or Philadelphia, and it is probably the best all-round fishing resort on the Jersey coast. I have had the pleasure of meeting "Big Reel" there, and fishing that is game for him is good enough for me.

I have had great pleasure in reading from time to time letters and articles during the last few years in FOREST AND STREAM anent the development of sporting instinct and training in our children. My boys and I have put this into practice. My oldest boy has had a Greener No. 16 since his ninth birthday, and in the four years since then he has managed with his greater opportunities for practice to become a great deal better shot than his father. Both boys are good surf fishermen and the elder took a tarpon in Florida last March of which he has cause to be proud.

This fish was taken off Nigger Head on the Caloosahatchee River, below Fort Myers; and, by the way, our experience in a short tarpon trip in that country accorded so closely as to localities with the suggestions given by "F. S. J. C." in your columns some time ago, that I would like to make my bow to "C." in passing and thank him. May I say to him, however, that my son and I take issue decidedly with him in his preference for a smaller reel. Let "C." fish a season for any large fish with a No. 5 Vom Hofe reel and he will want no other—certainly none under No. 4. As to line, I see he recommends Hall's 18. I know that Mr. C. A. Dean, of Boston, one of the most experienced tarpon fishermen, favors the same number; yet I am emboldened by my recent experience to advocate the lighter No. 15 for tarpon. As to snells, they use nothing at Fort Myers now but the rawhide snell, which you can get from the local dealer, Mr. W. R. Washburn, and with which you will be well satisfied. You cannot give away any other kind, and the rawhide undoubtedly is the best. I went down equipped with three dozen of the strong cotton snells with a wire wrap, so much used last year, and discarded them.

What do you think of this Kodak? I took it myself, of my boy, his fish and his guide, and I don't know whether boy, guide or father was proudest of that fish. Mind, this was an honestly caught fish, no guide work. The boy played and saved it himself, but he never could have done it but for his experience in surf fishing during the last few years on the Jersey coast.

And apropos of that let me tell you of an interesting experience the boys and I had last summer on the New Jersey coast. When the weather is fair and the wind west so you can go outside, the chances are good, that in the last part of August, or any time in September, you will get big fish of some kind at Beach Haven if you sail down to the Inlet and cruise out to sea for a day. And yet many a day have I done this with no result in the way of fish, but with ample reward in fresh air, sunny sky and dancing waves. Well, one day the boys and I thought we would try outside for big weakfish, and as a measure of precaution we took along our big reels and surf rods. After getting outside we cruised about for several hours trying for bluefish with squids and anon for weakfish with bait, with no result, until suddenly Capt. Abe Price, our faithful companion of many a fishing and hunting bout, sighted a yellow streak in the water about a half a mile off—"Them's fish!" And we went for them then and there. Another boat containing native fishermen got to the school first, but could do nothing with their hand-lines. As we approached they shouted to us to come on, knowing we had rods and reels. To our astonishment the school consisted of several acres of large (black) drumfish (not the red drum) swimming steadily in a southerly direction and keeping at the surface. The fish were all large, running apparently from 4 to 5 ft. long. They moved slowly and apparently did not take fright at the approach of our yacht, which was a cat-rigged boat, 22 ft. long. I baited with clam but they would not bite. I then tried drawing the hook through the school, and could feel the sinker strike the fish, and the hook catch and then slip. I succeeded in hooking one on the outside of his head, near the eye. I played that fish for one hour and ten minutes. At first he kept steadily after the school and fortunately the wind was so that we could follow him. In time I tired him so that he lagged behind and then took to the bottom in about 20 ft. of water and sulked. He was so big and so heavy I had to wait on him, but after many runs, at last I got him within 10 ft. of the boat, when he made the one roll that he apparently had reserved until that time, the proper one to disengage the hook (which you remember was not in his mouth) and off he went. My boys were with me, and I don't approve of strong language anyway—so I simply sat down and rested, after my seventy minutes' work.

Then it was Harry's turn. We sailed after the school and caught up with them within a mile or so, as they were swimming very slowly. Harry cast into the school and speedily hooked another, and a lively time he had of

it. The wind had come up fresher; we were about two miles from land, and the sea was getting up. That blessed fish wouldn't keep on one side of the boat, but revolved continually. Harry had to dodge back and forth, around the mast, under the boom, pass his rod under the sheet, and keep awake generally. After a long fight the end came, happily, and more successfully than in my case. We resolved when the fish was brought near the boat after fifty-five minutes' play, to take no chances, so Capt. Abe took Harry's gun loaded with small shot, and firing down at the fish when it was near the surface, so stunned it that we were able to get it on board with a weak little gaff we had. Not expecting any such experience, we had no suitable gaff with us.

That fish was hooked through the dorsal fin! If any of you know what it is to hook a small black bass through the back or tail, you can judge what it means to hook a fish weighing 80 lbs. (for that was his weight) in the back. It gave him absolute freedom of motion, and the contest

RED DRUM (CHANNEL BASS).

resolved itself into a question of endurance as between boy and fish. However, the boy came out ahead, and that drum now hangs in our hall beautifully mounted on an oak board by John Krider. The illustration shows the fish. Contrast the heavy build of the drum with the clipper lines of the tarpon above.

Let me see, where was I? Oh, yes—talking of our recent tarpon trip to Florida. The above drumfish incident was by the way—as indicating that if fathers and

JAMIE'S STRING OF FISH.

Ladyfish, snapper, cavalli, sea trout and Spanish mackerel.

mothers encourage small boys to fish for big tarpon in Florida, we mustn't send them out on such quests without preliminary training on large fish in our own latitudes.

By the way, I note that "F. S. J. C." says in his above article, "I assume the fisherman wishes to give four weeks to tarpon." A safe assumption, friend C., but how many of us can do it? My boys and I had just three days on the Caloosahatchee, and only one of them a good day, as we were there in the cold snap in the latter part of March, yet I had two runs, and my boy had a run and then got a fish. I am satisfied that one week's fishing with good tackle at Fort Myers in the last of March or preferably later, is certain of good results, if the trip is carefully

arranged in advance, and the needful precautions taken in securing good guides and tackle.

I telegraphed home the news of our tarpon from Punta Rasa when we reached there in the evening, and after supper took the yacht and sailed over to see Mr. F. Steensgaard, the taxidermist at St. James City, and left the tarpon with him, with some birds we had shot, to be skinned and mounted, and then shipped North to us.

Next day we had some fine small fish fishing in Charlotte Harbor. My younger son took numerous varieties, and I was content with a 14lbs. channel bass, caught with one of Conroy's light three-piece split-bamboo rods and a light silk line. That night we slept on the yacht in the warm southern air, the boys on the lockers and the Doctor and I on the deck, and in the starlight we sailed up through the waters of Matlacha Pass, reaching Punta Gorda at daybreak, in time for a good breakfast at the hotel, and in good time for the train North.

Finally, good friends, if you have little time and want to have fun and tarpon sure, go straight to Fort Myers on the Caloosahatchee, and if you put up as I did with mine host Kantz at the Myers Inn, you will have good clean quarters and good food.

If you have leisure, start fishing at Punta Gorda, enjoy the lovely surroundings there, and wonder at the enterprise that projected and supports the superb hotel. Fish the Peace River for small fish and tarpon; then go south and stop at Punta Rasa long enough to learn what a good hostelry friend Schulze keeps there and how kind he and his hospitable wife can be to wandering fishermen, and then, THEN, THEN, having been gradually prepared for it, go up the Caloosahatchee to Fort Myers and fulfill your destiny and revel in tarpon fishing such as the gods may delight in, but which we poor hard-worked mortals can only sometimes reach, and if you want good guides who never tire, and know it all from the ground floor up, seek the men whom my friend Wickham sent me to—Armeda, Bates and Blöm. May you have as happy a time and as successful a trip with them as my boys and I had, and come home with the pleasant memories of sunny skies and blue waters, waving palms, and mangrove shores that we cherish and love to talk over.

H. S. D.

### ANGLING NOTES.

#### Salmon Rising to the Fly Above Tide.

LAST year about this time, or a little later, I went to Mechanicville with a salmon angler, who is the owner of a portion of a Canadian salmon river, to try the salmon in the Hudson. The salmon did not rise, and in fact, the water was not in good condition, but soon after, this gentleman wrote me from Canada giving the opinion of an old Canadian salmon fisherman that salmon would not rise to the fly above a certain distance from salt water. I quoted this opinion, although it gave salmon angling in the Hudson a very black eye if it should prove that the theory held true in practice. That the theory or opinion, call it what you will, was wrong, was demonstrated soon after, for salmon did rise to the fly in the very place where it was believed they would not. In spite of this demonstration that salmon would rise to the fly at a greater distance from salt water than was predicted they would, I have been haunted by that opinion of the old salmon fisherman quoted, and wondered if it would prove true of any part of the Hudson commonly looked upon as suitable angling waters, once the stream is provided with fishways. Incidentally Mr. John Mowat said to me, that it was once thought in Canada that salmon fishing with the rod was to be had only in the upper reaches or headwaters of the streams, but now as many if not more salmon were taken a few miles above tidewater. Upon this I asked him to write me more at length, which he has done as follows:

"I have observed in sportsmen's papers articles advanced by anglers that salmon will not take the fly forty miles above tidal waters; also that when the temperature of the water rises above 70° it makes poor fishing. If those who put the temperature at 70° had said 60° they would have been nearer the mark. In our northern rivers the water seldom rises to 60°; the nights cool it down more than the mid-day sun heats it. On a cool night in August, in a well-stocked salmon pool, the fish are continuously jumping out of the water, and there can be no doubt the cooler air with its supply of oxygen required by the breeding fish is the cause. As to salmon taking the fly above forty miles in fresh water. In very many of our Northern salmon streams, and in the Labrador rivers there are insurmountable falls from three to thirty miles from their mouths; others have chutes and rapids so dangerous that anglers have come to grief, and they cause hesitation on the part of the angler. The Cascapedia and Nepissiquit both have falls on them some thirty or forty miles up. The Restigouche and its confluent have none, and more or less salmon reach the headwaters, some 110 miles, every season. The angling limit is fixed 70 miles above tidewater, and commences four miles up. Good scores were made last year at 14 miles up, but better were made at 40 miles up, where Messrs. Weeks and Penfold in six days bagged 126 fish. At 70 miles up Messrs. Rogers, Booner and Brooks in a week killed 116 fish. Both myself and Mr. Whitcher have killed salmon with the fly 30 miles above this place (Campbellton), on the Kedgwick River (now closed), and 100 miles above the head of tide. I remember that when I first came to this country the general belief was that all salmon ascended the river as far as possible to an unknown country called the spawning grounds, where they were taken by whites and Indians. In fact, the river was being depleted year after year, and a salmon was not allowed to live in the stream unless he got so far up in the headwaters a canoe could not reach him.

"Twenty years ago this action of taking salmon on the spawning grounds was made illegal by statute and after a hard fight it was enforced. To-day every suitable gravel bed from tidal water to source of stream is more or less a spawning ground, but that is not all, every one of those grounds has its regular quota of breeding fish, to which their progeny return, and remain, when grown to adults, thus giving an equal distribution over the whole stream. Now, dear sir, I may be giving the fish more credit for instinct than they possess, but I don't think I am."

If any one is possessed of doubts concerning future rod-fishing in the upper Hudson, when salmon shall have access to the headwaters, what Mr. Mowat says should dispel them, for I know of no one who can speak with

greater authority on this subject of times and places that salmon will take the fly. Mr. Mowat has spent fifty-five years on Canadian salmon streams as angler, fishcultivist and fisheries officer, and his sons have followed in his footsteps, and what he says is entitled to great weight, as he speaks from hard-earned experience, leaving theories and speculations largely to others.

What he says about salmon returning to the same spawning grounds, and their progeny likewise, reminds me of what a Scotch writer has said on the subject. At this moment I cannot recall the name of the writer or the medium that he used, but the substance of what he said is clearly fixed in my memory.

He had observed spawning salmon and sea trout for a series of years in the same waters, and had satisfied himself that both species not only returned, unerringly, to the stream in which they were born, but the same fish returned again and again to the same spawning ground.

#### Salmon Fishing on the Penobscot.

My friend Mr. Archibald Mitchell, of Norwich, Conn., has just returned from the Penobscot after fishing the Bangor Pool for three weeks. He killed three salmon of 18, 20½ and 23lbs. He says that from fifteen to twenty-five anglers fished the pool daily for three weeks, and during the time twenty salmon were killed. Mr. Mitchell will soon start to fish the water which he owns on the Restigouche, where the rods will not be as thick as at Bangor.

Imagine the Hudson provided with fishways that the salmon may reach the upper waters of the river to spawn, and then imagine the miles of holding pools that the river should afford, and reduce the number of anglers to five for each pool (in free water the number of rods to a pool cannot be limited), instead of fifteen to twenty-five as at Bangor, and one will get something of an idea of the wealth that will be a debt to the State of New York by providing the means to make the Hudson a salmon stream.

#### Lake Trout Still at the Surface.

Lake trout were at the surface so late as May 16 in spite of the early fall because the ice went out of Lake George a month earlier than usual just to spoil the surface trolling. I have been a persistent lake trout troller for twenty-five years and imagined I knew something about the fish and their habits, but now a market-fisherman at Lake George tells me that he believes that the trout do what we have been certain that they did not do, that is, come to the surface very early in the morning all during the summer. Be that as it may, I do know that the conditions have changed in Lake George within a few years to make such a theory possible, but that will be told later. Mrs. Albert C. Johnson caught a trout of 12lbs. in Lake George last week, which is about as large as they run as a rule. The largest of the season thus far was taken on the 16th by J. R. Fish, agent of the D. & H. R. R., with the veteran John Plum for guide. The trout weighed 15½lbs. and was 34in. long. I have seen a lake trout of 19lbs. that was only 30in. long.

A. N. CHENEY.

#### The Mohican Club and Non-Resident Members.

WHEN the Mohican Rod and Gun Club, of Glens Falls, N. Y., was organized the promoters had no thought of enrolling other than resident members, as it was believed that the objects of the club would be of a local character. Almost at once, and, in fact, before the club was fairly on its feet, the governing board of the club determined to begin a campaign which it was hoped would result in building fishways in the upper Hudson River to enable the salmon now in the river to reach suitable spawning grounds in the headwaters, where the salmon fry have been planted for twelve years past. A paper upon the subject was read before the club, and an extract in circular form was then distributed through the State, hoping thereby to interest sportsmen generally in the project. Among the early returns from this circular was an application for membership in the club from one of the best known American salmon fishermen, a man who owns his own salmon fishing, in fee, in Canada, but who wished to take an active interest in the movement to open the Hudson. This application was followed by others, and last evening the constitution of the club was amended so that non-resident members of the club will be received by the payment of an initiation fee of \$2 and annual dues of \$3. All members on the roll on June 1 next will be included in the list of charter members.

MAY 15.

A. N. CHENEY, Pres.

#### Governor Flower's Brown Trout.

AS A guest of Mr. Frank J. Amsden, of Rochester, Governor Flower spent an hour on Caledonia Creek, the other day, and caught a 2-pound brown trout, which he averred was the largest trout he had ever taken.

#### The Passing of "Joe Minnie."

CENTRAL LAKE, Mich., May 19.—The old French guide, Elzéar Fortin (better known as "Joe Minnie"), died at his home in Elk Rapids last week, after an illness of several months.

KELPIE.

### PUBLISHER'S DEPARTMENT.

"The Headwaters of the Mississippi," by Capt. Willard Glazier, from the press of Rand, McNally & Company, contains an interesting account of how the true source of the great river was ascertained, as well as a very complete history of all explorations from its discovery by De Soto. Captain Glazier claims for the origin of the river a more remote source than Lake Itasca. In 1881 he discovered a body of water lying immediately to the south of the generally accepted source discharging by a perennial stream, the mouth of which was entirely concealed from view by a dense growth of vegetation and fallen trees. This lake has an area of 255 acres, and a circumference of between five and six miles and an average depth of 45ft., and is also above Lake Itasca.

#### A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman's amusing "Ducking Scenes" (price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work, "Bird Portraits for the Young" (the price of which is \$3).

## Fishculture and Fish Protection.

### AMERICAN FISHERIES SOCIETY.

THE American Fisheries Society was in session at Philadelphia on May 16 and 17 in the office of the Fish Protective Association of Pennsylvania. This is also the headquarters of the State Fish Commission, and a very cosy room for those who delight in fishing and the books, pictures and social opportunities connected with the angler's art.

Hon. Henry C. Ford, president of the Pennsylvania Fish Commission, and of the Fisheries Society, presided at the meetings, and Mr. E. P. Doyle performed the duties of secretary. The attendance was small, scarcely reaching thirty, but the proceedings were full of interest. The Society has been rather unfortunate at its last two annual meetings in respect to outside noises, which made difficulty for both speakers and audience.

In the course of his annual address Mr. Ford referred to the beneficial results of fishculture in Lake Erie and in Pennsylvania streams as illustrated especially in the increase of the whitefish, pike-perch, black bass, shad and brook trout. The triumphs of the advocates of protection in passing restrictive laws have continued in spite of determined organized opposition, because public sentiment is enlisted on their side. The State of Pennsylvania, he remarked, has done a great work for its waters in planting 119,000,000 of pike-perch, whitefish and trout in the lakes, rivers and brooks.

Allusion was made to the strong prejudice in certain quarters against the carp, chiefly on account of its rooting propensities and its supposed destructiveness to the eggs and young of other fish. It should be remembered, however, that many of the hard things said about the carp are not proved, and some of them are false. Thousands of people in the Middle and Southern States, the Mississippi Valley and throughout the West, appreciate the fish and ask to be supplied with more of them. The fishermen at Havre de Grace find in New York a ready market for all they can catch and at prices equal to the rates for shad. In Cleveland and Chicago the demand is equally steady. At Quincy and Mendota, Ill., the carp has become a favorite fish and furnishes a vast deal of wholesome food as well as a growing source of revenue. Local prejudice should never be allowed to destroy interests with which it has nothing, and can have nothing, in common. Thousands of people will never have the pleasure of landing a salmon, a trout or a black bass, and who shall blame them if they find enjoyment and profit in rearing the carp?

Mr. Fred Mather read an article on an "Improved Method of Hatching Smelts," in the course of which he described how their adhesive eggs are separated and prevented from adhering in bunches by gently forcing them through wire screens, to remove the foot which causes the adhesion. To kill the fungus which frequently covers the eggs while in process of hatching he uses salt. After separating the eggs Mr. Mather hatched them successfully in jars in the manner followed with shad and whitefish.

A very interesting historical paper by Charles Hallock related to the time "When Shad were a Penny Apiece," the days when the epithet of "shad eater" was a mark of the deepest opprobrium in New England. What a contrast with the banquet enjoyed by the Fisheries Society in Philadelphia on Thursday evening, where planked shad was the chief luxury of the feast.

Dr. Bushrod W. James read an address on "The Value of Bering Sea and Alaskan Food and Fishing Interests." Besides the fur seal, which has produced much revenue and not a little contention, Alaska has wealth in the shape of metals, minerals and timber, but more especially in the fish which swarm in its seas, lakes and streams. The halibut, the cod and the herring abound; the whitefish, the trout, salmon, pike and grayling fill its inland waters. Rosy red rock cod and plain, but gamy, "black bass" eagerly snap at the angler's baited hook. Salmon run into the streams in such countless multitudes as to impede navigation and crowd one another out of water—and this is by no means "a fish story."

The report of Secretary Doyle, read at the forenoon session, carried with it a resolution to appoint a committee on increase of membership. At the opening of the afternoon meeting this resolution was adopted, and a committee consisting of Messrs. E. P. Doyle, Herschel Whitaker and W. L. Powell was appointed. The plan is to invite all fish protective associations in the United States to become members of the Fisheries Society and send delegates to the annual meetings. Other resolutions offered by Mr. Doyle and passed by the Society conveyed thanks to the Fish Protective Association for their hospitality, to Commissioner McDonald for his tender of the Fish Hawk for a trip to the Delaware River shad fisheries, and to the press of Philadelphia for their admirable accounts of the meetings.

U. S. Fish Commissioner McDonald read the most important paper of the sessions, to show "The Relation of the Community to the Fisheries." In this article the statistical history of the fisheries was related in condensed but comprehensive form, and the basis of restrictive legislation was clearly set forth. The broad general principle was established that in the case of fishes which run up from the sea to spawn in the fresh waters and those which enter brackish water in narrow bays and sounds for the same purpose cannot maintain their members undiminished, even with recourse to artificial propagation, unless their routes of entrance are kept measurably free from certain fixed apparatus of capture, or, in general, from excessive interference with their movements to the spawning grounds. This article naturally caused free discussion because of its important bearing upon fishery methods. Dr. B. W. James, Mr. Herschel Whitaker, Capt. J. W. Collins, Mr. A. M. Spangler and Dr. T. H. Bean were among those who entered into the discussion.

Mr. Herschel Whitaker gave an account of the artificial fertilization and hatching of eggs of the small-mouth black bass by one of the employees of the Michigan Commission, April 30, 1894. A ripe female from Thorn Apple River furnished 3,000 eggs which were impregnated by milt from a male kept in one of the ponds. The eggs were first placed on trays and afterward in a jar. They began to hatch on the fourth day and were all out on the fifth. The young were so small as to be nearly invisible, but the yolk sac was disproportionately large.

Dr. T. H. Bean read a translation of Dr. Fatio's report on the "Coregonus Imported from America under the Name of Whitefish" into lakes of Switzerland. Dr. Fatio labors under the mistaken notion that the eggs shipped by the U. S. Government were those of Williamson's whitefish or the Menominee whitefish rather than of the large common species of the Great Lakes, but his description of the specimens reared from American eggs in the Aquarium at Geneva shows clearly enough that they belong to the common form. The description fits equally well some examples of the same age reared at Northville, Mich.

By invitation of the Fish Protective Association the Fisheries Society enjoyed a planked shad dinner at Reisser's café on Wednesday evening. After the dinner Mr. H. O. Wilbur made an address of welcome, to which Mr. H. C. Ford responded on behalf of the society. These were followed by an interchange of stories, personal reminiscences, pleas for protection and various other sentiments from the following speakers: Marshall McDonald, W. H. Bowman, Herschel Whitaker, T. H. Bean, H. H. Cary, C. F. Chamberlayne, F. F. Christine, Prof. Dolley, J. W. Collins, W. E. Meehan and A. M. Spangler.

At Thursday's meeting, after the transaction of some preliminary business, Dr. Bean read a highly interesting paper by Livingston Stone, on "The Non-Feeding Habits of the Chenook Salmon in Fresh Water." Mr. Stone examined the stomachs of 66 salmon at Baird, Cal., and found them contracted so that they could not hold a walnut; the throats also were so small that one could not pass a finger through them. The salmon, he states, not only does not eat, but cannot do so if it desired. There are, of course, rare exceptions to this rule. The article was discussed by Col. McDonald, Fred Mather, H. O. Wilbur, Dr. James, Dr. Bean and Mr. Stokes. Mr. Wilbur once knew of a mouse found in a stomach of the Atlantic salmon. Mr. Stokes and Dr. Bean related instances of the capture of other anadromous fish, as the shad, by means of grasshoppers, minnows and artificial flies.

A very lively discussion followed the delivery of Mr. Chas. F. Chamberlayne's address on "A Pressing Need." The essence of Mr. Chamberlayne's advice may be summed up in three propositions: (1) Put down the poacher; (2) antagonize the Commercial Fisheries Association, and (3) organize for protective legislation and for the education of the people in favor of protection. Capt. Collins defended the commercial fishermen, and Mr. Whitaker and others renewed the charges of destruction of the fish food supply and failure to assist in the efforts to restock depleted waters.

The committee on nominations reported the following names of officers for the ensuing year, all of whom were duly elected: President, W. L. May; Vice-President, R. O. Sweeney; Treasurer, Frank J. Amsden; Secretaries, E. P. Doyle and Dr. J. A. Henshall; Executive Committee, H. H. Cary, L. D. Huntington, H. C. Ford, Calvin Spensley, Chas. F. Chamberlayne and Hoyt Post. New York was fixed upon as the place of holding the meeting in 1895.

Following is a complete list of members who registered their attendance: H. C. Ford, E. P. Doyle, L. D. Huntington, W. H. Bowman, Robt. Hamilton, H. H. Cary, Herschel Whitaker, W. L. May, Jas. N. Miller, B. W. James, J. W. Collins, John Gay, Chas. F. Chamberlayne, M. McDonald, T. H. Bean, R. Rathbun, W. L. Powell, E. Hagert, W. H. Benhardt, Fred Mather, B. L. Doudourea, Jacob Dowler, J. R. Sypher, J. E. Ellis, W. E. Meehan, H. O. Wilbur, J. S. Van Cleef, H. H. Van Cleef, M. G. Sellers.

Before adjournment a very important committee on increase of membership was appointed; it includes Messrs. E. P. Doyle, Herschel Whitaker and W. L. Powell. At 2 P. M. on Thursday the Society availed itself of Commissioner McDonald's offer and visited the shad-fishing grounds in the vicinity of Gloucester, N. J., on the steamer Fish Hawk.

#### New York Association.

THE New York (City) Association for the Protection of Game held its semi-centennial jubilee last Monday night at the Gerlach.

Of those present were the president, Robert B. Roosevelt, Judge H. W. Bookstaver, Col. E. A. McAlpin, Austin Corbin, A. Roe, Richard Pancoast, George H. Penniman, Dr. G. S. Winston, Simeon J. Drake, Thomas N. Cuthbert, J. Fred. Pierson, Hart Lyman, Esq., H. A. V. Post, Charles T. Van Sautvoord, H. M. Carey, Edson Bradley, Dr. S. A. Main, E. G. Whitaker, the Hon. B. L. Ludington, Charles F. Imbrie, G. W. Cotterill, John W. Keller, District Attorney John R. Fellows, Wakeman Holberton, G. B. Penniman, Henry Steers, Charles E. Whitehead, Charles R. Miller, Dr. George A. Quinby, William Carpenter, Col. Alfred Wagstaff, Dr. John W. Green, Hugh Auchincloss, Raymond L. Ward, Charles Hallock.

President Roosevelt reviewed the history of the society from the first meeting on May 20, 1844, "to consider the intolerably oppressive nature of the laws regarding dogs, whereby many valuable sporting dogs were lost to their owners." After naming the men of high standing and influence who had been members of the Association, he said:

In continuing your investigations, when you come to consider the work of the Association, you would find it from the commencement the same substantially as we are doing it to-day. On May 31, 1844, a reward was offered for evidence that would lead to conviction for disobedience to the law. At that time the only laws for the protection of game were to be found in the ordinances of the city, which were passed by the Common Council. The Association had these printed, framed and hung up in ferry houses, railroad stations and other public places, and a committee was appointed to visit public refreshment places and get evidence by calling for "owls, alias woodcock," as the resolution quaintly puts it. And owls are still to be had occasionally in the lower class of restaurants to-day—and our committee is still watching for offending vendors. Robbins of Fulton Market was prosecuted to conviction, and paid \$175. In 1847 Delmonico was sued. Within a year his successor, bearing the same name and following the same practices, has met the same fate.

In 1845 \$100 was appropriated for the purchase of live quail and pinnated grouse were let loose on Long Island. Odd as it may seem, too, so soon after the formation of the club as Aug. 26, 1844, a committee was appointed to arrange for an annual supper. Hence it seems that from the very first good digestion waited on the appetites of good sportsmen.

Shortly afterward the members assumed the habit of meeting at one another's houses, and no doubt had many as royal a time as we used to enjoy a few years back before the club became so wealthy that it could afford to pay for its own dinners. The first pigeon match was arranged in the club in 1847, and Mr. Charles H. Haswell represented the club at the first State sportsmen's convention on Nov. 15, 1859, for our club had been most useful as a model for the formation of others of a similar kind.

But the real work of the Association turned out to be just as we have found it during our time of effort; the great endeavor has been to perfect the game laws. At that time there was clashing between the Legislature, the supervisors and the city council. The question of interstate commerce was raised. There were different views held by different sportsmen as to the proper times of shooting and the best means of preserving game. Laws were prepared and perfected only to be emasculated and disjointed in the hands of the law-making powers. Frank Forrester wanted the time for woodcock shooting not to commence till the 1st of September; others were after that *feu follet* of protection, a uniform time for the killing of all game birds.

Such is the early history of our club as I find it recorded in the curious and interesting minutes of its proceedings. I was personally acquainted with most of the men that I have mentioned, and knew some of them intimately, socially and as sportsmen, although I did not become a member till nearly twenty years afterward. Some of them were splendid shots and skillful fishermen, and grand good fellows. They had started their work for the public benefit well and disinterestedly. It would be natural to suppose that those who took delight in the pursuit of game would not be very particular whether they killed it at one season or another, and that they would be humanly selfish enough to want to get it when they could and not wait till when they ought. But on the contrary they gave their untiring efforts to the public for the protection of one of its most important interests.

#### New Jersey Fish Commissioners.

TRENTON, N. J., May 15.—Gov. Werts this afternoon appointed the new State Fish Commissioners, as follows: W. Campbell Clark, Howard Frothingham, Parker Page, and George W. Pfeiffer.

#### Colorado State Association.

SALIDA, Colorado, May 9.—*Editor Forest and Stream:* The Colorado State Sportsmen's Association was organized in this city last night with a membership nearing fifty, and a constitution and by-laws that are broad in their scope. It is believed on this account that the new organization will grow to immense proportions and spread its influence throughout the State. The officers elected were: Peter Mulvany, Salida, President; Dr. Hall, Telluride, First Vice-President; A. E. McKenzie, Denver, Second Vice-President; Walter Thomas, Leadville, Secretary; Bryant Haywood, Denver, Treasurer. Executive Committee: J. N. Lower, Denver; Dr. Baird, Saguahe; S. Moore, Telluride; T. J. Thompson, Gunnison; C. L. Hoagland, Salida. John Lehrer, Salida, was chosen game warden of the Association, to act as an agent of the Association with the State game warden in the appointment of game wardens, without pay, throughout the State.

In his remarks when taking the chair as president Mr. Mulvany said: "Most of the time during the past twenty-five years I have been a member of some rod and gun club or association of sportsmen who delighted in the health-giving exercise and recreation of hunting and fishing, and in measuring in honorable competition at the traps their ability in shooting. In that time I have seldom met a member of a gun club in any country (and I have been around the world a good deal) who was not a true, liberal-minded, open-hearted, whole-souled, reliable gentleman. You may meet them in the cities, on the trains, on the hunting grounds, at the camp-fires, at the traps, or wherever you will, they are the same, always willing to make you feel perfectly at home with them and have you partake of the very best they possess. I am proud to see in this convention the same class of gentlemen who are actuated with the spirit and enthusiasm of the true sportsman. Many of you have come long distances regardless of cost, time and fatigue to be present at this meeting, which was called by our esteemed and efficient State Game and Fish Warden, W. R. Callicotte, for the purpose of forming a State association for the better protection of our game and fish. This convention will consider this subject thoroughly and act wisely. I am glad to see you here to-night, and on behalf of the sportsmen and citizens of Colorado, of Chaffee county, of Salida, and especially of the Salida Rod and Gun Club, I extend to you a hearty welcome to our city, and I trust you will enjoy the freedom and hospitality that our people will bestow upon you during your stay with us, and when you shall have returned to your homes after this convention adjourns and the tournament is over I hope it will be with a better knowledge of the duties of a true sportsman in the protection of the game and fish of the State. As president of the Salida Rod and Gun Club, and speaking for its members, I desire to say that we have done all in our power under the circumstances to give you a good entertaining time, and although we have not succeeded as well in that respect as we hoped to do we trust that the sportsmen present will leave Salida with good feelings for our club and citizens, and we hope to meet you and every member of clubs in the West in some of our cities or towns in the near future at a larger tournament of the Colorado State Sportsmen's Association."

The applause which followed showed that President Mulvany had struck the right key. Mr. Callicotte's address is sent you in full.

#### The Necessity of Organized Effort.

[A paper read by Fish Commissioner W. R. Callicotte, before the Colorado State Sportsmen's Association, at Salida, May 8.]

It is with great pleasure that I witness the assemblage of so many who are interested in the preservation of our fish and game. The time has come when all lovers of our fish, birds and game animals must concentrate their efforts in better game preservation, or before the close of the century our game will be practically extinct. This convention has been called with that idea. Let us carefully consider matters presented to us on this subject and work together harmoniously for the one end—the better preservation of our game.

The State has done something in this matter, and we hope will do still more in the future. We have three State wardens besides myself. I have the work of State Fish Commissioner in addition, this alone being sufficient to occupy my entire time. We have a fairly good law. It has faults, of course. We find the following difficulties in preserving game and fish: First, a lack of co-operative public sentiment; second, a disposition to kill more than is really necessary for immediate use; third, a rivalry to catch or kill more than another in the same party; fourth, an abnormal desire to kill for fine specimens; fifth, killing among ranchmen for "winter's meat"; sixth, killing on the border for market and hides; seventh, killing by the Indians; eighth, the destruction of fish by irrigating ditches; ninth, the dynamiting of fish; tenth, the catching of small fish; eleventh, the advertisement of game districts by the railroad and others.

We have made more than fifty arrests and convictions, and to a great extent, have stopped the sale and shipment of any part of the animal. The professional pot-hunting has been practically stopped. And yet we are not satisfied with our work. We must have the co-operation of all true sportsmen in order to do our work well. In the first case, we believe such conventions as this will tend to create a better understanding, a better feeling for our work. The enforcement of the law in all cases where intentional violation occurs will greatly assist in creating a better sentiment. To secure this, game associations should be organized in every county, whose object should be to co-operate with the wardens in securing evidence against violators and in the preservation of game. Each of these societies should have one or more Deputy State Wardens with authority to arrest and prosecute. I believe an incorporated State association could do excellent work. The State wardens should be faithful honest men, who are willing to do their duty without fear or favor. In the second case, our guides and others should give our tourists to understand that no over-killing will be permitted at any time, and any one violating the regulation should be sent from the field in dishonor, or arrested and fined.

The ranchmen and stockmen should conform to the law and kill for immediate use only. It has been a difficult task to convince these people that they must not kill their "winter's meat."

No law is effectual without public sentiment is back of it. In several districts arrests and convictions have been made for gross violation of the law where public sentiment was against game laws of any kind. I am pleased to say, however, that the sentiment is changing, and in many cases we now have the co-operation of the majority. Let us endeavor to cultivate this growing disposition to enforce the law. The border hide and pot hunters have been one of the worst enemies. Remaining near the line of an adjoining State or Territory, they can easily escape to foreign territory. We have by co-operation with other officers in the States and Territories, almost stopped this class of marauders. The Indian depredation has been a puzzling problem. The only solution to this difficulty is to get rid of the Southern Ute, and we hope to soon send him over the line, where he may be kept in bounds by the U. S. Army, and not be permitted to enter our State.

The White River Ute has forfeited all treaty rights in Colorado and should not be permitted on our soil. A permanent warden in that locality seems to be the most feasible plan to stop his depredations. An honest Indian agent could greatly assist us. The destruction of fish by irrigating ditches has been a source of annoyance. There is no law against keeping open ditches, hence the native trout are soon destroyed. It has been the policy of this office not to stock streams

largely used for irrigating unless some guarantee is given that ditches will be screened. I am satisfied that a horizontal screen will be eventually used in the fall when trout go down, and with but little care it may be made practicable. Another serious trouble has been the catching of small fish, yearlings and larger. I believe this may be overcome to a great extent by a law preventing a stream from being fished for at least two years after having been planted with trout.

The advertisement of the railways and others has created a draft upon our game and fish that has seriously affected us. I believe the time has come when self-preservation requires a law prohibiting the catching of our fish and the killing of our game except by citizens of our own State.

Forest fires are a great source of destruction to both game and fish. The ashes are deadly poison to trout. A burnt district diminishes the water supply and destroys insect life, the source of food for trout. Each game warden should be a forest commissioner with authority to arrest careless campers and others who may fire or otherwise destroy our beautiful mountain forests. Thousands of acres are burned over every year.

I am thoroughly in earnest in this matter, and am greatly encouraged by the increased interest being taken throughout the State in the subject. The good effect of our prohibitory law in regard to killing mountain sheep has been shown by the great increase in the past years. I think I am safe in saying that we have ten times as many as we had seven years ago. Let us put elk on the list with buffalo and mountain sheep for at least five years. We should unite in one grand effort for the better preservation of our fish, game and birds.

#### When Shad Were a Penny Apiece.

BY CHARLES HALLOCK.

[Read before the American Fisheries Society.]

EVERY schoolboy knows in a general way that shad were once so abundant in the Connecticut River that hired men used to stipulate that they should be served with only a limited quantity per week for food, but I dare say few people, adolescent or adult, are aware that it was considered disreputable a century and a half ago to eat shad, and that the epithet of "shad-eater" was regarded as most obnoxious and opprobrious in New England.

Whether it was because shad were in common use by the vagabond Indians who occupied the valley, or because their very cheapness and abundance made them vulgar, history does not state. But it is of record that shad were overlooked, thrown out, and despised as food by a large proportion of the English occupants of the old towns for a period of one hundred years after their settlement. Only poor people ate shad in those days. Shad eating implied a deficiency of pork, and to be destitute of pork indicated poverty. Even now an apology is sometimes made when a family has no "meat," as pork was always designated. The story is told of a well-to-do family in Hadley, which was always an aristocratic town, who, hearing a knock on the door just as they were about to dine on this tabooed fish, incontinently hid the platter under the bed. Indeed, so ground into popular sensibility was this ancient prejudice, that as recently as forty years ago members of the Connecticut Legislature were sometimes taunted with the epithet of "shad-eaters." The radical change of appreciation which has taken place since can be realized when we find these same people boasting now of the superlative quality of their shad as compared with all others in the markets.

Not until forty years before the Revolution was this economic ban removed and shad became a merchantable commodity. Connecticut shad in barrels were first advertised in Boston in 1736, though they were current in river towns for at least three years previous at one penny apiece. By 1773 prices had advanced to two and three pence, and in 1778 several thousand barrels were put up for the Continental troops. In 1779 the price reached four pence a half penny, and after the dam was placed at South Hadley Falls in 1795 the number of shad in the river perceptibly diminished and the price gradually advanced to six pence, nine pence, one shilling and then higher, until men ceased to buy shad to barrel for family use. Thenceforward they became a fancy fish and a luxury, even replacing the salmon, which had always maintained a high precedence, but had now also disappeared by reason of the dams which obstructed their ascent of the river.

Shad never passed the Bellows Falls, at Walpole, New Hampshire, nor the falls of the Chicopee River, in Massachusetts, though salmon surmounted both.

In 1739, according to Sylvester Judd, the historian, the town of Brookfield petitioned the General Court for leave to make a fishway for shad through the ledges of rocks across the Chicopee at Springfield, so that they might come up the river into the ponds; but Springfield opposed, and permission was not granted. The burghers feel differently now. Until the erection of the dam at Holyoke in 1849 caused an effectual blockade, shad were fairly abundant in the lower reaches of the Connecticut and falls; wherever they occurred were always chosen fishing places for both salmon and shad. Gangs of professional fishermen hired valuable seining privileges, and during the fishing season in April, May and early June rival camps were often the scenes of much horse play and frolic at off hours. History tells how the farmers and netters used to gather from all parts of the adjacent valley, and even from Berkshire, to the number of 1,500 or more at a time, just as they gather now on the tributaries of the Columbia when salmon are running, or on the rivers of Nova Scotia for alewives and gaspereaux.

Since the construction of the Holyoke dam many efforts have been made to restock the Connecticut with salmon and shad, and with partial success as respects the latter. But it is very doubtful if its old prestige ever returns, and certain that shad will never again be sold for a penny apiece.

#### The Pennsylvania Limited

traverses the State of Pennsylvania, with its wealth of mountain scenery. The mountains and valleys are superb in the freshness of early spring.—*Adv.*

Nov. 23.—Philadelphia Kennel Club, at Newton, N. C. Dr. G. D. B. Darby, Philadelphia, Pa., Sec'y.

## POINTS AND FLUSHES

[By a Staff Correspondent.]

## Restricting Starters in Field Trials.

UNDER date of May 7 Mr. J. B. Stoddard, of Thomasville, N. C., writes me that it may be considered settled that he will go to Manitoba and prepare dogs for the trials and handle them therein. It is probable that Mr. Stoddard will start for Manitoba in the near future. Touching on the matter of entries Mr. Stoddard writes: "I think that the Manitoba people should restrict the starters from large kennels on the plan adopted by some of the smaller race meetings, viz., allow as many entries as each kennel or party desires to make, but only allow to such party one starter in each stake. Some plan should be found to keep one man from winning the whole thing, as in time the other members will get tired of putting up with no possible chance to pull anything down. Gameness is a good quality, but it shows a lack of discretion to try to butt an engine off the track."

It is pleasing to note that there is a sentiment among the professional handlers in favor of restricting the powerful business combinations at field trials and thus opening up more opportunities to the amateur or those who have to consider the question of dollars and cents when indulging in their love of sport.

I have received several letters on professionalism at field trials, but as they refer more to an indorsement of my views than to a discussion of the subject in its public bearings it would not help the discussion to publish them. Still a public expression of opinion is desirable. Field trial clubs can not act intelligently in arranging their stakes if they do not know what their patrons want. The amateur can give an opinion which is quite as worthy of consideration as that of a professional. Without the amateur field trials can not prosper.

There is no sport, other than field trials, but what the principle of a handicap is recognized and applied in some form. In trap shooting the expert professional is placed at a longer distance from the traps, or is barred altogether. Field trials must have such necessary arrangements as the exigencies of the times require. The factors which make field trials have changed greatly in the past few years, while field trial managements have followed year after year nearly the same lines.

Professional handlers are necessary in field trials. It is only when it becomes so powerful and overwhelmingly successful that it becomes an evil. The handler who gets a dog or two here, there and everywhere, represents an interest from each man who employs him. Often he has the dogs but one season. Each season finds him with a new lot of dogs, or at most but one or two of the old ones. Such professional is more on even terms with the amateur than he is generally believed to be.

But the professional handler who owns a large kennel and devotes his time entirely to breeding, buying, selling and handling, possessing also ample means to carry out any plan he may have, is too formidable for the man who is strictly a handler or small breeder. The handler and breeder who is a capitalist in a limited way can keep his best dogs year after year to run in the trials. He furthermore can engage dogs of good quality owned by sportsmen, and develop and run them for a share of the winnings. Field trial prizes have been so large and the restrictions so few that taking dogs on hares has proven quite profitable in some instances. Thus the handler who can keep his dogs year after year, and borrow some of the best ones he has sold, and select others of good quality which he can get from their owners for a share of the profits made up from the winnings, has a string of dogs selected which mean everything as a powerful factor in competition, and nothing whatever in sportsmanship. The whole plan is purely mercenary. To the sportsman there is nothing attractive in such competition. The chances are unequal. In fact, the sportsman has so many odds against him that he has but a forlorn hope. His formidable opponent has five or six dogs entered to his one. These dogs have had the most thorough conditioning and professional training with a view to meet all the *finesse* of field trials. They have had abundance of experience in sections where game was abundant. Their handler, from years of study and experience, knows to a nicety the smallest detail of the competition and the rules governing it, and generally manages to invent some new refinement in handling to spring on his competitors each year at each trial. Some judges appear to be non-committal, some managements appear to be timorous where a loss of entries are concerned, the professional who trains dogs for others loses heart in the competition, the sportsmen hold aloof and field trials for the time being have shown signs of decadence. The cases are plain enough, but there does not seem to be everywhere the moral courage sufficient to apply the remedy. Physical courage is abundant, but moral courage is a bit short of the demand.

## Artificial Value of Field Dogs.

It is hardly wise to take the field trials of the past few years as a standard wherewith to measure those of the present. The times have changed and canine interests have changed with them. The breeding of dogs as a business or as a side venture for revenue has steadily increased throughout the country, while the game supply has grown less from the destruction which occurs each year. The number of shooters has steadily multiplied, and improved guns and powders have added to their destructiveness. The local shooters in particular have largely and uniformly increased in numbers throughout the country.

Dog breeding, from a business standpoint, is governed by the law of supply and demand, as is every other business. If there is over-production, cheap prices and slow sales are sure to prevail. If times are hard, the public is forced to dispense with luxuries first and afterward with such things as are least necessary. Both courses affect the interests of canines.

It is but business wisdom for those who breed dogs directly and indirectly for revenue to give the trials just as much support as they did in past years when the purses were larger. For those who are interested from motives of sportsmanship, the question of dollars has no interest, or at best but a remote one. The clubs, one year after another, could not afford the prizes they have been offering, nor did the large prizes received for the winning dogs help field trial interests. Thus there was a double injury to breeding interests, with the collateral injury of making an almost purely professional. The big prizes were more than the clubs could afford to pay, therefore there resulted the harmful deficits. The big prizes demanded and many times secured for the dogs placed the sport beyond the reach of men whose means were short of ample wealth. It gave all dogs, which could show relationship by blood lines to the winner, an artificial value as field performers on the score of such blood relationship. Many of the high-priced dogs, it is true, were bought for their stud service, but the high prices sympathetically affected all dogs which were well bred, or were so called. Prices which are forced to a high point by artificial agencies are certain to ultimately end in injury.

To attempt a thorough analysis of the canine interests would take too much space. Insufficient is written to induce interested parties to think over the situation, the object in writing this will have been attained. Of course, this is in reference to field trial matters, and the purpose is to bring before those concerned the wisdom of supporting field trials quite as liberally now as in the past. It is useless to attempt to coerce clubs into giving larger prizes by the indirect agency of withholding support. They cannot afford to give more. It is folly to ignore the real situation. Breeders will have to return to the prices which can be paid by sportsmen, from \$150 to \$300 or \$400 for dogs which are good workers or of

superior excellence. There are remunerative returns at those prices, and they are better prices in the long run for all concerned. I know the present business depression has its effect on canine interests as well as on all other interests, but it is but temporary. The signs of a return to genuine values in field trial matters and practical field matters have been written on the walls for two or three years past. Without field trials there would be a falling off in interest and values, which would mean an ending of the business of many trainers and breeders. The club members might lose a little yearly diversion if their organizations disbanded, but the trainers and breeders would lose a lot of serious yearly business—therefore it is wise to support the trials. B. WATERS.

## English Setters at Shows.

## Editor Forest and Stream:

As an admirer and breeder of the English setter, it was with no little pleasure that I read the communication from John Davidson re the English setter at Boston, and I fully expected ere this to have seen a reply from Major Taylor defending his own criticisms. Being the owner of some of the dogs criticised by the Major and referred to by Mr. Davidson, I will refrain from saying anything concerning them except in one instance, that of Blue Jennie. In the report of Boston show '93, he (Major Taylor) says "Blue Jennie, third, is a bitch of good form throughout, and would have placed her second, and Maid Marion first, who was second—this year she is only fair in forelegs and round in barrel." Now in '93 she weighed 56 lbs., and was in such a grossly fat condition that she resembled a pig fed for the slaughter, more than an English setter competing on her beauty of form. This year she weighed 49 lbs. (was even then too fat), and was only taken from a litter of pups on Saturday, two days before being sent to Boston, consequently she lacked that beautiful coat she generally has, but which all criticisms on the Boston show failed to note. I have never been a kicker when beaten, when at times I have honestly thought wrongly so, but when I see reports emanating from a man who has the reputation Major Taylor has in some English setter circles, and no one of the many real English setter admirers take notice of it, I cannot help but conclude that they are an apathetic set of fellows, who haven't the courage of their convictions, i. e., that the English setter of "Stonehenge's" standard is the one and only setter that should be classed as an English setter; and until we can breed one to that standard we should refrain from adopting a new one, and to fit every long-haired bird dog who happens to win a field trial. The bench is a place to judge form, not work or past reputations afield; and it behooves the lover of the handsomest of all breeds of setters to come out boldly and insist that bench show committees shall appoint judges capable of judging according to a standard, and with courage to award the prizes irrespective of the ownership of the animal judged. Until such is the case we shall continue to see conflicting reports such as appeared in America's two leading canine journals of May 19, *American Field*, "Setter classes, 60 entries, was excellent," etc. *FOREST AND STREAM*, "A more weedy, snipy, slabsided lot I never saw," etc., etc.

From such a diversity of opinion how shall we know if there was an English setter at Louisville or just a long-haired bird dog. I am a lover of an English setter such as Rockingham, Plantagenet, Cora of Wetherall, Monk of Furness and their like.

BRIDGEPORT, Conn.

## New Jersey Kennel League Meeting.

THE annual dinner and meeting of this club was held at the Davis Café, Newark, on the 14th inst. An accident prevented the attendance of the president, Mr. Edward Radel, and although the call was short, most of the more active members were present and a very enjoyable evening was spent. Mr. E. R. Christopher occupied the chair, and Mr. H. W. Huntington and Mr. John Brett were guests. The secretary read a large batch of letters from those who could not attend.

Mr. E. R. Christopher having acted as chairman of the bench show committee, and as that was the chief event of the year, he made a full report, referring to the fact that the show was one of the few given within the past twelve months that ranked as a first-class show; he referred to the very favorable press reports, the good opinion exhibitors generally held of the League, and spoke in flattering terms of the help afforded them by Mr. E. H. Morris.

The treasurer's report showed 78 members in good standing and a balance of less than a dollar, but as nearly \$700 had been made good on the loss sustained in giving the show those present did not inquire on which side of the book the few cents stood, but were unanimous in its acceptance.

The committee on diplomas reported that there had been a delay owing to the first photograph of Queen Vic being a failure, and that another had been taken on the first opportunity and a picture by Mr. G. Muss-Arnolt was submitted. This was accepted and arrangements were made to have the diplomas made and distributed forthwith.

The election of officers for the ensuing year resulted in Mr. Edward H. Radel being chosen President; Messrs. Charles Heath, Miles A. Hanchett and August Hahn, Vice-Presidents; Christopher Nugent, Treasurer, and Mr. Winter, Secretary. The new executive committee elected being Edward R. Christopher, Frank Link, Edwin H. Morris, W. J. Whelan, Walter L. Browe, John Brett, W. J. Davis, Dr. W. F. Seidler; and E. H. Morris was again elected as delegate to the American Kennel Club.

It was decided to leave the matter of another show to the new committee, and as it was understood that Mr. Edward H. Radel, the president, would assume risks, and what he says goes, it is quite likely another show will be given in the fall.

## The Canine Commonweal.

ALL dogs are not born free and equal, nor have they certain inalienable rights; and, among such rights as they have, are not life, liberty and the pursuit of happiness. Yet, paradoxical as it may seem, the caste lines are as sharply drawn between different classes of dogs and individuals of the same class, who are more fortunate in education and association than their fellows, as they are among men who in convention assembled declare that they are born free and equal, and who as individuals believe and act on the theory that "all men" means each one's own self. The other may be born equal by conventional enactment, but the fellow himself is above his kind by virtue of a conscious knowledge of his own excellence and inheritance, therewithal a self-appointed right to pass absolutely on the status of his brethren. Each one's own self-appreciation naturally resolves itself into self-exaltation or, what is nearly the same thing, a depreciation of the rest of mankind, in either case working to the singular excellence of each individual self.

A little knocking about in the business world, where values are estimated at their true worth, is sure to cast out some large redundancies of self esteem. But this is digressing to a consideration of men, whereas my theme is dogs. Yet, in lights and shades of lesser contrast, the nature of man is reflected in that of the dog.

The dogs, by some means undiscovered up to the present time of writing, became convinced that society as it concerned themselves, was all wrong, or, what was equivalent to the same thing, that they had a grievance against society. By modern usage, strictly speaking, one dog with a dissatisfaction has a grievance, but two or more dogs with that same dissatisfaction have a principle. This is mentioned be-

cause it has no equivalent in nature. Yet, the dogs of the country once upon a time had a grievance, or, to be precise and correct, they had grievances.

First, they had many disagreements among themselves. The city dog affected better manners and a haughtier deportment when in the presence of his country brother. He wore a newer and more fashionable collar, and his coat showed more color and the effects of more careful grooming. The country dog felt that he was just as good as any other dog, and he lessened not his claim thereto whether he reclined about in lazy postures, put his muddy feet on strangers, made malapropos barking, intruded uninvited and undesired, wore his coat dingy and full of rubbish, or conducted himself in his best manner. It is true, he was also wont to carry himself with much swagger, and utter many thousand irrelevant barkings and whinnings. While this country dog had the candor to admit that he had instincts in common with his brother, the city dog, he claimed a great deal of credit to himself on the basis of wearing a rusty coat and possessing the most unconventional manners. The natty coat of his city brother was to him proof positive of efficiency, while his polite bearing was interpreted as a haughty assumption of superiority. They criticised the city dogs' want of skill in chasing rabbits or pointing quail. A pretty collar was accepted as conclusive evidence of personal inefficiency. The country dog, too, by virtue of long and undisputed possession from time immemorial, boldly claimed title to the sunshine, the colors of the landscape, the birds of the air, the rabbits and the fish. Only by taking a glass of lemonade together could the city and country be brought into harmony.

The sectional prejudice was but slight compared to the race prejudice. The St. Bernard thought himself bigger than the others, and of these the great Dane elected himself the highest, while the greyhound considered himself the longest family. The dachshund had a reputation for crookedness. The hounds claim great wisdom because they were foxy, and the collies were certain of their good demeanor because they were sheepish. In short, a bit of difference in coat or barking was considered sufficient for them to differentiate themselves so completely that they were distinct and apart in everything. These differences among themselves, on matters of interest or vanity, were not so great as to blind them to the wisdom of united action in reference to common wrongs or grievances. All dogs, from the time when the mind of man runneth not to the contrary, had suffered from neglect or tyranny.

As they had a perfect right to exercise their freedom of speech, no one thought for a moment that freedom of speech could be wrong, particularly when the speech was made in mass meeting assembled.

The dogs of the country held such meeting, which was quite representative in character. There were dogs of fine breeding which would eat porterhouse steak or corn bread, and there were curs which would eat the same, as it was offered. There were others which would bark and look ugly when on their own door step, but were abject and servile when among strangers. Others again, which looked wise without thinking or barked a great deal to win general observation, vied with those which tried to please everybody. A few waited patiently for what might develop to their individual gain. After about three days' consideration, the convention passed the following preamble and resolutions:

*Whereas*, From time immemorial the dog has been man's best friend, sticking truly alike to him through adversity or prosperity, intrepidly facing dangers in his defense and acting as a spectator in his rejoicings, and

*Whereas*, The dog has been man's best friend and the man has been the only friend the dog ever had in his effort to attain a higher civilization than that of his progenitor, therefore be it

*Resolved*, That it is the sense of the meeting that man, while he loudly vaunts his humanity and love of the dog, too often allows that he has amply provided for our wants by giving us some scanty scraps, the overflow from his table for our daily sustenance, and turning us out of doors at night in lieu of a bed.

*Resolved*, That in return for our unselfish affection, devotion and services, we do not think it just to estimate our value in an equivalent of dollars and cents, the more so after so many centuries of service rendered to man by his best friend. It may be appreciation, but it is not agreeable. It may be pleasant, but it is not filling to the stomach. Neither is it justice. We have our pride, courage, memory, reason, affection and many of the sensibilities of our masters, whose civilization should imply more than refined savagery in dealing with each other and with us.

*Resolved*, That it is the sense of this meeting that the conditions of the times demand that the dogs of this country form themselves into a commonweal to protect themselves from the oppression of those who by their skill and labor have accumulated some goods. We also claim that we should have more social recognition. Our status socially and in domestic life is insecure and indeterminate. To-day we may be a petted companion on whom every luxury is bestowed, to-morrow we may be vagrants. The ballot-box offers us no relief. In our wild state we ran in packs. There was force and success then in numbers. As we approach feral life, we may make a like success in domestic life. Let us be a commonweal. Let it be so written.

B. WATERS.

## United States Field Trials.

## Editor Forest and Stream:

The United States Field Trials Club at its last annual meeting eliminated from its rules that old mossback robber which has for years prohibited bitches in heat from running in field trials. The owners of bitches can now enter them and know that they will not be thrown out, and the owner thus lose his entrance fee. This club is the only one in the country that runs pointer stakes separate from setters. The pointer breeders and owners should not lose sight of this feature and see that the stakes are liberally patronized. The entries to the Bicknell Derbies will positively close June 1. The judges selected are Mr. J. M. Freeman, of Bicknell, Major J. M. Taylor, of New York, and Royal Robinson.

P. T. MADISON, Sec'y-Treas.

INDIANAPOLIS, Ind., May 19.

The fact that another dog show is to take place shortly has served to stir kennel affairs up a little on the Pacific coast. The Oakland show, which takes place May 30, promises to be well supported. The entries close May 23. A good hall has been secured, and as Oakland is not far from San Francisco, most of the latter city's fanciers will avail themselves of an opportunity to exhibit their stock that the half-hearted action of the Pacific Kennel Club deprived them of. At this show the Fox-Terrier Club will donate a "Breeder's Cup," to be presented to the breeder of the best fox-terrier pup. The cup must be won twice before it becomes the property of a member. The entry fee at this show will be \$3 for one entry and \$2.50 for each subsequent one. Mr. Higgs will superintend. There are 223 classes provided.

At the last monthly meeting of the Pacific Fox-Terrier Club the treasurer reported a balance of \$25, besides cups to the value of \$75. The officers elected for the ensuing year are as follows: President, H. W. Fores; First Vice-President, C. A. Sumner; Second Vice-President, H. H. Carlton; Secretary, J. McLaughlin; Treasurer, G. W. Debenham; Board of Directors, A. S. Gonzales and Robert Siddle of San Francisco; John Hefferman, of Stockton; W. H. McFee, of Alameda, and J. W. Mitchell, of Los Angeles. The next meeting will be held June 11.

DOG CHAT.

Kennel clubs seem to be springing up in every direction in California and neighboring States. The latest is the Stockton Kennel Club, organized May 4. They have applied to the A. K. C. for admission and intend holding their first show Sept. 19 to 22.

The third week in Sept. will be a busy one for dog shows in this country, though neither of the three shows will conflict to any great extent with the other. A show will be held Sept. 18 to 22 at Newburgh by the local fanciers in connection with the Orange County Fair. Judging will commence on Wednesday, Sept. 19. Mr. Geo. C. Norton, 78 Clinton street, Newburg, N. Y., is the secretary.

During the past year or two, since Mr. Sears parted with her, champion Lady Wellington, the rough St. Bernard bitch that was so well known a couple of years back, has been little heard of. She was in her usual health until last Sunday week, when she was taken with gastritis and died on the Wednesday following. She was whelped June 9, 1885, and was by Duke of Wellington out of Henley Juno. Her breeder was P. E. Neighbours of Henley-on-Thames, England. Passing into Mr. S. W. Smith's hands she won a number of prizes and was then imported by Mr. Sears about 1889. Mr. Thiman, who owned her at the time of her death, intended to breed her to his smooth dog Chester.

The prizes for the Derby of the Manitoba Field Trials Club, commencing Sept. 5, are \$100, \$75, \$50 and \$25. Forfeit \$5, \$10 to fill. Entries close July 1. The All-Age Stake prizes are \$125, \$75 and \$50, with same fees; entries close Aug. 15. An Amateur Stake will also be given, the dogs running to be the property of members residing in Manitoba or the N. W. T. Forfeit \$3 and \$2 to fill. The rules are now identical with those of the U. S. F. T. Club. No entry for the Derby will be accepted unless accompanied by a certificate signed by the owner of the sire of the entry, stating the month and the year when the dam was served, or a similar certificate from the owner of the dam, stating the time of her whelping. Mr. R. J. Gallagher is the secretary from, whom running rules, etc., can be obtained.

We acknowledge the receipt of a photograph of the well-known St. Bernard, California Bernardo, by Duke of Wellington ex Tomah. He has won at the Los Angeles and San Francisco shows of 1893 and '94, and is owned by Mr. John G. Barker, of San Francisco. Cal. Bernardo seems to be a well made, handsomely marked dog that would do with a little more depth and squareness of muzzle and heavier pasterns and bone.

The Des Moines Kennel Club, which, as stated last week, intends holding a show in connection with the Iowa State Fair Sept. 4 to 7, is an organization of prominent business men of Des Moines. The club has already provided \$1,800 for premiums, and the special prize list is expected to be a large one. Mr. Bruce, the secretary, in writing to us on the subject remarks: "The daily attendance at our State Fair is on an average of about 40,000 people, and we hope that the dog fanciers of the country will see the advantage of making exhibits at our show." All Iowa railroads will make a rate one fare for the round trip, and the express companies will make the "usual concessions." The show will be held under A. K. C. rules. Such a show should tap a good country, and although it is not likely Eastern dogs will be sent so far during the warm weather we may expect at that period, Chicago and other points in the middle West have a good chance to pick up honors and cash.

The Boston Terrier Club have been tinkering their standard for this homedead breed and now instead of advocating a cropped ear, the rose ear will be the correct "tip." Changes have also been made in color, weight, which now reads, light weights 16 to 25lbs., heavy weights 25 to 40lbs., and the scale of points. By the way, Rawdon B. Lee does not give this sort of terrier a very complimentary notice in his new book on terriers.

Mr. B. Alton Smith, of the Al-De-Ber Kennels, has sold the collie bitch Maritana to a Mr. Hazard of South Carolina.

The New England Kennel Club is thinking of installing a permanent secretary in their club rooms on Tremont street, Boston, whose duties will consist in affording general information regarding dogs, pedigrees, etc., in fact make the office a sort of bureau of information for members and local dog owners. This we should think would be a very good move. Mr. Loveland will probably be the choice, and a meeting is shortly to be held at which the matter will be decided.

Rumor has it that a farm show with kennel show attachments will be held not a thousand miles from Boston during the early fall. Just after the Providence show is thought to be a good time.

Mr. W. Tallman has joined forces with Mr. S. B. Wheeler, of the Netherwood Farm, in starting a large boarding kennel. They have a main kennel building 138ft. in length, and 11 yards 100ft. long adjoining. Another yard is 500x75ft. There are also numerous other buildings which are usually to be found on a well appointed stock farm, such as this is. One thousand acres of excellent ground for quail, woodcock and grouse afford ample opportunity for training dogs, which will be a special feature to which Mr. Tallman will give his personal attention. The grounds are fairly well stocked already, and more birds will be turned down.

We heard of a sister to Rufford Ormonde, the noted collie, having been brought to this country by an English fancier whose name we could not ascertain. Cragston Kennels made an offer of \$750 but failed to secure her. The Englishman took the bitch with him to Pittsburgh.

Mr. P. T. Madison sold, during the Louisville show, to Richard Merrill, one pointer dog pup, born July 11, by Strideaway ex Hops II., for \$100, also the English setter bitch Nelly H's Lady, by Antonio ex Nelly Hope, price private, but a large one.

Another "McLin" Case.

We have received a communication from Messrs. Henry Kerr & Dean, of the King Graphic Kennels, Newcastle, Pa., which shows that the McLin affair is not an isolated case. In November last they sent two English setter bitches and two pointer bitches to C. W. Ellis, of Wabash, Ind., to be trained. Training expenses were paid in advance. This spring they also shipped a Roderigo pup to be trained for the fall trials. The bitches' training was to be completed by April 1, this year; and not receiving any answer to their letters to Ellis, they went to Wabash, and, in company with a deputy marshal, found the dogs in an outhouse at the back of a deserted farmhouse, three miles from town. Three of the dogs were dead, and the two alive were eating the dead ones; they were covered with mange and filth, and the sight was sickening. The Roderigo pup was found to be in the care of Ellis's mother, and was all right. One of the dogs in the kennel belonged to Mr. George Glynn, of Detroit; the other two are Breeze Gladstone bitches whose owner is un-

known. Ellis offered these two to Messrs. Kerr & Dean in place of their two that were dead, but the offer was refused. On consulting an attorney, it was found no satisfaction could be gained. We are told that Ellis gave as his references such well-known names as Dr. Withers and H. L. Goodman, of Chicago, and Dr. Hartman, of Latrobe, Pa. It would be interesting to know if these well-known dogmen stood sponsors for this man.

Dr. Hair, of Bridgeport, Conn., recently removed a uterine tumor from a valuable St. Bernard bitch belonging to Mr. Irving Watkinson, of Colchester, Conn. The operation, which was quite successful, was performed at Jos. Lewis's place, at Moodus, Conn.

Mr. Geo. Bell, in speaking of his recent suspension for one year by the A. K. C., asserts that the action taken was unjust, as he was not advised of the charges on which the suspension was based. On inquiry of Mr. Vredenburg, the A. K. C. secretary, if this was the case, the latter stated that a copy of the charges had been sent to Mr. Bell as long ago as September last, and that they had received his answer during the same month.

There seems to be a more than ever general feeling among dogmen that the "seances" of the Advisory committee should be given more publicity. Delegates at least should be allowed to attend the meetings *ex officio*, so that when the results of the committee's work come up before the executive committee they can vote intelligently in indorsing or not the action taken by the Advisory committee. The proceedings of this committee should also be published, so that those interested in kennel matters may judge for themselves whether the committee render correct decisions in the important cases which they undertake to decide.

Tumor in a Scottish Terrier.

Last Thursday afternoon we held a towel at a very interesting operation performed at Dr. Sherwood's new place. For some time past the Scottish terrier Wankie Ted, owned by the Wankie Kennels, West Medford, Mass., has shown an increasing abdominal girth. Several doctors diagnosed the case as dropsy, but it remained for Dr. Sherwood to properly explain the difficulty. The dog was sent to him some time since and his diagnosis proved to be correct when the animal was opened. Mr. Brooks was informed of the particulars and James E. Green represented him at the operation. The case being a most unusual and important one several doctors were present—Doctors Kakers, French and others. The preparations for such an operation to a lay mind were most bewildering, and the smallest detail of preparation for a similar operation on a human being was not wanting in this case. At our request Dr. Sherwood furnished the following account of the operation, which, though found to be impossible to carry through successfully, will be none the less interesting to our professional and lay readers: "On opening the abdomen a large tumor presented itself and on examining it I found that it was a malignant growth—a cancerous tumor. It grew from the mesentery (butchers call this the apron or caul) and was attached to the whole of one side of the stomach, a portion of the bowels and the spleen being also attached to it. There had also been a little local peritonitis, the neighboring glands and a portion of the intestines were also infected. Realizing that it was utterly impossible to remove the tumor, we decided to continue the chloroform and so destroy the dog. After death I removed the tumor and found that it weighed two pounds and a quarter of an ounce. I may say that the dog's abdomen was noticed to be large about nine months since and had since gradually increased in size. The cause of the growth was an injury. The dog had had a severe fight previous to the time his abdomen was noticed to be getting larger."

The White Star liner *Nomadie*, due in New York to-day (Tuesday), has on board two bob-tailed sheep dogs for Mr. C. F. Watson, Union Club, New York, two bulldogs for Messrs. J. V. Farwell & Co., Chicago, and one dog for Mr. A. C. Bradbury of the Maybrook Kennels. The care bestowed on the animals that come over on these steamers is justified by their popularity among dog owners.

On Friday afternoon, during the Specialty show, Mr. E. M. Oldham, the judge of spaniels, was made the recipient of a handsome silver cake salver and knife. This was tendered as a pledge of his popularity among his fellow members of the Spaniel Club. Dr. Bradbury made the presentation speech, and Mr. Oldham accepted the token with a few appropriate words.

Mr. "I Say" Fiske, the latest star in the spaniel firmament, must think the judging ring an easy game to the political one he is now engaged in in Mount Vernon. He believes he has been elected mayor of that town but the question as to where three votes were really put will make all the difference as to whether we shall call him "His Honor" or plain Mr. E. D. Fiske.

Lionel—"I say, Budge, where do the Skye terriers come from?"  
Budge—"Why from the clouds, when it rains cats and dogs, you know."—*Harper's Young People*.

False Bloodhound Pedigrees.

*Editor Forest and Stream:*  
In the *American Kennel Gazette* of February, 1894, there appeared in dogs registered under the head of "Bloodhounds" the following:  
"Frula, b., Wm. T. S. Wentz's, by Buster—Geo. Allison's Fulda, Oct. 30, 1892 (32,556)."  
Then following this:  
"Romp, d., Wm. T. S. Wentz's, by Crofton—Geo. Allison's Rags, Oct. 1, 1893 (32,557)."

On seeing this I at once wrote to the *Kennel Gazette* that there was no question but that the pedigrees were manufactured and false ones, and so it proved. To get his Romp, the blank he sent to the Kennel Club, which he certifies to be true, he has taken the name of the well known show dog champion Belhus and made him the grandsire of his Romp by breeding him to his imaginary Chiswick. To get the granddam of his Romp he has bred an imaginary Rigid to Mr. Glazier's dead Benison. Both Belhus and Benison were bred by Mr. Brough. I imported them and they were owned by Dr. Lougest and Mr. Glazier, and while in our possession certainly were never bred to any mongrels or to any dogs with such peculiar names as Romp, Rags, Rigid, Romper, Jeanker, Chiswick, Buster, Rippler, Fulda, Frula, etc. Now, to get the pedigree of the female he goes further back; on paper he breeds my old Rosemary, the dam of champion Victor, to a Stranger, as he calls him, and produces a Rippler; this wonderful Rippler he breeds to Mr. Innes's Dolan, a young bitch that has never raised any pups, but he gets a Fulda. The dam of his Frula, also this wonderful Fulda with such wonderful breeding, proves, in his pedigree, to be the dam three times back.

This Wm. T. S. Wentz, V. S. M. D., is quite an extensive dealer in dogs and a large advertiser. He says he deals in 16 different varieties and always has puppies on hand for sale. I have a letter from A. B. Morris, of Worthington, Ind., who says he sent him \$60 for this pair of pups on January 18, and Mr. Wentz acknowledged the receipt of the money on Feb. 19 and promised to send his puppies the next week, but in the last letter I had from Mr. Morris, which was dated

March 23, he says he has got the registration of the blood hounds, as he calls them, from the American Kennel Club, and their numbers are 32,556 and 32,557, but at the last accounts he had not got his pups. In that at least Mr. Morris is lucky. It shows how little they know about bloodhounds when they attempt to manufacture a bloodhound pedigree, for the strains are so well known that discovery is sure. There have been bloodhound pedigrees manufactured and registered in the Kennel Club, but none so flagrant as these two from the City of Brotherly Love—Philadelphia.

J. L. WINCHELL.

FAIR HAVEN, VT.

KENNEL NOTES.

Kennel Notes are inserted without charge; and blanks (furnished free) will be sent to any address.

NAMES CLAIMED.

Prepared Blanks sent free on application.

*Arbutus, Moss Rose, Golden Rod, Rally, Jr. and Rocket.* By Debonair Beagle Kennels, Gloversville, N. Y., for black, white and tan beagles, three bitches and two dogs, whelped April 25, 1894, by King Bannerman (champion Bannerman—Blossom) out of Ray's Rosey (Rally—Cora).

BRED.

Prepared Blanks sent free on application.

*Susie—Paul Bo.* R. B. Cottrill's (Des Moines, Ia.) English setter bitch Susie (Zippo II.—Faydelle) to R. Merrill's Paul Bo (Paul Gladstone—Bohemian Girl), April 27.

*Elora Chimera—Stormy.* B. A. Fox's (Moore's, Pa.) beagle bitch Elora Chimera (Drummer—Beauty) to Debonair Beagle Kennels' Stormy (champion Royal Krueger—Pussie), Jan. 4.

*Pet—Ransack.* O. B. Clark's (Brooklyn, N. Y.) beagle bitch Pet (King Bannerman—Fancy) to Debonair Beagle Kennels' Ransack (Drummer—Beauty), Jan. 5.

*Nellie S.—Stormy.* W. Soule's (Gloversville, N. Y.) beagle bitch Nellie S. (Spite—Laurel) to Debonair Beagle Kennels' Stormy, Jan. 13.

*Sweet Briar—Stormy.* E. E. Palmer's (Napoleon, Mich.) beagle bitch Sweet Briar (Rush—Blue Nell) to Debonair Beagle Kennels' Stormy, Jan. 31.

*Ray's Rosey—King Bannerman.* Debonair Beagle Kennels' (Gloversville, N. Y.) beagle bitch Ray's Rosey (Rally—Cora) to their King Bannerman (champion Bannerman—Blossom), Feb. 18.

*Rhyme—Stormy.* Debonair Beagle Kennels' (Gloversville, N. Y.) beagle bitch Rhyme (Dash—Gipsy) to their Stormy, Feb. 20.

*Jeannette—King Bannerman.* E. L. Bryant's (Johnson Creek, N. Y.) beagle bitch Jeannette (champion Bannerman—) to Debonair Beagle Kennels' King Bannerman, March 7.

*Nellie O.—Stormy.* O. Eastman's (Gloversville, N. Y.) beagle bitch Nellie O. (Ring—Fly II.) to Debonair Beagle Kennels' Stormy, March 10.

*Stick Singer—Chorister.* Debonair Beagle Kennels' (Gloversville, N. Y.) beagle bitch Stick Singer (King Lead—Stick) to their Chorister (Ransack—Gussie D.), April 23.

*Helen II.—King Bannerman.* Debonair Beagle Kennels' (Gloversville, N. Y.) beagle bitch Helen R. (Hardy's Little Duke—Flossy) to their King Bannerman, April 13.

*Rill—King Bannerman.* Debonair Beagle Kennels' (Gloversville, N. Y.) beagle bitch Rill (Stormy—Rhyme) to their King Bannerman, May 10.

*Ruth Lee—Ransack.* Debonair Beagle Kennels' (Gloversville, N. Y.) beagle bitch Ruth Lee (Jubilee—Ripple) to their Ransack, May 2.

*Gussie D.—Ransack.* Debonair Beagle Kennels' (Gloversville, N. Y.) beagle bitch Gussie D. (Brad's Sport—Fern B.) to their Ransack, May 10.

*Wee Millie—Chorister.* Debonair Beagle Kennels' (Gloversville, N. Y.) beagle bitch Wee Millie (Blue Cap—Minnehaha) to their Chorister, May 10.

*Lady Maud—Count Noble.* E. O. Tucker's (Providence, R. I.) Gordon setter bitch Lady Maud (Ranger B.—Countess Whip) to S. A. Nickerson's Count Noble, March—.

*Ven—Count Noble.* M. W. Murray's (Milton, Mass.) Gordon setter bitch Ven (Dan—Fanny) to S. A. Nickerson's Count Noble, April 30.

*Beauty—Count Noble.* C. B. Rutan's (West Orange, N. J.) Gordon setter bitch Beauty to S. A. Nickerson's Count Noble, Feb. 25.

*Josephine II.—Count Noble.* E. O. Tucker's (Providence, R. I.) Gordon setter bitch Josephine II. (Leatherstocking—Josephine) to S. A. Nickerson's Count Noble, Feb. 2.

*Mame S.—Tribulation.* R. L. Shannon's (La Grange, Ky.) pointer bitch Mame S. to B. M. Stephenson's champion Tribulation, April 26.

*Ruth—Tribulation.* J. C. Neely's (Memphis, Tenn.) pointer bitch Ruth to B. M. Stephenson's champion Tribulation, May 3.

*Jersey Daisy—Albert's Garry.* B. S. Boate's (New York) English setter bitch Jersey Daisy to Warwick Kennels' Albert's Garry.

*Princess Belton—Albert's Garry.* Dr. A. M. Quimby's (Worcester, Mass.) English setter bitch Princess Belton to Warwick Kennels' Albert's Garry (Warwick Albert—champion Daisy Foreman).

*Clara Barton—Jim Blaine.* G. W. Patterson's (Lake View, Mass.) St. Bernard bitch Clara Barton (Sir Bedivere—Judith) to E. B. Sears's Jim Blaine (Bryan—Martha Washington), March 23.

*Alta Lomond—Altoner.* G. W. Patterson's (Lake View, Mass.) St. Bernard bitch Alta Lomond (Alton, Jr.—Lady Lomond) to E. H. Moore's Altoner (Alton—Hera), March 26.

*Eulalie II.—Jim Blaine.* G. W. Patterson's (Lake View, Mass.) St. Bernard bitch Eulalie II. (Altoner—Clara Barton) to E. H. Sears's Jim Blaine (Bryan—Martha Washington), April 6.

*Alberta—Lord Wilton.* J. Brest's (Closter, N. J.) St. Bernard bitch Alberta to Mrs. A. M. Hughes's Lord Wilton (Marmion—Lady Alice), May 18.

WHELPS.

Prepared Blanks sent free on application.

*Lady Novice.* A. D. Fiske's (Worcester, Mass.) beagle bitch Lady Novice (The Rambler—Lady Vic), April 23, seven (three dogs), by B. S. Turpin's Clyde (Frank Forest—Sue Forest).

*Fitzhugh Lee—Lady Novice.* A. D. Fiske's (Worcester, Mass.) beagle bitch Fitzhugh Lee (Lady Novice), April 30, seven (three dogs), by B. S. Turpin's Clyde (Frank Forest—Sue Forest).

*Brummy.* A. D. Fiske's (Worcester, Mass.) beagle bitch Brummy (Fitzhugh Lee—Lady Novice), May 2, six (five dogs), by B. S. Turpin's Clyde (Frank Forest—Sue Forest).

*Ray's Rosey.* Debonair Beagle Kennels' (Gloversville, N. Y.) beagle bitch Ray's Rosey (Rally—Cora), April 25, five (two dogs), by their King Bannerman.

*Rhyme.* Debonair Beagle Kennels' (Gloversville, N. Y.) beagle bitch Rhyme (Dash—Gipsy), April 25, four (one dog), by their Stormy (champion Royal Krueger—Pussie).

*Lady Noble.* Inwood Kennels' (Providence, R. I.) Gordon setter bitch Lady Noble (Don—Lady), Feb. 10, nine (five dogs), by S. A. Nickerson's Count Noble.

*Fennont.* Smith Bros. (Deep River, Conn.) Gordon setter bitch Fennont (Beaumont—Belle Stephen), Feb. 12, ten (seven dogs), by S. A. Nickerson's Count Noble.

*Lady Dina.* R. Hoffman's (Brooklyn, N. Y.) greyhound bitch Lady Dina, May 15, eight (five dogs), by Romeo.

*Edgewood Matchless.* H. M. Howes's (Somerville, Mass.) bull-terrier bitch Edgewood Matchless (Gully the Great—Starlight), March 1, four (two dogs), by F. P. Dole's Ted Fritchard.

*Chatham Kit.* H. M. Howes's (Somerville, Mass.) bull-terrier bitch Chatham Kit (champion Jubilee—My Queen), March 1, five (three dogs), by F. P. Dole's Gully the Great.

*Flossie II.* W. W. Brown's (Springfield, Vt.) Irish setter bitch Flossie II., May 16, ten, by W. Wenzel's champion Chief.

*Dwight Effie.* J. E. Ought's Gordon setter bitch Dwight Effie, April 15, eight (six dogs), by his Heather Lad.

SALES.

Prepared Blanks sent free on application.

*Flash Noble.* Black and tan Gordon setter dog, whelped Feb. 10, 1893, by King Noble out of Dolly O., by Miss S. A. Nickerson, Providence, R. I., to Mrs. S. S. Brown, Pawtucket, R. I.

*Dick Noble.* Black and tan Gordon setter dog, whelped April 28, 1893, by Count Noble out of Fennont, by Miss S. A. Nickerson, Providence, R. I., to Miss E. A. Wadsworth, same place.

ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

A. I. Tampa, Fla.—There is little likelihood of the mongrel's service having any undesirable effect, therefore do not destroy the litter. The season of oestrus comes on about twice a year.

A. Reader, Olneyville, R. I.—Blister the spine for the chorea. In addition to the present treatment give a dessertspoonful of compound syrup of hypophosphites twice a day and also an equal amount of codliver oil. A seton is a narrow piece of tape carried under the skin

with a large needle. It depends entirely what you bleed for; generally from the jugular; a lancet or phlebotomy.

CONSTANT READER, Chicago, Ill.—Kindly advise treatment for my two pointer bitches, one five the other three years old. Hair has come out all over body but mostly on hindquarters; there seems to be but little if any irritation as they do not scratch much. They are good in flesh. Ans. Feed more meat and change diet oftener. Dress the bare places with castor oil and sperm oil, equal parts of each. Give following tablets twice, each tablet to contain 1 gr. of reduced iron and 1-100 gr. arsenic.

R. A. M., Pittsburgh, Pa.—I have a very fine English setter bitch also a dog pup eight months old from her. I sent the bitch away to be bred to a fine dog a short time ago. When she came back the pup got with her. What had I better do, drown the pups? Ans. It is very probable that the bitch was impregnated before the pup had connection with her, and no harm has been done.

## Hunting and Coursing.

### FIXTURES.

Oct. 23.—New England Beagle Club, at Oxford, Mass. W. S. Clark, Linden, Mass., Sec'y. Nominations close Oct. 1.  
Oct. 29.—National Beagle Club. Geo. Laick, Tarrytown, N.Y., Sec'y.  
Nov. 7.—Northwestern Beagle Club. Louis Steffen, Milwaukee, Wis., Sec'y.

### The Mitchell Meeting.

Editor Forest and Stream:

The spring coursing at Mitchell, South Dakota, which was run off April 17 and the following days, was not a satisfactory meeting. The trouble was with the judge and wet weather which prevailed during the week. The officers of the club did all in their power to make a success of the meet. A mistake was made in the selection of a judge, and of course to the nominator this is all. The banquet given by the club was a swell affair, the nominators being the guests.

William Fox Kinney was judge—a man who without doubt has had more experience at coursing than any man in America. And with all this experience, cannot see but one side of a course (at times). Last fall he judged an eight dog stake here and gave the best of satisfaction, and the boys were highly pleased to think that such a man was located in the State; but he had no interest in the outcome of that meeting. Mr. Kinney was asked to vacate the saddle on account of prejudice shown. It seems as though "He cared not for his first love, his last he loved best."

Since the International meeting at Huron last fall, Mr. Kinney has resided with Mr. Marston at Sioux Falls, S. D., taking care of his dogs until a short time before this meeting at Mitchell. Mr. Marston entered three dogs. He won first money with Blue Hat, third money with Miss Fanny and Juanita was put out in her first course. When such dogs as Ramona, Sir Hugo and Laplander are in a stake, it is hard work for a judge to send such a dog as Blue Hat to the top. And when a decision is questioned, he should not give the game away by "flying off the handle," using such language as would cause the prairies to blush with shame, to say nothing of the feelings of the ladies and gentlemen present. Doubtless the result will be that William Fox Kinney will never have an opportunity to judge another meet in this country. Joseph Dodd was slipper and did his work well. He is not a new hand at this business, having had quite an experience on the other side of the Atlantic; he has great control of the dogs while in the slips, and makes his deliveries in grand style. A nominator would not object to his work, but would feel confident that his dogs would leave the slips well sighted.

The Mitchell Stake, for 16 all-age greyhounds at \$5 each, with \$100 added; \$50 and 50 per cent. of entrance money to the winner; \$25 and 25 per cent. of entrance money to the runner-up; \$25 and 25 per cent. of entrance money divided between third and fourth; 14 entries.

R. T. Marston's be. d. Blue Hat, by Scottish Chief—Wasp.	beat	F. T. Williams's bd. w. b. Fanny, pedigree unknown.
Columbus Kennel (ns.) blk. d. Carter O., by Carter H.—Nell.	beat	J. Bateley's f. d. Budwaiser, by Tulo—Vixen.
Columbus Kennel's w. bd. b. Ramona, by Spot—Filly.	beat	L. G. Conant's blk. d. Grover O., by Diamond R.—Fleet.
J. H. Rew's blk. w. d. Sir Hugo, by Lord Neversett—White Lips.	beat	Columbus Kennel's blk. d. Laplander, by Trales—Dick's Darling.
R. T. Marston's blk. w. b. Miss Fanny, by Spot—Filly.	beat	W. Hawn's blk. d. Sport, by Jack—Boss.
J. H. Rew's bd. b. Jessie Green, by Sir Hugo—Fleet.	beat	L. Hooker's bd. d. Ole, by Tulo—Vixen.
Wedehase Bros' r. w. d. Grover, by Tulo—Vixen.	beat	R. T. Marston's be. b. Juanitta, by Wizard—Gypsy.

### Second Course.

Blue Hat beat Carter C. Ramona beat Sir Hugo.

### Third Round.

Blue Hat beat Ramona. Grover beat Miss Fanny.

### Deciding Course.

Mr. R. T. Marston's be. d. Blue Hat, by Scottish Chief—Wasp, beat Messrs. Wedehase Bros' r. w. d. Grover, by Tulo—Vixen, and won.

Blue Hat, the winner, is a large, coarse dog with long hair, and is a half staghound. NOMINATOR.  
[This report was delayed, owing to the sudden illness of our correspondent.]

## HUNTING AND COURSING NOTES.

The following comment in an English contemporary on one of our best coursing judges will prove interesting to coursing men who have met Mr. Mulcaster: "Those who used to attend local steeple chases in Cumberland and the various agricultural shows in the sixties and early seventies, will remember E. H. Mulcaster, the eldest son of the genial Carlisle, trainer, who was frequently seen on the back of a winner, until increasing weight put him out of the running. Something like twenty-five years ago I remember him riding Fanny Drake, a mare with a direct cross of Cleveland Bay blood, who was certainly the biggest jumper I ever saw, and I am not forgetting Old Star. Mr. Mulcaster, Jr., during his showing and racing days made many friends, who will, I know, be glad to hear that he is making for himself a name in the United States. When Mr. Mulcaster first went to America he managed a large stud farm in Nebraska, and on one of his visits I sold him some horses. But a sportsman to the backbone, Mr. Mulcaster could not long keep from 'playing the game' in one form or another, and he is now one of the foremost coursing judges in the land of the Stars and Stripes."

A recent eulogy on his riding and abilities as a coursing judge calls to memory the days when his father won golden opinions as a coursing judge in this country. And now just one word to my coursing friends. Coursing seems as if it had caught strong hold of our American cousins, and that it will maintain its hold seems pretty certain now, when they have secured competent men to judge. I should not be much surprised were there to be a boom in greyhounds before very long."

The boom is already here, for never has there been more interest taken in greyhounds for coursing than at the present date, for with new coursing associations cropping up in every direction west of the Alleghanies lovers of the leash may soon look forward to busy seasons at both ends of each year. The sport is clean and honest when the proper judges are in the saddle, and when such is not the case, as happened

recently, the offender is quickly ousted from the position. The very life of the sport now depends upon only true and tried men being elected to the office of judge, and if coursing clubs consider their best interests no expense should be spared in securing such men to officiate. The same applies with equal force to the slipper, and while we may not hope to see that experienced manipulator of the slips, James Wren, so far East, such men as Messrs. Brett, Cochran and Taylor can always be counted upon to do their honest best.

During Louisville show we saw a rough draft of the running rules of the National Fox Hunters' Association, which seem to cover the ground pretty thoroughly and provide for almost any emergency that may take place. The field stewards will be sworn in as deputy sheriffs, where practicable, so that they will be clothed with necessary power to maintain good order. This is a move that might be successfully copied by the coursing associations. The first field trials of the Association will be held early in October. Mud Lick, about forty miles from Lexington, Ky., is spoken of as the probable venue. This is in the wilds, but is a suitable country for all sorts of foxhounds and it is expected that a summer hotel, which will be empty at that time, will be placed at the service of the Association. The trials promise to be most interesting, as the hounds will be ridden by judges, owners and reporters. Members of the standard committee and others whom we met at Louisville show were much put out at the breach of confidence which allowed the new standard to be published in one paper before it had been ratified, and to the exclusion of other journals that have an equal interest in helping the sport along. This is not sportsmanlike.

Mr. Lyman W. Clute has sold the well-known foxhounds Crook and Drum IV., winners of numerous prizes on the bench. Vermont is their destination, but the purchasers' names we did not hear.

Our "debonair" friend, F. B. Zimmer, of Gloversville, N. Y., has purchased the sweet-headed little beagle bitch Mary Wise from the Hornell-Harmony Kennels. She is by champion Royal Krueger.

### FIXTURES.

#### MAY.

24. St. Lawrence, Squad. Cruise.	30. San Francisco Cor., Annual Cruise, Tiburon.
26. San Francisco Cor., Sail to Quarry Cove.	30. Fall River, Open Regatta.
26. Portland, Cruise.	30. So. Boston, Open, Boston Har.
27. San Francisco Cor., Sail Out.	30. Rhode Island, Spring Regatta.
26. Winthrop, Pen., Boston Harbor.	30. New Bedford, Club, Buz. Bay.
26. Southern, Ann., Pontchartrain.	30. Hempstead Bay, Opening.
26. Atlantic City Cor., Trophy Race, Atlantic City.	30. N. Y. Bay, Op'g, N.Y. Harbor.
30. So. Boston, Open, City Point.	30. Plymouth, Club, Plymouth Harbor.
30. Racing, Opening, Raccoon, W. Minnetonka.	30. Cleveland, Op'g, Rocky River.
30. Douglaston, Open, L. I. Sound.	30. Staten I. d., Op'g, N.Y. Harbor.
	30. Minnetonka, Opening, Club, Lake Minnetonka.

#### JUNE.

2. St. Lawrence, 18ft. Class, first series.	10-17. San Francisco Cor., Cruise, Sacramento River.
2-3. San Francisco Cor., Cruise, Petaluma Bridge.	16-18. Winthrop, Club Cruise, Massachusetts Bay.
4. Brooklyn, Ann., New York.	17. Manchester, Club Sweeps, Massachusetts Bay.
5. Atlantic, Ann., New York.	17. Oak Point, 3d Ann., L. I. Sound.
7. New York, Ann., New York.	18. Rhode Island, Spring Regatta.
9. Larchmont, Spring, L. I. Sound.	18. Beverly, Sweeps, Mon. Beach.
9. St. Lawrence, A, 30, 25, 21ft. Classes, first series.	18. Squantum, Club, Squantum, Mass.
9. American, Special Class, Newburyport.	18. Massachusetts, Open, Nahant.
9. San Francisco Cor., Owners' Day.	18. Plymouth, Club, Plymouth Harbor.
9. Atlantic City Cor., Vansant Cup, Atlantic City.	22. Rhode Island, Spring Regatta, Narragansett Bay.
9. Cape Cod, Club, East Dennis.	22. Cape Cod, Club, East Dennis.
9. Douglaston, Open, L. I. Sound.	23. St. Lawrence, 18ft. Class, third series.
9. Lynn, Expert Cup, Lynn, Mass.	23. Sea, Cor., Ann., L. I. Sound.
9. Fox Lake, Club, Fox Lake, Ill.	23. Yonkers Cor., Ann., Hudson River.
10. American, Club, Boston Har.	23. American, Seaver Cup, Newburyport.
12. Schoodic, Special Race, Club.	23. Douglaston, An. Open, L. I. Sd.
12. New Jersey, Ann., N. Y. Bay.	23. Fox Lake, Club, Fox Lake, Ill.
13. St. Lawrence, 18ft. Class, second series.	23. Winthrop, Open, Boston Har.
13. Bay Shore, Open, Bay Shore.	23. Lynn, Expert Cup, Lynn, Mass.
15. Portland, Annual.	23-24. San Francisco Cor., Cruise, Sacramento River Return.
16. American, Club, Boston Har.	27. Atlantic City Cor., Trophy Race, Atlantic City.
16. St. Lawrence, A, 30, 25, 21ft. Classes, second series.	30. St. Lawrence, A, 30, 25, 21ft. Classes, third series.
16. Cor. Mus. Fleet, Ladies' Day, New Rochelle.	30-July. San Francisco Cor., Cruise, McNear's.
16. N. Y. Bay, Club, N. Y. Harbor.	30. Jersey City, Ann., N. Y. Harbor.
16. New Bedford, Club, Buz. B.	
16. Knickerbocker, Open, L. I. S'd.	
16. Minnetonka, Club, L. Minnetonka.	

#### JULY.

2. A. M. St. Lawrence, A, 30, 25, 21ft. Classes, challenge cup; P. M. steam yacht race, 18ft. fourth series.	14-15. San Francisco Cor., Cruise, Galinas Creek.
3. Sea, Cor., Race, Oyster Bay to Larchmont.	14-21. Larchmont, Cruise, Long Island Sound.
3. Southern, Cruise.	16. Rhode Island, Ann. Cup, Narragansett Bay.
3. Squantum, Cham., Squantum, Mass.	16-19. Hempstead Bay, Cruise, G't South Bay.
4. Larchmont, Ann., L. I. Sound.	17-18. Interlake Y. A., 1st Meet, Put-In Bay, Lake Erie.
4. City of Boston, Open, Boston Harbor.	19. Interlake Y. A., Cruise, Lake Erie.
4. Beverly, Club Cham., Monument Beach.	19. Fall River, Ladies' Day.
4. Cleveland, Ladies' Day, L. Erie.	20. Hempstead Bay, Club, Hempstead Bay.
4. Plymouth, Club, Plymouth Harbor.	21. Squantum, Cham., Squantum, Mass.
4. Fox Lake, Club, Fox Lake, Ill.	21. American, Seaver Cup, Newburyport.
4-7. Lake Y. R. A., Race Meet, Soda Bay.	21. Beverly Sweeps, West Falmouth.
7. Dorchester Bay Clubs, Union Race, Dorchester Bay.	21. Fox Lake, Club, Fox Lake, Ill.
7. St. Lawrence, A, 30, 25, 21ft. Classes, fourth series.	21. Plymouth, Club, Plymouth Harbor.
7. Riverside, Ann., L. I. Sound.	21. Lynn, Expert Cup, Lynn, Mass.
7. Cape Cod, Club, Nobscessett Pier.	21. Manchester, Minot's Ledge Cup, Massachusetts.
7. Douglaston, Open, L. I. Sound.	21. Larchmont, Flat Cup, cabin cats, Long Island Sound.
7. Lynn, Expert Cup, Lynn, Mass.	23. N. Y. Bay, Club, N. Y. Harbor.
7. Manchester, Open, Mass. Bay.	23. South Boston, Club, Cruise, Massachusetts Bay.
12. Schoodic, 1st Cup Race, Club.	23. Squantum, Squantum, Mass.
12. St. Lawrence, A, 30, 25, 21ft. Classes, fifth series.	23. Indian Harbor, Ann., Long Island Sound.
14. Cor. Mus. Fleet, 21ft. and cabin cats, New Rochelle.	23-29. San Francisco Cor., Cruise, Goat Island.
14. Knickerbocker, Club, L. I. S'd.	30. Schoodic, 2d Cup Race, Club.
14. N. Y. Bay, Club, N. Y. Harbor.	
14. New Bedford, Club, Sail, Buz. B.	

#### AUGUST.

6. New York, Annual Cruise, Rendezvous Glen Cove.	11. Plymouth, Club, Plymouth Harbor.
6. Manchester, Ch. Pen., Mass. B.	12. Schoodic, Open, St. Andrews.
6. Squantum, Ladies' Day, Squantum, Mass.	16-17. S. Corinthian, Midsummer Series, Marblehead.
6. Cape Cod, Club, Orleans.	17. Manchester, Ch. Pen., Mass. B.
6. Beverly, Club Cham., Monument Beach.	18. Fox Lake, Club, Fox Lake, Ill.
6. Fox Lake, Club, Fox Lake, Ill.	18. Cape Cod, Club, Orleans.
6. Lynn, Expert Cup, Lynn, Mass.	18. American, Seaver Cup, Newburyport.
6. Winthrop, Club, Boston Har.	18. Beverly Sweeps, West Falmouth.
4-5. San Francisco Cor., Cruise, Sausalito.	20. Rhode Island, Open, Narragansett Bay.
6. New York, Semi-Centennial Race, Glen Cove.	21. Fall River, Open.
6. Manchester, Ch. Pen., Mass. B.	25. Atlantic City Cor., Open, Muckle Cup, Atlantic City.

10-11-13. Atlantic City Cor., Special Midsummer Races, Atlantic City.	25. Quincy, Open, Dorchester Bay.
11. Cape Cod, Club, Orleans.	25. Squantum, Club, Squantum, Mass.
11. Cleveland, Ladies' Day.	25. Cor. Mus. Fleet, Ann., New Rochelle.
11. N. Y. Bay, Club, N. Y. Harbor.	25. N. Y. Bay, Club, N. Y. Harbor.
11. Hempstead Bay, Club, Hempstead Bay.	25. Knickerbocker, Club, L. I. S'd.
11-12. San Francisco Cor., Cruise, Petaluma Bridge.	26-26. San Francisco Cor., Cruise, California City.
	27. Schoodic, 3d Cup, St. Andrews.

#### SEPTEMBER.

1. Beverly, Sweeps, Mon. Beach.	15. Larchmont, Larchmont Cup, Long Island Sound.
1. Larchmont, Fall, L. I. Sound.	15. Beverly, Club Cham., Monument Beach.
1. Squantum, Club, Rur, Squantum, Mass.	15-16. San Francisco Cor., Cruise, Vallejo.
1. Hull Cor., Open, Hull.	20. Plymouth, Club, Plymouth Harbor.
1. New Bedford, Club, Sail, Buzzard's Bay.	22. Squantum, Cham., Squantum, Mass.
3. So. Boston, Open, City Point.	22. American, Seaver Cup, Newburyport.
3. New York Y. R. A., Ann., N.Y.	22. Atlantic City Cor., Trophy Race, Atlantic City.

3. Lynn, Open, Nahant.	22. Knickerbocker, Ladies' Day, Long Island Sound.
3. Plymouth, Club, Plymouth Harbor.	23. San Francisco Cor., Sail Outside.
3. New York Bay, Club, N.Y. Bay.	29-30. San Francisco Cor., Cruise to McNear's.
3. Atlantic City Cor., Club Cup, Atlantic City.	
3. San Francisco Cor., Cruise to Pacific Y. C. Regatta.	
12. Schoodic, Sail-off for Cup.	
12. Hempstead Bay, Club, Hempstead Bay.	
15. Winthrop, Club, Boston Harbor.	

#### OCTOBER.

13. San Francisco Cor., Final Sail.	
	SOCIAL AND BUSINESS.
May 25.—Riverside, Opening, Cos Cob, Conn.	
May 30.—Seawanhaka Corinthian, Opening, Oyster Bay.	
July 30.—New York, Semi-Centennial Celebration, New York.	
Aug. 17.—Riverside, Ball, Riverside, Conn.	
Aug. 25.—Winthrop, Ladies' Day, Reception, Winthrop, Mass.	

AFTER languishing for some years, the large racing single-sticker is now in fashion, though just why or how is not very clear. The races for the America Cup in 1885-6-7 failed to establish the class in America or England, and at the end of last season there was every prospect that the new boats of 1893 would soon pass away, without any permanent influence in the class to which they belonged. Recent developments, however, promise at least a couple of seasons of building and racing, if not more. In addition to Vigilant, Valkyrie and Britannia, now in commission, there is the new Bennett yacht, to be ready for next season, and now comes a report from Paris of a French 87-footer, to be designed and built in France, for Baron Robert Oppenheim, of the Union des Yachts Français. It is hardly likely that with such a fleet afloat the Emperor of Germany will be content with the old Thistle, and he is likely to come into the class with something a little more meteoric in speed. With Fashion's seal firmly set on it, and with a real price and emperor as patrons, the class is likely to come into favor with wealthy men in America and Europe, a result that yachtsmen will hail with delight. There is no question of the desirability of such a class of large single-stickers, but experience has proved that it is entirely too expensive for such racing yachtsmen as sail for love of the sport. If, however, through the aid of royalty or in any other way, men can be induced to build for it, the yachting world will be the gainer, and we wish it a long life.

THE improvement in interior finishing has by no means kept pace with the advance in designing, construction, machinery, and equipment, and in no part of the modern yacht does the owner get so small a return for so large an outlay as in the arrangement, fitting up, and decoration of the living rooms, in which much of his time aloft must necessarily be spent. The functions of the designer and decorator ashore are generally recognized, and no one would dream of intrusting the finishing of an expensive house to the contractor or carpenter who built it; but in the case of a yacht, where the outlay is five-fold for a given cubic space as compared with work ashore, it is much a matter of chance as to who has the entire charge, the builder, who has a thousand other things to engross his mind, or some boss joiner whose training does not extend beyond the saw and plane. The pressing need in yacht interiors is more brains and trained skill, and less carved and moulded mahogany.

### Stockless vs. Stocked Anchors.

If any one is in doubt about the snugness, neatness and practical sense of using stockless anchors, they should make a comparison between them and the old-fashioned anchor with both wooden and iron stocks, as we did recently on the big handsome ship George Stetson, which lay on the opposite side of an East River pier from the steamship Bayan. The port anchor of the Stetson hung from the cat-head, and from an aesthetic standpoint interfered largely with the beauty of the vessel's bow. On the starboard bow a heavy wooden stocked anchor was "cockbilled" with the big cumbersome stock at the cat-head and the fluke in the "shoe" on the rail. In viewing these two vessels (the Stetson and the Bayan) as their bows presented themselves to the passerby on the street, it only required a glance to see that the stockless anchor is everything that the anchor with the stock attached is not. The stockless anchor was hove up snug in the hawse pipe with only the flukes outside. The forecastle of the Bayan was clear of fish-davits, tackles, cat-heads and other necessary gear, which must be at hand to handle the old style anchor and hoist it on deck, while the ship George Stetson had all these incumbrances on the forecastle or near by, which are not only in the way, but produce a lot of unnecessary expense.

What officer of a vessel is there that cannot bear witness to the trying conditions that are so frequently met with when hauling one ship outside of another, or getting her into a dock berth, when it comes to getting the anchor and the cat-head by another vessel's stern or bow, oftentimes causing hours of vexatious delay and more or less damage?

The stockless anchor overcomes all of these difficulties and is a guarantee of safety where quick letting go of the anchor is necessary. Its value in this respect alone should be sufficient to warrant a reduction of premium on the insurance of vessel and cargo.

It is our opinion that the only reason for the slow adoption of this anchor by the maritime fraternity is that it doesn't look exactly ship shape to the experienced mariner's eye—nothing more nor less than prejudice, such as has existed against many new inventions or new improvements, that have only met with favor eventually through their valuable points having been brought out by practical use. No shipmaster will gaily the great advantage of having an anchor that will "let go" in a position for the voyage to be let go in a moment. This everyone must acknowledge the stockless anchor will do, and it has been proved beyond a doubt that it will hold as well, if not better, than the old style stocked anchor.—Marine Journal.

### Vigilant.

THE work of preparing Vigilant for her ocean voyage is progressing rapidly at Robins' Erie Basin, under the care of captains Haft and Jeffrey. At Mr. N. G. Herreshoff's suggestion the hull has been strengthened by braces similar to those in the Scotch, recently described in the Forest and Stream, an angle iron strainer being run along the flat of the floor, and angle iron braces running from it to the deck on each alternate deck beam. Three water tanks have been added, giving a total capacity of 3,000 gallons. The mizzen mast and other cruising spars are ready, and all of the racing spars, including the hollow boom made at Bristol, but never used, have been very carefully wrapped, and will be shrouded by the stronger to Glasgow.

Atlanta, Mr. George Gould's steam yacht, was in the dock last week at the Erie Basin for scraping, painting and a general overhaul. She will go on the dock again for a new manganese bronze wheel, and will then be ready for sea. Capt. Haft and Mr. Howard Gould will go with her.

Races have been arranged with Lord Dunraven between Vigilant and Valkyrie, for special prizes, over the Royal Victoria Cup course, off the Isle of Wight, and Messrs. Gould will probably challenge for the R. V. Y. C. Cup. Through the efforts of Mr. Kersey, the Royal Dorset Y. C., of Weymouth, will throw open to Vigilant its race for the Queen's Cup of this year.

## Interior Arrangement and Decoration.

has an opportunity to escape the owner's vigilance he will put a drawer or a locker almost everywhere, most of which serve no other purpose than an excuse for the accumulation of dampness and discomfort. An experience of this kind some time ago aided me to fully illustrate this fact. It was a change the owner desired in his state-room; the space was about 6x8 ft., on the starboard side, and in one of our large sloops, and contained, besides the thorough bewilderment of panels, a bed 2 ft. 6 in. x 6 ft. 6 in., and a mirror, a chest of drawers extending from the face of cabin trunk into the side from floor to deck. The bed in so small a space was naturally a very inconvenient piece of furniture. He seemed to fancy the drawers very much, but upon opening them and putting his hand down to the bottom of one, he pulled out a number of corks and other rubbish which had been lying there no one knows how long. The desired result was now at hand. Their removal was suggested, and in their place a simple function of the waistcoat, which was arranged so as to lower, giving him a folding bed 6 ft. 6 in. x 5 ft. 6 in.—more than double the width of his former bed—out of the way, and still leaving ample space for a small washstand at the after end.

At the conclusion of the job, after practical tests of this new arrangement, the owner pronounced it a success, and in more than one way felt that it repaid for the loss of drawers. The cause of this lack of taste aboard ship is mainly that the ship joiner is considered fully competent to take entire care of that end of the business. Give him a pocket full of nails, a sufficient amount of mahogany and a suggestion and he will do the rest in a way of which we have already ample evidence. He should no more be permitted to experiment with this very important subject than our ordinary house carpenter should be allowed to dabble with the decoration and scheme in treating a Louis Seize salon, a Renaissance dining-room or a Moorish den. Heaven save the mark, but we have fortunately advanced sufficiently in house decoration to leave the suggestions and preliminary details to an architect or skilled designer. "This is an age of specialties."

As an example of the proper plan, view the transatlantic liners, especially those of the North German Lloyd Co., the French liners or the English racers. The display of art in their treatment is simply gorgeous. There the interior really kept pace with the exterior, and between the two they have succeeded in producing a triumph of harmony and refinement.

The progress ashore has been far in advance of that afloat. What better accommodations or pleasanter surroundings could one desire than on a train made up of Pullman coaches, parlor, dining room, buffet, sleeping and smoking cars, each one to suit the hour of the day. Even our saloons and cafés are fitted up with some pretense of pleasing the eye and many of them suggest the employment of the best skill at hand. It is all simply the influence of art upon the advance of time.

Although the marine architecture of to-day has reached a high state of perfection as to hull and equipment, the interiors' on the contrary, show little improvement on the past.

Mr. W. K. Vanderbilt's new yacht *Valiant* is an excellent example to the contrary, as the Parisian firm intrusted with the decoration of the *Valiant*'s interior have succeeded in bringing out to the best advantage all the beauty and loveliness possible, in wisely using classic styles and treating the ship in general with an effect of taste and refinement seldom seen in any of our large yachts.

The accompanying sketch illustrates a salon in a steam yacht of large tonnage, and gives an idea of what can be done in this way. The style is that of Louis XV., treated very simply in enamel and gold. An alcove, formed by two piers, serves as a locker and bath-room, entered forward and aft of the salon. The relief decoration is papier maché, delicately tinted, and touched here and there with a dash of gold, so as to relieve the cold surrounding ground. The frieze is arranged to embrace a row of electric globes, with ornamentation, there being twenty-four electric globes in all. The remaining wall spaces are covered with tapestry, ornamented with delicate garlands and traceries of flowers interlacing ribbons and musical symbols.

The skylight is in translucent leaded glass, giving an impression of height and repose. By the use of color to attain this effect, it is not necessary to use costly woods; and material of very light weight can be introduced with good results, and weight is very important factor these days; by the liberal use of papier maché, which is very light, durable and strong, and inexpensive wood, the gain is twofold.

So much for the big fellows, but it is not well to forget the little ones—Corinthians and singlehanders. They, too, require some attention, and for them a suggestion is introduced here which may help to serve their purpose. Fig. 3 illustrates the cabin of a boat say from 30 to 36 ft. waterline. The space of course is limited, but by removing the usual locker under the cockpit floor and extending the bunks almost aft

SALON OF LARGE STEAM YACHT—LOUIS XV. STYLE. DESIGNED BY W. C. LEIBER.

to the arch board, one will find how much larger the cabin will be in appearance and actual room. This interior is treated in Romanesque. The wood used in the construction is simply white pine, natural finish, and decorated with silver stenciling. The cushions are covered with a dark green velvet, there is a woven wire rack under the deck for such small things as hats and umbrellas, a little Persian rug on the floor, and the result will be an effect of comfort and cosiness second only to your private den.

What is more pleasant than to lounge amid surroundings treated with a thought to human nature? How often has one gone below to pass the night or seek refuge from a howling gale and rolling sea, with nothing to comfort but a merciless bunk, a tongue and grooved cabin, with a few rags hung over the port lights suggesting curtains, when the employment of cheap and simple materials, arranged with judgment and good taste, would change the whole interior into a pleasant home. W. C. LEIBER.

## The Webb Academy and Home.

The position which the great port of New York now holds in the shipbuilding of the world is so small and insignificant that the younger generation is almost ignorant of the fact that for the first half of the present century this city was well nigh at the head in naval construction; its numerous yards along the East River turning out the very highest class of work in all branches, war ships, clipper, pilot boats, ocean steamers, river and sound steamers and yachts. Not a vestige of these great yards now remains, and of the great builders, Eckford, Bergh, Steers, Lawrence, Bell, Brown, Dimon, Collier, Westervelt and others, who made the fame of New York nearly a century ago and upheld it until the war of the Rebellion, but one is left. Isaac Webb was born in Stamford, Conn., in 1794, the son of a ship carpenter in the yard of Henry Eckford, where the son in time served the long and hard apprenticeship of those days, and finally established a yard of his own, his reputation for good work being only equalled by that for honesty and integrity. William H. Webb was born in 1816, in New York, and entered his apprenticeship in his father's yard when 15 years old. On the death of Isaac Webb, in 1850, W. H. Webb succeeded to the business, and from the construction of the smaller sailing ships, gradually worked upward to ocean steamships and clipper, and then to such famous war ships as the *General*, *Admiral* and *Dunderberg*.

In the thirty years which have passed since the closing of his shipyard, Mr. Webb has resided in New York, engaged in business pursuits and enjoying the fortune acquired in youth and middle age. Though shipbuilding has become a thing of the past, his interest in all that pertains to it has remained keen and fresh, and above all his first thought has been for his fellow-craftsmen, old and young. The last great scheme of his life is in every way worthy of this typical old time mechanic and business man; and must make the most noble and fitting monument of his successful career. The scheme, conceived by him some years since, included the construction and endowment of an institution which should provide a free home for aged shipbuilders and their wives, or for widows of dead builders; and in addition, should provide a school of instruction in practical designing and ship construction and marine engineering, for deserving young men. To this end Mr. Webb has devoted much time, and a sum of nearly half a million dollars.

The home is located in a commanding position on Fordham Heights, just above the Harlem River, a large building of stone and brick fully fitted for the comfortable housing of sixty occupants in the south

end, while in the north end are the quarters for the sixty students, who will be lodged and boarded while at the school. The buildings were practically completed last fall, and there have been a few old shipbuilders and eight students installed for some time; but the formal dedication only took place on May 5. Some 300 visitors were present, including many who are eminent in ship and engine building, and many old mechanics.

The services were conducted by Bishop Henry C. Potter, who invoked a blessing after the Lord's Prayer had been said and the Doxology sung. Mr. Webb then made the presentation address to the trustees, which was responded to by Mr. Stevenson Taylor. Addresses were then made by Bishop Potter, Robert Collyer and Joseph H. Choate. George F. Roesch then presented an American flag made by the daughters of former employees of Mr. Webb; and Wm. H. Helme, an old employee, presented Mr. Webb a series of resolutions in eulogy of his beneficent action.

The officers of the Webb Home are Wm. H. Webb, Pres.; Stevenson Taylor, Vice-Pres.; Thos. B. Rowland, Treas.; Stephen M. Wright, Sec.; Chas. L. Smith, Albert G. Bogert, Fred. R. Hutton, Merrett Trimble, Henry Steers, Andrew Reed, Chas. H. Cramp, Thos. S. Marvel. The home is in charge of Andrew Reed and Mrs. Alice Howard Hilton. Professor Jansen is the instructor in naval architecture, and Thos. Main, M. E., will have charge of the department of marine engineering.

## Minnetonka Y. C.

THERE is every indication now that the Minnetonka Y. C. is to have the busiest and most interesting season in its history. There will be at least 20 new sloops afloat when the flotilla turns out for its annual cruise on Decoration day, and some of these new craft are well worthy, though of local design and construction, to rank with any of the famous products of Eastern yards. Jim Stack is still keeping ominously quiet about the new boat Herreshoff is building for him, and nothing can be discovered about the original plan upon which she is said to have been put up. A local yachtsman of fame, both as an owner and sailor, said yesterday that he had heard the Stack boat was to be a perfection of the Onawa idea. Herreshoff is said to be building this canoe-like craft on an exaggerated Onawa plan, the intention being to outdo anything that floats on western waters. It may be mentioned though, that it was Herreshoff who last season built the *Kite* for the express purpose of lowering Albia's colors, and that the result was unsatisfactory. If this flyer justifies the rumored description of her, there is a probability that Mr. Burton will trot out the white-hulled wraith of Deephaven and give her a run for the honors.

The latest news is that Arthur Dyer is at work on a first class sloop for the Walkers, and that she, like the rest of the boats launched and to be launched this year, will be the long fore and aft overhang type. Dyer admits that he has the order, but is not willing to say just at present what the boat will be like.

Brackett's new sloop, that had such a curious experience on her first cruise, is going to prove a wonderfully fast sailer, judging from the way she went before her ballast sunk her. The boat looks very handsome in the water, and carries her sail well, but she will have to be tried out a few times before smooth running can be expected. Perhaps the prettiest of the new boats is the mahogany-hulled first class sloop built by Peterson for Prof. Cross. She will be about the handsomest craft on the lake, with the possible exception of the *Kite*. Mr. Peet is having the last-named flyer sand-papered and varnished, and she will go afloat in a few days looking as bright as a new dollar. So far as is known now her owners have been unable to decide on any change in the sail plan, though it is recognized that she is a good deal handicapped by the rules.

The new first class sloop being built by Mr. Long is going along nicely, and the outlook is that she will be ready for launching by June 1. Peterson, who has just finished up the Wilson boat, expects to send her out to the lake to-day. This is a second class sloop of very neat lines and the understanding is that Mr. Wilson intends calling her *The Hawk*.

Alpha is getting a new rig preparatory to opening the season under more favorable circumstances than those of last year. The first race of the regular series will be held on or about June 16.—*Minneapolis Journal*.

## Rights of a Racing Yacht.

On last Labor Day the yachts *Violet* and *Exile* came into collision, and the owner of the latter preferred charges against the owner of the former. The respective clubs in which the boats were owned had a series of communications, which resulted in the selection of Mr. Thomas Dean as referee. The choice of this practical yachtsman was a happy one, and both parties to the dispute appeared before him. The charge that the *Violet* intentionally collided was withdrawn, and this was only just to the owner of the *Violet*, who would be the last man to do such a thing.

On the question of collision, Mr. Dean sets up a decision which should last for all time. The *Exile* was in the race, while the *Violet* was sailing off and on about the course. By the rules of the road the *Violet* no doubt had a right to sail in the water, as the *Exile* had then no rights superior to hers. What applies to merchant vessels, so far as racing goes, can hardly apply to yachts, and on the question as to which yacht was right under the circumstances, Mr. Dean took broad ground and decided that where yachts are in the same waters, one racing and the other not, the yacht racing has the right of way, and the other yacht must keep off the course.

This is common sense, and non-racing yachts should keep off the course. Mr. Dean's decision is most satisfactory to all, and a love feast is soon to be held between the owners and crews of the *Violet* and *Exile*.

The owners of non-racing yachts should bear this decision in mind during the opening regatta of the South Boston Y. C. on Decoration Day.

Mr. Thomas Dean has for 27 years been the honored secretary of the Boston Y. C.—*Boston Herald*.

## Brooklyn Y. C.

The annual spring regatta of the Brooklyn Y. C. will be held Monday, June 4, over the city courses, starting from Gravesend Bay, at 11:30 A. M. The following clubs have been invited to compete: Atlantic Y. C., Brooklyn, N. Y.; Columbia Y. C., New York; Canarsie Y. C., Canarsie, L. I.; Corinthian of New York; Gravesend Bay Y. C., Bensonhurst, L. I.; Great South Bay Y. C., Indian Harbor Y. C., Greenwich, Conn.; Jamaica Bay Y. C.; Knickerbocker Y. C., College Point, L. I.; Larchmont Y. C., Larchmont; Marine and Field Club, Bath Beach, L. I.; New York Y. C., New York; New Jersey Y. C., Hoboken, N. J.; New Rochelle Y. C., New Rochelle, N. Y.; New Haven Y. C., New Haven, Conn.; Pavia Y. C., Jersey City, N. J.; Riverside Y. C., Riverside, Conn.; Shrewsbury Y. C., Red Bank, N. J.; Seawanhaka Corinthian Y. C., Oyster Bay; Yonkers Corinthian Y. C., Yonkers, N. Y.

The iron steamboat *Cygnus* will accompany the yachts over the course, leaving Pier 1, North River, N. Y., 9:15 A. M.; Bridge Dock, Brooklyn, 10 A. M.; "Captains' Pier," Bath Beach, 11 A. M.; returning landing at same places.

Information as to courses, classes, etc., may be had of Louis Wunder, chairman of regatta committee, Box 154, Brooklyn.

INTERIOR OF SMALL CUTTER—IN ROMANESQUE. DESIGNED BY W. C. LEIBER.

## New Rochelle Y. C. Special Race.

NEW ROCHELLE—LONG ISLAND SOUND.

Saturday, May 19.

The New Rochelle Y. C. opened the season on Saturday with a special race of cabin catboats in two classes, the prizes being pennants presented by Com. Andrus. The course was from off the club house, Echo Bay, twice around the buoy off Execution Rocks. The wind was N. by E. The times were:

TWENTY-FOOT CLASS—CABIN CATS.			
Kittoe	Start	Finish	Elapsed.
Kittoe	3:27 02	4:13 35	5:03 35
Caper	3:26 24	4:14 01	5:08 02
TWENTY-SIX FOOT CLASS—CABIN CATS.			
Mary	3:26 36	4:18 44	5:01 45
Almira	3:26 33	4:18 33	5:01 45
Keora	3:26 33	4:18 33	5:01 45
Almira	3:26 33	4:18 33	5:01 45

Admiral broke her rudder. The regatta committee included Fred Adler, John Rough and Wm. Moore.

## Larchmont Y. C. Opening.

The formal opening of the season by the Larchmont Y. C. took place on Saturday, the colors being hoisted in the presence of Com. Husted and a number of the members. One of the guns of the Dauntless was formally presented to the club in a letter from Mrs. Colt, and will find a permanent place on the terrace in front of the club house.

## YACHT NEWS NOTES.

The third general meeting of the New York Y. C. was held on May 17, with Vice-Com. Brown in the chair. The following amendment to the constitution was finally adopted:

"Any woman owning a yacht is eligible for election to the club as a flag member and shall upon election pay annual dues, but no initiation fee.

"Such membership shall continue only during the period of yacht ownership and carries only the following privileges:

"The right to fly the club burgee, to have private signal registered with the secretary, to enter yacht in club races and the use of club stations and floats."

The other amendments proposed at the March meeting were also adopted. After discussion it was decided to celebrate the fiftieth anniversary of the founding of the club by a reception at the club house on July 30 and a special regatta off Glen Cove on Aug. 7, the rendezvous for the annual cruise being at that place on Aug. 6. Mr. Ogden Golet renewed his offer of cups costing \$1,000 and \$500, which will be raced for off Newport. Mr. George Gould requested the permission of the club to challenge its name for the Royal Victoria Y. C. cup, provided the ten months notice be waived by the R. V. Y. C., and after discussion the request was granted. Mrs. Lucy C. Carnegie, steam yacht Dungeness, was elected the first flag member of the club, as permitted by the new amendment. The following gentlemen were elected to membership: Lieut. J. A. Bell, U. S. N.; Frederick D. Hilt, Lieut. Albert P. Niblick, U. S. N.; Lieut. John A. Nichols, U. S. N.; John E. Alexander, Girard C. W. Lowrey, Chas. F. Ulrich, George Walbridge Miller, Edmund Randolph, C. C. Noyes, George R. Sheldon, Gardner B. Pennington, R. A. C. Smith, Marion Story, Henry Scott Rokenbaugh, Frank T. Morrill, Lieut. W. H. Schuetze, U. S. N.; R. Floyd Clarke, Paul Alden, E. L. Barlett, Lieut. H. H. Hosley, U. S. N.; Plincy Fisk, James Speyer and Arthur D. Cochran.

The *Lock to Lock Times*, of April 14, in its series of "Outviews and Interviews," has an interesting interview with Mr. Dixon Kemp, at his home in London, with a portrait. Mr. Kemp's connection with yachting journalism began when 19 years old, in 1858, in reporting the yacht races about the Isle of Wight, his native place; and in 1862 began his connection with the *Field*, of which he has been yachting editor since 1863.

The U. S. Hydrographic Office has just issued a pamphlet descriptive of the wrecks and shoals of the North Atlantic from 1887 to 1893 inclusive, with the pilot chart for the month of March, and a wreck chart of the entire North Atlantic.

Nydia, steam yacht, has been sold by Dr. R. V. Pierce to Eugene Tompkins, of Boston.

Aztec, steam yacht, has been sold by D. A. Loring to F. C. Dinning, Jr., of New York.

A decided novelty in knockabouts is the one which Dr. C. G. Weld is having built at Lawley's from his own designs. She will be a little Jubilee so far as the combination of fin and centerboard is concerned, and will also have a small forward centerboard. She is 17ft. water line, 28ft. over all, 7ft. beam and 10ft. in draft of hull. Below this a T-shaped bronze fin drops for a little less than 18 inches, and through it plays a T-shaped bronze centerboard. The forward centerboard is a small plate of T-shaped bronze. The boat has a large open cockpit and is undoubtedly non-capsizeable, but to keep her afloat should she fill she has water and air-tight compartments forward and aft made by white metal bulkheads. She is lightly built and copper-fastened, has clean lines and promises to be a good looking boat. —*Eastern Globe*.

Piscella, sloop, built by Lawley & Son for John M. Richmond, of Providence, R. I., was launched on May 10.

Ustane, the small 21-footer, has been refitted by her new owner, N. F. Fitzgibbon, with new canvas and hollow spars, and will be raced about Boston this season.

Colonia, cutter, has been hauled out on Tebo's new dock to clean and paint, after which she will be tied up until a purchaser is found.

Messrs. Longmans, Green & Co., announce two new volumes of the *Badminton Library*, in *Yachting*: "Vol. 1. 'Cruising, Construction, Racing Rules, Fitting Out,' etc. By Sir Edward Sullivan, Bart, Lord Brassey, K.C.B., C. E. Selby-Smith, C.B., G. L. Watson, R. T. Pritchett, 'Thalassa,' the Earl of Pembroke and Montgomery, E. F. Knight, the Rev. G. L. Dyer, etc. With 23 plates and 18 illustrations in the text, by R. T. Pritchett, G. L. Watson, J. M. Soper, etc. and from photographs. Crown 8vo., 10s. 6d. Vol. II. 'Yacht Clubs, Yachting in America and the Colonies, Racing,' etc. By the Marquis of Dufferin and Ava, K.P., G. Christopher Davies, Lewis Herreshoff, the Earl of Onslow, G.C.M.G., H. Horn, Sir George Leach, K.C.B., etc. With 35 plates and 100 illustrations in the text, by R. T. Pritchett, G. L. Watson, J. M. Soper, etc. and from photographs. Crown 8vo., 10s. 6d."

The new *Yachting* Year Book is publishing two special supplements per week, one of a yacht and another of her owner. The publication office is 28 Fateroster Row, London.

A detailed report of the total loss of the cutter Valkyrie L, now owned by Count Florio, on the African coast, with the loss of her crew, was published last week, but is denied by her owner.

The issue of *The Yachtsman* of May 3 contains a photo of Rear-Admiral Montague, owner of Corsair, Vendetta and Carina. The regular weekly supplement is a fine picture of a Nile dahabieh, and among the other illustrations are some good views of Trieste and Istria, the home waters of the Imperial and Royal Austro-Hungarian Yacht Squadron, whose station is at Pola. Some time since a yachtsman offered through *The Yachtsman* prizes for designs for a cruising cutter of 35' L.W.L., and the prize design appears in this number; no less than 48 designs have been sent in. The design shows a conventional cutter of the date of 1875 to '80, practically a modification of the well-known Vanessa. The conditions of the competition virtually prohibited anything of the fin de siècle type, with extravagant ends, but at the same time, even for cruising only, the design is by no means up to modern ideas, and might be much improved upon. *The Yachtsman* is published at 143 Strand, London.

We have received from the author a copy of the "Almanac of Yacht Racing in the Solent Classes," for 1894, compiled by Lt. Col. J. T. Bucknill (Thalassa), late Hon. Secretary of the Castle Y. C. The book contains the full particulars of the racing in the Solent, and the Solent, with courses, dates of races, tide tables, etc., and will be most useful to those who are fortunate enough to be within reach of the racing. This locality is unequalled throughout the world as a sailing center, last year's sport including some 65 races for craft of 1 rating and under.

The M. M. Y. R. A. held a meeting on Monday night at the home of E. F. Knight to make arrangements for the season. Six new members were elected. Tuesday was decided upon for the racing of the special class, the start to be made at 7 o'clock. Fridays for the 25in. class at the same hour and Sundays at 8:30 for the 30 and 35in. class. W. Hale's 25in. cutter was out for a trial spin on Saturday evening. The breeze was light, and the trial showed that the model will need a larger suit of sails for such weather. Later in the evening the breeze lightened and the trial was continued at a fine rate of speed. She holds well to windward, this being her best point of sailing. A. English's sloop for the special class is now completed and ready for her trial trip. She is a keel boat of about four beams to the length, the greatest beam being at the waterline. Her topsides tumble home considerably. She has a very heavy entrance, though the run is not quite so good. She has a great overhang aft, and will increase her waterline considerably when beeled over. Wm. Hyde's boat for the same class shows more beam, with shallower body and deep keel. The overhangs here are long also, but seem more evenly divided fore and aft than in the English model. C. Mellin's boat for the class is of a different type from either, being a fin-keel model of good beam and very shallow body. C. Aldrich is building a model for the class from the same design as Mr. English built from—*Minneapolis Journal*.

## Canoeing.

## AMERICAN CANOE ASSOCIATION.

OFFICERS, 1893-94.

COMMODORE: IRVING V. DORLAND, Arlington, N. J.  
SECRETARY-TREASURER: G. P. DORLAND, 71 Broad street, Newark, N. J.  
LIBRARIAN: W. P. STEPHENS, Bayonne, N. J.

## ATLANTIC DIVISION.

Officers:

VICE-COM: C. V. Schuyler, New York.  
REAR-COM: B. C. Proctor, Newark.  
PURSER: E. C. Knapp, Springfield.  
EX. COM: J. R. Lake, F. W. Hayes, J. K. Hand.

## EASTERN DIVISION.

Officers:

VICE-COM: E. H. Barney, Springfield.  
REAR-COM: C. F. Schuster, Jr., Holyoke.  
PURSER: E. C. Knapp, Springfield.  
EX. COM: G. L. Parmele, Paul Butler, R. Apollonio.

Applications for membership must be made to division pursers, accompanied by the recommendation of an active member and the sum of \$2.00 for entrance fee and dues for current year. Every member attending the general A. C. A. camp will pay \$1.00 for camp expenses. Applications sent to the Sec'y-Treas. will be forwarded by him to the proper Division. Persons residing in any Division and wishing to become members of the A. C. A. will be furnished with printed forms of application by address ing the Purser.

## WESTERN CANOE ASSOCIATION.

Commodore—O. A. Woodruff, Dayton, O.  
Vice-Commodore—F. B. Huntington, Milwaukee, Wis.  
Rear-Commodore—L. K. Light, Detroit, Mich.  
Secretary-Treasurer—C. W. Cleveland, O.  
Executive Committee—T. J. Kirkpatrick, Springfield, O.; G. B. Ellard, Cincinnati, O.; S. B. Mettler, Jackson, Mich.  
Applications for membership should be made to the Sec.-Treas., on blanks which may be obtained from him, and should be accompanied by \$2.00 initiation fee and dues for the current year.

Lake Mendota, Wis.

SEPTEMBER.

3. Holyoke, Ann., Holyoke, Mass. 15. Red Dragon, Fall Regatta, Delaware River.

As noted elsewhere, for the first time an American will visit England to compete for the premier British sailing trophy, the R. C. C. challenge cup. Although Mr. Howard is a member of the New York Y. C., and challenges in behalf of that club, but little is known here of the venture; he has been absent from New York all winter, and his new boat has been hastily built since his return, not having been tried afloat. Just what she is in model and dimensions has been as carefully concealed as in the case of larger cup racers, but she is said to be quite unlike Mr. Howard's previous canoes, which were heavy sail carriers and very straight on the keel. The challenger labors under serious disadvantage in that he has had no opportunity to test or work up the new boat, and will have little time to do so after his arrival, having sailed on May 17. The challenge cup race is set for June 19.

The A. C. A. book 1894 was issued last week, uniform in size with those of recent years. Through the personal exertions of Sec'y-Treas. Douglas, sufficient advertisements have been secured to cover the cost of publication. The book contains excellent portraits of Com. Dorland and Mr. Douglas.

## Canoe-Yawls.

The small craft of all types which muster under the general term canoe-yawl are rapidly increasing in numbers and importance in England, and promise to be quite the feature of the season on the Thames, as well as in other localities. As yet these boats are hardly known in the United States, certainly there are not enough of them to make any racing or to call for serious notice; but it is quite likely that in another year or so they will have found their way across, as did the sailing canoe, to meet with a favorable reception, as they are excellent little craft, of various types and sizes, giving a wide range of choice for the special work intended. According to the *Field*, there will be among the Thames clubs no less than twenty-four races for the class, not over 5-rating, with over \$360 in first and \$110 for second prizes; while twelve more races, for craft of not over 1, or not over .9-rating will also be open to the 5-rating class under time allowance.

The canoe-yawl is divided roughly into cruisers, which do no racing, but still with rig and ballast for racing. The cruiser class includes sturdy little craft, both keel and centerboard, mostly intended for rough water work, the only kind of sailing possible in many localities. The racer class are either centerboard or bulb-fin; and in model follow the types, the enlarged canoe form, of elaborate curve build, or the sharp form, with flat bottom and angle or chine between it and the sides.

The *Model Yachtsman and Canoeist* of this month, published at No. 161 High street, Hull, Eng., contains the lines and description of a fine cruising canoe of the centerboard type, Cherub, designed by Albert Strange, of Scarborough, an amateur designer and experienced canoe-yawler. Cherub is 30 ft. in length, 17ft. 9in. in beam, 3ft. 10in. in draft of hull and 3ft. 6in. in draft with centerplate lowered; ton 2 cwt. displacement, made up as follows: Hull and spars 8½ cwt., keel 1½ cwt., mast 1½ cwt., outside iron 2½ cwt., centerplate, 3½ in. steel, 1½ cwt., crew and stores about 2½ cwt. A large lifting and sliding hatch forms a tight cabin for sleep and refuge in bad weather, and abaft it is a deep cockpit. The centerplate is hand-operated by a tackle rigged under the cockpit floor to save room, the hauling end coming up at the after end of the trunk. The steel plate is of the cleaver form, very much cut away, so as to call for a low trunk under the cabin floor. The construction is quite elaborate, double skin of ¼ in. mahogany, with cloth and varnish between, no frames, but five longitudinal stringers on each side, the deck is of 1 in. mahogany. The sail area is 210ft., and a practical test under 190ft. in a heavy blow in smooth water has shown her to be non-capsizeable. Such a canoe-yawl would be suitable for many localities in this country.

The *Field* describes three of the racing type as follows:

"At Kingston we found considerable work going forward, but all on the inevitable canoe-yawl. The Nora Creina has been almost rebuilt, and from the deep cargo-carried type has become a racer, one reasonably shallower, and looking quite fit to enter the racing list, especially as she is being fitted with a bulb fin-keel. Her original construction was too extra strong, at least in the amount of wood, apart from the question of size and amount of fastenings; but a great deal of this has been removed, and now all she needs is a suitable sail plan and a brace. The centerplate is hand-operated by a tackle rigged under the cockpit floor to save room, the hauling end coming up at the after end of the trunk. The steel plate is of the cleaver form, very much cut away, so as to call for a low trunk under the cabin floor. The construction is quite elaborate, double skin of ¼ in. mahogany, with cloth and varnish between, no frames, but five longitudinal stringers on each side, the deck is of 1 in. mahogany. The sail area is 210ft., and a practical test under 190ft. in a heavy blow in smooth water has shown her to be non-capsizeable. Such a canoe-yawl would be suitable for many localities in this country."

In the same shop the stocks are being prepared and the keel about to be set up for the new Nautilus, ½-rater. Whether this craft will be a canoe-yawl or not depends much upon individual fancy as to twisting the meaning of technical terms; the twisting only comes in on one point, that is, the question as to whether she has a counter or not. She is sharp at each end, with a hanging stempost and sternpost of identical formation; her hull form is pure canoe, and excepting for the preferable mode of trim for sailing she might have all her overhang given by trim at the bow end. She could not then be said to have a counter, as there would be then no overhang at all aft. On the other hand, she could be trimmed down forward, and have all her overhang aft, but this would not create a counter, as the rudder is for such racing, and the sternpost is a counter, for Y. R. A. ½ rating sailing she has her rudder shipped under her keel or body, and thus has a counter, in the usual acceptance of the word. She is to be built stringer ribbon framed, with three watertight bulkheads, and fitted with a novel construction of combined center-board case

and keelson, acting as an internal girder support to the flat or shallow plank form of keel. This craft is also to be used as a yacht's ½-rater tender for salt water sailing."

## The British Canoeing Season.

The Royal C. C. has just moved into new and greatly improved quarters in a building erected by Turk, the canoe builder, at Teddington, with a camping ground near at hand; and in spite of the increase of canoe-yawl sailing, the club is promised quite an active season in the various classes. The chief event of the year will be the Bourne End week, next month, the following races being scheduled: June 10, sailing canoe-yawl; June 13, sailing, first class canoe; June 18, sailing, canoe-yawl and canoes; June 19, sailing, challenge cup; June 19, paddling, Canadian singles, 1 mile; June 20, sailing, canoe-yawl; June 20, sailing, first class canoes; June 21, sailing, handicap, yawls and canoes; June 21, sailing, first class canoes; June 21, paddling, Rob Roy's, ½ mile; June 22, open race for ½-raters, Y. R. A.

Bourne End is a small place well up the Thames, where the river is narrow, about like the Passaic River off the lanthe C. house. Here the chief event, the R. C. C. challenge cup race, will be sailed, with an American competitor. Mr. William Willard Howard, of the New York C. C., owner of Toltec and Aztec, will be present to compete, having sailed May 17 on purpose for this event. Mr. Howard takes with him a canoe specially built for the purpose by Fox, of Clayton, a 16ft. craft of the usual American type, but designed to carry only the small sail area allowed, 112ft. for 16ft. length of water-line.

We have before discussed the new R. C. C. rule and the probable winner under it, and in the case of the challenge cup in particular there is every necessity for a careful study of the rule before building. We indicate as the most likely proportions a waterline length of not over 14ft., with the added 2ft. overhang in the average between the two ends, and a sail area of about 132sq. ft. The 16ft. canoe, with 112ft. of sail, would have but a small chance against this shorter craft in most cases, and at Bourne End, in narrow waters with many turns, there is an absolute necessity for a short hull with a rockered keel, instead of the long hull with straight keel, as in most American canoes; Mr. Howard's former craft being extra long in this direction.

The *Field* speaks as follows in the matter of type: "We have been asked to advise in the matter of a new canoe, building for racing under R. C. C. rules, as to center-plate versus a bulb on fin-keel. We have no hesitation in saying that, for the R. C. C. races at Bourne End, with the chances of summer weather and the smooth confined water, the light center-plate of good area would, in conjunction with a sliding seat, on the average prove to be the more successful. But if the race were windy and squally the bulb-on plate would drown all the center-plate canoes. Were it a question in regard to canoe-yawls, other considerations would have to be taken into account, but with canoes the matter is simple. Have two plates, one a center-plate quite light, the other a lead bulb on plate; the comparatively light bulb can be lifted over and on the average will be the more successful, so that the plate houses in the center-plate case and through it, and is held up and liftable by a pennant and tackle gear. It is supported or hung when down by two pins inserted through the case and plate, the plate having two vertical slots by which it passes up or down the pins in hoisting or lowering, and is thereby kept steady. Of course, when the plate is up it will project considerably above deck, and the fore boom can be fitted for tricing the fore boom up for running in case of a gybe over."

## Palisade C. C.

The Palisade C. C., of Hoboken, N. J., held the annual opening of the season at the club rooms, foot of Tenth street, on May 19. The war canoe, 25ft. long and 2½ in. wide, with a picked crew, commanded by Robert McKeehie, an all-around canoeist, is expected to do some good racing this season. Master Neil Finn christened the war canoe with the following speech: "Ladies and gentlemen—No doubt you all know how much I prevaricate when I tell you what pleasure it gives me to be called upon to officiate on this occasion. As I have short notice I will have a short say. My first duty (according to my instructions) is to christen the war canoe. May you demonstrate that you are the chief over all, and may you carry your warriors always to victory! I wish to warn each lady to have a care of their hearts when bounding over the apples of the eye of the handsome American, and to be low on the right side and left to paddle while the balance take care of their special ladies, and then change about. I will close wishing the P. C. C. the continuance of the success that has always attended it, and may it paddle out of sight from its adversaries!" The following members also had their canoes christened:

Louis Held, canoe christened Adele by Alonzo Letts, the racing canoe-yawl of John E. Davis christened Marion by Miss Mamie Finn. B. Lentz's canoe Victor by Miss M. Letts, Henry Goetz's canoe Restless by Miss Emma Hildebrandt, Messrs Thomas McKeehie and Chas. Spear's canoe Priscilla by Miss L. McKeehie, Messrs. Hall and Mitteldorf's canoe Scorch by Miss Emily Felsing, John Bohrenburg's canoe Dolphin by Master Chas. Baker. The greatest surprise the club received was the presentation of a handsome American flag and Union Jack to the club. The following speech was made by Miss Emma Hildebrandt: "Ladies and Gentlemen—In behalf of the lady friends of the members of the Palisade Canoe Club, I have been requested to offer you a slight token of remembrance, hoping it is received in the feeling in which it is given. We regret that we could not furnish the regular club flag, if could not be completed in time. The ladies were Miss L. McKeehie, Miss K. Farrell, Mrs. McKeehie, Miss Felsing, Mrs. Felsing, Mrs. Spear, Miss Finn, Miss C. Farrell, Miss V. Hall, Miss K. Held, Mrs. Hildebrandt, Miss E. Hildebrandt and Mrs. Moore. The entertainment committee were Messrs Held and Mitteldorf."

## CANOE NEWS NOTES.

At the annual meeting of the Wish-ton-wish C. C., on May 15, the following officers were elected: Captain, James R. Giffman; Mate, Robert Weir; Purser, H. C. French; Member of Ex-Com, George H. Sergeant. It was decided to buy two more club canoes, as the election of 10 new members makes the present fleet too small. The club will be well represented at the E. D. Meet at Calla Shasta, May 28-31, although it is not likely that any of the men will race. On the whole, everything looks well for a good season.

We have received from the Wm. English Canoe Co., of Peterborough, a new and well catalogued of canoes, including all sizes and prices of craft, from the light open basswood to the fully rigged sailing canoe. The firm makes a specialty of war canoes.

For hard service and reasonable price the canvas-covered canoes made by Arthur B. Godfrey, of Old Town, Maine, will compare very favorably with the finer class of varnished canoes, and at the same time are shipshape and attractive in appearance.

The Passaic River clubs will hold their annual meet on Sept. 3-5, the regatta of the lanthe C. O. taking place on the later date, Labor Day, with those of the Arlington and Orange clubs on Saturday, Sept. 2.

The May number of the *Model Yachtsman and Canoeist* contains the opening of a very interesting summary of the literature of canoeing by F. W. Foster.

The annual meet of the Owanux Canoe Association will take place Aug. 4-11 at Woodmont, Conn.

## A. C. A. Membership.

ATLANTIC DIVISION: H. A. Crampton, Thomas B. Latham, New York; John V. Cackroft, Sing Sing, N. Y.; Henry Baynton, New York City; Joseph E. Murray, Philadelphia. F. L. DUNNELL, Pres.

## Indianland and Wonderland.

The passenger department of the Northern Pacific Railroad Company has outdone itself and set a standard which it will be hard for other railroads to realize in the publication of its 1894 tourist book entitled "Indianland and Wonderland." This is a medium 8vo. of 110 pages, bound in a handsome, heavy paper cover, and illustrated with numerous colored plates as descriptions of the most prosperous and the most famous hunting grounds which are passed. A large part of the book is on proper, deals with the National Park, and neither the agricultural nor the mining resources of the country passed through are slighted.

But for readers of *FOREST AND STREAM* probably the most interesting part is the notes on hunting and fishing localities. It is safe to say that more sports of American big game are to be found along the route of the Northern Pacific than can be found on any other American railroad. Copies of this book can be obtained from Chas. E. Fee, G. P. A., St. Paul, who will forward it on receipt of 6 cents in stamps.

# Rifle Range and Gallery.

**Rifle at San Antonio.**

THE twenty-first annual rifle tournament and prize shoot of the San Antonio Rifle Club took place on Sunday, May 13. The readers of FOREST AND STREAM can scarcely form an opinion of the interest that is manifested in this section of the country as far as rifle shooting is concerned. There were nearly a hundred riflemen present from all quarters of Bexar county, as fine a lot of fellows as ever pressed a trigger, and this was a particularly gala occasion, as is usual in the Alamo city. The service was perfect in every particular and everyone present praised the efficiency of the committee in charge, admired the beautiful grounds and said ever so many pleasant things about the magnificent ranges—3 at 200 and 1 at 150yds., all equipped with the most modern appliances.

The prizes offered by the local club were very attractive and costly, and altogether this was one of the most pleasant meetings ever held in this section.

Following is the list of the prize winners. Conditions 200yds., rest, 10 shots per man, American Standard rest target:

A Steves.....12 10 8 12 12 6 7 9 11 12—99

Mr. Albert Uhl of San Antonio, won the gold ring medal for the best center shot, the second gold medal and Mr. Ernest Steves won the third silver medal. O. C. G.

**Williamsburgh Shooting Society Prize Shoot.**

THE two days' festival and prize shoot of the Williamsburgh Shooting Society, which was held in Williamsburgh Park on Sunday and Monday of last week, was, despite the prevailing hard times, quite successful.

Nearly all of our local experts were out, prepared to do their best in order to secure the prizes which the society had put up for competition.

Capt. George Schmitt, the popular executive, and Messrs. G. Krauss, C. W. Lenz, Sr., Ignatz Martin, F. C. Ross, Max Weiskers, Albert C. Klingelhoefer and Philip Herschaft, the shooting committee, were present in the shooting house on both days, and gave close attention to all the details of the shoot and to the welfare of the competing marksmen. The weather on both days was fine and the light good. There was hardly any wind to upset the calculations of the cranks, whose expectations are generally based upon the center of the bullseye. The consequence was that at the close of the shoot the best had been some remarkably fine scores made on the ring target.

On the first day of the shoot Henry Holges succeeded in making the fine score of 74 out of a possible 75. This, in conjunction with another score of 71 made earlier in the day, was considered by all of his competitors as giving Holges a pretty good mortgage on the first prize on the list, \$40.

Shortly after Holges had made his score of 74 M. Dorrier started a new entry with a 25 for his first shot; he at once became a center of interest to all present and when on his second shot the flag came up giving him the second 25 everybody began to feel as though something was going to get loose. In fact, the tension upon the nerves of some of the interested onlookers was such as to compel them to step outside and brace up as it were. When Dorrier went into the stand for his third and last shot, the excitement of the spectators present seemed to lose all interest in their own individual efforts for the time being, and by the time the old veteran's rifle was settled at his shoulder all hands were grouped behind him watching for the result.

With the crack of the rifle there came a unanimous query, "Where is he, Michael?" "I can't pull it any better," says the old veteran, and simultaneously with his answer up came the flag of the marker, giving him his third 25 and a full score of 75 points, the second authenticated full score on record.

As soon as the fact that Dorrier's third shot was a 25 and that he had made a full score had become recorded in the minds of the excited onlookers, something did get decidedly loose in that shooting house. For a time pandemonium reigned supreme, cartridges and bullets went rolling over the floor, and it is a wonder that the rifles did not follow, for some of the excited marksmen in their efforts to embrace the victor, or something were inclined to shoulder the loading benches, but as everything human has its end so had the pent up enthusiasm of these excited shooters. A visit to mine host Wissel's corner soon acted as a sedative, and in a little while every shooter was hard at work trying to outdo his neighbor Dorrier, who had previously made a score of 70 and was now a tie with Holges for first prize; and on account of Holges's ammunition having been scattered over the floor during the excitement attending his full score he retired from further competition on the ring target, leaving the matter a tie.

The second day brought new elements into the competition. Among the new comers were Gus Zimmerman, E. Fisher and others. Zimmerman, who is shooting in good form of late, showed up well in his shooting both on the ring and bullseye targets. He made one score of 74 and one of 73, tying Holges and Dorrier for first place on the prize list.

E. Fisher of Hoboken shot in good form, making 73 and 69, taking fourth and fifth place with F. C. Ross, who made 71 and 71.

There was considerable competition on the bullseye target for the best and the most flags. Ross and Flach had a close race for the first premium for the most flags. The honors went to Flach, he made 42 to Ross's 40. Flach also got the honors as well as the cash for the best center shot. Ross, Holges and Zimmerman came next in this order; there was only two degrees difference in their bullseyes.

With the going down of the sun on Monday came the close of the shooting, then the cleaning up of the rifles, followed later by an adjournment to the dining hall, where the tables were laden with those good things that help to make the hungry man at peace with himself and his surroundings.

Ex-Capt. Geb Krauss, on behalf of the society, made a neat speech thanking the riflemen present for the liberal support they had given the programme. He was followed by Messrs. Walther, Schmitt and others.

A fitting final to the ending of the two days' festival was a vote of thanks by the assembled sportsmen extended to mine host Wissel and his worthy wife.

The programme was as follows:

Ring target—Three-quarter inch (25) ring target, any rifle, first ticket \$2, each following \$1, tickets unlimited, only one prize obtained

by one shooter, best two tickets to count for the first five prizes. Ties divided, 30 prizes, from \$40 to \$1.

Bullseye target—Ten shots for \$1, the best bullseye to count for measurement, open to all comers, tickets unlimited, 18 prizes, \$20 to \$1; 6 premiums for most bullseyes, \$10 to \$1.

Scores, ring target, 3 shots per ticket, two best to count for first five prizes:

M Dorrier.....75 70 L P Hanson.....69 G Schmitt.....64  
H Holges.....74 71 M B Engel.....68 Jos Günther.....63  
G Zimmerman.....73 72 I Marten.....68 Weiskers.....62  
E Fischer.....73 69 B Walther.....67 Menninger.....59  
H Ross.....71 71 L Busse.....65 A Eppig.....53  
L Flach.....73 G G Zettler.....65 M Braun.....50  
G Krauss.....69 O Horney, Jr.....64

Bullseye target, best center shot (measurement):

Degrees. Degrees. Degrees.  
L Flach.....25 M Dorrier.....52 I P Hansen.....84½  
F C Ross.....35 G Krauss.....55½ O W Horney, Jr.....85  
H Holges.....38½ G W Plaisted.....61½ Wm Vorbach.....101½  
G Zimmerman.....37 A Eppig.....61½ G Worn.....116  
E Fischer.....41 M B Engel.....61½ G Schmitt.....150  
B Walther.....49 I Marten.....61½ L Busse.....157½

Premiums for most bullseyes: First, L. Flach, 42; second, F. C. Ross, 40; third, H. Holges, 37; fourth, G. Krauss, 26; fifth, Gus Zimmerman, 23; sixth, G. W. Plaisted, 21.

**Comparative Sporting Rifle Test.**

Editor Forest and Stream:

A series of experiments were recently carried out by the American Testing Institution with different bullets employed for the Winchester .45-70 rifle, and several nitro powders, which may be of interest to a great many of your readers. Similar tests will be made in the future for the purpose of determining the best adapted make and charge of nitro powder for all kinds of American rifle ammunition.

The question of primer plays a very important part in smokeless rifle ammunition, and this rather perplexing problem seems to be solved at last. The primer used on the occasions is the Union Metallic Company's No. 24, which appears to answer the purpose quite satisfactorily. No tests were made for accuracy, but it can fairly be presumed that in all cases where the velocities show a marked degree of uniformity, the accuracy will be satisfactory also.

Observations: Therm., 56° F.; barom., 29.9; humidity, 40%.

All velocities were taken at the usual distance of 50 meters (165ft.) from muzzle. Fractions of feet are omitted.

Five rounds of shots were fired in each case.

A.—45-70-500 Winchester Government ammunition, loaded by U. M. C. Co.

Velocities—Feet.	Average.	Greatest difference.
1. 1206 2. 1203 3. 1206 4. 1216 5. 1209	1206	13ft.
B.—45-70-404 DuPont's black powder:		
1. 1275 2. 1281 3. 1243 4. 1254 5. 1268	1264	39ft.
C.—45-25-405 Von Foerster's nitro powder:		
1. 1390 2. 1360 3. 1312 4. 1300 5. 1375	1347	90ft.
D.—45-30-405 S. R. smokeless powder:		
1. 1285 2. 1297 3. 1384 4. 1300 5. 1376	1338	99ft.
E.—45-29-405 Walsrode leaf powder, smokeless:		
1. 1340 2. 1325 3. 1321 4. 1351 5. 1327	1333	30ft.
F.—45-70-330 Gould's "Express" bullet:		
1. 1310 2. 1288 3. 1280 4. 1300 5. 1324	1292	30ft.

\*The term "express" does not appear to me as the proper one. *Expressive* bullet would be the word in Europe for such a bullet. An *express* bullet must not necessarily be and mean a hollow bullet.

As will be seen, none of the nitros proved superior throughout to black powder in point of uniformity, and I venture to say that such is not likely ever to be the case. But some of the smokeless powders behaved quite well, and in all instances the latter surpassed the black in regard to high velocity or penetrative force.

The charges were chosen with due regard for pressure or strain in both the chamber and the barrel, but the permissible limit of expansion of the cartridge case has been reached with all the nitro powder charges as employed.

The proportions of the load of the ammunition A does not meet those found to be most advantageous abroad. The bullet is too heavy for the powder charge.

The standard proportions are about 1:5, and the proportion of the ammunition named is 1:7½.

As a natural consequence the recoil is rather heavy and the velocities are below those of ammunition B and F. But the uniformity of the velocities of ammunition A is simply remarkable, and speaks well for the weapon and even more so for the ammunition.

The Gould expansive bullet produced, as might be expected, a high velocity. The proportions between it and the 405 and 500grs. bullets would, of course, be reversed if the terminal velocities were taken at the long range. It can be taken for pretty certain, however, that the killing effect upon a reasonable shooting distance is comparatively high, the recoil is comparatively light, and for the purpose for which it is principally intended it ought to meet all reasonable requirements in point of accuracy.

The ammunition to be tested next will be the Winchester .44, Winchester .38-50 and the .32 Ideal rifle.

Parties desiring to have the best suited charges of nitro powders established for rifles as named can have this work done free of charge, but the expressage must be defrayed both ways by the holder of the rifle.

The tests herein referred to and as contemplated by the institution, are watched with considerable interest in foreign lands. Full particulars of all such trials are solicited by sportsmen as far away as South Africa.

In order to avoid the ordeal of a controversy in the sporting papers, for both the reader and the Testing Institution, the proceedings of the latter will henceforth, as a rule, be submitted to the members only and will not appear in public print.

ARMIN TENNER,  
Superintendent American Testing Institution.

**"Old Mohawk."**

SAN ANTONIO, TEX.—Among the gentlemen who amuse themselves at the rifle range, and one who covered himself with glory there, is Capt. Ernest August Dosch, the septuagenarian rifleman, sportsman and altogether the keener blade, the bravest heart in southwest Texas. A monument of honesty to which all men and women pay homage, a man who is recognized a prophet in his own country and of whom the country is justly proud. Seventy-two years old on May 3 he still stands erect in the full majesty of his glorious manhood. A man who has fought gallantly for his country, always fallen on the side of the weak, suppressed the tyrant and succored the oppressed. Such is Captain Dosch of San Antonio.

At 200yds., muzzle rest, American standard target, he made the magnificent score of 105 out of a possible 120, with ordinary globe and peep sights. The excellence of his performance will be better understood when it is known that the best score ever made in this club is 109. May the "old man" be spared to us for many years to come is the devout wish of the sportsmen of Texas, and they desire their brethren throughout the width and breadth of the land to echo the sentiment.

O. C. G.

**New York Schuetzen Corps.**

THE second monthly practice shoot of the New York Schuetzen Corps, Capt. Henry Ofterman, which took place in the Union Hill Schuetzen Park, on May 11, was highly successful. The attendance was large, over seventy members being present and participating in the shoot.

The weather was fine and the light just suited for fine holding. Fred Schmidt put up the best score of the day on the ring target, making 218, B. Walther was second with 210, A. J. Christen third with 205. Scores:

Ring target, 10 shots, possible 250: F. Schmidt 218, B. Walther 210, A. J. Christen 205, Wm. Hahn 202, J. Schmitt 200, F. Facompri 193, B. Zettler 183, H. Hanschew 181, H. Butcher 184, E. Meyer 177, C. Grosch 172, J. C. Brown 172, G. Wehrenberg 171, A. Liss 174, H. B. Michaelson 169, J. D. Wilkens 166, J. G. Thoeke 165, H. A. Sievers 165, H. Krobelt 162, F. Lemmermann 162, F. Alfors 160, H. Oppermann 160, J. H. Klee 159, W. Meyer 170, F. Flapp 155, J. Hainhorst 154, H. Lohden 153, H. Meyer 153, H. Strake 151, J. Mohrmann 150.

Man target, 3 shots, possible 60: B. Walther 55, F. Facompri 54, F. Schmidt 54, A. J. Christen 52, A. W. Lemcke 50, H. Wehrenberg 48, C. Grosch 46.

Bullseye target: W. Hahn 3, B. Walther 3, J. H. Klee 3, F. Facompri 2, J. D. Wilkins 2, G. David 2, F. Schmidt, J. C. Bonn, D. Eickhoff, C. Grosch, A. Liss, F. B. Michp, W. Meyer, E. Butcher, A. G. Walta, H. Peters, F. Himmel, W. Wessel, J. N. Herrmann, O. T. Martens, F. Lange, H. Meyn, D. Basse and E. Meyn 1 each.

**West Newburgh Gun and Rifle Club.**

NEWBURGH, N. Y., May 12.—Prize shoot on the decimal target:

**Greenville Rifle Club.**

AT the weekly shoot of the Greenville Rifle Club, held May 13, the following appended scores were made by the members present:

First Class—J. Boag first, 240—6, Robidoux second, 240—5, Dorrier 241, Purkess 234, Robidoux 240, J. Boag 240, Collins 238, C. Boag 235, Scheeline 229.

Second Class—Chavant first, 237, Charlack second, 228+5=233, Dodds 221; Chavant 227, Chuester 238, Agneau 224, Cagne 226, Fagen 222.

Third Class—E. Wuestner, Jr., first, 223+8=230, John Hill second, 233, Holzapfel 218, Graef 206, Daniels 225, F. Wuestner 210, Zeiger 213.

**Correction.**

In my article, "How they Do It," published in last week's issue, I made the error of crediting the new Fissore cleaner used by Dorrier to the Ideal Co., as manufacturers. The credit belongs to the B. G. I. Co. Also the weight of Dorrier's bullet should read 255grs.

PLAISTED.

**Palisade Rifle Club.**

AT the weekly shoot of the Palisade Club, on May 15, the following appended scores were made: 10 shots, distance 75ft., possible 250. Scores: Fred Esperer 230, R. Glaser 229, Ad. Ahles 228, Geo. Dorr 226, Fred Krobatsch 226, Chas. Hemberger 217, Aug. Ahles 212, Wm. Ahles 210, Henry Zuehl 205.

## Trap-Shooting.

All ties divided unless otherwise reported.  
If you want your shoot to be announced here  
send in notice like the following:

May 22-25 — Knoxville (Tenn.) Gun Club's thirteenth annual tourna-

ment; first days, targets, \$1,000 added money, known traps, unknown angles; last day, live pigeons. Open to the world. No handicap. R. Van Gilder, Sec'y.

May 23-25.—Minneapolis (Minn.) Gun Club's fifteenth annual tournament.

May 23-26.—Winner Cartridge Co's tournament, at St. Louis.

May 29.—Massachusetts State Shooting Association's tournament.

- under auspices of Hingham Gun Club, at Hingham.
- May 29-30.—Big Four Gun Club tournament, at Sheldon, Iowa.
- May 29-30.—Janesville (Wis.) Shooting Club, third annual tournament, targets and live birds.
- May 30.—Muncie (Ind.) Gun Club tournament.
- May 30.—Harrisburg (Pa.) Shooting Association tournament.
- May 30.—Eastern New York League tournament, at Canajoharie, N. Y., under the direction of the Canajoharie Gun Club. Charles Weeks, Sec'y.
- May 30.—Central New York Trap-Shooters' League, third tournament, at Utica.
- May 30.—Niagara Gun Club's second annual tournament, at West Pittston, Pa.
- May 30-31.—Central New York Trap-Shooters' League tournament, at Rochester.
- May 30-31.—Mountain Gun Club tournament, at Mahanoy City, Pa.

May 30-June 1.—Interstate Manufacturers' and Dealers' Association first tournament, and second annual tournament of the Michigan Tennis Association, both at the auspices of the Valley City Gun Club, Mason. \$300 added money.

June 4-9.—Illinois State Sportsmen's Association tournament, at Chicago. W. L. Shepard, Sec'y.

June 5-7.—Iowa State Sportsmen's Association's tournament, at Independence, Iowa.

June 5-7.—Wilmington (Del.) Rod and Gun Club tournament.

June 7-9.—Ohio State Sportsmen's Association's tournament, under auspices of Willmette Gun Club, at Portland, Oregon.

June 8-9.—Binghamton (N. Y.) Gun Club, first annual tournament.

June 11-16.—New York State Sportsmen's Association for the Protection of Fish and Game, thirty-six annual tournament, at Utica, N. Y., under auspices of Oneida County Sportsmen's Association.

June 12-14.—Kansas State Sportsmen's Association's fifth annual tournament, at Topeka.

June 12-14—Atlantic City Rod and Gun Club, three days' tournament. Address R. C. Griscorn, Sec'y, Atlantic City, N. J.

June 14-16—Sportsmen's Association of the Northwest's tenth annual tournament, under auspices of Tacoma Rifle, Rod and Gun Club, at Tacoma, Wash.; \$1,500 added money; open to the world. E. E. Ellis, Sec'y.

June 19—Chamberlin Cartridge and Target Company's first annual tournament, at Cleveland, Ohio. \$1,000 added money.

June 20-21—Belfast (Me.) tournament, under the management of Belfast Gun Club. Chas. R. Coombs, Sec'y.

June 28.—Union Gun Club tournament in conjunction with monthly team shoot of New Jersey Trap-Shooters' League, at Springfield, N. J.

June 27-28.—Intersate Manufacturers' and Dealers' Association's shoot, under auspices of the Elwood Gun Club, at Elwood, Ind. Elwood Gun Club will add \$300.

June 28.—New England Shooting Association championship tournament.

ment, under the auspices of the Colt Hammerless Gun Club, at Hartford, Conn.

July 4-6.—Central City Gun Club tournament, at Duluth.

July 10-18.—Standard Gun Club tournament, at Baltimore, Md.; \$150 added.

July 18-19.—Interstate Manufacturers' and Dealers' Associations' seventh tournament, under the auspices of the Kentucky Gun Club, at Louisville, Ky. The Kentucky Gun Club will add from \$200 to \$400.

July 19-19.—Dr. Wallade's bluecock target and live bird tournament, at Newport, Mich.

July 20.—Central New York Trap-Shooters' League fourth tournament, at Syracuse.

July 26.—New England Shooting Association championship tournament, under the auspices of the Willimantic Rod and Gun Club, at Willimantic, Conn.

Aug. 13-18.—John Parker's fourth international tournament, blue

Sept. 26.—Central New York Trap-Shooters' League, sixth tournament, at Auburn.

## DRIVERS AND TWISTERS.

Club secretaries are invited to send their scores for publication in these columns, also any news notes they may care to have printed.

The Columbia Gun Club, of Marietta, O., has elected: John A. Davis, President; C. L. Flanders, Vice-President; Walter Kirby, Secretary; E. P. Eddy, Treasurer; F. S. Bibbee, Field Captain; P. Schlicher, Jr., Assistant Field Captain. The third annual tournament will be given June 7 and 8. The secretary writes: "With our complete new outfit, including electric lights, we are assured of a successful season. We will make every effort to make it an enjoyable one also. We trust all our friends will make every effort to be with us. Programmes will be out in a few days."

Enoch Miller, the well-known pigeon shooter of Branch Mills, N. J., has had his right hand amputated. The physicians said that this must be done to save life, as blood poisoning had set in. Miller was cleaning his gun a week ago, and accidentally cut his hand with a knife. The wound was small and was at first neglected. The arm soon began to swell.

The Eastern N. Y. Trap-Shooters' League tournament, under the auspices of the Canajoharie Gun Club, will be shot at Canajoharie next Wednesday, commencing at 9:30 A. M. sharp. For further particulars, address, Charles Weeks, Secretary.

Mr. C. W. Dimick is preparing for a new revision of the trap-shooting rules of the American Shooting Association, which will cover the case of known traps and unknown angles.

**Kansas State Tournament.**  
The fifth annual tournament of the Kansas State Sportsmen's Association will be held at Topeka, June 12-14, under the auspices of the West Side Gun Club, J. C. Clark, secretary. American Association

**Meadville Gun Club.**

rules will govern all contests. All purses will be divided 40, 30, 30 and 10 per cent., and will be paid in full. No deductions from purses will be made for any purpose. The graduating handicap will be used in all programmed events. Winners of first and second moneys shoot in the next event in which they enter at known traps but unknown angles. Forty dollars will be donated by the management each day.

For average prizes to be divided into five prizes, \$12, \$10, \$8, \$6 and \$4. Shooters tying for a place may withdraw their pro rata. All contests open to all, excepting medal shoot. The National Hotel will be headquarters for shooters. The annual business meeting of the Association will be held in the parlors of the National Hotel, Wednesday evening, June 13. Two sets of five traps will be run, and all shooting

will be rapid firing. Bluerock and Empire targets will be used. Good live birds are guaranteed. A special rate of a fare and one-third has been secured during the tournament on all railroads running into Topeka from all points of Kansas, and from Kansas City and St. Joseph, Mo. Write the secretary if any further information is desired.

**Meadville Gun Club.**  
MEADVILLE, Pa., May 16.—To-day's unpromising and at times dam weather had no terrors for the club, and a goodly number of member

was that some of the usually crack shots came in on the tail end of the score. The following were the results of the reggatt, 25 singles known: Hines 22, Kelso 22, E. W. Smith 22, Ehrigott 21, Clark 20, Johnson 20, Dr. Johnson 20, Yates 19, Whittington 19, Bolton 18, Lashell 18, Adams 18, Worst 17, See 17, Neal 17, Baker 17, Stebbins 16, Kellam 16, Hodge 12, Reisinger 12, Hayes 12, Carskadden 10, F. B. Smith 10, McFarland 9, Carpenter 6, Stano 6, Kelpert 2.

### The Eureka Gun Club.

DELIGHTFUL weather and a good attendance favored the club's shoot on Saturday, May 12. The traps worked badly, which somewhat detracted from the pleasure of the event. Some youths were present and exhibited most skillful shooting. Following are the scores:

..... 22

## POLITICS AND GAME PROTECTION.

In his recent address before the American Medical Psychological Association, on the treatment of the insane, Dr. S. Weir Mitchell declared that the management of insane hospitals in this country is clogged and fettered by the intrusion of politics.

When a work of such vast importance as the care of the insane is cursed by politics, it would be asking too much to insist that the relatively unimportant interests of game protection should not suffer in the same way. The fact is notorious that game protection in most of our States which have any would be more efficient if the system could be divorced absolutely from political control.

The Duluth, Minn., *Commonwealth* reports that the vast game preserve, of which Duluth is the center, is at present without a warden, because the man best suited to fill the place, and whose appointment to it had once been approved by the Governor, has had the appointment withheld because of his politics. The selection of a Board of Fish Commissioners for New Jersey, this year, was long delayed because of partisan considerations. In New York, Gov. Flower's recent appointment of a game warden for the Thirteenth District, called out a long article in the *Rochester Post-Express*, headed, "Was it a Dr. Rural Politicians Guessing about O'Lahey's Appointment." This was followed by a statement intended to show that the protector owed his place to pulls and counter pulls of local political factions.

The practical effect of making game protection subordinate to politics is to defeat the purposes of the system by putting heelers into office instead of protectors, to insure inefficiency in the place of ability, to excite disgust instead of respect among the law-abiding, and to give license, comfort and protection to the wolfish poachers who defy the laws with impunity.

What we need in game protection is less politics and more conscience.

## THE LAKE MILTONA WHITEFISH.

THE name whitefish, as used by us, is applied to all the species of the genus *Coregonus*, and fifteen are now recorded in North American waters. In every-day language these are known as the common whitefish, whiting or Musquaw River whitefish, Nelson's whitefish, Rocky Mountain whitefish, Coulter's whitefish, Menominee whitefish, Richardson's whitefish, tullibee, Lauretta's whitefish, blackfin or bluefin, lake mooneye, little whitefish, smelt, longjaw, and lake herring or cisco.

The whitefishes are naturally divided into two principal groups, one having the lower jaw not reaching as far forward as the tip of the snout, and the other with the lower jaw projecting forward beyond the snout. In the first group the mouth is generally small; in the second it is usually large. It might be supposed that the second group, to which belong the lake herring, the Milona whitefish, the longjaw and several others, would take the hook rather than the common whitefish, if any of them could be captured in that way; but, singularly enough, most of the reports of taking whitefish on a hook relate to the small-mouthed form—the common lake whitefish. We published an interesting account of ice fishing in Lake Erie by "Fly-fisher" several years ago, in which was described the capture of lake herring by a pearl button lure; the fish, however, did not bite, but were speared when they came within suitable distance.

Mr. J. R. B. Van Cleave of Chicago has written to *FOREST AND STREAM* about the blackfin or bluefin of Milona Lake, Minn., and our illustration is made from a photograph which he made for the U. S. Fish Commission. Mr. Van Cleave stated that the fish "has been known in lakes Milona, Ida, Mary, L'Homme Dieu and Geneva, and the lakes of Douglas and adjoining counties in Minnesota that empty into the headwaters of the Mississippi River, through what is known as the Long Prairie River, for the last thirty years [written in 1891], and is indigenous to these waters. It is not the kind of fish that would naturally be introduced, inasmuch as it can not be taken with hook and line. It is certainly a native fish."

"A sample of this variety was taken in Lake Geneva, near Alexandria, Minn., last month (November, 1891), that weighed before being dressed 6lbs. \* \* \* The average size of those caught (and they are taken by the wagon load in October and November) is about 2½lbs."

Mr. Van Cleave had the following to say about the relation of the Milona whitefish to the cisco of Lake Geneva, Wis.: "Mr. G. B. Ward, a prominent banker of Alexandria, in the center of this lake park region of Minnesota, advises me that he lived for many years upon Lake Geneva, Wis., and during the time he resided there became very well acquainted with what is known as the Lake Geneva cisco. He says the fish taken from the lakes around Alexandria, and known as the whitefish, are not the cisco, and that as a food fish there is no comparison between them."

"The whitefish of the lake region referred to are taken altogether in nets and run from 1½lbs. to as high as 6lbs. in weight. A wagonload of the fish caught will present the appearance of mackerel, inasmuch as they run so nearly the same size, being about 2½lbs."

In a paper recently published by the U. S. Fish Commission, Dr. Hugh M. Smith has described the longjaw whitefish, until then not known except to fishermen in lakes Ontario, Michigan and Superior in deep water. If this fish could have been taken with hook and line, doubtless it would have been described many years ago, but it is caught only in nets.

## SPORTSMAN AND FARMER. AGAIN.

WE hear and read much about the "true sportsman," why never anything of the "true farmer?" The "true sportsman" is commonly defined as embodying all of the cardinal virtues and a few extra ones peculiar to the class. Would the ideal of the "true farmer" comprise any of the approved attributes of manhood in a less degree? It is very clear that if all gunners and fishermen were "true sportsmen" and all land owners "true farmers," we should have an end of the quarrelings and collisions which every once in a while now fall out between plain every-day sportsmen and farmers. There have been such contentions from the beginning, and they will renew themselves probably to the millennium. This is because as now constituted both sportsman and farmer are intensely human.

The conflict between the two classes has, as a question by itself, no certain right and wrong. In any given case either side may prove to be in the right. The sportsman may be a very decent and well intentioned fellow, and the farmer a brute; or the farmer may be shown to be a long-suffering man of peace, and the sportsman a rowdy. Again, and by no means infrequently, the whole disagreement may be due to a want of tact in one or both. Tact means conciliation. An ounce of conciliation is worth a ton of fight.

As a rule, the sportsman is in the position of asking a favor or a privilege, and the farmer has it to grant or refuse. A recognition of these relative positions is demanded of the sportsman. His own individual interest and his obligations to other sportsmen require him to adopt the policy of conciliation. It is the policy that pays; like honesty it is best.

For as we have said again and again, broadly considered, the real interests of farmers as a class and of sportsmen as a class are identical; and instead of pulling against one another both should be united in one common cause. Take a case, which has just come to our notice, in Columbia county, New York. The Philmont Rod and Gun Club was organized in 1889. Every spring since then it has stocked the streams of the vicinity with brook trout, procuring the fry from the State hatchery, but paying out of the pockets of its own members the expenses of teams and labor of putting out the fish. The trout were planted in streams which were open to the public. But this year, after the waters have become well stocked and ready to yield fair fishing as a result of the enterprise of the Philmont members, the lands bordering some thirty miles of stream have been posted, and the public, including the club men, have been shut out and prohibited from fishing. This has aroused the indignation of the Philmont trout planters; very naturally they resent the injustice and ingratitude involved in the course adopted by the land owners, and they contend with a show of reason that it was the part of double dealing by the owners of the lands to permit them to do the stocking for all these years and then to turn on them in such an ungracious way. They complain of the inequitable application of the trespass law and denounce the law itself.

The farmers' side, as given by the sympathetic local paper, is this: That the State game protector has enforced against them the law forbidding fishing for suckers in trout streams; that "it is the farmers who own and pay taxes upon the land through which these streams run, and these same farmers have been annoyed year after year by the indifferent way in which their crops have been trodden down, and by many other petty annoyances. They have borne it all until the sportsmen compel them to pay a round fine for catching their own fish in their own streams, simply because these self-same fishermen want the streams kept inviolate for their special benefit. Now the farmers assert their rights and the fishermen are out."

What this amounts to is that the fishermen have been trying to supplant suckers with trout, and the farmers prefer the suckers. The farmers hold the fishermen responsible for the enforcement of the law, and have had recourse to the trespass sign, not to protect the trout, but to spite the trout fishermen. There is just enough plausibility in their reasoning to appeal strongly to men who are smarting under the application of the game protector's activity; but to cool-headed and unprejudiced folks at a distance the pleading is illogical and fallacious. If in Columbia county or anywhere else there are farmers controlling waters suited to trout, and fishermen ready to stock these waters with trout, it would be the part of common sense for all hands to unite that the fish might multiply and grow in stature for the common good of all. But the settlement of the difficulty, if it is to be arranged to the satisfaction of those concerned, is not to be secured without the exercise of considerable tact by the club members—tact which brings conciliation.

## SNAP SHOTS.

EXAMPLES of the naturally bloodthirsty and destructive tendencies in civilized man are seen in one or two cases recently noticed in *FOREST AND STREAM*. In one of these a deer appeared near a Connecticut village where none had been seen for many years before, and pretty near the whole populace turned out to destroy it. In another case a beaver was killed by a farm laborer near Washington. When it discovered the man, instead of manifesting fear and trying to escape, the beaver walked up to him and was promptly clubbed to death. And now it appears from Dr. Baker's note published elsewhere that this beaver was probably a tame one which had escaped eight months before from the National Zoological Park at Washington. We constantly meet with occurrences like these which show how thin is the varnish with which a few thousand years of civilization has covered the natural bloodthirsty animal that stands at the head of creation. The process of educating man to consider other living beings will necessarily be slow, but a beginning has been made.

What is the old saying about making the wolf a sheep herder? They have been doing that very thing in Rockland county, New York, where one Emil Klein holds the office of game constable of Clarks town. Last week State Game and Fish Protector Willett Kidd went out there and secured the conviction of Klein and the imposition of a fine of \$175 upon him for his game law violations. Protector Kidd's suit against the restaurant man, Byrnes, of this city, for serving woodcock and quail out of season, has gone over for trial to June 18.

Our correspondent "Culpepper" reports from Los Angeles, Cal., that one dealer in that town claims to have handled 162,000 dozen quail in a season; and "Culpepper" thinks that the sale of game should be forbidden. He is right. Secretary J. C. Clark of the Kansas State Sportsmen's Association, in his declaration of principles printed in another column, declares that the law forbidding the sale of game in Kansas must be retained. He is right. The sale of game should be prohibited in every State in the Union.

Col. Frederick G. Skinner died at Charlottesville, Va., on Tuesday of last week, aged eighty years. Col. Skinner was at one time field editor of *FOREST AND STREAM*.

Because of Decoration Day the *FOREST AND STREAM* of this week was put to press on Monday, May 28.

## The Sportsman Tourist.

### MY FIRST TURKEY HUNT.

I HAD come South for recreation; a little boating and a little fishing and shooting would answer my requirements. I chose Biloxi, Miss., as my headquarters, knowing it to be an ideal place for sailing, and, as the back country is thinly populated and intersected by numerous bayous, it seemed reasonable to suppose that game and fish would be found in sufficient quantity to satisfy the requirements of a very reasonable sportsman. And right here let me upon the heads of all falsifiers, prevaricators, loose talkers and bearers of false witness, cry anathema maranatha, the reason of which will appear later on.

After bathing in the delicious sunshine of Biloxi for a day or two and incidentally getting my bearings, I overhauled my fishing tackle and prepared for sport. On inquiring as to the whereabouts of the best fishing spots my head was soon filled with tales of the redfish, speckled (salt water) trout, sheephead, croakers, mullet, green trout (black bass), not to mention enormous jewfish, gars, bullfish and other marine monsters. I began to think fish were too plentiful to afford much sport, but after trying several places indicated without getting a bite, my mind was speedily relieved on that score. I had begun to wonder if all these fairy fish tales were not products of the tropical Southern imagination, when, just about time, I made the acquaintance of a fine, well-informed old gentleman, with whom I had not five minutes' chat before I felt he was the man I wanted to meet.

He was a retired judge, genial, kindly and humorous, and he had learned how to weigh evidence and separate fact from fancy. Said he, "Fishing good? Yes, sometimes, but not now; it's out of season. You might catch a few up Biloxi River, but it's rather doubtful. What about these fish stories you hear on all sides? Well, most of them are true, in a measure, but not in weight," he added, with a smile. "You are acquainted, I suppose, with the singular fact that some fish increase in weight more rapidly after death than when living. Curious fact in ichthyology, isn't it? Well, these fish stories are about that sort of fish. These loose-talking fellows don't lie, as a rule; they merely exaggerate. For instance, a jewfish weighing 250lbs. was caught out there in our channel about three years ago. The loose-talker says to the inquiring stranger, 'Yes, sir, there's prime fishing here; git most any kind you want. Why, one day last fall, I think it was, Hank Smith hauled up a big jewfish right out there in the channel that weighed—lem me see—350lbs., wasn't it Bill?' (to a bystander) and Bill thinks it was about that weight—don't exactly recollect—it was 'thar or tharabouts.' And so the stranger is stuffed; and if he is a loose talker himself, he tells the next newcomer at the hotel that 'there was a jewfish caught right out there last month weighing 500lbs.,' and the next Mr. Loose Talker passes it along as caught last week, 'weight 600lbs., sir.' And so it goes until the poor jewfish wouldn't know himself from a sperm whale.

"Yes, it's curious how little trustworthy information you can get out of the average man, even when he means to be straightforward with you. In the first place, he has not formed the habit of acquiring accurate information, it's too much trouble; besides, it requires a certain amount of mental training. It's easier to get it by hearsay and still easier to color it in telling, for man delights in the marvelous and loves to surprise his fellows with an unusual tale even when he has no motive of self-interest for exaggerating. And, I may add, next to telling a marvelous tale, man delights in listening to one. It is upon this element of our human nature that the newspapers fatten, and they encourage its growth by their garbled and sensational reports, and thus educate and increase the pernicious tribe of loose talkers."

To all of which I say, Amen!

When I came to inquire about the shooting it was just the same, "Plenty of partridge (quail) just across Back Bay." I went—walked ten miles—and dog (plug, borrowed) got up one covey of six. This I reported to a hunter I met. "Yes," he said, "partridge is purty sca'ce, but if ye git back a few miles fuder ye'll find plenty of doves and larks in the plowed fields, and mebbe some early robins and cedar birds." I found later that these are regarded as legitimate game throughout this section. On inquiring about ducks I was told they were pretty scarce, but I could get plenty of gulls and pelicans over on Deer Island. Doves, larks, robins, gulls, pelicans! Now, I am not one of those who go about, gun in hand, seeking to kill or maim everything that flies. I do not make war on song birds or sea gulls, or the great big foolish-looking, harmless pelicans. Those who know me know that I kill nothing but game birds, and mighty few of those, might pertinently be added.

The evening I returned from the "partridge hunt" I met a neighbor who spends his winters here—a Northern man who had told me he was fond of shooting. Learning of my ill success across the bay, he said: "You didn't go to the right place." (I might here remark that the right place is always "a little further on.") "There's plenty of game around here and I know it," he continued. "Why, man, I saw a wild turkey over on Deer Island yesterday afternoon. Saw his tracks, followed them up, and started up a big fellow, a gobbler. Lord! how he did run!" Deer Island is a long, narrow, pine-timbered spit parallel with the shore. It is seven miles long and its western end, on which there are three or four shanties, lies opposite the town, three-quarters of a mile distant. I had hunted over several miles of it and found nothing—but mosquitoes—therefore I facetiously suggested that he had mistaken a pelican for a turkey. "Pelican be hanged," said he contemptuously, "don't you suppose I know a wild turkey when I see it? If I'd had a gun I could have knocked him silly."

A further attempt at humor on my part was not well received. "Look here," said he, excitedly, "I know what I saw, and it was a wild turkey. I don't say there's more than one, though there may be, and this one may be a stray, like the one shot here in town, near the drug store, about six weeks ago. I can show you exactly where I saw him—about a quarter of a mile east of the last house, where the big dead pine stands out," he said, pointing across the bay to the spot.

I sniffed incredulously, and left him glaring at me resentfully. "But," I mused, all the same, on my way homeward, "the man says he's a shooter—he says he saw

it. It's not impossible, and there was a stray killed on the main street a few weeks ago. By Jove! perhaps there is a turkey over there." That night I loaded some shells with BB.

The next morning, an hour before daylight, a skiff sneaked quietly out from the wharf in the darkness, leaving in its wake a quivering, phosphorescent trail of silver. All now was still save the sound of the oars and the rippling of the water against the boat's prow. Here and there gleamed the bright light of an oyster schooner, with its long, trembling penciling of gold upon the dark face of the throbbing tidewater.

The island was soon reached, and I stole quietly through the palmettoes to the center of the grove to wait for daylight. The morning was coolish and the mosquitoes simply ravenous. I turned up my collar and tied a handkerchief about my face, but it was of little avail, and my execrations, if not loud, were deep, while I listened with all my ears to catch the noise a turkey would make in descending from his roost to stretch himself and take his morning feed.

The dawn came rosily, the breeze whispered softly to the pines, the little birds twittered a good morning to the new day, the mosquitoes ravened upon my devoted corpus, but no gobbler made glad the sight. A full half-hour I watched, listened and fought the mosquitoes, when suddenly I heard a subdued *kowk-kowk-kowk*, and hastily slipping behind a pine, my heart was in my throat as I saw the black heads of turkeys in the palmettoes about 150yds. distant. Luckily they had not seen me and were slowly feeding toward my hiding place. One, two, three, four, five—I counted as they came slowly into view—a magnificent gobbler and four hens. The palmettoes were almost knee high and pretty thick, so it was not often I caught sight of more than their heads, and now that my heart had descended from its altitude to its normal position, and reduced its stroke, so to speak, I laid my plans coolly for at least the gobbler's demise, and possibly one of the hens. I felt pretty certain they would continue feeding toward me, for less than an eighth of a mile back of them was a house which they would be apt to give a wide berth. If they veered, to pass to my right or left, they would still be within easy range, as the woods from shore to shore did not exceed 100yds. in width. I resolved to be patient and motionless, biding my time until they reached a space comparatively clear of palmettoes about 40yds. distant.

I carefully got my gun in readiness in order that I need hardly make a movement beyond taking sight when they came into range. I resolved when that time should arrive I would give a low whistle, just sufficient to startle them and cause them to raise their heads, and I would try to do this at a time when two or possibly three of them were in line, but of one thing I felt tolerably certain, whether I got one of the hens or not, that gobbler was my meat. The thought of leisurely rowing over to town and landing at the oyster wharf, amid the throng of boatmen and oyster openers, and then sauntering up the main street on my way homeward, with the gobbler trailing from my shoulders, filled me with most pleasing anticipations. Henceforth I should be an authority on turkey hunting. I had abundant time for reflection of this sort, as a full half hour had elapsed since the game was discovered, and they moved toward me very slowly. I stood like a statue awaiting them and in the meantime the Deer Island mosquitoes were having a banquet. Jerusalem, how they did bite! I knew when I made my plans what I should have to endure from them and had set my teeth, compressed my lips, half closed my eyes and let them eat. They hadn't often a chance at so passive a victim, and they were literally "out for blood." "Let 'em feed," I muttered grimly, "old Mr. Gobbler out there will pay their board." Occasionally I would press the side of my face against the rough bark of the pine and kill a few dozen, but I did it cautiously, I wasn't taking any chances. What did it matter, a few bites, more or less, as long as I bagged Mr. Gobbler.

For nearly an hour I waited thus until the strain became really distressing. I was dead tired of standing in that one rigid attitude, to say nothing of my itchy, prickling, smarting face and hands, but all this time the flock was slowly but surely approaching. I was bound to get my reward.

At one time I had an awful scare when a measly, spotted, razorback hog dashed, with many grunts, into the open space destined for my private slaughter pen. In addition to startling me greatly, I was palsied with fear lest the flock take alarm. Weariness and mosquitoes seemed to vanish for the moment, and it was with a great gasp of relief that I saw the gobbler, after ruffling up with a start at first sight of the hog, calm himself and give a few soft, reassuring gobbles to his female consorts and then quietly resume feeding. The breath I drew at this seemed to come up from my boots. Had they taken the alarm I honestly believe I would, in my rage, have put the two changes of BB straight into that hog's ugly head.

At length, after a seemingly interminable time, the flock drew near the magic circle. My heart beat faster and faster, and my stiffened limbs trembled when the gobbler with a strut stepped out into the open space and peered warily about. I recovered my nerve almost instantly and muttered, "Great Scott! What a shot! He's mine as sure as fate!" I drew a bead on the bronze beauty, my finger was just about to press the trigger, when the thought of my plans recurred to me, and I kept him covered and waited for a hen or two to come into range also, as there were two of them within a yard of him, a little to one side. Fatigue, nervousness, mosquitoes were now all forgotten, and I felt a wave of triumph surge through me as I saw myself landing in town literally covered with pendant turkeys. With a chuckle I said to myself: "This is my busy day—for turkeys," and then as I glancingly took a sight along the barrel: "Great Caesar! Couldn't I just paralyze him? He'd never know what hit him. But, hold on; don't get brash! You might just as well get one or two of those hens," and then as the hens came closer I resolved when the three got in range to give them both barrels and to slip in a couple of fresh shells as I ran out to finish the cripplés, for I knew it would be foolish to expect to kill three turkeys outright at the first discharge. After a minute of breathless watching: "By Jove! there they are in a lump—all three of them. Now for the whistle," and with a thumping heart and nerves steady, but strained to the bursting point, I puckered my parched lips, when—crack! went a branch with a sharp snap right behind me. In

my wrought-up state I could not have been more startled had it been the discharge of a cannon. I cast a rapid look behind, and there, not 10ft. away, leaning on a long staff, stood a tall, slender, sun-bonneted native female. I gazed at her in wild-eyed, helpless amazement. "Mawn'n", suh," said she, "wot yeh aimin' at?"

The Father of Lies helped me to swallow my heart and lungs at a single gulp, and I answered thickly, "Rabbit; behind that log yonder."

"Huh," said she with a grin, "tho't yeh was aimin' at my tukkeys."

"Oh, no," I replied, with an engaging Ananias smile, "I'm not wasting any powder on tame turkeys."

"Wull," she said, "they duz look like they wuz wild ones, to be sho," and then, with a look at my face, added: "Skeeters pow'ful bad round yeah, suh. Mawn'n."

I watched her wade through my flock of turkeys, leaning on her long staff. I had no wish to detain her. I wanted to be alone. \* \* \*

I need not mention the beatific state of mind in which I hastily sought my boat. The shore breeze on the beach relieved me of the swarm of mosquitoes, and while I bathed my smarting face and hands in the brine I held a somewhat sarcastic conversation with myself upon the subject of turkey hunting. Mr. Loose-Talker, who was the cause of my visit to Deer Island, also came in for a few pithy remarks.

It may be well to add that I did not land at the public wharf, but rowed directly home, stopping only to moisten my tingling face and hands.

The thing that stared out at me from the mirror in my room was not the complacent countenance of a successful turkey hunter; it seemed rather to resemble a chunk of rare beef with a central garniture of over-ripe tomato.

The next two days were spent in the house applying lotions to inflamed surfaces, and reading selections from the books of Job and Jeremiah, with occasional intervals of pious meditation. To have ventured upon the street with that visage would have invited a quick trip to the pest house at the Ship Island Quarantine and an immediate rise in the local market for vaccine points.

As for Mr. Loose-Talker, the author of my misfortunes, he will be overtaken by a deep, subtle, humiliating revenge. For him, "the pit is digged!" L. J. M.

### EXPEDITIONS TO THE ARCTIC.

THE interest in Arctic exploration is an intermittent fever which returns in almost epidemic forms, after periods of prolonged repose. The present century has been marked by several epidemics of Arctic fever of this character, and while there have been perhaps few deaths within recent years, as a result of this polar enthusiasm, much—very much, has been added to our knowledge of the unknown polar regions. The success of the Peary North Greenland expedition of 1891 and '92 has stimulated anew the interest in Arctic research. We have now arrived at a period ripe for polar explorations. The time is at hand when important things are to be discovered regarding the top and the bottom of our globe. Not less than a dozen expeditions from all parts of the globe are at present fitting out to attack different parts of the mysterious polar regions. To push back the realm of darkness and ignorance and place upon our charts definite outlines of the present unknown regions surrounding the North and South Poles, three expeditions are in the field pushing on and on, through ice and over snow, mastering and overcoming what but a few years ago seemed insurmountable obstacles, aided by the fortunes and misfortunes of early explorers, and assisted by all that modern invention and improvement can suggest. There are but two distinctively North Polar expeditions in the field. The first is commanded by Dr. Nansen, sent out by the Norwegian Government; the second may be termed an American newspaper expedition; it is under the command of Walter Wellman, Washington correspondent of the *Chicago Herald*. A third polar expedition will be sent out during the summer by the Royal Geographical Society of England, under the command of Frederick Jackson. The fourth and perhaps the most important expedition in the field is that of Lieut. Peary, who is at present north of Greenland. It is not the main object of Lieut. Peary to reach the North Pole. It is Peary's object to complete the survey of Greenland and to study the topography of the land masses north of this frozen continental island. This will, however, take him poleward, and Lieut. Peary is certain to make a bold dash for that point which involves so much glory—the North Pole. Peary will start from the northern coast of Greenland, Nansen from the New Siberian Islands; Wellman will make a bold dash during the summer from Spitzbergen, and Jackson will make a cautious but determined effort from Franz Josef Land.

While these desperate attempts are being made to reach the Pole, several other expeditions are now organizing to attack the little known Arctic lands, study the fauna and flora to examine the geology, to survey in detail some of the unknown coast. Most of these expeditions will combine and go North with me on the steam whaler *Newfoundland*, leaving New York about June 30. Harvard is organizing a party under the direction of Manyard Ladd; Yale is organizing a party of ten under the direction of Prof. W. H. Brewer; the University of Pennsylvania will send a party of ten to the wilds of Labrador; Prof. G. Frederic Wright, the author of the "Ice Age of North America," with a party of five, will go North to study the glacial conditions; Prof. T. C. Chamberlin, of the University of Chicago, will go North with a party of five to study the geology of a part of the Greenland coast. Another and very important party is at present organizing, one which I shall take charge of myself, to engage in hunting and fishing along the Polar shores, shooting polar bears, walrus, seal and narwhale, and other marine animals, as well as reindeer, foxes and Arctic birds. This party will remain with the vessel and go to the far North, skirting the edge of the ice in Melville Bay, Smith Sound and along the shores of Ellesmere Land. While in this region we shall also engage in the search for the lost Swedish explorers, Björning and Kallstenius and their companions. Several expeditions with various objects, who will band together and in some respects pool their interests until we arrive on the scene of action. While Peary, Nansen, Wellman and Jackson, are plodding away in the far North, spending time, money and energy in exploring inaccessible regions, we will devote our time in exploring more accessible regions, and attempt to utilize their resources. Most people think of the Arctic regions

as a place where the weather is cold; there is an idea that Greenland is a dreary land, where there is little amusement except dodging polar bears, where no one enters except persons who desire to reach the North Pole, and where no one lives except Eskimo. Moreover, the prevalent idea is that Greenland is a far way's off, and only those who take one's life in one's own hands can reach the North Pole.

These opinions are altogether wrong. It was my good fortune to be connected with the Peary expedition in 1891 and '92 as surgeon and ethnologist to the party. I studied the resources of the land very carefully, and last summer I again went north in an ordinary schooner yacht, cruising along the coast of Greenland for three months. Our vessel was not fitted for ice work, but we cruised along those icy shores and returned within three months, having had a most delightful trip. The present expedition is the outcome of my experience with the first Peary expedition and the cruise of last summer. I am also organizing an expedition to spend a winter below the Antarctic circle; perhaps we are going to find the South Pole. First, however, I am going to demonstrate to every one what a capital place Greenland and the Arctic shores in general are as a summer resort. Soon after we cross the Arctic circle we will be involved in a period of constant day, where the sun hangs low upon the northern horizon at midnight, and a little higher in the southern skies at midday. I admit that sometimes in the winter, when the sun disappears entirely, that the weather is a trifle chilly and occasionally uncomfortable; but during the summer the air is soft and warm, for there is no night to cool it. Indeed, I know of no region in the world that possesses more actual beauties or contains the elements that are so productive of health, or a climate so wholesome and delightful as that of the Arctic during the summer.

To sportsmen Greenland is a country to rejoice in. If he cares for big game, there are polar bears, reindeer, white whale and walrus. I have never hunted tigers, but I don't believe that any moment in the pursuit of a cat can be more thrilling than the moment when a hundred walrus, barking with rage, each weighing a ton or more, each equipped with big white tusks, are charging all together on the small boat in which you are sitting with your rifle ready to fight them. And for beauty of coloring, Greenland scenery is unsurpassed. Imagine a promontory of rock 3,000 ft. high rising out of the middle of a white glacier. Its facade at the base is mottled with patches of red lichen and green grass and the gray of the stone. Up near the top of the cliff the patches blend. You cannot see their outlines; you catch only an impression of exquisite tints, always changing as the sun moves and casts the shadows differently. There are thousands of such rocks in Greenland.

The indications are that in the near future summer hotels will be built on the Arctic shores, the region which Dr. Hayes described as the "Land of Desolation." The barren Arctic wastes to which Dr. Kane added so much romance and the icy shores where the Franklin expedition perished, and Greely's expedition came to grief, will all be opened to summer tourists and sportsmen, scientists and artists. By the aid of modern improvement in navigation, our past experience, and perfected foods, the imaginary dangers of the Arctic seas must vanish.

FREDERICK A. COOK.

15 HART STREET, Brooklyn, N. Y.

#### A Little Essay on Trees.

We all love trees; they add to the beauty and value of a home, a city and a State. I cannot imagine what my boyhood would have been without them. Many were the battles we waged from cherry trees. The apple and the chestnut filled our pockets and kept us roaming over fields and forests. We prized the horse chestnut because it was so big, and seemed in our bursting pockets like owning so much. What merry days we passed among the sugar maples. It was a pine tree into whose sheltering branches I climbed when pursued by savage bloodhounds, escaped from confinement. The story of Swiss Family Robinson who lived in a tree, became very real to me, as also many other adventures during the ten or twelve hours I was perched up on the old pine tree branches.

I never can forget my visits into Delaware, during the peach season. The exquisite aroma of the plums, peaches and other fruits make those boyhood sunny days seem extra sweet. And the balsam gum—how we hunted it; what quantities we found, and how incessantly we chewed it to a pinky elasticity. Swap gum? Yes, many is the friendship sealed by swapping gum. We peeled the white birch bark and stopped a while our restless feet as we carefully penciled on its smooth surface a love message. I wish I could see those white trees now; I wonder what has become of all the girls whose names and initials we carved deep through the many white layers to the living green. How nicely the hemlock bark peeled off, and what a splendid roof it made on our hut when camping out. Could anything be nicer than the sassafras and slippery elm; we always carried a supply in our pockets with fish hooks, worms, knives, sweet fern and corn silk for smoking, and other necessities. We always had an appetite for the mayapple (tamarind) and wintergreen when we found them; and as for the wild strawberry, long, oval and sweet to taste and smell, we lay on the moss and ate, and ate, and ate. Climbing trees after birds, nests, storming hornets' nests and peering down black trunk hollow for hidden treasures or perchance a squirrel family, were a constant delight.

Tell me you can bring up boys and girls without trees? Impossible. Why, the tree of the field is a boy's life. Give them trees. Let them plant them, climb them, love them. There are tongues in trees, and they will sing you the sweetest song on earth. They will draw out your soul and whisper joy, gladness and purity to you, such that you can feel but not express. They will be true to you, and when your sorrow is beyond their healing sympathy will point you upward to their creator. Don't let the boys and girls grow up without trees. In season urge them to plant trees. Help and urge them on, and when their youth is gone and dull care, sickness, sorrow, avarice for wealth and the world's greedy self have taken away much of the zest and poetry of living, their thoughts will revert to boyhood days, and through the nights a tree-top anthem will be borne to them, carrying sweet melodies of childhood days and memories of long ago.

W. GOODRICH JONES,

Temple, Texas.

#### A COW-PUNCHERS' BALL.

FIFTEEN years ago one of the most uninhabited regions of the United States was along the north side of the North Platte River in western Nebraska and Wyoming to the headwaters in North Park, Col., near the Continental Divide, a distance of over 600 miles.

The Platte will ever be identified with the history and development of the great West, Northwest and Pacific Slope. The old California road runs along its banks for hundreds of miles, by the famous landmarks like Court-house Rock and Chimney Rock, while further up on the Sweetwater are the renowned Independence Rock and Devil's Gate. The earliest settlers traveled by this road, the pioneers of the once Great American Desert, leaving many lonely graves behind them, the result of hardship and Indian fights. The Mormons followed it as their guide to the land of Zion, at last finding peace and plenty by the far away Salt Lake.

In this country the hardy trapper and hunter found game enough to satisfy the wildest imagination; and ran great risks of falling into the hands of the wily Sioux, who were lords and masters, as they thought, of that vast domain. Great herds of buffalo roamed over the vast plains grazing on the luxurious grass by hundreds and thousands. Wild horses ran at will in droves with the freedom of unconquered kings, as they were. Thousands of antelope fed on the rich grass. Deer and elk roamed in the foothills and mountains in great herds. During the spring and fall the river was covered by millions of wild duck, geese, cranes, swan and all kinds of birds of the feathery kingdom. Bear, mountain lion, wolves, coyotes, panthers, wildcats and beaver sported by the banks of the great river. The Sioux and Pawnee fought each other for the supremacy of this land of abundance. The mighty Sioux could lay claim to it only after nearly exterminating the entire Pawnee tribe, and only to find himself facing a new and unconquerable foe—the white man. Soldiers fought hard battles here, and many a boy in blue saw his last sunset over the glorious mountains in the west.

In 1880 the Sioux was gone, and the buffalo, with the exception of here and there a straggler, was exterminated. But in their place roamed thousands of cattle almost as wild as the Indians and buffaloes had been before them. The entire country was a vast continuous pasture, bounded on the west by the Rockies, on the east by the settlements of eastern Nebraska, on the north by the Big Horn Mountains, and on the south we might say by the Union Pacific Railroad and Gulf of Mexico. Cattle strayed for hundreds of miles during the winter, drifting with the storms, to be caught by the cowboy and driven back to the home range in the spring.

The Indian and buffalo were gone; but there remained the same picturesque and sometimes monotonous wildness. There were no farms—nothing but ranches, thirty, fifty, sometimes a hundred, miles apart. Forts Laramie and Fetterman were the only places where any number of people dwelt together; and here they were mostly soldiers and Government employees.

Many immigrants used the road up the Platte to Montana, Idaho, Oregon and Washington. They were mostly from Kansas, Missouri, Iowa and Southwestern States. We would often see from one to twenty prairie schooners, with horses, cattle and all the implements to run a farm; some even carried pigs and chickens fastened in coops under the wagon boxes.

We were on our home journey from a round-up below Camp Clarke in Nebraska in August, having been on a calf round-up, when we met a large party of these wandering home seekers, most of the party coming from Kansas and Missouri. They camped that night about a quarter of a mile above us, and two miles east of old Camp Clark and Sidney bridge. It was an exceptionally large train, and some of us rode to their camp to exchange a few words. The party consisted of about sixty men, women and children, eighteen wagons, 300 cattle and nearly 100 horses. They had some blooded stock, buggies and light wagons, which showed that they were well-to-do for people traveling in prairie schooners. After exchanging salutations we were invited to dismount and make ourselves at home.

We did not fail to notice nine or ten pretty young girls, of between 14 and 23. In those days a cow-puncher was a very bashful man in the presence of women, his isolation from civilization being the natural cause; and most of our conversation was with the men, about the country, the roads, camping places and best places to get wood and water. But natural curiosity soon brought us all together. A young farmer produced a fiddle and set to playing the familiar strains of the "Arkansas Traveler," when one of the boys proposed a dance in the evening.

"Where can we dance? Where is the hall?" chimed in one of the girls. He replied that the prairie was very level and square dances could be managed, if not round ones. The moon, stars and camp-fires would answer for lights, the fiddles and mouth harps for music.

At that time a great many of the boys were fine performers with the mouth harp; and often in the evening, while we were sitting around the camp-fire some one would play old familiar airs, and the rest would join in, singing songs of adventure, or of the far away home, sweetheart or mother.

We made the necessary arrangements in a short time; and promising to bring more of the boys with us, rode to our camp to impart the news and to brush up in our best for the occasion. After an early supper, and extending our sympathy to the two men on night guard, we mounted our horses and returned to the other camp, which presented a pretty sight on that bright moonlight August evening. The wagons were drawn in circles; the fires by which the women were preparing supper, while the men and boys were looking after the horses and cattle. Some were carrying water from the river, others were chopping wood and cleaning the harness. The children were playing and watching the flicker of the fires, and a group of girls were singing, while all within reach joined in the chorus. The rushing of the river, the neighing of horses, the lowing of cattle, with the singing of some near and others far, seemed to give perfect harmony to the peaceful scene and lend a charm to the surroundings.

It is doubtful if ever a lot of young men entered a ball room, with waxed floor, magnificent decorations, and containing beauty, wealth and culture, who anticipated more pleasure than we, as we rode up to this spot which was to be our ball room; with the earth for a floor, the wagons for walls, and the bright starry heavens for ceiling;

and the light summer air, the prairie and the murmuring river for surroundings; two fiddles and mouth harps as our orchestra.

Upon invitation to dismount and consider ourselves one of them, we were not long in getting acquainted with every one, in the easy Western style. Supper soon over, the musicians took their positions on top of the wagon, and the dancing began—such dancing as is seldom done. More healthy enjoyment was never had; and a merrier lot of men and women seldom came together, even the babies and old people danced.

At 10 o'clock the second guard went on, and we danced an hour longer to give the boys who were on first guard a chance. Then came song, conversation and flirtation, for another hour, and after a hearty good bye we returned to our camp.

We had work to do next day, separating the cattle, for some our men were going north, others went to their home ranches. The immigrants decided to rest a day and see how we worked with the cattle. The cutting out and branding is always exciting and interesting to look upon, though hard work. Some of the boys borrowed saddles of those not on duty, and with the gentlest horses invited some of the boys to view an actual round-up, and afterward at our camp they sat down to a dinner that our cook, old Ginger, took particular pains to prepare. Of course we were all sorry to part after such a pleasant time, and I am sure it will remain one of the best remembrances of our lives.

At the time I hardly realized it, but what a picture that dance by the moonlit river must have been!

To-day a great deal of this Platte River country is settled by farmers and small ranches, with the exception of western Wyoming, but the northwestern part will be a sportsman's paradise for years to come, owing to the rough country and the almost impenetrable mountains and forests. Big Horn county, yet unorganized, comprises 12,260 square miles and lies directly east of the Yellowstone Park; the greater part of Fremont county, with almost the same area, and the northern part of Uintah county directly south of the Park comprise nearly 15,000 square miles; and with the Park we have a vast area of nearly 50,000 square miles—a great wild scenic country, beautiful and grand almost beyond comprehension, and almost as it was a hundred years ago. This comprises the Yellowstone, Big Horn, Shoshone, Wind River, Gros Ventre, Teton, Owl Creek, Jackson's Hole, Lake and Basin country. A magnificent mountainous region, whose parks, forests and foothills are full of game, and lakes and streams abounding with the choicest fish, the climate fresh and exhilarating, a perfect health and strength giver. Can a finer field for a summer's outing be found anywhere? JACK WORTH.

KEARNEY, Nebraska.

#### "Danvis Folks."

I TRUST it is not too late to say that I hope we have not heard the last from the "Danvis Folks." I was the more disposed to regret the conclusion of their story, because the most of the types were familiar to me in old Vermont, away back in the fifties, and later in New Hampshire. The conclusion differed from my anticipations, for I kind o' thought that Uncle Lisha was to be the guardian angel; but then of course I did not know that Sam had a mine in his fox pasture. I am glad Sam did not shoot Bascom—he wasn't worth powder.

No sketch can ever be written that shall contain a truer portraiture of the lives and language of the kindly farmers of Vermont of forty years ago, and their descendants owe to Mr. Robinson a debt of gratitude for having thus embalmed those memories of their predecessors which the present generation has been privileged to read. KELPIE.

### Natural History.

#### Albino Birds.

HOLLAND, Mich.—I have a redwing blackbird which is a partial albino. Nearly every feather on the breast and sides has a large spot on the end, some pure white, others more pinkish; on each leg there are several red feathers. In all other respects the plumage is normal.

A few days ago I observed a robin whose secondaries and seemingly the outer webs of part of the primaries of each wing were pure white. I stood within 10 ft. of the bird, which was on the ground; in this position several white lines could be seen on each wing. When he flew, the white on the wings was easily discernible.

Was not the animal mentioned by a correspondent several weeks ago as an albino weasel, an ermine?

A wild pigeon (*Ectopistes migratorius*) was killed near here April 7 and brought to me for mounting.

During the last fall and winter I have received many rather rare birds, most of which I have secured for my own collection. Among them are a pair of double-crested cormorants, two male velvet scoters, a male Acadian owl (*Nyctala acadica*), and a male American long-eared owl. I have also a female opossum, which was shot here last September. A. G. B.

#### It was a Tame Beaver.

NATIONAL ZOOLOGICAL PARK, Washington, D. C., May 24.—*Editor Forest and Stream:* I notice that in *FOREST AND STREAM* of the 26th you have copied an item from the Washington *Star* concerning the finding of a beaver on Four-Mile Run, a small tributary of the Potomac near this city. The animal was undoubtedly one that escaped from the National Zoological Park about eight months previously. He was very tame, and when he came up to the farmer probably expected to get something to eat instead of a stroke on the head with a pitch fork.

FRANK BAKER, Superintendent.

#### A Woodchuck Up a Tree.

SPRINGFIELD, Vt.—While fishing last week I saw a woodchuck 12 ft. from the ground among the branches of an elm tree only about 2 in. in diameter. Have often heard of their climbing large apple trees which slanted sufficiently for them to get a footing, but never knew before of one climbing a perfectly perpendicular tree of so small a diameter. W. W. F.

## GOOD NATURED JAGUARS.

## Some Stories from Honduras.

"If she would, my wife could tell a story about that tiger-skin rug on the floor, and about the skin of its kitten, that covers the back of her chair; but as she will not tell it, I may as well," said our host, as we seated ourselves in the sala, where the never failing breeze from the sparkling Caribbean drew fresh through open doors and windows, and the music of the surf on the sandy shore rose and fell in soft cadences.

"We had tired of the monotony of a diet of cassava and cocos, of beef and bananas, poultry and peccary, of turtle eggs and tarpon, with nothing but oranges and pine-apples, mangoes and marañones for dessert—the things we have to live on here, you know, most of the time. So I asked her to go with me duck hunting, one morning.

"We paddled to where the bayou widened into a little lake, and saw a flock of muscovies feeding among the pond-lilies and water-poppies on the further side. Wife stepped ashore where there was a little clearing and I paddled away to steal near enough for a good shot at the ducks. The sunshine fell on her as I went, and I saw her take the bright red shawl from her shoulders and fold it carefully and hang it over her arm. Then a bunch of fuchsia bushes on the point hid her from me.

"I had put my paddle down and reached for my gun, when I heard Anna scream. Of course I turned and paddled for dear life; and I felt like heaping abuse on the man who invented so clumsy, so loggy a device as a dugout.

"When I rounded the point I saw Anna standing at the edge of the water staring intently at the bushes, while she beckoned me.

"What is it," I shouted, "what is the matter?"

"It's a tiger," she answered, "it is a big tiger."

"That was matter enough, and I dug the paddle down into the water and pulled for the shore. The instant the pitpan grounded on the sand I had my gun in hand and sprang ashore.

"Where is he, where is the brute?" I gasped.

"It was right there where my shawl lies, I scared it away. When it crept up to me I threw my shawl in its face and it ran away."

"I picked up her shawl and took a look at the sign. It was plain enough, for the imprints of claws showed clearly in the sand. We pushed off from shore and paddled for the mouth of the bayou.

"I stood there watching you until the bushes hid you from me," said my wife, "I was wishing that I had asked you to pick a lot of those white pond lilies and water poppies after you had shot the ducks. Then I heard a rustling in the grass behind me and turned around quickly, for I thought there might be a man there or a waree, or something savage behind me; and there was that tiger not four yards from me.

"It was crouching down exactly as a cat does when she's creeping up to catch a poor little bird or a nasty sparrow. Its eyes were green and shining and its tail stuck out behind and waved from side to side a little—not very much. I couldn't help thinking that it acted just as my cat used to at home when she tried to catch birds in the garden. I wonder how poor pussy got along after we were married and I deserted her to come away down here with you. I'm awfully sorry I didn't bring her with us."

"But, for heaven's sake, what did the tiger do?"

"Oh, yes, I forgot the tiger. I just screamed as loud as I could, and threw my shawl into its face. Then it turned away, and I screamed again. It ran into the bushes then; but I was afraid it would come back."

"How inconsiderate women can be," murmured the Captain. "The tiger's nerves must have been unstrung by such treatment."

"Well, her nerves were unstrung before night, anyway," replied Burch, "for when had seen my wife safe in the house, I got the best of our Waika hunters and the best tiger dogs in the village, and went back to the place where it was seen by Anna. The dogs took the trail at once, of course, and in a few hours we had the skins of the old one and of her half-grown kitten. No doubt the big cat would have lit on my wife an instant later if Anna hadn't happened to turn just then and thrown that bright-colored shawl straight into the face of the brute."

"Los tigres negros are bad fellows, sometimes; but some of them are not so bad," said Lanuza, the rubber gatherer.

We swung in our hammocks near the fire which blazed cheerfully on the earthen floor beneath the thatched roof which made his home, fifty miles from his nearest neighbor. If the blackness of the forest night had not walled us in—it was the only wall the hut had—we could have looked down on a shining reach of river that ran straight away to the wall of forest, a mile or more away, that shut off the further view.

Beyond the pool, where flakes of snowy foam danced before the huts, arose a rounded hill where were clusters of cariso bamboos bending low in cover so dense that no bird could have flown through; and thickets of palmettoes covered from root to furthest tip by spines as slender and as sharp as any needle; and smooth gray ceibas of prodigious girth that held, eighty feet or more above the ground, enormous bouquets of roselike bloom; and gigantic cedars and tuberoses, and rubber and other tropic trees grew there; and great lianas ran from one to the other, and tied all together, and afforded bridges by which squirrel, coon and possum, monkey, sloth and cats of various kinds could pass from tree to tree.

A hoarse, long-drawn, roaring *mea-o-u* had come across to us from that hill a moment before Lanuza spoke. He lit a cigarette and drew a whiff or two, while the dozing dogs sprang to their feet at the sound of that cry, whined uneasily, sniffed at their owner, then coiled themselves again in the ashes.

"Do the tigers give you much trouble here?" I asked.

"No; I have no bestias, no cattle, nor mules, nor horses, and my children are big enough to take care of themselves. But the lions are of evil mind. No, the tigers are not so bad. Susana would tell you, if she could speak any other than the tongue of the Sumos."

"Why, what would she tell me?"

"Susana has lived her life in these woods. She is true Sumo, brave as any man, and a good hunter, for a woman. She knows the ways of all the animals, how they live and what each will do. And she saw once that which would have made some mothers have fear, perhaps. It made

both of us uneasy until I killed off a family of lions that lived in the rocks by the falls of the Blanco, where you shot the mountain cow.

"Our Tonio is my bravo. You know."

"Yes, I do know. He's full of mischief."

"So it is. Well, then, Tonio and his sister—she was a little one then—wandered along the sand by the river there, and waded through the shallows where the cuyumel watch for food, and played at hunting until long after the time when they should have brought the appetite of the coyote to the breakfast their mother had made ready.

"The sun was past the middle of the sky when Susana started to find the children. She might have left Tonio to come when he would—he is a boy, and boys must learn to care for themselves; besides, who can tell where a boy will be, at any time. But Juliana is to the heart of my wife as honey is to her tongue, and sweeter."

I might have added that the child was to her father as precious as the blood in his own veins; but he was telling the story.

"Perhaps you know how is, señor; you have read many books written by wise men; but I have lived with Susana and have known these Indians many years, yet have not been able to learn how they know such things, and they will not or cannot tell me—but it is as true as that the sun will shine to-morrow, that they do know exactly when and where and how to go, when they want anything.

"Well, then, Susana knew that it was time for her to find her niña; so she walked fast straight away to the falls of the Blanco. She stopped in the bushes by the sandy slope beside the pool that is below the fall. You would expect any one to stop when they saw before them an open space in the woods, of course, to learn what might be there.

"Juliana lay asleep in the shade of the tops of cariso that almost swept the dry sand. Tonio had left the child there, while he followed a chuchu-de-agua. You know it, the little opossum that lives so much in the water.

"And Susana saw also a yellow head, with pointed ears and shining eyes under the big leaves of a platanio. It was not ten varas from our little one. It crept from its hiding and crouched on the ground. It crawled nearer to our baby, slowly, its white breast almost touching the sand. Then Susana stepped softly and swiftly through the bushes, that she should be close behind when she would jump out, and yell to scare him and awaken the child, and would slash him with her machete. There was time, for my wife knows the lions, and that they look carefully, and make sure before they leap on any sleeping thing. If the child had stirred—ah, who knows.

"But, before she was near enough to the lion, out from the black shadows beneath the cariso a tigre negro shot over the niña. He crouched before the lion, on the sand.

"Susana stood still, and looked. Her baby slept, for neither of the beasts had made a sound. Her mother is Sumo—she knows the ways of the animals. Her child was safe, for the two great cats would not think of her. They were busy. When they would be through fighting they would not think of eating. No. They—one of them—would be thinking of its hurts. The other would be dead.

"They faced each other and growled, not loudly. The lion sprang. When he touched the sand there were gashes in his side, for our tiger was wise in fighting. He had jumped aside, and struck the lion before his feet had touched the ground. Jump and blow were like the flash from the gun, for quickness.

"Then the lion screamed aloud. He was enraged. But the tiger does not cry so readily. He fights. But our spotted friend was brave, and quick, and strong. The lion leaped again, and the tiger met him in the air. Hair flew, and blood. My wife stood like a tree, for stillness, and Juliana scrambled up on the shelving rock beyond the river.

"They fought long; then the lion ran and crawled beneath the big liana that hangs near the ground there. The tiger jumped on the liana, and the lion lay on his back, with his paws up, to ward off blows. The tiger snatched at his enemy, and his claws tore the head of the lion, and blood filled his eyes. The lion cried loudly, for it knew that it was near the end.

"When the tiger heard that scream, he was a devil. He tore at the hinder legs of the lion. He struck at the head, the legs, the sides of his enemy. Then he jumped down, and in a moment the two were held fast together by their forearms, and their hinder claws cut like knives. The lion screamed again, horribly. The fight was done; his bowels were dragged from him.

"The tiger struck the lion three or four times, then slowly walking to the water, turning half around each few steps, to see if any life was in the lion. He lay down close to the water and lapped a few mouthfuls. The spots on him could not be seen; they were red with blood. His ear was torn to shreds, and we know him to-day by that."

"Then he did not die?"

"He lives among the rocks beyond the falls of the Blanco. You have been there many times. Susana would have washed his hurts. He was a tigre negro, but he saved our baby from the lion—so my wife did not try to kill him with her machete when he was weak from the fighting and loss of blood. No, I know him well, and do not shoot at him, no, never."

E. W. PERRY.

## Alaskan Bird Observations under Difficulties.

SITKA, Alaska, May.—*Editor Forest and Stream:* After my last letter to you of Jan. 21 and up to the last of March, we had an almost daily fall of snow of from 1 to 6 in. per day; and the oldest inhabitant declared that he has never known such a winter "in this neck of the woods." Under these circumstances any systematic observation of the birds was very difficult, especially so as the fall of snow was generally attended by intense cold and high winds, which prevented entirely, save on very occasional days, any canoe navigation, which is the only means here of going about upon the water.

Early in March, by some kind act of nature, a calm day dawned, and being impatient to take some notes, I engaged two Flitig Indians to take me in a canoe down to the Baranoff Hot Springs, situated on Baranoff Island, about sixteen miles below Sitka. Near these springs are some extensive mud flats, which are laid low by the low tides, and upon them I had hoped to find the first arrivals of our migrants. We reached our destination after an uneventful voyage of about six hours, but upon the day following our arrival the prevailing high winds and intense cold commenced with renewed vigor and continued unabated for ten consecutive days, by which time we availed

ourselves of a calm and were forced to return. So great was the sea and so heavy the wind, that upon one day soon after arrival, when our Indians ventured out during a few moments of calm to endeavor to secure some venison, a squall struck their canoe, which was an unusually large one of the Hydah pattern (which is considered by far the strongest), when they were within 600 yds. of the shore, splitting the strong craft from stem to stern.

It is needless to say I did not find any spring arrivals among the birds seen. The mud flats I found were frozen hard as soon as uncovered by the tide, and were additionally covered by cakes of stranded ice. I found, however, a few specimens well worthy of note. On the trip down I saw a number of the tufted puffin, but none near enough to secure. What is chiefly valued (over any specimen secured thus far is what is evidently the short-winged murrelet of Coues (*Brachyrhamphus brachypterus*, 1, Coues, No. 870). The specimen secured I have mounted and placed in my collection. It differs from any murrelet I have ever seen in the amount of white upon neck and belly, having a long head and a bill about half the length of head. The tarsus is longer than the middle toe. This specimen has almost a collar of white around neck. The head is a coal black. White on belly continues from neck collar to base of tail. Can any one give us any light upon this species? Coues is very meager in his description, which is quoted from Brandt. He gives the habitat as Unalaska, which might be continued to the Sitka district. There were two individuals of this bird together, of which I was able to secure but one.

Since my return from the Springs my Indians have brought me two specimens of the Mongolian plover (*Egialitis mongola*, A. O. U. 279), but they were so badly shot as to be quite useless for preservation. I have secured several fine specimens of the harlequin duck (*Histrionicus minutus*), and have found them fairly abundant. These species winter here. Have also secured with especial pleasure a specimen of the red-throated pipit (*Anthus cervinus*), and while the only specimen secured was badly damaged even by the light charge of No. 10 shot, yet I have seen quite a number since, and have reason to feel confident of securing others. The Wilson snipe (*Gallinago wilsoni*) are quite plentiful during the spring and summer, judging from accounts given by the few enthusiastic sportsmen.

During my many waiting hours between storms I have been much amused and instructed by watching the ravens (*Corvus corax*), which abound here and which reach great size. (I have killed one specimen with bill of a trifle over 3 in. in length, and total length 2 ft. 6 in.) A more pugnacious bird is hard to find. I have seen a single individual chase a bald eagle for a mile or more. Their favorite food seems to be the clam, which they unearth with their stout beak. After unearthing it, they seize the bivalve in their claws and with him fly to a height, and then drop him upon the rocks, breaking his shell, after which they pounce down upon him and devour the dainty morsel with great relish. Should the shell be found not broken by the fall, the clam is again seized and carried to a greater height than before, and then dropped again. Sometimes this is repeated three or four times.

This quaint old Russian town has suffered an irreparable loss through the destruction by fire of the old Baranoff Castle—"America's only castle," as some writer has called it. How the fire started no one knows, but at 2 o'clock in the morning the town was awakened by cries of fire, and in two hours, in spite of every effort, the noble structure was in ashes.

## Camp-Fire Flickerings.

"That reminds me."

## A Night in the Wilderness.

LANCASTER, N. H.—In the vast unbroken wilderness lying directly south of the Dixville Notch, there are three celebrated trout ponds in the township of Millsfield, and named after that township. Big Millsfield lies about six miles from the road running directly from Colebrook, through the notch to Eroll Dam on the Androscoggin River. Little Millsfield and the third pond lie seven miles further south.

The wilderness lying around these waters is in its primeval state. Here deer, rabbits and partridges, and game of all kinds abounds. And at night the hoot of the owl, the snarl of the bob cat, the yell of the wildcat, the scream of the panther and the whistle of bears keep up a continual concert.

Last fall the New Hampshire Fish Commissioners concluded to stock, partially, the Colebrook hatchery with trout taken from these ponds, and Sam Gerrish, a veteran woodsman and guide, was employed to fish there during the spawning season, or rather after the commencement of the close season.

Sam has spent most of his life in the woods, and camped there for three months, coming out in December. He tells the writer of an adventure he had a few days before his final departure:

"For the last month, I had a number of visitors, including Col. Shurtleff, chairman of the Fish Commissioners. He was the last to leave. When he left an unaccountable sense of loneliness seemed to take possession of me. Why, I cannot tell. I have been in the woods most of the time for twenty years and am seldom ever lonesome. But that day I felt 'down to the heel' as the saying is. The day might have had something to do with it, for it was dark and gloomy, with a light rain.

"After putting the camp in shape, and placing a piece of venison in the pot for supper, I built up a good fire, and taking my Winchester, axe and lunch, sticking my fish lines in the belt around me, I started for Little Millsfield, to take my last trout before going out. The path to it was a mere spotted line, through a dense forest, seven miles.

"It commenced snowing soon after I left camp, which in a little while turned to a light rain. I came to the pond about 11 o'clock, and built up a fire on the margin of the pond, as the weather had begun to grow cold. I cut some holes in the ice, set my lines and ate my lunch. I had good luck catching twenty trout that would weigh 30 lbs.; and at 4 picked up my traps and started for home. It was growing dark and I hurried along, when I came to Big Millsfield, it was blowing a gale, driving the frozen rain into my face.

"By crossing an arm of the pond I could save more than a mile in reaching my camp. Still it was very risky

as the ice was not of sufficient thickness to make it certain. Still I started across.

"When about half way to the shore below where the camp was located, I heard a long continued scream and snarl, I knew then I was followed by a wildcat or panther, or at least one was behind me. This was repeated, only a howl and shriek followed. That I hastened my footsteps is only putting it mildly. Jumping ashore, I hurried along the bank to the camp, the yells continuing. I got inside the camp door when a dog jumped over me as I was setting down my luggage, and a piercing scream followed at the same time, such as I shall never forget. I sprang and shut the door and barred it.

"I was just in time, for the animal at that moment came against the door with a howl of disappointed rage. I loaded my shotgun with double charges and nailed up the windows and other open places in the camp, and then sat down and waited developments. The dog had undoubtedly been chased by the catamount and sought refuge at the camp. All night long he remained around the camp, howling and snarling and jumping against the door and then on to the roof. I sat on guard all night long, and I assure you I was glad when daylight began to appear.

"As the morning advanced he left. All around the camp were tracks sin. long. He must have been a very large animal. The dog proved to be one owned at the nearest settlement, and was very likely in pursuit of a deer when he ran into the catamount. The next day I came out."

### Uncle Jack's High Jumps.

There is one thing about summer hunting in the South I cannot get used to, and that is snakes. I do not see many, but I know they are about, and also that they are bad snakes, too. Often a lizard scurrying away in the leaves will make cold chills run up and down my spinal column, and taking into consideration that where I hunt there is a dense growth of switch-cane and the ground hard to see, it does not tend to increase my confidence or decrease my expectations of feeling a squirming reptile under my foot every time I put it down.

Speaking of being afraid of snakes puts me in mind of an old gentleman who lived in the neighborhood of where I trained dogs once. His name was Smith. He went by the title of Uncle Jack. The story was related to me by his wife, Aunt Sally, so I guess it is true. I will give it as near as possible in Aunt Sally's own words:

"So you are afraid of snakes, be ye? I low you kain't be more skeerd of them th'n my husband, Uncle Jack Smith, was. Law, he was that skeerd that he was a plum fule about snakes.

"I rec'lec' one spring he was plowing out sum young co'n, about as high as his a'mpits, en I went down to the fence to kerry him sum fr'sh water. Now, he h'd clean'd up a little strip of briars en sweet gum sprouts, be'n where ther plowin' stop'd en ther fence, en ther briars en bushes were lyin' jist as they'd bin out. Uncle Jack was a leetle hard o' heerin', en I hed to holler mighty loud fore he seed me with the water. When he did, he turned his hoss around en stuck his plow in the groun', en started toward ther fence whar I was. I notice he pick'd his way mighty gingerly, first going this way en then that; but I knowed what a fule he was about snakes, so let him cum his own way.

"Fin'ly, he got to whar I was, en got his water en start'd back to his plow ag'in.

"He had on a par o' jean pants; en you know howen'thing that is stuck into them will hold. Well, he poked erlong as keurlful as he did cumin', en was getting erlong all right till a big briar happened to ketch ther bottom of his pants.

"I seed in er minute that he was going to get skeer'd en act ther fule, so befo' he hed a chance to look around en see what it wus, I squalled as loud as I could, 'Hit's a bri-a-r!'

"I never knowed Uncle Jack was that soople, tho' I hed knowed him all my life, for no sooner did I squall that it wus a briar, then he rose in ther air like he wus one of these high-jumpin' chaps in the sarcus; but as high as he jumped that briar stayed right with him. Well, he no sooner lit than I yelled again as loud as I could, 'Hit's a bri-a-r!'. And the moment I hollered he made another jump into the air, like he expected to lite on sumthin' en stay up there. En then I hollered as fast as I could, 'Hit's a bri-a-r! a bri-a-r! a bri-a-r! a bri-a-r!'. And every time I squalled he would jump as high as the top of the co'n, until finally the briar cum loose, and he made a big circle so as to not cum back ther way he went out, en he leaned up ag'in his plow just completely tuckered out. I wus so mad at his actin' sich a fule I wouldn't speak to him. Finally he said:

"'Aunt Sally, I believe a tarnal snake will be the de'th o' me yet.'

"'Hit wusn't no snake, ye old fule,' sed I. 'I kept telling you it wus nothing but a briar. What on earth did yer go skipping off like a kid in a desert land for?'

"'Why,' sed he, weak like, 'I thought you hollered 'jump higher.'"

"'En that old fule went jumping as high as he could, with me hollering hit wus a briar, thinking all the time I sed 'jump higher.'"

"I sed afterward to the old man, 'What do you always want to run for when you see a snake?'

"'En he says right solemn like, 'Aunt Sally, I always runs because I kain't fly.'"

I am a sort of that way about snakes myself. I do not care about them in the open where I can see them, but in a thick place, where the snake has ninety-nine chances to bruise my heel to my one of countering on his head, I am like Uncle Jack—"I run because I can't fly."

W. W. TITUS.

### Another Witch Duck.

Apropos of Mr. Gallup's witch ducks: On one occasion we had our decoys out, about half a mile north of where the steam launch was anchored, in McKee's "pocket," on the Yazoo River. We took them in before dark and proceeded in the skiff toward the launch. During the afternoon several of the decoys had got away and drifted below. When about half-way to the launch one of them was seen near the edge of the water. The skiff was headed that way to pick it up. When about 40yds. from the duck, I, who sat in the bow, distinctly saw it move its head, and promptly raised my gun and fired—without apparent result. We approached and picked it up, when it proved to be a well peppered greenhead wooden decoy.

COAHOMA.

## Game Bag and Gun.

### AFTER ANTELOPE IN THE BAD LANDS.

THERE is a section of high, barren land between the Big Horn Mountains and the Black Hills in Wyoming which is on the regular migration trail of the antelope herds that summer in Montana and Canada and winter in New Mexico and Arizona. Around the heads of the Little Missouri, the Belle Fourche and Little Powder rivers there is a part of this land that furnishes good pasture for both deer and antelope. An occasional sheep, too, crosses the broken ridges which mark the heads of the rivers and their tributaries, but the antelope are now the most plentiful of any of the big game of the region. Antelope summer through this belt of country and are numerous from April to November, and if hunted right are easily killed.

One September day we found our larder empty so far as meat was concerned at the ranch, and that meant to go hunting that day or go meat hungry the next. The light team was hitched up, field glasses and rifles overhauled, and we started for the antelope pastures a short distance to the northwest. The sun was well up before we left but we were in good game country by 10:30 and had rounded up a "mess" of young curlews, which go very well for a change. Driving to the top of a ridge which commanded a view of considerable country, we stopped and carefully scanned the "flats" and pasture lands for the white "flag" of the antelope, which, with a good glass, can be seen for a long distance. A solitary buck was seen away to the east, feeding along a side hill toward a little spring near a cañon head.

Driving as near as the lay of the ground would permit, I jumped out and started after him. By this time he had worked down into the flat, and so far away from any cover that I could not get a shot. I tried to crawl up behind the sage brush, but he saw me and ran over to a high butte where he was joined by a doe and two fawns, one a yearling and the other only a few months old. That spoiled my chances and I watched them scurry away, out of my range, until they were lost to view among the buttes.

There are a great many old lake beds in this particular part of the country which are now dry and grassed over, furnishing the best of feeding grounds for the antelope. These are the "flats" of prairie vernacular.

After these antelope had disappeared I signaled to the team to drive on while I struck across the country, swinging over the rocky, cactus-covered hills at a good pace; and soon got to the wagon again.

Over a ridge to the northeast was another good feeding ground and we struck for that next, bound to have our meat if it took all day to get it. While on top of the ridge, we saw three feeding antelope at the mouth of a small cañon, where the ground was rough enough for good cover. Quickly unhitching, we left the team out of sight among the rocks and started down the cañon after them. We were a little late and they had fed past the cañon when we got to the mouth of it, and "had the wind on us," so we did not dare advance for fear of losing our game again, and we lay still waiting a favorable chance for a flank move. They went slowly down the valley nibbling at bunches of grass and tender shoots until they were joined by seven more which we had not seen before. They now left off feeding and started in a leisurely way for water, always leaving one on top of the hill while they crossed any little low place. This is a most provoking habit, which antelope share with deer and other large game, and if the hunter gets impatient the chances for a shot are pretty slim. We lay behind the lava boulders and sage brush, with a scorching sun burning our backs, watching them travel along, looking back over their trail with that peculiarly watchful, suspicious glance that all wild animals display to a more or less degree. We lay for perhaps twenty minutes before they passed out of sight over a little ridge and gave us a chance to run for the "breaks" on the other side of the cañon.

In about a minute we were out of sight and safe across. Now, unless they had winded us, we stood a very good show to get a shot. Climbing up among the lava rocks we reached the top of the mesa and walked rapidly along in a parallel course with that of the cañon. After carefully scanning the stretch of valley and hillside, we found that they had not taken the alarm and scattered when we crossed the wind and were still in the cañon. There was a spring a little further down, and for this we bent our steps, rightly conjecturing that they were heading for water, for contrary to the habits of most big game, the antelope drink between 11 and 2 o'clock.

Cautiously advancing toward the edge of the cañon we surveyed every inch of the valley below us as it came into view. A few minutes of this kind of work showed us the bunch standing near the spring, and every one faced back the way they had just come from, sniffing the air and stamping suspiciously. The bucks had the hair of the neck all "roached" up the wrong way, and were moving about in a jerky, uneasy fashion, that said plainly enough they had scent'd us when we crossed the cañon, but did not know whether to run or not. They were so intent in watching the cañon that our flank move was a surprise and they knew nothing about our being above them until bang! went my Winchester, and they scattered like a bunch of sheep. I scored a clean miss at 15yds. By the time they bunched and got down to steady running Harry was on hand with his old Springfield, and sent an ounce ball into the middle of the herd, which had the effect of starting them a notch faster. I got to work with the repeater and started ounce balls after the flying bunch as fast as I could work the lever and shoot. About as fast and regularly as a clock can tick, I sent a ball out and the empty shell over my shoulder. The echoes roar and rattle among the rocky nooks of the cañon until the sound is like a volley of musketry. One buck goes down, shot through the back about the point of the hips, and still the Winchester cracks, barks and hisses as it sends its ounce balls chasing each other after the herd. Puffs and patches of dust burst up among the frightened animals as they go racing along down the cañon to windward and running so low they seem to skim the sage tops. As they turn the corner the repeater cracks a last time and a two-year-old buck turns a somersault, landing with the whole top of his head shot off. Ten shots have chased out of the rifle in about as many seconds, and two antelope lie in the valley. Harry goes for the team while I skin the prong-horns and let my rifle cool. The shadow of a buzzard crosses and recrosses the

valley as I work, and he waits, sailing overhead on stiffened pinions for his share when we are gone. The other antelope have gone long ago and the sun has traveled three-quarters of his trip when we load our meat in the wagon and skirt back across the brown grass country for the ranch, crushing the thick prickly pear into a slushy mass under the wheels every few feet. Sage hens rise in a heavy way as we jolt over the sage clumps, and an occasional rattlesnake or horned toad slips away among the cactus pads and boulders. Four more antelope are seen on the way in, but we have meat in plenty; we let them go until some other time; they will keep fresh longer that way than they will dead, and they won't go south yet for a while.

EL COMANCHO.

### IN A VIRGINIA GAME POCKET.

THE long-looked-for 16th of November at last arrived. We pulled in at C. an hour before sunset, and I had the pleasure of beholding the friendly face of Tom, who was in waiting with his buggy to convey me to his hospitable home. I was called early in the morning, and all was in readiness for the deer hunt, and it fell to my lot to occupy the "R" stand on the river. The party was composed of Tom, his father, Embra, Wirt and his nephew, Reginald, and myself. Several other neighbors were to engage also. Wirt was to start five miles west and to hunt toward the "R" stand. Others were also to hunt from other points and converge on the same stand on the Meherin River. I could hear dogs running at different times, but before noon all was quiet, no deer having come my way. In the afternoon I held the same stand, and had not been waiting long when I heard the dog; but it was so indistinct that I could not tell in what direction it was running, but soon found it was coming my way. My eyes were strained to their utmost to see the deer. My nerves tingled, though they were firm. My heart beat a lively tattoo. The dog was nearly in sight on the opposite hill. Just then the deer had doubled and the dog was soon out of hearing. This finished the first day, and I mentally consigned it with many more of the same kind to the past.

I went to bed early that night with the understanding that I would be called at 4 o'clock next morning. The last I remembered was how the wary deer could always have the luck to give me the slip, when I noticed a light, and looking up, there was the genial face of Embra. It was 4 o'clock and time for me to get up for breakfast. In a few minutes I was in the saddle, bound for my stand on the Gullies, southeast of Rocky Level, where W. had been running all of the day before. The deer had been running around and dodging from place to place like a cotton-tail, seeming to notice the dogs but very little, only to keep out of their way, a lot of them always up at the same time.

The big-hearted Tom and I arrived at the Gullies just after sunrise, I on a little knoll and Tom 80yds. to the north, the deer sometimes going to either side. Round about was a thick growth of old-field pines, except where the soil was gone. Barely were we seated and still when I heard the dogs coming; they approached very rapidly, and finally ran within 10ft. of me, I straining my eyes to the utmost. But no deer. After they had passed I looked, and sure enough there was the deer tracks, which had passed before we arrived—another opportunity for the deer to be numbered with the past.

After holding my position for near an hour, carefully looking west, I turned my eyes to the left and saw a doe come loping easily direct to me, about 100yds. off. Fearful that it might turn I did not move, in fact I hardly drew my breath, until the deer was within 20yds. of me, when I threw up my gun. But quick as I was it darted to the left through a clump of thick pines. The third jump left the flank to the fore shoulder exposed. In a space between two pines I pulled the trigger, and it tumbled in its tracks. I turned my gun to the next space for a second shot, but as the smoke cleared away I saw no chance for a second shot. I was a little surprised, for I had been told by Uncle Fuller not to be astonished if I could not hit a flock of barns if I was shut up in one of them. Indeed was it a tame affair.

I called to the genial Tom and told him a rabbit. He started to give me a reprimand, but on raising his head, saw the deer kicking. His face fairly beamed with satisfaction while he congratulated me for my successful shot. Nothing but seeing his kindly face would give an idea of how much satisfaction it gave him to see me bag my first deer. We took it to the branch near by and prepared it for shipment, for it was to be my first trophy ever shipped home. We were hardly seated on our stands again when I heard the dogs strike and come toward us rapidly.

When the dogs got in 400yds. I saw a large buck coming for me. My gun was to my shoulder when I whispered to T., who was sitting to my back, "Let's both fire at once." But this he flatly refused, saying he would not pull a trigger till I was through, and to be sure and kill him. The deer came on with an easy lope, but at 60yds. wheeled to the left. Before he sprung I fired and dropped him, but as he sprung to his feet I fired again, tumbling him once more, but he was quickly on his feet again with a broken leg. I told Tom to shoot and he fired two more shots, hitting him with both, which seemed enough to have killed anything, but he kept going. I had another cartridge in by this time and brought him down again. Both were large and in good condition, and the next express took the only two deer to my county that have been shipped in my time.

This was the little game pocket I had told brother Hough of while I was in the White City, but did not tell the location, as I wanted the pleasure of killing one before saying too much about it, but now if he wishes to enjoy some royal sport, if he will communicate with me I will gladly take him along and we will enjoy it together.

How is it the deer do not seem to be afraid of the dogs? The dogs, mostly hounds, go out in the morning and have a race almost daily, though they rarely run more than an hour or so, or to one of the rivers, where the chase generally ends. Most of the deer I have seen in front of dogs do not seem at all frightened. In one instance a buck made his bed within rifle shot of where I stopped for the night, with a hunter and four hounds.

The deer seem greatly on the increase, as the citizens say there are more there now than have ever been, though the dogs are running them whenever they choose. A number were killed the last season.

W. G. D.

WHITTLE'S DEPOT, VA.

## THE SKIN I DID NOT GET.

NEW YORK, March 19.—*Editor Forest and Stream:* Last autumn my friend Jack, who lives on the west slope of the Rocky Mountains, told me that he expected to kill a mountain lion or two during the winter, and intimated that he would send me a skin. A recent letter from him gives an account of the killing of the lion whose hide should be mine, and explains why I did not get it. When the beast was dead, all the fur had been knocked off the skin.

O. M.

I killed the other day a very fine lion which measures 7½ ft. from tip to tip.

I was out for marten when I came across the track of a mountain lion. It was snowing, and I followed it for some distance before the dog would notice it, but after a while the tracks freshened and the dog commenced to slow trail. At length I saw that we had jumped the game and told him to go on, while I followed along leisurely on the tracks of both.

In about fifteen minutes I heard the dog yip as though running something, and then heard what seemed a sharp growling as though they were fighting. Then the dog commenced to bay, and I knew that lion was my meat.

I ran through the deep snow for about half a mile and then slackened up, so as to get my wind before reaching the dog. When I got to within about forty paces of where he was dancing about in the snow, I looked up and saw the lion above him in a leaning tamarack tree. He was about 30 ft. from the ground and seemed to be amused at the gall of so small a dog. He was looking down, having one foreleg over a small limb. His tail was swaying gently from side to side, and altogether he seemed to be at home.

The lion watching the dog, saw him look on the back trail for me, and following his look saw me. This seemed to greatly astonish him, and he ran up the tree thirty or forty feet to a fork, poked his head out as far as he could and looked me squarely in the eye.

I had been running hard, my eyes were full of sweat and the gun sights clogged with snow, but I cut loose at the beast with my .40-82. There was scrambling among the dry limbs and the lion fell part way down, but caught around the tree and knocked off a lot of small dry branches. I kept pumping the lever and soon knocked him off the tree. As soon as he struck the ground the dog jumped him. There was a scramble, the lion squalled and spit, and I heard the dog howl. Then the lion came out of the scramble and went for another tree about twenty steps off, with the dog in hot pursuit. The lion ran up the tree about twenty feet and the dog stopped at the bottom, and I, running, sweating and yelling "sic," brought up the rear. I commenced to work the lever of the old gun again, and after about three wild shots I again knocked the lion out of the tree.

The dog seemed to get desperate, perhaps on account of such fine shooting, and when I got to him he had the lion by the hind quarters and the cat was making passes at him with the left paw. The right one I had shot off. I blazed away a couple of times more and let the dog shake until he was tired, but still there was a little life and fight in that lion. I now called off the dog and adjourned to a fallen tree, and let Father Time do the rest. For this I had very good reason, as I had used up all my ammunition and my fighting was over. The poor animal soon died, but he was game to the last. He died glaring at me and snapping his teeth. His skin measured 7½ ft. long, but I had knocked about all the fur and hair off of it.

I had shot him in the leg and shot him in the paw and had also cut off a slice of tail. Then there was one shot in the belly and another in the hams and some fur had been knocked off his under jaw. Still he had never squealed nor showed the white feather. He was certainly all wool and a yard wide.

JACK.

## KANSAS GAME INTERESTS.

From a declaration, "Where we Stand," printed in the programme of the Kansas State Sportsmen's Association Tournament, to be held at Topeka, June 12-14.

THE Kansas State Sportsmen's Association stands pledged, first of all, to the protection and preservation of game, and while it must be confessed that heretofore its efforts in that direction have not been conspicuous, has at last awakened to a sense of its duty in the matter, and will in future use its best energies and influence for the enactment of a proper game law and for its enforcement afterward, to the end that what remains of our once bountiful game supply may be preserved from entire extinction. The Association neither expects nor desires special or exclusive privileges for any class; on the contrary, it insists that every citizen should be allowed to share in the taking of game, subject always to proper legal restrictions.

The game laws of this State, as they stand upon the statute books to-day, are both unjust and ineffective, and its framers, in their effort to produce an act which would restrict all killing of game to persons who were owners of land, have extended to this privileged class such extensive rights that the game is left without any protection whatever, and is in much greater danger of extermination than it ever was under any previous laws, which have always been confessedly insufficient, even when enforced, as was rarely attempted.

It will hardly be claimed by those who secured the passage of the present law that they were animated solely by a desire to afford increased protection to our game. The law itself gives a flat denial to such an assertion; the proviso in section 1 of the act, that "No provisions of this act shall apply or interfere with persons who may have in their possession or raise for sale any birds as pets, or may at any time catch, kill or entrap any of the birds mentioned in this section on his or her own premises, controlled by such person for his or her own use," contains the animus of the entire act. Only owners of land may take game, but they may do so at any time of year and by whatever means they choose to employ. The man who owns no land may not shoot, even on invitation of the man who does, without violating the law, for this unique specimen of "class legislation" does not even allow a land owner to permit others to shoot upon his property, or rather it prevents a man from availing himself of such a permission. The law is a dead letter, as it ought to be in this regard, besides being void because unconstitutional; but its effects, equally pernicious, whether it be enforced or not, demand that it be replaced by an act which will afford protection to the game and at the same time extend to every citizen the right to take game

at proper seasons, provided he can obtain permission to enter upon private grounds to do so, as is necessary under section 2440, Revised Statutes 1889.

The one commendable feature of the existing law is the section which prevents the sale and shipment of game, and it is the duty of every friend of game protection to do his share toward preventing the repeal of this provision if it is ever attempted. Killing game for the market means the total wiping out of every species of edible game, because it enormously multiplies the number who kill, and invites the most destructive methods. It is impossible that the supply should increase while game has a commercial value, and thousands of persons who otherwise would never go afield at all, are permitted to kill for profit only. This class will not shoot if there is no market for what they kill, and when shooting is restricted to those who hunt for sport and not for the market, and who confine their killing to proper seasons, the question of game preservation will have been solved. The non-sale and non-shipment portion of the law is by far the most important feature in it, and should by all means be preserved.

A bill will be submitted to the Association at its annual meeting, at which time a full discussion will be invited. It would perhaps then be advisable to have a committee appointed to act upon the recommendations of the Association, and prepare and have printed a bill which should be widely circulated throughout the State—copies being placed in the hands of sportsmen in each county, and by them distributed among the people. Then at the next meeting of the Legislature the committee should use every means to have the bill become a law.

All members of the Association are requested to give the matter consideration, and be prepared at the annual meeting to intelligently discuss the entire question in order that any action taken may be well advised and for the best interests of the cause.

A few reasons why every shooter and every shooting organization in the State of Kansas should become members of the Kansas State Sportsmen's Association.

First—Proper legislation for the protection of game can only be secured by thorough organization, and it is only through the combined efforts of the friends of game protection in Kansas, working as a unit through a strong association, that the enactment of efficient game laws can be brought about.

Second—The enforcement of the law is of no less importance than the law itself, and once having secured the right kind of a game law, it becomes the duty of every game protectionist to assist in bringing to punishment every person who wilfully violates it. Our Association can, if its energies are properly directed, make the violation of the game law as odious a crime as hog stealing, and so mould public sentiment that "bootlegger" will be looked upon as a gentleman in comparison with the man who kills game out of season.

Third—To be effective the Association must be strong, and in numbers there is strength. There are enough friends of game protection in the State to make an organization powerful enough to carry out whatever plans it might adopt looking to the protection of game, but they must get together; the next section tells you how it may be done.

Fourth—For a club to join costs \$5 and for annual dues \$1. Every member of the club becomes a member of the State Association. For an individual, \$2.50 to join and annual dues fifty cents. Write for further information to Sec'y J. C. Clark, Topeka, Kan.

## AN ADIRONDACK BEAR CAPTURE.

A PARTY of three young men, well known in the business circles of Gloversville, had come to Lake Pleasant in the North Woods. An uninterrupted year of attention to business had given to each one such an appetite for the good things in store for them, that every opportunity was taken advantage of, and from first to last every pleasure was enjoyed with the keenest relish.

We put up with David Sturges, and George and I were spending the day at Elm Lake with Burr Sturges as guide. The only exciting incident of our fishing for two hours and a half was the taking of two fish at once by George, the largest of which was a 2 lbs. trout of exceptional beauty. About 11 o'clock Burr said he wanted to visit a bear trap he had set about a mile up the inlet, so, taking in our lines we started. At the head of the still water he left the boat, and very soon he called, "Come over here and bring the gun." Taking the rifle, we started through the thicket and soon came to the place where the trap had been set.

The trap was gone, and the bark knocked off a small tamarack showed where the clog had met the first obstruction. Then we lost the trail, but soon found it again; and here was the evidence of a terrible struggle—a little hollow, with an old top across it and a rotten log or two in the space, this hollow for a dozen feet each way literally torn up, the logs pulverized and the small trees chewed to splinters. Sturges said some big words and "guessed" he'd never see his trap again, for there lay all that was left of the clog. This had been a stick of green spruce about 3½ ft. long fastened at the end of the trap chain, but about a foot of the stick had been eaten off and the rest was covered with the prints of teeth and claws. A few rods further and the chain must have stopped the bear again, for here a little tree was entirely gnawed off about 3 ft. from the ground and there stood the splintered stub. Close by on the ground was the body of a dead cub, which had met its death in the frantic efforts of its mother to escape. As we stopped and looked at the havoc the beast had made, I thought of the bedlam of snarls and growls and scratching claws and snapping teeth there must have been when all that work was done. We soon lost the trail again, for with only the trap and chain to carry bruin could get on quite easily, the object of the clog being to catch on to trees and logs, and so prevent too rapid a retreat.

As soon as we lost the trail we separated, and first one and then the other would find marks showing where the animal had gone. So we kept on through brush and mire until the track led over a knoll and into a swamp, thick with alders, where we lost it again, and Sturges told us to wait while he crossed and found where the creature had gone out.

While we stood waiting in the thicket my companion said, "I hear something like the whine of a puppy." I listened but could not catch a sound, except the beating of my heart, which thumped away at a great rate, probably because we had come so fast. Soon Sturges

called and we went over. He had not found the trail, but asked us if we had heard any noise. George repeated what he had said to me, "Which way?" "That way." "That's right," said Sturges, "come on." In less than three minutes we found where she had come out of the swamp. She had been started probably by our voices, and here the track was plain, leading directly over a little hill. Before we reached the summit we all heard the rattle of the chain on the other side. Now the excitement of the chase was intense; it was a new experience to George and myself and we were all the more eager to be in at the death.

As we came to the top of the hill there lay below us a rather open slope of five or six rods, then a level space of as much more. Just at the top George seized Sturges' arm and whispered, "There she is; there she is." Sure enough, at the bottom of the slope was a monstrous bear and two cubs making for the swamp beyond. Down we rushed, like boys after a cat, and as we came near the cubs went up a tree. The bear was now in the edge of the swamp, and as soon as she missed her offspring she faced us and partly rose on her hind legs. Her eyes looked wicked, and she gave a savage growl, as much as to say, "If it wasn't for this trap I'd scatter your party in short order." But Sturges had the rifle at his shoulder; there was a sharp crack, and bruin fell in her tracks. We went over and were looking at her black coat, when suddenly instead of a dead bear we had a live one, and the way George and I got out of reach was very rapid but not surprising under the circumstances. Sturges made some lively motions in getting another cartridge in the gun, and this time a ball under the ear gave her the quietus.

We all took hold together and dragged her out to dry ground and Sturges began the process of skinning, while we lighted our pipes and talked how "Betsey and I killed the bear." In the meantime the cubs were at the top of a not very large hemlock, and I decided that I wanted one of the skins for a relic; so taking the rifle I stepped back a few rods, where I could see the head of one peeping round the trunk. I blazed away, but my nerve was not very steady and the ball did not even make the cub dodge; but the second shot was better and brought down the game fairly hit through the head. This gave George the bear fever, but he wanted his cub alive; so after much urging by Sturges and myself, he decided to climb the tree and try to get his young bear out. Slowly he toiled up, showing considerable agility as a climber, until he came near the cub, when the young bear started for him, and he, not caring for an encounter in the tree, came down much faster than he went up. When he got below the branches the cub came down tail first, and when nearly down George grabbed and held him against the tree, calling to Sturges to help him. By this time the old bear was skinned, so the guide came and took the cub and we soon started back for the boat. Arriving there we found that we could not get the cub home unless one of us held him all the way, so we let him go. He seemed tame enough then, and I stroked him on the back before he disappeared in the bushes.

We floated down to Elm Lake, landed and soon Sturges had a splendid trout dinner cooked. After dinner and a smoke we started down the Comjenuc, fishing by the way, and reached the hotel safely about sunset.

The bear skin, beautifully mounted, now lies in George's parlor; while the cub's skin, mounted on a white goat, is in my possession.

GLOVER.

## IMMODERATENESS.

*Editor Forest and Stream:*

Your desire to protect the game of this country from total extermination is most praiseworthy, and I wish to be one of the thousands to tender my aid and to wish you God speed in your effort. Every true sportsman is with you even though he may not approve of your means of accomplishing the end. "Stop the sale of game" would no doubt alleviate the distressing symptoms, but it would by no means cure the disease.

The measure proposed is extreme and all extremes are dangerous. Are you not afraid that the enactment of such a law (if it could be done) would bring about such a violent reaction as to sweep game and game laws alike from the face of this country? A demand for game exists and the people have a right to a reasonable supply. The market-shooter is a very convenient man on which to wipe our muddy boots, but is he really responsible for the gradual extermination of the game? Now Mr. Editor, think a moment before you say yes. I do not wish to defend the market-shooter, he kills game because that is the easiest way for him to support himself and family. A small percentage of the game shot by these men goes to waste, but a market-shooter never shoots game when he knows that he cannot make use of it. Now, can we say as much for the fraternity collectively classed as sportsmen? Is it not a fact that a goodly percentage of this latter class shoot anything which dares rise in front of them and continue to slaughter just as long as game and ammunition hold out, regardless of what becomes of the game so killed? It is against these pirates of land and sea that war should be declared and systematically prosecuted; their extermination would mean preservation of game, yes, even more, it would rid the fraternity of sportsmen of a decidedly objectionable class. During the last nineteen years I have hunted in a good many places including New Brunswick, Nova Scotia and a majority of the States this side of the Rockies, and have met with the market-shooter and the game hog, and of the two please give me the market-shooter.

Let me mention just a few of the many instances of wanton slaughter of game which have come to my notice. Two years ago two New York sportsmen went to Long Island and returned after one week's stay with enough ducks (spoiled and in good condition), to supply the inhabitants of their ward for a month. Another brother went to the Adirondacks and shot six does, used a small portion of the meat and the hides and left the rest to rot. Fortunately, this hog was caught and paid the usual fine. Spruce partridges are very plentiful in some parts of Nova Scotia, and a certain person from New Glasgow goes there nearly every year for a wagon load full—some keep till he gets home, but more of them spoil. It is the same way in fishing, and I could relate a good many stories to the credit of so-called sportsmen.

Restrict the sale of game to one month or two months of the open season, run down and kill the game hog wherever you find him, and weather permitting, the game of our country will not grow less but will increase from year to year.

G.

STOP THE SALE OF GAME.

A PLATFORM PLANK.—The sale of game should be forbidden at all times.—FOREST AND STREAM, Feb. 10.

Editor Forest and Stream:

I am thoroughly in accord with those who have declared in favor of stopping the sale of game at all times. The time must come when the supply of game in this country will be entirely exhausted, unless such a law as proposed by FOREST AND STREAM is passed and made effectual. Like "Bushwhacker," I am a poor man, tied down by an occupation that does not let up on me except for a few days each year. In this locality those who shoot for the market are dubbed "pot-hunters;" well, let the name be what it may, the market-shooter is the man we are after. I am surprised that any one should take up the subject in defense of this class of shooters. All "sportsmen" belonging to this species that it has been my misfortune to run across have been heavily loaded with the "instinct" to kill for the price, with an elastic conscience regarding the manner of capture, to say nothing of his faculty for not discerning between open and closed seasons. The people must decide whether they in the future retain the market-shooter and no game, or have a fair amount of the latter and none of the former. Which is best, and will prove the most beneficial to a large majority of the people is a question with but one answer. Without this protection thousands throughout this land see the time rapidly approaching when they will be deprived of that grandest of all recreation, a tramp through forest and field with the gun. We must have that plank! A. M. SOUDDER.

LOS ANGELES, Cal.—At a meeting held here in April by the sportsmen of this city and vicinity to elect delegates to the State Sportsmen's convention, held at San Francisco, the delegates were recommended to endeavor to have a law passed prohibiting the shooting of quail for market for the period of two years. So you see we are coming around to it, and let us hope that if such a law is passed, by the end of the two years a law prohibiting the sale of game at all seasons will be passed. But even a two years' respite will do an immense amount of good. A prominent game dealer of this city states that in one season he had handled 162,000 dozen (1,944,000) quail alone, not to mention the ducks, Wilson snipe, etc., and he is only one of many. Such slaughter is an outrage. We would protect our fast-vanishing game much better if we should allow shooting for pleasure alone at all seasons, provided that the ruinous market-shooting be stopped. CULPEPPER.

Editor Forest and Stream:

We have here as fine a ruffed grouse country as in the United States, but the hunting for market has done its work. We have one or more men who hunt in this county from July 4 until Jan. 1; and dozens hunt from Oct. 1 until Jan. 1, all for market. Several thousand were shipped from East Stroudsburg and Analomink, besides deer and other game last season. There are one hundred sportsmen in this county who would hold up both hands for a bill to prohibit the sale of game. We must hammer away at it until we get such a law. Let every sportsman see the representative of his own county in the State, and I think we can accomplish it. RESICA, PA.

A Lost Opportunity.

LATE in the afternoon of a day in last November, while I was walking past a swampy piece of land with a pond in the middle of it, on my way to the village to get the day's mail, I was surprised to see a single large mallard drake swimming on the surface of the water. I turned and made tracks for the house to get my gun and returned to find that the drake had not flown away, but was at the other end of the pond, tranquilly preening his feathers, all unconscious of the trouble in store for him. He was quite a distance off for a shot, but not realizing the toughness of an old mallard drake, I drew a bead on him and fired just as he rose from the water, the shot cutting off some feathers, but apparently not injuring him otherwise. Then I suddenly remembered that the cartridges in the gun were loaded with a light charge of powder and fine bird shot, and I hastily opened the gun and threw out the empty shell, with the intention of substituting one loaded with a heavier charge of powder and larger shot. The loaded shell went in the breech half-way, and then, much to my astonishment, it stuck there! I pushed on it with all my strength, but only succeeded in wedging it in more firmly. The drake was slow in getting "started," being heavy and fat, and I thought that if I could get the defective shell out of the gun and substitute another, I would still have time to shoot him, so I tried my best to pull it out, but it was wedged in so firmly that it would budge neither one way nor the other. What a dilemma I was in! There I stood with my gun in my hands, that splendid mallard offering a tempting shot, and I powerless to even close my gun! Perhaps I was a trifle angry, but I guess you will forgive me that, for what gunner has not been in a predicament similar to this one? The incident taught me a lesson—never to use a poor crimp which mutilates the edge of a shell, and always to have my shell-extractor handy—not in the depths of my trouser's pocket, in company with forty other odds and ends. TYRO.

California Game Seasons.

LOS ANGELES, Cal.—Editor Forest and Stream: California is too large a State to be governed by one general game law, for a law which would effectually protect the game in the extreme northern districts might compass its entire destruction in the southern counties. For instance: The State Sportsmen's Convention, after a good deal of discussion, finally decided to endeavor to have a general State law passed making the open season on quail and doves from Aug. 1 to Feb. 15. Now the quail in this county are running around in August with pieces of the shell still adhering to their backs, and any law which would allow them to be shot during that month would in a very short time cause their extermination. But perhaps some of the would-be sportsmen could never get any quail, unless they were allowed to shoot at the chicks, and so are in favor of the above law. Even as late as the middle of September the great majority of the quail are far too small to be shot, and what folly it is to make the dove and quail law one and the same, for right now, at this date, the doves have nested

and are hatching their eggs, while the quail have not entirely paired off as yet. The only dove shooting we have here is in July and August, as later in the season the birds flock up and render a fair bag an impossibility. California changes her game laws about once a year on an average, and each succeeding time makes a worse mess of it than before. But, after all, they are a perfect farce, for until recently no one ever thought of enforcing them. I well remember that ten days after the season of 1892-3 closed, I saw several bunches of Wilson snipe hanging up in open market. Fortunately things are changing, for the other day Simon Maier, wholesale and retail butcher, got himself into the toils of the law for having sold and offered for sale Texas deer, in direct disobedience of the law. CULPEPPER.

A New Gun Barrel Material.

Editor Forest and Stream:

Krupp, the German "cannon king", has invented a new process for manufacturing a steel especially suited for gun barrels. Owing to its superior quality this new steel is rapidly finding favor with the German sportsmen, particularly those who employ nitro powders. In order to enable the American shooting fraternity to judge for themselves the merits of this "German special steel," as it is called, I shall simply quote the figures from the official report pertaining to a series of comparative trials carried out with this steel and other gun barrel materials. In the following table the columns show:

A—Ductility limit of load in kilograms (1 K.=2,204.737 lbs.) per square millimeter (or 0.03937 in.).	B—Breaking limit of load, the same.	C—Dilation prior to fracture, in per cent. of original length.	D—Internal pressure in the moment of cracking of barrel, expressed in total atmospheres.	E—Internal pressure for equal thickness of walls in kilograms per square millimeter.	
Belgian Bernard damascus .....	27.3	39.5	1.3	403	35.5
Belgian horseshoe nail .....	35.3	39.8	1.9	378	39.1
English Crollé damascus .....	25.3	28.9	1.7	343	32.1
English Siemens steel .....	41.1	61.6	10.9	584	55.5
English Whitworth steel .....	40.8	61.3	10.1	527	47.0
German special steel .....	72.5	91.3	8.1	1240	87.0

Testing the resistance of the several gun barrel materials to gas pressure: Bernard Damascus bulged with a load of 231.497385grs. of black powder and 1,111.187448grs. of shot; it burst with a load of 231.497385grs. of powder and 1,605.049536grs. of shot. Horseshoe nail Damascus bulged with 231.497385grs. of powder and 987.72316grs. of shot; it burst with 231.497385grs. of powder and 1,419.850628grs. of shot. English Crollé Damascus bulged with 231.497385grs. of powder and 1,296.385356grs. of shot; it burst with 231.497385grs. of powder and 1,605.049536grs. of shot. Siemens steel bulged with 231.497385grs. of powder and 1,419.850628grs. of shot; it burst with 231.497385grs. of powder and 2,407.572804grs. of shot. Whitworth steel bulged with 231.497385grs. of powder and 1,543.315900grs. of shot; it burst with 231.497385grs. of powder and 2,033.476465grs. of shot. German special steel, same thickness of walls as the former, bulged with 293.230021grs. of powder and 7,870.911090grs. of shot; it burst with 432.128452grs. of powder and 12,840.417288grs. of shot. The powder column of the last-named load measured in the gun barrel 4½ in., that of the shot 19 in. in a 16-bore gun. ARMIN TENNER.

Pheasants for Stocking.

AT a recent meeting of the executive committee of the Genesee Valley Fish and Bird Protective and Propagating Association, of Rochester, N. Y., it was decided to secure some pheasants for introduction in Monroe and Livingston counties. The kind thought to be best adapted for this climate is a cross between the English pheasant (*Phasianus colchicus*) and Mongolian ring-necked pheasant (*Phasianus torquatus*). An order has already been placed at the pheasantries for birds and eggs, and as soon as enough enthusiasm has been shown among local sportsmen to pass in contributions, a larger order will be sent; adult birds can be had in July at \$225 per hundred. It is intended to distribute them among farmers who are willing to protect and care for them. They are hardy and prolific, and if given a chance will increase rapidly. Efficient laws will be enacted to protect them for three years at least. This is only a beginning in what the Association proposes if it receives the right kind of encouragement and support. The covers need replenishing and it is thought the pheasant will fill the bill. The John F. Weiler Gun Club, of Allentown, Pa., has completed arrangements with Mr. Wells for one thousand young English pheasants with which to stock the woods in this neighborhood.

Dogs and Cougars.

SANTA FE, N. M., May 16.—Editor Forest and Stream: My friend Henry Windsor, a cattleman up on the headwaters of that beautiful trout stream, the Pecos, had quite an experience with mountain lions (cougars), that seems good enough to give to the readers of FOREST AND STREAM. The lions had been giving the ranchers in that vicinity a great deal of trouble, killing stock, principally colts, which they seem to have a special fondness for. Henry was in town and took a fancy to my hounds, which are a very large strain of foxhounds, full of courage and fight. I donated him a pair of my best old fighters, that had a record of good work on coyotes. He was greatly pleased with them and said he would take them out and show them a lion trail soon. However, the lions did not wait for that but before the dogs had been on the ranch more than two or three days Henry heard a "racket" just dusk in the evening, and looking out in the corral, saw the hounds and a nice frisky lion having a very lively fight. He caught up his Winchester and rushed out, but for several seconds (minutes Henry thought), he was unable to get in a shot on account of lion and dog being so badly mixed up. Finally the lion, which was a medium-sized female, concluded that that was not the game she was looking for, wrenched away from the dogs and bounded back a few feet, and, of course, got a bullet that put the quietus on her. Just as she jumped back her mate, a good-sized old male, jumped over the corral fence, and without any hesitation the dogs flew at him, but before the fight got under good

headway another bullet laid him out. The dogs were rather badly scratched up but not seriously injured in the fight, and the next day Henry took them out, put them on a lion trail where there had been a cow killed, and in less than half an hour they put another large fellow up a tree, to be shot by Henry. I think that is a pretty good record, three lions in two days, and I really consider the work of the hounds in the fight about the best I ever knew of. I was surprised to find in that section, the headwaters of the Pecos, at an altitude of 8,000 to 12,000ft., that there are a great many white-tail deer. I had always considered them more a lowland than mountain animal. There are also a few bighorns in the same locality. [Speaking of "cactus deer," there are some very peculiar freaks killed in that line. I suppose they are a freak as they seem to be a true mule deer except the horns, and some of these are a sight. My friend Judge Sloan has a fine specimen finely mounted, in his office. It was killed several years ago in the southern part of the Territory, and is a good-sized specimen of the mule deer except the antlers, and they are as irregular as a bunch of cactus, and really resemble it very much. H. B. HERSEY.

Game in Colorado.

BERTHOUD, Colo., May 15.—Near my Morgan, Colorado, ranch we still have quite a number of antelope. I saw 40 one day last week. Coyotes, gray wolves and rattlesnakes are entirely too plenty; and there are jack rabbits by the thousand. Up here where I live, near the foothills, geese and ducks were very plentiful the past fall and spring, more so than for several years. Denver sportsmen are leasing the small lakes for the shooting privileges. Black-tail deer are still quite abundant in the foothills; but as the hills are here quite rough and the open season short, very few have been killed for the past two years. Trout fishing is not as good as it was a few years ago; but I expect to try my split-bamboo as usual in July. We can get all we want to eat while in camp, and have a grand good time any way. I expect to take an antelope hunt at my ranch in the fall and will report my luck to FOREST AND STREAM. A. A. K.

Wild Turkeys.

AVOCA, N. C., May 16.—I never saw as many wild turkeys at this season of the year as at present. They are nesting not a mile from my house, and the dry May has been very good for them. The crop of wild strawberries is very abundant, and the young turkeys are living on them; and the old ones are pulling up my corn all around the woods. Tracks all about in the fields. Next spring sport ought to be fine. Birds are having same good luck, great many pair all over the plantation. No young birds yet. W. R. CAPEHART.

The Editor is Grateful.

From the Berthoud (Colo.) Bulletin. When it comes to killing geese, Al Hawkins takes the pastry by a large majority. On Wednesday, in company with Charley and Jim Golden, of Longmont, sixteen geese and nine ducks were bagged, Al killing ten of the geese. This makes a total of thirty-nine geese he has killed since the season begun, besides countless ducks, jack rabbits, etc. The entire Bulletin force and family will regale themselves on roast goose to-day—a result of Al's generosity. Many thanks.

Sea and River Fishing.

MULLET TAKEN WITH BAIT.

VICTORIA, Tex., May 20.—This morning, in looking over an old copy of FOREST AND STREAM dated Nov. 18, 1886, I came across an article by "Nessmuk," of sainted memory, in which occurs the following passage, to which I wish to add my testimony: "I could buy a fat 'buck' mullet for a nickel, and as he was about the best fish on the coast, and would afford two ample meals, it seemed a waste of time and muscle to paddle three or four miles on a hot morning to catch one or two sea trout or channel bass, when the mullet was much the better fish." As I have been a constant reader of FOREST AND STREAM for fifteen years, I have no doubt that I read the foregoing at the time it was printed, but if so I had forgotten it when about four years ago I first attempted to eat mullet. My son Jack and I were out for a couple of days' fishing for bass on a fresh water bayou between this place and the Gulf Coast. The bayou contained a great many mullet that had evidently made their way up the Guadalupe River during a heavy rise, and having gotten into this bayou, the receding waters had left them landlocked. Their surroundings had apparently proven congenial, as they had grown very large and fat, and had acquired a new characteristic, that of "biting," a thing they very seldom if ever do in salt water. During the morning, while fly-fishing for bass, the mullet had several times made a game rush at my tail fly, a scarlet-ibis, but as they had never taken hold I thought it was merely bluff, and had no idea that they would bite at any sort of bait. My boy had started out in the morning with a light rod and tackle and worms to fish for "perch," as the different species of fresh-water sunfish are universally called in this State. Later in the day I found him on a bridge over the stream, and just as I came in sight saw him pull some kind of a large fish, struggling and kicking, to the floor of the bridge, and on approaching closer discovered to my surprise that it was a mullet. He had three or four of them, together with half a hundred or more "perch" on the bridge, and according to his own statement, had been having a "hog killin'" time. He inquired if the mullet were good to eat, and was considerably disappointed when I expressed the opinion that they were not. As the bass had quit rising I took the fish back to camp, put them in the icebox, and procuring a light bait-rod repaired to the bridge for the more plebeian bait-fishing for what "Old Knots" would have called "them minners." We caught several more mullet before dinner time and Jack insisted on saving and taking them back to town, arguing that there were plenty of darters that would be glad to get them if we were not. While he was cleaning them I noticed that they were very plump and fat, and that their flesh was beautifully white and firm, and being naturally of an investigating turn of mind, concluded to cook a couple of them as an experiment to see how they would "eat." They were turned out of the frying-pan nicely browned and crisp, together with several sunfish and bass, and established their superiority at once by their appearance, which was confirmed by tasting, they

proving so much better in every way than the other fish that the latter, in the language of the present day, were "not in it" at all.

Since that day I have caught many hundreds of them and they have never failed to sustain the favorable impression then created. In talking on the subject with anglers and others I invariably maintain that the mullet of the Gulf coast, after sojourning for a proper time in fresh water, is superior in edible qualities to any freshwater fish in the State. Some who have had experiences similar to mine agree with me, others who have never tested the truth of the statement usually take on a look of incredulity, much as I imagine I would have done before I had the opportunity of proving it to my own satisfaction.

These fish, so far as my observation goes, do not breed when they become landlocked in fresh water, but grow much more rapidly than in salt water. When first discovered in the bayou referred to in this article they were from 6 to 8 in. in length, and in the course of three or four years they grew to 18 or 20 in. and attained a weight of 3 or 4 lbs. They also lost the dark markings or stripes peculiar to the fish in salt water and became a beautiful silvery white. After they began to take the hook they were all caught out of the bayou in about three seasons, and as there has not been an overflow of the river since there are none there now. GUADALUPE.

## ON THE NORTH SHORE OF LAKE SUPERIOR.

(Continued from Page 468.)

The next morning was so inopportune, indicating rain, that we concluded to abandon our cruise to Sand River. We remained in camp the entire morning, and during that time made several trips to the rocks in our immediate front, and though Ned and I both worked like galley slaves, only succeeded in capturing one two-pounder, which fell to my jungle-cock.

In the afternoon we took the boat and skirted westward along the shore. The sky was still overcast with leaden clouds, and the lake was somewhat roughened by an easterly wind, though we were in a lee that completely protected us. This place last year gave us ample sport, and if the red-handed pot-hunters had not gill-netted every trout this season I was positive we would secure at least a respectable number.

Ned, who was in the bow this time, drew first blood by the capture of a pound trout, while I soon followed with one a half a pound heavier. Coming to some grand rocks, the base of a towering mountain with its numerous spurs clothed in somber pines and spreading cedars, I was fortunate enough to here secure a coveted prize in a three-pound *Salvelinus*, richly-spangled in mottled dyes, a very dude, doubtless, of which his race so generously abounds. Ned was working hard at both the leeward and windward sides of the boat, as if determined to go over every inch of the ground before I could reach it from the stern. As we alternated in these positions, the bow being considered the most favorable position, it was on a basis of perfect equity, as the accounts balanced in the end. Sometimes the bow was not so desirable, particularly when plunging through heavy seas with the wind in your teeth. Then your flies were oftener at the tip of the oar blades than elsewhere. But no matter what the conditions of the elements we had to take our duly assigned positions as per arrangement.

At last Ned aroused a magnificent trout, but, sad to relate, he squarely missed him. It was a deep dis-appointment and his face clearly expressed it. Again he drops his lures, but he came not. Once more he tries and this time fortune favors him, for he sank the cruel steel well home in the toughened jaw of the wolfish biter.

"Ah, ha, I fooled you that time," came from the exultant angler.

"Be careful you are not fooled in return."

"He is well hooked, I am positive, but I'll watch him all the same."

"All right, now kill him like an angler true."

Ned needed no advice on that subject, for he always handled his fish in a very skillful manner, ever patient and watchful and never hurrying to a final. He was really much more careful than I, for I occasionally loved to force the fighting to a rapid conclusion, getting nettled sometimes at the stubbornness of the victim in hauling down his colors when I thought he was sufficiently defeated. I well knew my fault in this matter, but when I was fast to a prize of unusual weight I endeavored to exercise the utmost patience and vigilance, for I was always deeply chagrined when I lost one of such noble proportions.

After a gallant struggle the lucky angler had the pleasure of seeing his hard-earned trophy reposing in the bottom of the boat. Put to the scales the indicator registered it at 3½ lbs. This caused a sunny radiance to overspread his face, and well it might, for it was a match to the peerless beauty I had caught a few days before and was a prize to be duly proud of.

A short distance ahead, where some tiny rivulet was dropping its beaded waters over the ragged face of a rocky bluff into the lake below, was a charming isolation behind a riven rock, the very place for the lair of a hermit trout. Ned being ahead of me, dropped his flies into this lovely retreat, and was rewarded with a vicious rise. Being a little late with the wizard movement of the wrist he failed to pierce with his needle-like lance of arched steel. Repeated casting from the disappointed angler did no good, for the inquisitive trout had discovered the counterfeit and was not to be coaxed again. He knew every color on the fly, had felt its feathers as it passed between his jaws and had fully ascertained there was no dainty morsel in it for him to masticate.

As my flies were the very opposite of Ned's in color, I felt highly encouraged as I reached the spot, and with cherished hope let my lures drop around the edge of the detached rock, and lo! there was a sudden tumult in the waters as if a skyrocket had there exploded, and then a delicious rhythm from the revolving reel rang out upon the air that was music most entrancing. The savage trout instantly developed as a fierce fighter and gave me a battle that I dearly enjoyed. The cold steel had done its work handsomely and ere long I had the stubborn vitality drawn out of him and then had him on such terms of intimacy as to ascertain his weight to be 2½ lbs., to say nothing of the fractions that made generous gravity.

Ned was a bit surprised at my capture, but it was simply the introduction of other lures that did it, exemplifying

the favoring influence of an occasional change in flies. I tried for another warrior of the aureate hues, but it was futile, for nothing came from the feathery flies.

It was push along once more by rocky ramparts of stern rigidity, which possessed a decidedly singular fascination in their scarred surfaces and their forest-crowned tops. Solitude was here supreme, and so smooth the rocky bottom, that we began to think it also had possession of the waters, for it did not look as if it were tentanted with a single trout, and after we had flogged it till we struck a change in the rocky formation were sure of it.

The grounds now began to look more trouty, for rocks in all manner of strange confusion, with chasms and ledges abounded without end. Ned was the first to boat a pounder, and then I followed with one about the same size in a lovely sheen of scarlet and silver.

It being evident that we had fish enough for the camp, the return was suggested and made without another cast, though we were strangely tempted as we went by favorite grounds to try another beguilement of the graceful innocents of the ravishing tints. Eager for camp and a good square meal, the half-breeds put their strength into the oar blades and sent us along with a delightful swiftness that tumbled the water from the prow into a caress of tinkling joy.

We reached our quarters under a very sullen sky, ominous indeed for the morrow's sport, but as Lake Superior is as capricious in her moods as the lovely trout she harbors in her icy bosom, a forecast is as often a failure as a success. All being ravenously hungry, on landing we gave our *chef a carte blanche* order for the supper, and his response developed the choicest in our larder.

"A table of celestial food divine,  
Ambrosial fruit, fetched from the tree of life;  
And from the fount of life ambrosial drink."

After the repast we sought an open glade and drank in the picturesque beauty of the wild mountain scenery which was spread before us in boundless extent of infinite grandeur.

"An Eden haunt, a charming fairy grot,  
The angler's home in Nature's fairest spot;  
Where peace, like some wing-wearied bird, drops down,  
Folds her white pinions o'er her breast of brown."

"The evening sky is flecked with gold,  
As slow the setting sun declines;  
The western cloud's transparent fold  
With a surpassing radiance shines."

"And as the deepening shadows sweep  
Athwart the glimmering landscape's breast,  
And o'er the purpled mountains creep,  
The soft air, drowsy, sinks to rest."

"How clear this icy lake, in whose depths  
The gold and silver fishes glide!  
So clear, I count the pink-hued shells  
That pave the cool, transparent tide."

Here, where the mountain ranges are older than Thebes or Baalbec and higher than the Pyramids, the goddess of health has her silent home; here her grand palace and her stately throne; here the sweetest dews are distilled, here the pure air is drawn from the realms of ether, here the most wholesome of waters and an atmosphere laden with life-giving properties that impart new luster to the eye, tone to the languid pulse and vigor to the wasted frame. No wonder, then, that the patient angler returns from these exhilarating regions as if he had taken a new lease on life.

Our admiration of the grand, towering scenery, which was in a hush of sweet and silent repose, was disturbed by Ned leaping from his chair, with fiery maledictions upon the entire insectivorous family who feast upon human gore, and making rapid time for the fly repellent. I also felt their warm attachment, and followed in the footsteps of my aggravated and tormented partner. After a copious ablution with the diluted vitriol and other ingredients which composed the fluid, and which the "cussed" tribe so dreaded, we changed our base to the rocks in front, which were entirely free from the blood-sucking marauders.

Here we found our half-breeds comfortably seated with their backs snug against a lofty shaft of granite that sheltered them from the evening breeze. They were quietly smoking and gazing vacantly at the wild expanse of sea which was beating the shore unceasingly and then falling back with clutching snarl o'er the detached masses of rock in ample confusion on all sides. Peter, who had been anxious for a move up the lake to Point Brulee, thought this a favorable opportunity to open the subject, so he descended liberally relative to its not only being a magnificent rendezvous for big trout, but a capital place for camping. He stated that he had been to the point twice with other parties and that they had had very fine sport there, and were especially delighted with the location, which was exceedingly picturesque. I was as anxious as Peter for the change, but Ned, not being tired yet of our present quarters, was not inclined that way. I, however, refrained just then from insisting on the trip, but concluded to gently harp on the subject at the proper time until I had brought him around to favor the move. True, we were having only moderate success here, but we always had trout enough for the table at each meal, and very frequently a surplus; but this was never wasted, for the boys always disposed of it to Indians passing or stopping near by.

I was very much interested while we remained on the rocks with Kenosh's account of a trip that he made to Hudson's Bay last fall with Judge Steere and a Mr. Ferry, of the "Soo." He said it was one of much toil and hardship, and that it was made principally by rivers in canoes, though they had plenty of tiresome tramping and much carrying to do. They had expected to find some fine trouting streams *en route*, but in this were greatly disappointed. Ducks and wild geese in migration were abundant, a few of which, when opportunity offered, they shot. It was really more of a time-table trip than aught else, for it was every day an early breakfast, and then quick time and forward march. Returning, they very often had to break the ice in the rivers with a long pole for passage of their canoes. It was slow and hard work, but it had to be done in order to make any headway at all, as the overland trip was out of the question, and if attempted would have taken twice as long.

The scenery along the route was not of a grand and picturesque character, though occasionally they would have

views of magnificent mountain ranges in which nature had shown a lavish hand. It being the fall of the year everything was shrouded in sombre shadows. Sunshine days were rare indeed, but when they did come were appreciated like smiles from a beauty's lips. I had a long and interesting talk with Judge Steere about the trip after my return to the "Soo," but he exhibited no enthusiasm over the country. It was really a disappointment to them, but profitable in the intelligence they gleaned of the wild and untrodden forests and the far away home of the savage trapper.

After returning to camp we were very forcibly reminded that as the twilight deepened it indicated an ill-boding harbinger for the morrow. Solemn and stately the great hills with their pinnacles shrouded in the lowering clouds inclose us with their aspect of eternal melancholy calm; from the deep ravines a white mist is slowly arising; in the darkened woods a sigh of lament is winding through the bending branches; fireflies in countless numbers usurp the brilliant offices of the obscured stars, while along the ironbound shore the waves are deeply moaning as if in direful warning. I was positive on retiring that we would hear Old Boreas storming our fortifications with a hurricane savageness when we awoke in the morning; but having grown accustomed to his wild vagaries, we little thought of what the dawn would bring, be it storm or calm. ALEX. STARBUCK.

[TO BE CONTINUED.]

## ANGLING NOTES.

### Fish Reports.

For a few days past I have been so deluged with reports of fish and fishing that it would seem as though a fish epidemic had broken out in this section. The first symptom manifested itself when there was a ring at my door and a boy was shown in to see me, with a paper parcel in his hand containing a trout. The trout was 12½ in. long and the boy was about 3½ ft. high. He was 10 years old and his name was Sylvester Falmer. He was a little disappointed that it was not one of the brown trout which had been planted in the brook where he had fished, but, all the same, he was proud that he had caught a native brook trout weighing nearly a pound. The trout are not yet in good condition, and the boy's trout was quite thin.

Later, the same evening, Mr. A. K. Pike gave me the outline on paper of a yellow perch which he caught the day before, May 11, in Dunham's Bay Creek, Lake George. The fish was 14 in. long and weighed 2½ lbs., making it the largest perch on record from Lake George or its tributaries, and a very large perch for any water in these days. Last year Dr. Edward Eggleston told me that he caught a yellow perch at the mouth of Dunham's Bay Creek which weighed 1½ lbs., and at the time it was considered a most unusual capture.

The next report to come to me was also from Lake George, and it told of the capture of a "lake trout with black spots," and my informant, who got a description of the fish from the captor, was quite sure that it was a landlocked salmon. The fish weighed 7½ lbs., and the fisherman who caught it said it was unlike any fish he had ever seen in the lake. The only salmon planted in Lake George or its tributaries I planted in 1887 and in 1890. Both plants were of fry from the U. S. Fish Commission. Of course I cannot say that the fish was not a landlocked salmon, and much as I wish that it may have been, I have serious doubts about it, for reasons too long to explain here at this time.

The next report filled me with joy. Saturday evening, May 13, a boy exhibited in several stores in Glens Falls a brown trout 18 in. long which he caught in the river above the falls at a "sorting place," *i. e.*, a place where saw logs are sorted to separate those belonging to different owners. One of the rivermen who was on the platform when the boy caught the trout knew of similar fish having been taken in the river on other occasions, and after following several leads this is what I got:

Mr. W. A. Sherman, of the Sherman Line Company, told me that about May 1 a man caught a brown trout in the Hudson near the Sherman Lime Kilns which weighed 2½ lbs., and this caused him to investigate the matter of the appearance of a new trout in the river from which the native trout disappeared long years ago. The brown trout have been taken in the Hudson for two or three years, the greater number having been taken at or near the mouth of Clendon Brook. A few men who discovered that the trout were in the river have fished persistently for them and at the same time have tried to keep the matter a secret. The two-pound trout caught May 1 was caught below the falls at Glens Falls at a point about three miles below the mouth of Clendon Brook. All the trout taken have been of good size, weighing from ½ to about 3 lbs.

Now, as to how the brown trout got in the river. In 1886 Mr. Eugene G. Blackford, then president of the New York Fish Commission, sent me 8,000 brown trout fry from a lot of eggs sent to him by Dr. von Behr, from Germany. I planted them in the Clendon Brook, and from the day they were planted until a few days ago I have heard nothing of them in any way. I have fished the brook and examined and cross-examined every man whom to my knowledge has fished it, and finally came to the conclusion that the plant was a failure. In 1887, at the request of Mr. C. E. Durkee, superintendent of the Adirondack R.R., I procured 5,000 brown trout fry from the U. S. Fish Commission, and they were planted in Wolf Creek, a stream which flows into the Hudson just above Luzerne. Those are the only plants of brown trout fry made in the Hudson, or its tributaries, so far as I know, and if there had been others I think I would have known about it. A sufficient number of brown trout have been taken in the Hudson to demonstrate that the upper portion of the stream may be a suitable habitat for their species, and under the circumstances it is well worth while to continue planting them. That they do not stay in the small trout brooks is quite clear, and in the river it cannot be urged against them that they will eat the native trout of slower growth. It is true that there are still a few of the native brook trout in the river from the Glen northward, but they are becoming more and more scarce every year, and if the brown trout can replace them why not give them the opportunity?

### Hudson River Salmon in Market.

A New York newspaper in announcing the arrival of the first North River salmon in market on April 28, adds that for over fifteen years these fish were unknown in market.

All the Hudson River salmon that have found their way to market have come from fry planted in the river since 1882, unless there were a few taken before that as the result of a small plant of fry (47,500) made in the Battenkill River in Vermont, a tributary of the Hudson, in 1875, a plant of 30,000 made in the Hudson in 1873, or a plant of 20,000 in the Mohawk, at Rome, in 1875. But that is not the point, for the same paper says that last year over 250 Hudson River salmon were sold in market, and a proportional increase (over the fifty sold the year previous) is looked for this year. Pleasant as it may be to record salmon in market from the Hudson, every salmon taken in the Hudson, or from that portion of it controlled by New York, is taken illegally. New Jersey has done nothing toward stocking the river with salmon, and resists all appeals to protect them from the netters until the stream can be made self-supporting.

#### Salmon from Lake Champlain.

In conversation with Mr. E. S. Sweet, I learned that salmon had been taken near Plattsburgh, N. Y. Mr. Sweet was then on his way from New York to Plattsburgh and promised me particulars in regard to the fish, which he furnished soon after. In 1892 two salmon were killed at the mouth of the Saranac River, under the railroad bridge, and at least 10 or 12 other adult salmon were seen in the Saranac River just below a dam, but the people interfered to prevent their being killed. Mr. Sweet tells me that it is believed that the salmon strayed from the St. Lawrence and came up the Richelieu River to the place where they were killed and seen.

This explanation will not hold water, and I have a much better one. In 1886, 50,000 salmon fry were taken from Cold Spring Harbor, Long Island, by Mr. Walters, the superintendent of the Adirondack hatchery, and planted, a portion of them, in the headwaters of the Saranac River, and in all probability it was some of these fish, having been to sea, that were seen trying to get back to the place where they spent their infancy. But the plant of 1886 was not the first of salmon fry made in the Saranac. In 1875 Livingston Stone hatched a lot of Penobscot salmon at Charlestown, N. H., and 36,500 of the fry were planted in the Saranac River at West Plattsburgh, and the year before—1874—24,000 were planted on the other side of Lake Champlain near Ferrisburgh, Vermont, the home of "Uncle Lisha." The appearance of salmon in the Saranac River establishes the fact that with fishways that stream may be restocked with salmon, and the streams on the Vermont side of the lake may also be restocked and made to teem with salmon as they once did. A. N. CHENEY.

#### HOW TO CATCH PIKE-PERCH.

SINCE my note about the discovery of the spawning pike-perch in Lake George I have received a number of queries in regard to the habits of the fish and the number of catches there. I think I have already written two pages in FOREST AND STREAM about the habits and manner of fishing for pike-perch, but "Dexter," a well-known Albany angler, and correspondent of FOREST AND STREAM, came to the rescue. I think it is just sixteen years ago that I first met "Dexter" in FOREST AND STREAM's columns, and then we were discussing the black bass.

As to the size to which pike-perch grow, it depends upon the water in which they are found. Dr. Estes of Lake City, Minn., caught a pike-perch in Lake Pepin that weighed 40lbs. He had the head of the fish the last that I knew. In the mail with "Dexter's" letter was one from Fish Commissioner Wentworth of New Hampshire telling of a pike-perch of 9lbs. caught in Sunapee Lake, N. H., and yet few people about the lake have seen a pike-perch. A. N. CHENEY.

ALBANY, N. Y., May 14.—I noticed with much interest your communication in FOREST AND STREAM of the successful planting of wall-eyed pike in Lake George, as I consider them one of the most valuable of our fresh-water food fish; besides they afford some attraction to the sportsmen. I think the reason they have not been noticed to any extent heretofore was that what few of them there was went to some less conspicuous spot to spawn. They prefer to run up a running stream very early in spring, usually spawning there, and then returning to the mouth and feeding on worms or such other food as the successive freshets following the spring rains bring to them. If you wish to catch them during hot weather troll with a lake trout rigging on reefs that have a depth of from 15 to 50ft., with very deep water near by, using a No. 3 Buell spoon in place of the gang and minnow. They require water about as cold and pure as do lake trout, and will go to it when possible during the summer months. I think the estimate of their size rather high, as in fourteen years' experience with them on Lake Champlain I never heard of one being caught that weighed when put on the scales over 8½lbs. Of course, larger ones have been hooked and lost.

They are very clannish, and usually when you get one persistence will find the school and insure a good string.

Your speaking of Mr. Bull's experience in catching four trout almost in our city limits reminds me that my son George fished the same brook last Saturday, getting three from 6 to 7½in. and one weighing ½lb. This I think makes him high hook for Sand Creek this year up to date. 'Tis only a small stream running into one of our city reservoirs, but it shows what the trout can do when they have some place of safety for the time being.

DEXTER.

#### Niagara County Anglers' Club.

LOCKPORT, N. Y., May 25.—Secretary F. K. Sweet is working up the arrangements for the forthcoming tournament, and he is making life very miserable for the can't-get-aways who must stay at home.

#### A Word About "Kelpie."

BALTIMORE, May 25.—Editor Forest and Stream: All health and long life to "Kelpie"—or Thurston or any other name by which he may be known to others. We of the FOREST AND STREAM know him as "Kelpie," and "Kelpie" he must remain to me and, I think, to all readers of our FOREST AND STREAM. We take FOREST AND STREAM into our family circle and read it to our children. It is free from all objectional features and always prompts a desire on the part of the old folks (as well as of the "kids") to join just such campers as "Kelpie." I confess I formed a picture of "Kelpie" in my mind's eye. I was "far out of line," as we say in railroad parlance; but the good face and genial expression of that face carries out my idea of what my "Kelpie" would be.

#### WHITEFISH NOTES.

ALPENA, Mich.—Editor Forest and Stream: The question of bait for whitefish and the taking of them with hook and line which has somewhat interested your readers in recent numbers of FOREST AND STREAM and aroused inquiries from an occasional correspondent, does not appear to possess any special interest or value for the angler for several reasons.

The whitefish is not in any sense a game fish, nor found in waters where anglers would be apt to seek him. It is one of the most timid of the finny tribe—a soft, sucker-mouth chap with no spirit or sport in him. Even if he would take a hook with his favorite bait, the first pang from the steel hook would cause him to throw up the sponge and surrender unconditionally. Whitefish have been taken at the Sault Ste. Marie in the rapids with hook and line, as stated in the FOREST AND STREAM, but it is exceedingly doubtful if the fish caught at Owosso, Mich., or in Otsego Lake, N. Y., or in other inland lakes were the true whitefish of the Great Lakes. They were either "long jaws," "black fins," herring or "white suckers," as certain fish in these waters are called, and which in some respects resemble the whitefish. I am inclined to think with Mr. Tulian, superintendent of the U. S. fish hatchery at Alpena, that these fish are a cross between a whitefish and lake herring, as they combine some of the characteristics of each. But they are totally different from the genuine whitefish in both habits and associations.

I have many times made the inquiry both before and since seeing your reply to your Owosso correspondent relative to bait for whitefish, whether this fish is actually taken with hook and line, and to this day I have yet to see the man who has taken one. Within the past three days I heard of one who was said to be successful in taking them in Hubbard Lake, some fifteen or twenty miles from Alpena; but diligent inquiry revealed the fact that there was never a whitefish in Hubbard Lake, and Mr. Tulian confirms this by the statement that no whitefish fry were ever planted in these waters. The fish alluded to were undoubtedly "long jaws," the name given them on account of their peculiar-shaped mouth, which is quite different from that of the whitefish, with which it has

WHITEFISH OF LAKE MILTONA.

been confounded. The resemblance, however, is considerable, and might easily lead to the common mistake; one easily distinguishing feature is the dark fin of the "long jaw." The fish is quite as good on the table, and in all probability there are few who could detect any difference. In the water the "long jaw" is by no means a game fish; but somewhat more satisfactory than the whitefish, because he has a better mouth and more pluck.

It is often regretted by anglers that so beautiful and so delightful a fish as the whitefish should not also possess the qualities that afford him the sport he so keenly enjoys. There is nothing required in praise of the table qualities of a "planked" whitefish to him who has ever tasted one. There may be other things just as good, but it is a question of doubt; but in any way that this fish may be cooked, fried, broiled, baked or "planked," it is a dish fit for a king of gourmets.

The United States Commission of Fish and Fisheries has a hatchery at Alpena in charge of Mr. E. A. Tulian, which has a capacity of about 50,000,000 eggs, but not for more than 30,000,000 fry, and as Mr. Tulian observes, with the present facilities it keeps them hustling to take care of more than the number turned out the past season, which was about 16,000,000 fry. There were also planted some 3,000,000 whitefish eggs and 7,000,000 lake trout eggs. These were disposed of along the spawning grounds as far north as the Sault. Two attempts have been made to propagate black bass at this hatchery and eggs have been carefully gathered and handled, but so far wholly without success. Not a fish has been hatched.

The greatest enemy of the whitefish, in fact, of every other variety of the tribe, is the lake trout, an aggressive, pugnacious and ugly fellow, which regards as legitimate prey all that crosses his path. The whitefish is no fighter, and its extreme swiftness enables it to elude its formidable and voracious adversary, generally with good success.

Much has been said, and well said—none too strongly, of the disastrous inroads upon the supply of whitefish in the Great Lakes by the pound system of fishing. The evil has been a great one.

Though a tremendously prolific breeder, there has been grave danger of the utter depletion of the waters of this superb fish. On Lake Erie especially, he could not swim a half-mile without encountering some kind of deadly trap set for his destruction. This spring, however, he is enjoying a partial immunity from this evil. The very low price in the market has caused hundreds of fishermen to abandon the occupation, and where usually a dozen tugs are employed in the business, there is scarcely one. I find that whitefish are selling in all the Lake ports at the astonishingly low price of 2 to 2½ cents per pound! Think of buying a superb 5lbs. whitefish for a dime! This is, perhaps, pretty rough on the fishermen, but it is giving the fish a chance, which they have not for years enjoyed. The season for brook trout has been thus far very fair, and some very respectable catches have been made. I

have just seen a very pretty one made in a stream near Au Sable. There were about 40lbs. of the beauties, ranging in size from 5oz. to 1½lbs. in weight. The season has been cold; last night, in this vicinity, ice formed in small ponds as thick as a postal card, and, as usual, when we have an early opening of spring we are having a backward May. The foliage hereabout is no further advanced than it was in March in the southern portion of the State. KEUKA.

#### Trout Tickling.

Editor Forest and Stream:

I wish to submit to our bureau of information a description of an odd method of capturing the wily brook trout. I have followed the streams since boyhood, and although I confess to having in several instances heard of this mode of taking trout, I certainly never have seen it in practice, neither have any of my angling associates. Some time ago a correspondent of the Norwich Bulletin expatiated at length upon trout tickling. He gives the testimony of Dennis P. Rich, of Shelton, as one who is an adept at it. Mr. Rich catches a great many trout every season, but admits that most of the big ones are taken by hand. As Mr. Rich strolls along the brook, he discovers in some dusky pool a sage old trout who has grown big and fat. The man lies stealthily down on his stomach, and then as slowly as if he was a black log slipping down the bank, worms himself into the stream; then with caution his long naked arm slides slowly and almost imperceptibly through the sluggish current toward the big fellow's tail. The spotted victim lies perfectly still, the delicate swaying motion of his back fin comes to a rest, and there is not the ghost of a movement in his whole body. Perhaps you may fancy the trout does not see that long slim arm advancing upon him, but the presumption is that he does, for a trout's vision in the water is like a hawk's in the air. But the trout does not know what the singular thing is. At last Rich's fingers touch the big fellow, and that first touch of the electric human hand settles the business and it is all over with the trout; the fingers glide slowly along the quivering body till they encircle him at the gills; then they close with lightning swiftness, there is a sudden flert on the part of the fisherman, and the big trout is tossed

out on the bank palpitating and wondering "how" in the world he got there.

Such is the detailed account of the singular proceeding called trout tickling; and to give color to the above, a German blacksmith, living on the Salem Turnpike, six miles from Norwich, states that in Germany the practice was common. Now the question is, why does the trout with his wild timid nature lie so quietly and succumb so easily to the touch of the human hand, is it an overweening curiosity, a hypnotizing influence exerted by the stronger human mind, or simply the love of being tickled; or is the whole thing the invention of the fertile brain of some literary Ananias? If any of the many contributors to FOREST AND STREAM can give me any information on the subject, I should be glad to hear it. E. M. B.

#### Maine Fishing.

THE fishing at Rangeley was exceptionally good last week. A party of four New York sportsmen, consisting of Messrs. Cleveland D. Fisher, James N. Jarvie, Cyrus K. Small and Frank B. Arnold, have just returned from a ten days' trip well satisfied with their success. They fished Rangeley and Mooselucmaguntic, as well as the mouth of the Kennebec and the pool at the Upper Dam. While larger fish were caught during their stay, theirs averaged among the best taken, and no one of the New Yorkers has reason to be jealous of his companions.

Mr. Arnold took the top fish, which weighed 4½lbs. after having been out of the water all day. Mr. Small's and Mr. Jarvie's fish ran from 4lbs. down to 2½, and Mr. Fisher brought back with him four that a number of hours after catching weighed respectively 3½lbs., 4lbs. and two of 4½lbs. These latter were exhibited in the window of Kolb's restaurant on Pearl street. The party also caught four or five landlocked salmon, and found the fishing steadily improving during their stay. They took their biggest fish out of Rangeley, but caught more in Mooselucmaguntic. Most of them were taken trolling, though some were caught fly-fishing.

They caught so many big, genuine square-tail brook trout that they acquired the habit of not keeping anything that weighed less than 2lbs. Mr. Fisher acknowledges that this had a paralyzing effect on his nerves, and thinks it has unfitted him for any other trout fishing in future. B.

#### A NEW-SUBSCRIBER OFFER.

A bona fide new subscriber sending us \$5 will receive for that sum the FOREST AND STREAM one year (price \$4) and a set of Zimmerman'samous "Ducking Scenes" (price \$5)—a \$9 value for \$5.

This offer is to new subscribers only. It does not apply to renewals. For \$3 a bona fide new subscriber for six months will receive the FOREST AND STREAM during that time and a copy of Dr. Van Fleet's handsome work "Bird Portraits for the Young" (the price of which is \$3).

## NEWS FROM THE FISHING WATERS.

VANCOUVER, B. C., May 10.—A party of four, consisting of H. Bell-Irving, Dr. Bell-Irving, W. Murray and H. N. Mackay, left here last Saturday to inspect the hop ranches at the Squamish River. As they would have a little time to spare they decided to take their rods and try the fishing. They fished the Chackamus, a tributary of the Squamish, and in six hours the party took 42 trout weighing 160lbs. Of this number Mr. Henry Bell-Irving took 17 out of one pool, the heaviest of which weighed 11½lbs. All the fish were taken on the Devon minnow. So far the fishing in the Province has been poor owing to the backward spring, and above bag is at present the largest of the season. C. E. T.

ITHACA, N. Y., May 25.—Game Protector Carr, of Union Springs, has just put into Cayuga Lake a consignment of 100,000 mascalonge and between 25 and 50,000 perch. At this end of the lake Mr. Carr has had a determined gang of fish law violators to work against, but a second arrest, lately made, of the same party of seine haulers, has apparently developed a more wholesome respect for the law. The bait-casting and trolling fishermen are taking some pretty large pickerel at this end of the lake. Black bass anglers are unlimbering their outfits preparatory to the opening day pilgrimage to the favorite resorts. At Lagoda Park, twelve miles north of this city, a good many fine bass were taken last season. M. CHILL.

NEVERSINK (Fallsburgh), May 18.—On May 12 William Turner and Mr. Eldrege, of Fallsburgh, N. Y., caught 103 very fine trout at Neversink; a number of them weighed over 1lb. each. On May 14 Misner and Vanderlyn caught 93 trout, and Horner Shields caught on May 17 a very fine lot, one over 2lbs. A number of other catches have been made the last week. H. W. DEAN.

BEECH CREEK, Clinton Co., Pa.—We expect good bass fishing in the Bald Eagle when the season comes in. J. V. M.

NEWPORT, Vt., May 25.—Several good catches of lake trout have been made the past week, one of which, just brought in by one party I give the weight of. He had 5 trout, two weighed 12½lbs. each, the others 8, 10, 11½lbs. respectively. ROB.

## BOSTON AND MAINE.

BOSTON, May 25.—Messrs. E. A. Dow and Everett G. Place, of Boston, have just returned from a successful trouting trip to the Upper Dam, Richardson Lake, Me. They had good fishing, Mr. Dow taking a 5lb. trout; Billy Cutting guided; Mr. Dow says that he had all the trout he wanted. They threw back a great many small fish. The Camp Allerton Lodge party, better known as the Col. Rockwell party, left Boston Thursday. In the party are Mr. C. H. Andrews, one of the senior proprietors of the Boston Herald; Col. Horace T. Rockwell, than whom few men are better known in military circles; Mr. Priest, and one or two other guests. Col. E. B. Haskell was to have been one of the party, and indeed he may go later.

The Camp Stewart party left Boston on Thursday. This party is a large one. It is composed of Mr. and Mrs. Chas. H. Stearns, Mr. and Mrs. W. T. Farley, Mr. and Mrs. T. Ralph Parris, Mr. and Mrs. W. K. Moody, Mr. Geo. T. Freeman, Mr. H. S. Kempton and Mr. A. D. Hoitt. The party is in for several days' fishing. Billy Cutting is cook. Charles and George Cutting are guides, with three others. Mrs. Stearns has a record of a 4lbs. trout. Mrs. Moody has taken one weighing 8lbs. and several of 6lbs. Mr. and Mrs. Parris are new-comers, neither having fished the Rangeley waters previously. It is also possible that Mr. C. H. Johnson of Mattapoisett may join the party. He is one of the pioneers of Camp Stewart. Mrs. Geo. Y. Freeman was to have been one of the party, but is prevented by illness. She has a record of a 4lbs. and a 5lbs. trout, both landed the same day.

The Linder party was to leave Boston on Friday for Moosehead. This year the members are Mr. G. H. Linder, Mr. Maynard and Mr. Hurd. They go this year under a rather different arrangement. They are to go into a camp, instead of chartering a steamer as has long been their custom. They go for fly-fishing, rather than trolling, and they believe they will get it better if camped in the right location, than if tied to a steamer. There are few greater lovers of the angle than either of these gentlemen.

Mr. Claude H. Tarbox, with his friend Mr. Charles Bailey, have made another day on the trout brook at Bayfield. This time they warned the Colonel, as on previous occasions, that they should pass his house very early. He was to be up and waiting for them. They called him at a little past 3 A. M. A rooster crowed and a dog bayed in the distance, but the Colonel was not awake. He appeared on the scene later. They warned him again concerning the evidences of old age creeping on. Time was when nobody could get up earlier if it was a fishing trip that required attention. They took ten trout, and came home happy. They have got the brook they fished practically under control. It is posted, and they have permission from the owners to fish it. Some 10,000 trout fry have been secured and put into the same stream. They look for good fishing in a few years. SPECIAL.

## Onondaga Anglers' Outing.

SYRACUSE, N. Y., May 24.—The third semi-annual outing and fishing contest of the Anglers' Association of Onondaga, will take place at Brewerton, on Thursday, June 7.

A large number of prizes will be distributed on the various scores made, as at last year's contest. Members of the Anglers' Association only are eligible to enter the contest. Two persons as contestants must fish from the same boat, each one to be chosen for different sides in the general contests. Oarsmen accompanying contestants must not be allowed to fish.

All contestants must report at the Washburne landing one hour and a half before the scheduled time of returning train. On signal for closing, the roll will be called promptly, and all persons not present when named shall be barred from entering their catch for prizes or for the general contest. Two captains will be chosen to select sides for general contest. The tickets, including transportation to and from Brewerton on the previously specified trains, and the entrance fee for the contest for prizes,

etc., are sold for \$1. At this extremely low rate, it is hoped a large number of tickets will be disposed of for the benefit of the Association.

Tickets are now on sale at the store of Reuben Wood's Sons & Co., and can be had of the committee and other members of the Association. A meeting of the Association will be held Monday evening, June 4, at 8 P. M., at the Business Men's Rooms. AMOS PADGHAM, G. B. WOOD, C. H. MOWRY, R. A. MOLYNEUX, F. C. BROWER, Committee.

## Terre Haute Fishermen.

TERRE HAUTE, Ind., May 20.—By reading the following clipping from a local paper you will see that the Terre Haute fishermen have awakened from their long sleep. Nothing but dynamite could arouse them: "Complaints are being made within the past few days of fish being dynamited by fishermen too lazy to catch them by the lawful practice. Some of the more enthusiastic members of the Terre Haute Fishing Club have taken the matter in hand and propose to put the violators through the judicial machinery and grind them as much as the law will allow. Large quantities of dead fish are found in various places on the shores of the Wabash River, but the nuisance will be abated. Nets are also being used by lazy fishermen, who want to make a big showing, and this practice will also be stopped. The Fish Commissioners will be notified this week."

Regardless of the fact that the dynamiter, net and seine fishermen have had full sway for several years, there are yet a few fish left for the true fishermen, as the following will show: "Mort McKinley, Fred Pomeroy, William Gleason and Louis Stern returned from a fishing trip twelve miles up the river this afternoon heavily encumbered with fish. When the fish were placed on the scales the beam was tipped at 67lbs." W. B. C.

## Fishing Near Los Angeles.

LOS ANGELES, Cal., May 18.—Many trout fishing parties go from here to San Gabriel Cañon. There is practically no fishing less than eight or ten miles up the stream, and the trout are more plentiful the higher up you go.

The fish average about 9in. in length, although occasionally a "whopper" is caught, as was evidenced by the fact that Mr. Ed. Silent, of this city, successfully landed, this season, a mountain trout a fraction over 20in. long, weighing 3½lbs. It was said to have been the largest trout ever caught in the San Gabriel. Mr. Silent used a light rod and small flies.

Messrs. Bath, Safford, Sr., and Safford, Jr., returned from a two days' trip up the cañon, the sum total of their creels being 83 trout.

Another party of four stayed up five days, and report a total of 263, the largest being a trifle over 12in. long.

The trout in Bear Valley Lake run much larger than those in the streams, some having been taken last year as high as 12lbs. weight. They are the genuine mountain trout, but the large fish will seldom take the fly, preferring a species of grub found in the bark of the pine tree.

CULPEPPER.

## A Brown Trout Record.

PORT HENRY, N. Y., May 20.—I wrote you last year of some of the results obtained from planting trout fry in local waters and cited the killing of a 4lbs. 3oz. German brown trout, in a pond that was never known to contain a trout until the fry was planted there by me. I inclose you a photographic proof and an outline traced around the largest of a catch made in the same pond, on the 17th, by my wife and myself, all were taken on light rods, fly-rods, but with "worms for bait."

A peculiar thing to me is, that in one of the females taken, both ovaries or sacs were filled with spawn that would be ripe or in condition to be spawned in the fall, while in addition there was about a tablespoon full of spawn that was all ready to be deposited, and as if she were just finishing up. None of the others were in that condition. A great many trout have been caught this spring, although I am sorry to say that the youngsters find it hard to live up to the 6in. law in the nearest brooks.

W. C. WITHERBEE.

[The outline sent shows a fish 22in. long, 14in. girth and 4½lbs. weight. The presence of eggs of different stages of development is not unknown.]

## Fishculture and Fish Protection.

## THE CHINOOK SALMON.

(Oncorhynchus chouica; Salmo ginnat.)

## Its Non-Feeding Habits in Fresh Waters.

BY LIVINGSTON STONE.

It is an admirable provision of nature that the great armies of anadromous fish that annually ascend fresh-water streams to spawn, where there is, practically speaking, no food for them, should be so constituted that they are not obliged, in order to sustain life, to feed in fresh water. Mammals are said to be more ravenous than ever at corresponding periods; but in the case of anadromous fishes, and possibly of almost all fishes at the spawning season that congregate in large numbers over limited areas, a wonderful exception is made in their favor, in consequence of which they are not only not obliged, in order to support life, to feed where there is no food, but, in the case of Chinook salmon (*Oncorhynchus chouica*), their alimentary organs are so modified at the spawning season that they could not eat if they would; and in consequence of this again they probably do not suffer from hunger, for if the ability to eat be removed by natural causes, we expect nature to remove also the desire to eat. One can hardly help wishing that industrial armies had also been included in this exception at all seasons of the year.

That such a provision of nature in the case of fishes is necessary—is absolutely indispensable, indeed—is obvious. The often-repeated story of salmon so thick in fresh-water streams that one could cross the stream on their backs if he could keep his balance, is true. The writer has seen salmon like that scores of times. It happens indeed every year in all good salmon streams where the primeval abundance of the fish has not been reduced by human agency. Now, imagine all these streams filled, as they are every spawning season for weeks and months, with thousands, yes, hundreds of thousands of salmon, all crowded together where there is no food for them, and suppose at the same time that it was necessary to their existence to have food. What would be the result? The result would inevitably be that they would soon be driven wild with hunger, and would doubtless in their desperate extremity endeavor, if possible, to return to

the ocean. Later on, if they continued to stay in fresh water, they would die of starvation before the days of their spawning were accomplished, and ultimately the race would in consequence become extinct.

It is evident therefore that the salmon must be enabled to live without food in their fresh-water spawning streams. Otherwise it would be simply suicidal for them to go up the streams to spawn. In other words, if the salmon must of necessity go where there is no food, they must also of necessity be provided with the power of living without food.

The common objection to the statement that salmon do not feed in fresh water, is one that comes up at once in every mind instinctively, namely, that it is not natural for an active creature like a salmon to go without food for so long a period as the salmon have to. The argument, put concisely, is that it is unnatural that they should live so long as they do in fresh water without feeding, and consequently it cannot be that they do not feed there. The reply is that it is much more unnatural that, being compelled to feed in order to sustain life, the salmon should be sent into places to stay for months where there is no food to be had. This would be unnatural indeed. On the other hand it is not the most natural thing in the world, since the salmon must of necessity be sent up into rivers where there is no food for them, that they should be so constituted that they should neither be starved to death or tortured by hunger for want of food? Let us look now at some facts bearing upon the question. Some years ago, a large salmon hatching station was built on the Clackamas River in Oregon, and each year a rack was constructed across the river to prevent the ascending salmon from going up the river beyond the station.

In the year 1888 the rack was put across the river in March and during the summer of that year there were, it is safe to say, upward of 5,000 full grown salmon (*Oncorhynchus chouica*) in sight below the rack. The salmon did not begin to spawn till the middle of September. The great body of these fish were there three months, many of them four months, and some of them five months. During all that summer there was not a moment, night or day, when there were not hundreds of these fish struggling to get past or through the obstruction in front of them, and in all that time there was not visible feed enough where they were in the river, to provide them with an ounce of food apiece once a week. In one place the salmon were so thick that a person standing on the rack could with an ordinary carriage whip reach 500 full grown salmon averaging 20lbs. a piece in weight, and all of them actively struggling all the time to hold their places against the current. No food whatever was there. No appreciable amount of food could have come down through the rack to them. No food could they possibly have had except such microscopic nutriment as may have existed in the water, and there must have been only infinitesimally small rations of this, when divided up among so many thousand pounds of fish. The only conclusion left is that they must have lived several months practically without eating. There is no question whatever about these facts. The writer saw the salmon below the Clackamas rack almost every day during the summer of '88. Hundreds of other people saw them too. The same thing has happened every year except that there are not so many fish now and they are not stopped so early in the year. The same thing happens every year at the McCloud River in California, where the U. S. Fish Commission has its salmon breeding station, named after Prof. Baird, which the writer has had charge of and where he has watched the salmon for nearly twenty seasons. The salmon do not feed in these streams, or if they do their food is invisible. The same thing happens every year in Rogue River, Oregon, where Mr. K. D. Hume has had for over fifteen years a salmon hatchery on a large scale. Mr. Hume says in his little pamphlet ("Salmon of the Pacific Coast," p. 25) that "it has been the custom at his hatching pond to hold salmon nearly four months, even after they had been held in the river for some time prior to being placed in the pond, and this without supplying them with any sort of food." Many more instances might be furnished of salmon living a long time in fresh water without eating, but those just given would seem to be sufficient. It may be mentioned, however, as incidentally confirming this truth, that although hundreds of salmon have been found with absolutely nothing in their stomachs, not a single instance has ever come to light, at least to the writer's knowledge, of a genuine Chinook salmon being caught any considerable distance above tide water with a full stomach. Furthermore, although thousands of salmon have been known to live several months without eating, not a single case has ever been produced to show that a salmon has not been able to live in fresh water without eating.

It does seem impossible that any creature above the grade of reptiles could live so long and keep so active without eating. It does seem impossible and hence people argue that "being impossible, it cannot be true," but it is a well-known principle of logic that an *a priori* argument like that has no weight whatever against the argument of one unanswerable fact. No *a priori* argument based on the general principle that animals cannot live for months without eating can hold for a moment against actual well-authenticated facts that prove that salmon have so lived without eating, and the Clackamas, McCloud River and Rogue River hatcheries furnish these facts without limit and with overwhelming conclusiveness. It is not claimed that the salmon thrive or get fat on this way of living. On the contrary, they get very weak and finally very much emaciated in fresh water. From the moment they pass above tide water they begin to fall off in weight, appearance and general condition, and they never under any circumstances whatever improve their condition afterward. They go on getting weaker and thinner. Every day their blood grows less red and less abundant, until at last their great store of strong red blood that they brought from the sea almost entirely disappears. Every day the rich layers of fat between their flanks of flesh become less noticeable till they disappear also. The dark rich pink of the flesh itself changes to a dirty white. Even their scales are absorbed into the body. Everything about their appearance indicates that a tremendous draft is being made upon their physical organization. It is without doubt the draft that nature is making upon their flesh to keep their vital organs in the activity necessary to sustain life, and to develop the growing seed that will replenish the next generation. For, here let me also say, it is not claimed, because salmon live without eating, that there is nothing whatever to keep their vital forces in action. This would indeed be incredible. This would be having a fire without fuel, an effect without a cause. It would be quite as absurd as the perpetual motion theory—indeed, it would be, in a sense, a realization of perpetual motion. The fire must have fuel, the vital processes going on within the fish must be sustained by some supply of nutriment—this must be admitted, but this supply does not come from outside the fish in the form of food. It comes from within the fish. It is the blood, the fat, the superfluous flesh that the salmon brings from the ocean in his own body that he lives on in fresh water, and that enables him to sustain life so long without taking food from outside into his stomach, and this explains—indeed, it must explain—why salmon do not have to feed in fresh water.

It was remarked near the beginning of this paper that "the alimentary organs of the salmon are so modified at the spawning season that they could not eat if they would." This is easily verified. If any one will examine the viscera of a Chinook salmon, caught well above tide water and near the spawning season, he will find that the stomach and throat of the fish are singularly contracted, so much so indeed that one cannot push one's finger down the throat without lacerating the tissues, while the stomach is so shrunken

that it will not hold a walnut. If it is very near the spawning season he will find the stomach still more contracted and always absolutely empty, with the exception of about half a teaspoonful of a yellowish, bilious-looking fluid.

Having noticed the good-natured controversy going on in the sporting papers about salmon not eating in fresh water, I began last fall to examine some of those that were caught at this station (Baird, Cal.), with especial reference to this question, intending at first to try 100 fish. We did, however, examine the stomachs of only 66 and then we stopped, because they were all exactly alike, and I was convinced that if we had tried 100 or 100,000 they would all have been the same. In every one of them the throats were very much contracted, the stomachs very much shrunken and all entirely empty with the exception of the yellowish looking fluid just mentioned. As to the throat and stomach, every fish was an exact counterpart of all the rest.

Here we have another admirable natural adaptation to circumstances. Since the salmon are sent into places where there is no food for them to eat, nature kindly takes away their ability to eat and also their desire to eat. If it were not for this wonderful adaptation of nature it seems probable that the salmon, retaining their appetites, would become frantic with the ravings of hunger, and abandoning the mission on which they were sent would, regardless of everything else, race back to the ocean to satisfy their hunger on the well-filled stores of food that they undoubtedly well remember leaving. Then alas for their posterity. There would never be any.

The most grateful minded man that I ever heard of was one who after he had lost every earthly possession, even his last crust of bread, thanked the Lord that he had not lost his appetite. It seems to me a subject both to ourselves and to the salmon of sincere gratitude that the fish do lose their appetites when they start on their mission through foodless streams to reproduce their species.

It looks now as if it were pretty well settled that salmon do not feed in fresh water, but when the inquisitors thought they had it all settled about the revolution of the earth by making Galileo retract his statement that the earth moved, the famous astronomer as he was being led away, was heard to murmur under his breath, "It *does* move," and now that it seems to be all settled so nicely about salmon not feeding in fresh water, I imagine I hear more than one veteran salmon angler say, "They *do* feed in fresh water." I admit it. I would be the last one to deny it, for not only do I know of enough instances of salmon being caught in fresh water with food in their stomachs, to make it folly to deny it, but I have seen the fish in their stomachs myself. Last July in particular (July, 1893), I examined the stomach of a salmon caught in the McCloud River about six weeks before spawning season, which had in it four salmon eggs, and the newly pulverized remains of several insects and larvae. The salmon eggs came, of course, from the hook that caught it, but the insects it had doubtless picked up from the water in its usual manner of feeding. I must admit therefore that it is undeniable that food is taken by salmon in fresh water. It will be found on examination, however, in every instance where anything is discovered in the stomach of a salmon caught much above tide water, that the food is in very small quantities and composed of very small objects, such as would easily slip down a very small throat and enter a very small stomach, and satisfy only a very small appetite—not enough by any means to disprove the fact that the salmon might, if necessary, have lived without it, but enough nevertheless to prove the fact that salmon do actually feed in fresh water.

The truth is that the evidence compels us to admit both of these apparently conflicting facts, namely, that salmon can and do live for months in fresh water without food, and that they can and do feed during some of the time that they are in fresh water. These two facts are not necessarily conflicting, however, though they may seem so at first. The writer's own theory is that as soon as the salmon, coming from the sea, strike fresh water, their appetite begins to weaken, their throats begin to narrow, and their stomachs begin to shrink. This does not at first, however, entirely prevent them from feeding, but it changes them enough to enable them to overcome the temptation to return to their well-stocked feeding grounds in the salt ocean, and the longer they remain in fresh water the greater the changes become, and the temptation to turn back for food correspondingly less. There is probably no one specified time when an abrupt change comes which deprives them in an instant of their ability and desire to feed, but in the writer's opinion, the transformation comes on gradually, increasing constantly day by day from the time that they leave tide water till at the near approach of the spawning season, their throats and stomachs become entirely incapacitated for receiving food, and the desire and ability to feed leave them entirely, but, notwithstanding their scanty supply at first and their entire abstinence afterward, the great reserve of superfluous flesh and blood which they bring with them in their own bodies from the bountiful ocean, enables them with little or no food in their stomachs to keep their vital organs in vigorous activity until their momentous mission up the fresh-water streams is accomplished.

Allow me in conclusion to make the precautionary statement that where the word salmon is used in this paper, the word is intended to refer to only one variety of salmon, namely, *Oncorhynchus chouchei*, commonly known as the Chinook salmon, Columbia River salmon and Quinault salmon.

### Greenwood Lake Netters Convicted.

THE question which has so frequently been asked of late years, "Why are the fish caught in Greenwood Lake so small?" was satisfactorily answered in the court room of Justice of the Peace George B. Senior, in Paterson, N. J., on Monday, May 21. The case which was being tried was a suit brought by Fish Warden Charles A. Shriner against Gardner and David Storms, the charge being that the defendants had used gill-nets in Greenwood Lake and had had in their possession fish unlawfully caught in gill-nets. The two defendants and their father, Thomas S. Storms, have for a number of years run a hotel on Storms's Island, which lies in Greenwood Lake near the State line. The elder Storms was convicted of netting some years ago on complaint of Warden Shriner, on which occasion he stated in court that he owned real estate worth \$40,000 and had no debts. It has always been suspected at the lake that the Stormses were engaged in the unlawful taking of fish, and that suspicion was frequently confirmed by the wagonloads of fish the Stormses peddled about Warwick and other places in New York State near the lake. Their method of operation was supposed to be the following: They took the fish in gill-nets in New Jersey and at once rowed over the State line, where the fish were dumped into a wagon and then hawked about. They were assisted in their operations by Leonard McCloud and William Ryerson, who commit their depredations in New Jersey at night and then hurry back to their homes in New York; so that all the efforts of Warden Shiner to arrest them in New Jersey have proved unavailing. Finally the warden secured evidence against the two Storms boys and he at once made a complaint. He had considerable difficulty in obtaining the necessary witnesses, some of whom lived in New York State.

Jacob Ryerson testified to seeing the two defendants taking up a gill net one morning near the Lakeside Hotel; on account of the distance which separated him from the defendants he could not tell what kind of fish they caught but he saw dark spots in the net which he took to be fish. He knew that the Stormses were engaged in peddling fish. Martin Hand saw the two defendants one morning about the same

time—the first of April—taking in a net. He had seen fish with gill net marks in the possession of the defendants. James Ryerson saw the two defendants have in their possession and sell on several occasions fish which bore the marks of gill nets about their necks. Levi Binnegan met Gardner Storms one morning and Gardner told him that he was afraid he would have to pay a fine as Jacob Ryerson had seen him take up a net. The defense was a general denial. Gardner Storms testified on cross-examination that he had on a number of occasions purchased from Leonard McCloud perch and pickerel with gill net marks on them; he knew that McCloud was a violator of the law and that there were warrants out for his arrest, but the fish he unlawfully took were always welcome at the Storms Hotel, where they were bought and then peddled about or sold to fishermen who were not expert enough with rod and line to take a mess for themselves. Justice Senior found the defendants guilty and imposed a fine of \$25 and the costs on each. They paid the costs and gave security for the payment of the fine, reserving the right to appeal.

Justice is frequently puzzled how to deal with violators of the law from Greenwood Lake. On Feb. 9 last Warden Shriner had a case before Justice Senior against two of the "natives" from Greenwood Lake; they were charged with having taken bass out of season, having caught them a few days before their arrest was effected. Being locked up in the county jail, they requested the warden to postpone action in their case from Monday—the day set for trial—to Friday. As there was no danger of their running away, the warden granted the request. When Friday arrived the two pleaded guilty; they had asked for the postponement in order to have the privilege of remaining in jail for a week more than would have been the case had they pleaded guilty at once. Neither had any money to pay costs or fine. To send them to jail would do them a favor, and so the only method of punishment was to take them by the backs of the necks and kick them out of jail, which was accordingly done. The State paid the costs and the laws of the State had been vindicated.

### Muscalonge Planted in the St. Lawrence.

CLAYTON, May 19.—As the morning train pulled into the station the genial face of W. D. Marks, Supt. Green's expert assistant, was seen, and in a few moments more your correspondent was taking a look at one of the greatest numbers of muscalonge fish ever seen on the St. Lawrence. There were 175,000 of them and had stood without harm the long journey of 23½ hours between Chautauqua Lake State Hatchery and their destination. They were brought from the Caledonia hatchery to Clayton to be placed in the St. Lawrence. They were taken in charge by G. M. Skinner, representing the Anglers' Association, who consigned 75,000 of them to A. C. Cornwall and W. F. Thomson, of Alexandria Bay, for distribution in that vicinity. The remaining 100,000 were placed in the hands of competent assistants, who carefully deposited them in numerous desirable localities adjacent to Clayton. It is thought by experts that the stocking of the stream will be a great success. It is understood that this is the first lot of muscalonge fish placed in the waters of the St. Lawrence, for which sincere thanks are tendered to the members of the State Fish Commission and their able superintendent, Monroe A. Green.—*Watertown Standard*.

### PUBLISHER'S DEPARTMENT.

The Joseph Dixon Crucible Company, with an experience of nearly 70 years in manipulating graphite for lubricants as well as for many other uses, such as lead pencils, crucibles, stove polish, etc., has been induced by requests from dealers and wheelmen to make and place on the market a first-class preparation for lubricating bicycle chains.

Reierson & Spore, of Houston, Texas, will shortly open an extensive sporting goods establishment in connection with their regular bicycle trade, and wish to come into correspondence with manufacturers and jobbers. They will handle articles for the use of lovers of the rod, gun and dog, as well as athletic goods, and will carry a full line of ammunition. At present there is no first-class sporting goods store in Houston.

Wm. W. Hart & Co. received on May 16 the official report from the Commissioners of the Columbian Exposition, Chicago, stating that they had received the highest award for first-class artistic and life-like mounting on North American heads and mammals.

Lee & Shepard publish a series of essays by Julius A. Palmer, Jr., "About Bluefishes." These are mainly reprints from a long series of articles which the author contributed to various publications between 1877 and the present time. Mr. Palmer has made an exhaustive study of edible and poisonous fungi, and as a result shows that only one family causes death, while at least fifty, besides the common or horse-mushroom, are edible. His essays are both interesting and instructive.

"Seven Strange Stories," by the well-known canoeist and author, J. Wallace Hoff, comes to us from the Brandt Press, Trenton, N. J. The first of these, "Felix Mondet," has been made the subject of ministerial criticism, and has furnished a topic for more than one sermon. The names of the other stories are "Daphne," "Frontier Service in '49," and "This is Love," "Baiting a Conspiracy," "Little Bell," and "Metempsychosis."

"The Practical Angler," by Kit Clarke, and published by the American News Company, is a book with a purpose. It is written, so the preface says, "For the benefit of the man whose angling education, to his greatest misfortune, has been neglected, and who desires to acquire a knowledge of the most delightful, health-bringing and harmless recreation in existence." "The old-timer" who knows it all," the author continues, "will meet only plainly told, familiar facts. Technical phrases and rhetorical pyrotechnics are studiously avoided, as they are of no use in the practical pursuit of catching fish. The book is a business—*that's all*." The preface capably describes the book. It is busy from cover to cover and Mr. Clarke has happily succeeded in putting in black and white just what is necessary to know about various kinds of fishing. Paper 50cts. Cloth \$1.

We have received from the manufacturer, Mr. J. E. Bacon, Clinton, Conn., a set of patent bluefish jig, which are a novelty for this kind of fishing. The jig is made of wood and metal in the form of a fish and is hollow. It is intended to be filled with bait which will ooze out through holes provided for that purpose and leave a trail to attract the fish when trolling.

The well known Philadelphia firm of Jas. W. Queen & Co., manufacturers of scientific and photographic instruments, has absorbed the business of G. S. Woolman, who will hereafter be the manager of their New York branch. The company is now incorporated as Queen & Co.

Mr. Chas. K. Reed, the Worcester, Mass., taxidermist and dealer in taxidermist's supplies, has issued a new catalogue which will be of interest to sportsmen and taxidermists generally. The catalogue contains a number of excellent half-tones of mounted specimens, including birds, fish and big game, as well as descriptions of specialties for which this house is famous.

We have received a letter from Mr. Jack Hobday, of Portsmouth, Va., dated May 24, '94, requesting us to send him copy of *FOREST AND STREAM* containing address of the manufacturer of the Thompson hunting shoe and enclosing 10 cents for same, showing that he meant business. We have complied with Mr. Hobday's request, but to do it had to go over our files five years. Such instances of the lasting value of advertising in *FOREST AND STREAM* are constantly coming to our notice, and they point to a moral that it is the continued advertising that pays best. The advertiser who gets his name known by keeping everlastingly at it is the one who reaps the fruit of his investment.

"Yes, sir, ever since he married that wealthy heiress he has led a regular dog's life."

"I hope that will be a warning to—"

"He has, in fact, nothing to do but to eat, drink, sleep and submit to being caressed."—*Neisser Zeitung*.

Woman leads the world. She used smokeless powder for ages before men ever thought of adopting it.—*Tid-Bits*.

### Southern Yacht Club.

NEW ORLEANS, May 21.—*Editor Forest and Stream:* The race for the schooner's Sunday Cup, sailed Saturday, May 19, was one of the most exciting races New Orleans has had in a long time. The course was across Lake Pontchartrain to Mandeville on the north shore, a round trip of 45 miles; starting gun to be fired at 10 A. M. The race was started in a rattling northeast, the tail end of the fearful gale of Thursday and Friday, which lowered the thermometer 50° in some parts of the country, and which did so much damage in Lake Michigan. The wind was strong and steady, the rate of 45 miles an hour at 3 o'clock Saturday morning, but diminished somewhat with the rising sun, and at 6:30 A. M., when the preparatory gun was fired the anemometer on the Southern Y. C. house, at West End, registered 30 miles an hour. The wind was puffy, and the gale had kicked up one of the nastiest cross seas that any of the club house gallery old salts had ever seen before.

The yachts for the start were the schooners Adrienne, Gordon & Lawrence, owners; Gertie, C. A. Lindaur, owner, and the little New York yawl Presto, Fox & Flasspolder, owners. The other entry, the schooner Viola, a light weather crack, did not start. The three starters had some difficulty in being pulled out of the "pen," along the narrow canal and into the lake at the club house in the eye of the wind. All three were snugly reefed down, yet had all they wanted to carry, particularly as they were in shallow water and right on a lee shore. Owing to the stress of wind and sea, the boats were unable to get the stakeboat out far enough from the club house, and as it kept drifting in shore, none of the boats thought for a moment of coming about and running down into shallow water to cross the imaginary line between the stakeboat and the club house, less than a hundred yards on the lee. With no other alternative the three boats held off shore from the mouth of the canal, on the port tack, for about two minutes, then came about.

The wind was now N.N.E. and the starboard tack took them along by the club house, and at right angles to the imaginary line, but about three boat lengths to windward of the outside end, or stakeboat. The start was half an hour late. The Presto was the first away, with Adrienne and Gertie following close. The Presto experienced trouble right away, her starboard mainbackstay gave away; she went about on the other tack, and the portstay did not save her, and then she quit and ran back into the canal for repairs. The Gertie, which up to this time had been sailing splendidly, also met with an accident, the cap of her rudder head twisting off, and she shot up into the wind and then came to anchor. The Adrienne, drawing four feet and a half of water, was meantime stirring up the mud; when she shortly went about and beat out into deeper water she made excellent weather. She was under double reefed main, single reefed fore, and forestay-sail, which was at times supplemented by a jib. The puffin hit her like a sledge hammer, and two or three of the short cross seas hitting her at once and breaking all around her sent the spray flying half way up to the masthead. Her lee rail was of course out of sight and the water was boiling along half way up the cabin trunk. The crew of fourteen were up to windward with backs humped and heads on breast, taking the dashes of the cold spray and philosophically and metaphorically sawing wood.

The sky was a bright blue, and not a cloud was to be seen. The wind was steadily increasing, and a man had to shade his eyes to look up to windward.

Adrienne, eating out to windward like a witch, held the port tack until well across the lake and within sight of the north draw of the Queen & Crescent R. R. drawbridge. She then tacked and beat up to the westward. Off Goose Point the water was rougher and the puffs, right off the north shore, were harder than ever. The boat behaved nobly and was a revelation to those who had not before been on her in a blow. She had several severe knocks, with the water foaming over her cabin and into the cockpit; she would go over no further, but with a supreme effort she would shake loose and come up grandly, giving those of her crew who were down to her waists in the water a chance to breathe, when she was ready for the next on-coming wave. Down here they say it is impossible to turn a boat like Adrienne or the Burgess 45ft. Nepeenthe over. They have good big chunks of lead on their keels, and with their strong cabins well corked up so they won't fill, they go so far and no further—with a good man at the helm.

Adrienne tacked up behind Goose Point and then on down the shore to Mandeville. The wind did not least a trifle to the westward and was decreasing. The stakeboat, in charge of the Mandeville Yacht Club, was rounded at 5:30, and the Adrienne was put before the lulling breeze for home. She arrived at West End at 8:10, the race having occupied 9h. 40m.

After making repairs the plucky little yawl Presto started out at 2 o'clock; she crossed the line properly this time and behaved splendidly on the beat over. She anchored at Mandeville over night and sailed back to West End Sunday morning.

After the race was well started the regatta committee held a meeting, and considering the stress of weather, and that all three boats had been able to cross the line, it was resolved to count the start an equal and fair start. Adrienne was awarded the race. S.

The Penobscot Y. C. was organized on May 13 at Rockland, Me., with the following officers: Com., M. A. Rice, Vice-Com., Clarence E. McIntire; Sec., F. Tuttle; Treas., D. Fuller; Meas., W. S. Barrett; Regatta Committee, M. A. Rice, W. A. Merriam, E. E. Davis and O. E. Copeland.

A FRENCH SHARPIE—DESIGNED BY MR. G. ANDROUS.

DETAILS OF RUDDER.

Vice-Com., J. H. Skinner; Capt., O. L. Taylor; Sec'y, A. A. McKeechie; Treas., J. J. Taylor. Regatta Committee, J. P. Elmer, S. C. Stickney, J. H. Skinner. The first race takes place on Memorial Day and the second on June 2.

Gadabout, auxiliary steam yacht, designed by J. Beaver Webb and built in 1892 for E. M. Fulton, Jr., has been sold to James S. Watson, of Rochester, N. Y., who has re-named her Algonquin. She sailed recently from New York for Lake Ontario by way of the Gulf of St. Lawrence.

The Audubon Y. C., of 153d street, North River, New York, has just erected a fine club house. The membership of the club is 200.

At a meeting of the Great South Bay Y. C. on May 18 the following officers were elected: Com., Herbert S. Jewell; Vice-Com., Fred G. Bourne, Jr.; Rear-Com., Samuel T. Peters; Treas., Miles H. Bergen; Sec'y, Fred C. Bliss.

Mr. George Gould, owner of Vigilant, has been elected a member of the Tower Ridge Y. C. at his request.

Barracouta, steam yacht, J. R. Fell, arrived at Philadelphia on May 15 from Nassau after an extended cruise in the West Indies.

The revival of the 21-foot class in Eastern yachting has brought into prominence the wonderful success of the Minnetonka-built sloop Onawa, built by Arthur Dyer last year to beat the Herreshoff boats Kite and Alpha. Dyer's fame as a designer has penetrated the East pretty deeply and the fact is evidenced in his having received within the last week orders for two 21-foot sloops from Long Island yachtsmen whose names are known all over this country. The Journal representative this morning saw a letter from one of these gentlemen relating to his order from Dyer. The new boats will be of the Onawa type, but of somewhat heavier material, as they are for work on salt water. There is no doubt at all that Minnetonka is now the headquarters for the 21-footers in America. The fastest boats Herreshoff ever built of this class were the Alpha and Kite, and Onawa walked away from both of these last season as though they were anchored. Ward Burton has received half a dozen offers to purchase the Onawa from New York and Boston parties, and others, still more numerous, to take the boat East and sail her this year. He says, however, that he has positively decided, as per notice to the Minnetonka Y. C. last year, to retire her from racing and use her for further experimental work in the same line on the new Larchmont Club rules, with crews limited to two or three men. One of the new boats ordered from Dyer is destined for Buzzard's Bay. The latter is to be very similar in design to the new Watson boat now ready for launching at the Dyer yard. As the Onawa will not go East, the other fast Dyer boat, Apukwa, will be shipped once to take part in the Eastern events. Apukwa will be remembered as the boat that sailed off a tie race with Alpha last autumn and defeated her handsomely. As Alpha was never defeated in Eastern waters, Apukwa should show a good record at the end of the season if she is properly handled. She will make her appearance at Marblehead some time in June.—Minneapolis Journal.

Soso, steam launch, has been sold by the estate of the late N. L. Munroe to J. W. Stuart of New York.

Ventura, 40ft. cutter, has been sold through Stewart & Binney by T. W. King to Wm. Williams, of New York. Mr. King will build a 21ft. knockabout from a design by Stewart & Binney, to be 29ft. over all, 7ft. 6in. beam and 4ft. draft.

The Miramichi Y. C. held its eighth annual meeting at Newcastle, N. B., on May 10, the following officers being re-elected: Com., J. C. Miller; Vice-Com., J. L. Stewart; Rear-Com., John McKane; Sec.-Treas., J. R. Lawlor; Meas., Thos. Crimmer. Several new members were elected, a programme of events adopted and other business transacted. The fixtures for 1894 are: May 24, cruise to Shell Drake Island; June 2, Newcastle to Chatham; July 2, cruise to Wheelbarrow Point; July 19, triangular at Chatham; Aug. 16, Stewart pennant, Oak Point; Sept. 13, triangular, Newcastle; Sept. 23, Chatham to Newcastle.

The Mobile Y. C. held its annual meeting on May 16, and the old club was merged into a stock company and a charter granted with a capital of \$2,500, divided into 100 shares of \$25 each. There were 75 shares taken at this first meeting and much enthusiasm shown. Capt. W. A. Hutchinson presided and W. A. Hopper acted as secretary. A board of directors consisting of H. Pillans, W. B. Curran, J. S. Woodhull, W. M. Marshall and E. D. Ledyard were elected to draft by-laws, etc.

The season's races of the Plymouth Y. C. will include the following events: May 30, low tide, 1 P. M., outside course. June 18, high tide, 11:45 A. M., inside course. July 4, high tide, noon, inside course. July 21, high tide, 1:15 P. M., outside course; ladies' day. Aug. 11, low tide, 1:45 P. M., outside course. Sept. 3, high tide, 1:30 P. M., inside course. Sept. 20, high tide, 2:15 P. M., inside course. The races will be open to all boats of the following classes: First class, catboats 20ft. and under 26ft., measured waterline. Second class, catboats under 20ft. measured waterline. Third class, boats with sprit foresail and mainsail. Fourth class, boats with gaff foresail and sprit mainsail. For the Fourth of July race there will be a fifth class for all rigs, and without time allowance. The starting time will be about 1½ hours before high or low tide, as given above. General prizes will be offered amounting to about \$250. A club pennant prize will also be offered to each of the four classes of boats; to be awarded to the boat of this club making the shortest corrected time in any three of the first five races. The races are to be sailed under such conditions as may be prescribed in regatta notices of each race, subject to the rules of this club. Regatta committee: A. O. Fay, Albert T. Harlow, and Walter H. Sears.

Mr. J. F. Small and Mr. C. W. A. Bartlett had a very pleasant trip around the Cape to New York on the 21-footer Exile. They started from Dorchester on Tuesday, May 8, and made a good run across the Bay and down the Cape, but were becalmed on the Shoals for several hours. They put into Hyannis Wednesday night. Thursday they ran from Hyannis to Newport under short sail, for it blew hard from the northeast. Friday morning they lay to, Newport and had a light breeze nearly all the rest of the run, which they made with but one stop, anchoring for the tide to turn at Hell Gate. Throughout the trip the Exile behaved beautifully, and beat everything in the line of a sailing craft that tackled her. It was a first-class object lesson to those yachtsmen who have condemned her as a smooth water racing machine. There was not a moment of the whole trip when her crew of two amateurs were not able to handle her easily, and she proved fast and dry in the rough weather which they encountered on the run to Newport.—Boston Herald.

The Sewaren Improvement Company have dredged a channel through the bar at the entrance to Sewaren Harbor from Staten Island Sound, and boats drawing not more than 5ft. of water can enter at any tide.

The Indian Harbor Y. C. has announced the following events for the season: May 30, opening of club house, Greenwich, Conn.; July 21, special race for 21-footers and open cats, Waller and Osborn cups; July 26-29, club cruise, Long Island Sound; Aug. 4, annual regatta; Aug. 18, Ladies' Day race. The date of the annual regatta, as above, has been changed from July 28, as first announced.

The sale of Puritan at auction on May 21 was not successful, the bidding being started by Mr. Geo. Lawley at \$3,000 and going very slowly until the yacht was knocked down to Mr. Chas. A. Welch for the small sum of \$4,700. After the auction Commodore Forbes stated that there had been no sale, as the price was not satisfactory, and that the boat would be held until some future date, when something nearer her true value might be realized.

Marguerite, steam yacht, Col. A. J. Drexel, arrived at the Corinthian Y. C. station on the Delaware River on May 19 from the West Indies. She will at once refit for a cruise to British ports, and after attending some of the races she will continue to Norway.

Speranza, schr., A. A. Wilkinson, was damaged by fire on May 24 at Ferris & Matthews' ship yard, Camden, the steamboat New York being totally destroyed in a neighboring berth, and the flames extending to the yacht.

At Hartford, Conn., on May 22, Charles E. Gross and John Hall, appraisers, filed in the Probate Court the inventory of the estate of Commodore Caldwell H. Colt. It amounts to \$785,496, \$500,000 of which is the value of 4,794 shares of the Colt's Patent Firearms Manufacturing Company. Real estate is valued at \$38,500; railroad bonds, \$32,685; the yacht Dauntless at \$5,000, Oriole at \$3,000 and Atala at \$800. The remainder of the estate is in insurance, bank, and railroad stocks in some of the leading companies in the country.

The annual regatta of the Eastern Y. C. will be sailed on Monday, June 25, over the club courses off Marblehead. The club will open its house at Marblehead at noon on May 29. Commencing July 5, and continuing until September, there will be the usual band concert every Thursday evening. On the days of the annual regatta and on Wednesdays and Thursdays throughout the season the house will be open to ladies. The increased demand for accommodation for bicycles has led to the provision of a clean, dry room for their reception, where space will be found ample and free for all members. A competent mechanic will be in attendance to clean and adjust machines.

Huron, cutter, has been sold by W. Butler Duncan, Jr., to Albert J. Myer, of Buffalo.

Although the Herreshoff and Gardner boats will all be of the fin type, there will be at least two centerboards in the Larchmont 21ft. class, one by the designer and builder of the successful Onawa, Arthur Dyer of Lake Minnetonka. This boat is for Vice-Com. George Work, of the Larchmont Y. C. and will be named Minnetonka, and from the reports, she is an improved Onawa. Another boat for the class has been designed by Waterhouse & Chesebrough for J. H. Adams, owner of Clara, cutter; also a shoal centerboard craft.

A mysterious announcement was made this week that the "Steam Yacht Valiant Company had been wound up voluntarily," and that a Birkenhead accountant had been appointed liquidator. The Valiant Steam Yacht Company consists, we believe, of Mr. W. K. Vanderbilt made into a "company," which Mr. Vanderbilt could dissolve at will. At any rate, the voluntary winding up and appointment of a liquidator need not cause alarm on the Stock Exchange or elsewhere.—*The Field.*

The Douglaston Y. C. will sail five extra races for small yachts; on June 2, June 9, July 21, August 4 and August 18. The boats will be classed as cabin sloops, cutters and yawls, of thirty feet l.w.l. and under, cabin cats of twenty-two feet l.w.l. and under, open cats of twenty-two feet l.w.l. and under, and mixed rigs of seventeen feet and under. It will be a series of Saturday afternoon races, and there will be four prizes of a value of \$25. Entries are restricted to the Larchmont, Corinthian, Atlantic, New Rochelle, Knickerbocker, Riverside, Indian Harbor, Hempstead Harbor and Sea Cliff yacht clubs.

Frank T. Morrill has settled his differences with George Munro and Frank Squire, executors of the will of Norman L. Munro, in respect to the possession of Vamoose, and now possesses it, but he is at law with his attorneys, Messrs. Blumenstiel and Hirsch, in regard to the compensation that they should receive for the services rendered him in the action. He compromised the suit without the consent of his counsel. They claim that they are entitled to \$1,250 for the services, which Morrill disputes. They sued him in the City Court to recover the amount of their bill. In the meantime, when an order was given them to sign, discontinuing the action over the Vamoose, they declined to do so until their bill for services was paid. Application was made to Justice Patterson, of the Supreme Court, in behalf of Morrill to have Henry Ware Jones substituted as his attorney in the place of Messrs. Blumenstiel and Hirsch, and to have all the papers in the action turned over to him, with the view to having the original suit discontinued. Judge Patterson decided that Morrill was entitled to a substitution of attorneys upon proper terms—the payment of or the giving of security for such amount as they may be entitled to for the services rendered.

The New York Shipbuilding Co. (Messrs. Gardner & Mosher) here signed a contract with Rich. K. Fox to build a racing steam yacht to run 30 miles per hour. She will be 100ft. long, 10ft. beam and 6ft. draft. The guarantee calls for official trials of the speed over measured courses.

Valkyrie was sighted on May 27, off the Irish coast, being then 24 days out from New York.

#### Vigilant.

THE work of preparing Vigilant for sea was completed early this week, and everything was in readiness for sailing on Thursday. The yacht was docked last week at the Erie Basin Drydocks for examination, but nothing was found necessary and she was floated on Saturday. The seagoing rig includes a small triangular mizzen with a light pole mast. The bowsprit is quite short. The stays up and down the mast have been removed for the voyage and a second forestay set up some 8ft. inside of the main one. Along each side is run a 4in. spar supported on trestles about 2ft. above the deck, to serve as a bulwark, while a lifeline will be run on stanchions. The sails were bent on Monday morning. The steam yacht Atlanta came off the dock on Tuesday with a handsome new wheel of manganese bronze, and is now ready for sea.

### The Kennel.

#### Dogs as Property.

There are always two sides of the question in keeping a dog, especially in towns and villages. Because a man is a lover of dogs and likes to see them around him that is no reason why he should ignore the pleasure and rights of his neighbor, who may not have the same feelings. A dog, like horses and cows, should be kept in its proper place, and no more be permitted to run at large and become a nuisance, simply because it is a dog, than the animals spoken of. If a man claims ownership of a dog he should be made to use every endeavor to keep that dog within the bounds of his own domain, and if the dog be allowed to run at large then the owner should be made to assume all responsibility for his acts and incur the penalties accruing from the mischief he may do. There is considerable agitation just now in different parts of the country about dogs being recognized as property. This is all very well and commendable, and if the dog is considered valuable enough to be recognized as property it is no reason why its owner should allow it to ride rough shod over the commonweal. The sooner this fact is properly digested the sooner will laws be made for their proper care and protection.

Mr. Dan. Joh. Wadén has very kindly sent us a copy of the "Finska Kennelklubbens Kalenda och Stambok (F.K.S.B.)" for 1889-1893. Our acquaintance with Finland and its language is limited to a very interesting visit we received from that gentleman, who is one of the officers of the Kennel Club of Finland, during last summer, an account of which was published in FOREST AND STREAM at the time. We are therefore unable to give any very lucid description of this stud book. The interest taken in well bred dogs seems to compare very favorably with that in the English speaking countries, for we find a list of 253 members, and the registrations number 265. Some of the names of familiar breeds seem very peculiar, for instance, a collie is called a "Skotsk Farhund," but they do not seem very popular, as only one is registered, and he is Lord Aberdeen, a son of Christopher, winner of first at Helsingfors, 1891-92. Fox-terriers are called "Räfferrieri." Pointers and setters are the most popular breeds, and many familiar names are found in the pedigrees of those registered. The cover of the book is adorned with a number of excellent sketches of dogs, by A. Federley, and is altogether a handsomely arranged publication.

#### Express Companies and Dog Shows.

In a chatty letter from Mr. C. A. Stone, superintendent of the Toronto Industrial Fair Association's dog show, he asks us to do something in regard to railway companies compelling all owners to send their dogs by express. While FOREST AND STREAM is only too willing to ventilate the subject we are afraid little good can be done at present. It lies entirely with the railroad and express companies, and they hold the reins with a pretty tight hand at present and decline to move from their position. The A. K. C. committee that was appointed to make some arrangement has done nothing but have a few sheets of foolscap covered with names of dogmen in the form of a petition. A prominent officer in one of the companies when recently asked if some reduction could not be made in the rates answered, "Why should we reduce rates? We can get all the dogs we want to carry at the present ones." And that covers the whole ground and the dog owners are powerless.

Mr. Stone remarks: "Now the question that arises in my mind is this. Railroad companies being common carriers and their rates to a certain extent being authorized or governed by the Government, can they as carriers refuse to accept dogs for transportation over their lines? Have they power to discriminate and say that they will only carry this and not that? I don't think they have as long as the stuff they carry is not dangerous to the general public, as gunpowder, etc."

If the rule to send all dogs by express were strictly adhered to, dog owners would be able to make their calculations accordingly, but this is not so. For instance George Thomas had a large team of dogs for Louisville show. Starting from Boston he was allowed to send the dogs as excess baggage at a rate of \$2.25 per hundred weight. His crates and dogs weighed 2,800 lbs. and all went well until he arrived in Washington, when he was compelled to send them the rest of the journey by express. This cost him \$90 more, so that when he arrived at Louisville he had paid \$146.25 exclusive of cartage at both ends of the journey. And when one considers the cost of fare and hotel expenses, etc., there must have been little profit in such a trip even if every dog won first prize

SAIL PLAN.

DETAILS OF FRAMES.

Then Ben Lewis, who had also a large team of dogs, had to pay \$118 in expressage from Philadelphia to Louisville. This with fare and hotel expenses would bring his outlay to about \$175 before drawing his prize money. There were other grumblers to a large extent at this show but we quote these two cases as being the principal sufferers. It is therefore apparent from this, it merely becomes a question of staying power between the express companies and the handlers, with the usual corporate result and, as these men control a number of dogs or in other words unless they go to the dog shows the dogs stay at home, dog shows will suffer seriously in the end. Another hardship this new order of things entails. When dogs are shipped by express they usually go on certain trains that carry such matter, and the result is that dogs must lie over here and there until such time as the companies are ready to take them, and in several instances this season the owners of valuable dogs have suffered loss on this account.

The whole question is a serious one for dog show committees to consider, in fact, as the case stands at present it is almost a vital one. We should like to hear some suggestion that would point a way out of the difficulty. As it is, with all the risks, and little compensation if losses ensue, dog owners have to pay double rates, and having received double rates the express companies in most cases magnanimously allow the dogs to be returned free. Would dog shows be as popular as they are in England to-day if the railroads did not meet the dog exhibitors halfway? There a man may buy a ticket for his dog and it travels as a passenger, while some roads have special cars fitted up with dog kennels. We may come to this in time, but not at the present rate.

#### A Glass-Eating Dog.

Editor Forest and Stream:

It is rather startling, but I am going to tell you something I know to be true. In Livingston, a small town in western Alabama, which was at one time my home, there lived a large liver-colored pointer, Carlo by name. One day the owner, Mr. P. P. W., asked if I had ever seen Carlo eat glass. I laughed, thinking he was joking with me, but my curiosity was greatly aroused when I saw him pick up a piece of broken window pane which happened to be lying near and lay it down in front of the dog. The latter immediately picked it up, and crunching it in his mouth, swallowed it. Piece after piece went in the same manner. Carlo lived to be 22 years old. The only explanation Mr. Richmond could give of this queer taste was that the dog being quite old was perhaps unable from lack of teeth to chew his food sufficiently for digestion and had taken to swallowing the glass

for the same reason fowls swallow sand and pebbles, to aid in digesting the food. I thought, though, that the same teeth that had crushed the glass might chew the food. Carlo was first class in the field and Joe had many a good day's shooting over him. I dare say that there is hardly any one who ever visited Livingston but that remembers Carlo. He was a great pet and loved by all who knew him. W. H. S.

BROOKLYN, N. Y.

#### True English Setter Type.

Editor Forest and Stream:

I think the time is now ripe for a radical change in the way English setters are being judged at some of our shows. I was glad to see you speak out as you did in report of Louisville show. It is time to sound an alarm. Any one who has followed the shows recently cannot but notice the great lack of type among the English setters exhibited. There are, of course, some dogs shown with good typical heads and bodies, but the average are inclined to weediness. Good legs and feet they possess, as Mr. Davidson remarked, in common with the mule; but the run after field blood and qualities is producing an animal at variance with the standard. In the South and West, where so much attention is given to dogs purely for field work, is this more apparent. Many of the owners of these dogs affect a contempt in more or less degree for bench shows; still I notice that when a dog show comes their way they are only too eager to strive for bench show ribbons, and will kick as heartily as the next one if they don't come their way when they think they should. This is where the harm comes in; if these dogs were kept for the field only, then the result would not be so serious.

The average field trial man has no conception of "Stonehenge's" standard and thus pays little attention to the niceties of form, which combine to produce a typical English setter such as a Rock, a Foreman, a Plantagenet or a Rockingham, and when judges whose sympathies are entirely with the field trial element, elect to place the ribbons, they are as a rule more influenced by the performances of the dogs on the field than by beauty of form as adapted to a standard that has done so much in years past to produce one of the handsomest animals of the canine creation. In how many of the English setters of the day do we see the head and expression of the dogs named, as well as Blue Nell, Maid Marion, Princess Beatrice, Spectre, Glendon, and others could be named that conform to "Stonehenge's" standard in a great degree, and are still not at all heavily built, as the average field trial man considers all dogs of the old standard. The breeding of Rockingham and Myrrha II, produced English setters that were at once typical with the expression and

beauty of form that an English setter should have, and still without an ounce of superfluous lumber or the heaviness of a Count Howard, for instance.

I think it is time for those breeders who love an English setter for its beauty of form as well as field qualities to give the subject careful thought. There is no earthly reason why dogs of acknowledged good form cannot go in the field and win. They should be pushed to the front with this end in view. If field trial work is to be left entirely in the hands of those kennels which are winning now the truly formed English setter will soon be but a memory, and as you remarked in the Louisville report, there will be as many types and weedy specimens as one now finds in the American foxhound. The same cause in both cases will lead to the same effects, breeding entirely for speed and nose to the neglect of standard requirements in regard to build and head. One man's voice cannot work a cure, but if several make their opinions known perhaps the note of warning will be heard in time.

What hope is there for the English setter when the breeders and breeders are told to follow the awards at New York and some of those at Philadelphia this year; the man who breeds for type may as well throw up his hands and keep his dogs at home for any chance he may have with those mixed awards. However, a really built a setter may be, it should stand no chance on the show bench when its ears hang like an elephant's, with eyes like yellow marbles, and muzzle like an ait eater, in fact, for the exception of coat and color bear little resemblance to the good old standard. I consider the vague terms of the English Setter Club's standard is responsible for much of the present trouble. B. J.

New York, May 22.

## POINTS AND FLUSHES.

[By a Staff Correspondent.]

### Dog Dealings.

FEW dog fanciers have any idea of the number of complaints, coming from purchasers, which are made to the editors of sportsmen's journals in the course of each year, in respect to unfair or dishonest treatment received from the seller in connection with some canine transaction. It would seem that an equal standard of business honor, or even a higher one, should obtain than that which governs the every-day transactions of common business. I think that, on the whole, there is a higher sense of honor, and that unfair dealings are confined to a very few individuals, ones who probably would not observe the strict rules of fair dealing let their vocations be what they might. I am disposed, however, to think that some sellers unwittingly offend by following a false standard of values, based primarily on a good pedigree, or one which will pass as such, as the unit of chief value. Generally, a fashionable pedigree is set forth and claimed as a most valuable consideration. A high price is set on each individual of a whole litter, because each one has the same fashionable pedigree. The strong and the weak, the well or ill-shaped, the healthy or unhealthy, etc., are too apt to be rated at a high market value on the score of good or fashionable pedigree.

It seems a reasonable proposition that a purchaser, who pays a first-class price, is entitled to a first-class article. In the purchase of a dog, good physical condition and good health should be insisted upon as well as purity of blood. A puppy, be he ever so well bred, if worthless from physical infirmities, is not a merchantable article at a high price on the score of good breeding. The physical perfection and capabilities of the individuals of a strain should be the real test of the excellence of the blood. If the breeder from any cause raises inferior specimens from good stock, he cannot justly expect the best prices for them. Insufficient or poor food, bad sleeping quarters, or bad conditions of the parents, or weedy parents of good blood, are conditions in breeding which cannot have good results.

Where a puppy, or grown dog, for that matter, is sold at a high price and proves to be other than represented, it is a matter to be settled in court and not in a newspaper. There seems to be quite a general opinion to the contrary, however. But if people who hold such opinions will but consider that there are always two sides to an agreement and that each side must have a full hearing before any just conclusion on the issue can be reached, it will readily be seen that a private matter, perhaps of interest only to the principals, could easily grow into a public affliction in a newspaper. Moreover, in a court the parties are held to the issue. In a newspaper it is too often mere bold assertion, largely devoted to crimination and recrimination.

I received in a letter from a gentleman in Canada a description of a puppy which he recently purchased in the States—not in the way of any complaint, but as an expression of disappointment. The puppy is of good breeding. My correspondent writes:

"I have a setter bitch pup, whelped May 8, 1893, purchased from ———, which I have named ———. She reached me the most dilapidated dog I have seen for some time past. I soon discovered the cause, and gave her some worm powders. I was rewarded by her expelling one tapeworm 37in. long, nine red flesh-colored worms from 1½ to 7in. long, and a large number of small white worms. She is still very weak and dead on her feet. I cannot help feeling disgusted that a pup in her condition was shipped. As it is I can not expect much from her this year, she being still too weak to yard break." B. WATERS.

## DOG CHAT.

We have received Rawdon B. Lee's third and concluding volume of "Modern Dogs." This is devoted to terriers, and we shall have more to say about it next week. The price of the book is \$3 at this office.

The death of Mr. Hughes-Hughes is announced in the issue of *Stock-Keeper* just received. This gentleman has long been identified with St. Bernards in England, and only recently compiled a specialist stud book of the holy breed in conjunction with Mr. Gosling. Mr. Hughes-Hughes imported from Switzerland such well-known St. Bernards as the brindle dog Angelo, the smooth Daro, the rough Grandee, and the noted bitches Salome and Mareta. Another well-known St. Bernard breeder has also joined the majority. This is Mr. W. A. Kirkham, of Knutsford, Cheshire, who bred Lady Mignon, Lord Douglas and other cracks.

British *Fancier* gives an interesting account of Mr. C. H. Wheeler and his noted kennel of collies in the latest issue.

Mr. C. A. Stone, of Toronto, has purchased what he terms a cracking fine English setter bitch. This is May that he gave first to at the late Toronto Kennel Club show. She is by Burgess' Doncaster out of Nellie Lee. He has since bred her to Sir Tatton (Sir Allister—Belle of Furness). Mr. Stone has just purchased a place in Toronto, and will now be able to keep his dogs at home, as he intends building a kennel for about ten or twelve dogs.

The dog which came over to the Nomadic for Mr. Bradbury, turns out to be the wire-haired fox-terrier Halifax Revival, which, in conjunction with Mr. Nelson, he has purchased from Mr. James Dennis, of Redruth, Cornwall, England. This dog is by General, by champion Jack Frost and out of Nettle, by champion Carlisle Tack, so he does not lack good blood. His winnings on the other side are Skipton, three firsts; Halifax, two firsts and specials; Darwen, first; Morecambe, three firsts and two specials; Wyke, first; Blackpool,

first; Burnley, two firsts; all north country shows and under four of the best judges. As he is a dog with stiff wire coat, great bone and lots of terrier about him, he should be an acquisition to the fancy. He will be placed at stud shortly. He arrived in excellent condition.

A regular meeting of the National Beagle Club of America will be held at the A. K. C. rooms, 44 Broadway, on Monday, June 4, at 4 P. M.

The English Kennel Club is being brought to task by several exhibitors, who claim that the English setter classes were unjustly canceled at the late show. The secretary of the English Setter Club claims to have known of 14 entries having been made, and as other breeds which had less entries were allowed to remain in there is no little anxiety to know the reason for their elimination from the E. K. C. show. There is already a feeling among pointer and setter men on the other side that the Kennel Club does not sufficiently consider the interests of these sporting breeds, especially where field trials are concerned, and their recent action will not serve to improve matters. It only shows what a hold pure "fancy" has on showing in England at present. Fourteen entries only of English setters at the principal show!

Some superstitious people claim that if a dog howls, death is sure to follow. It depends, one would say, a good deal on the kind of a rap one gets at the dog.—*Harlem Life*.

Mrs. Smyth, owner of the Swiss Mountain Kennels, tells us that the well known red cocker bitch Ruth S. recently became the mother of eleven puppies by Red Doc. Nine of them are dogs, all red and varying little in the shade and "not a runt among them." Ruth suckled the whole brood for a week and none ever did better. A foster mother was then secured. Their fair owner, naively, remarks that she hopes in this litter to raise enough different styles of cockers to suit all the *non-de-plumes* judges, whether they wish "long and low" or "tall and short." Another interesting litter of eight came from the union of Lady Fidget and Middy. Mrs. Hall had a litter of ten by Middy out of Hamilton Dinah, and is raising nine of them; and Tonita, that Mr. "Donovan" Paine bought at the Philadelphia show in whelp to Middy, has also increased the cocker population by ten, so this little "lap" dog as some cruel critics term him, must be considered a very practical one at any rate.

### Death of Col. F. G. Skinner.

We regret very much to hear of the death of Col. F. G. Skinner. He died at Charlottesville, Va., May 21. He was a grand old sportsman, a charming writer and a type of the old school Virginian, of whom few are left. He was an enthusiastic fox hunter and was one of the first, if not the first, to own and run a pack of hounds in the vicinity of New York, and even at this advanced age of seventy-five he held his own with the younger ones in the memorable fox chases held during the Richmond show in 1888. Col. Skinner was born March 17, 1814, and was educated in France with the grandchildren of Lafayette. He was a brave soldier, a gentleman in every sense and his contributions to sporting literature were among the most graceful writings of this end of the century.

The Prince of Monaco is experimenting with a new kind of fish net. The name of Monaco is strongly suggestive of nets and gudgeons.—*Philadelphia Ledger*.

We draw attention to the new offerings in our business columns this week. Seminole Kennels place well bred collies at reasonable prices; J. Dennis, of England, offers greyhounds and Irish terriers; Richwood Kennels, two pointer bitches; A. D. Flske, well bred eagle pups; Richwood Kennels, English setter pups; H. W. L., a well bred fox-terrier. At stud: Maybrook Kennels offer services of prize-winning wire-haired fox-terrier Halifax Revival.

In renewing his advertisement in our business columns Dr. Sauveur, owner of the Seminole Kennels, tells us that they have at last moved into their new kennels, which are situated on a farm, about two miles from his residence at Chestnut Hill. They have about twice as much kennel room as before, with very large exercising yards, well shaded with fine old trees. Seminole Kennels have always been cramped for room, although the doctor built one of the prettiest little stone kennels in the country, on his grounds, and this will now be used more as a show place for some of the best stock. Dr. Sauveur closes his letter by saying: "We are now so fixed as to be able to raise some good puppies, and thereby show dogdom what the Seminole Kennels can do." Will Connors will live at the new place.

The crack mastiff bitch Brampton Beauty whelped on the 16th inst seven puppies to Beaufort's Black Prince; five of them are dogs. Mr. Winchell says they are very large and so alike it is difficult to tell one from the other. They are all future champions. The litter is interesting not merely on account of its illustrious parentage but from the fact that it was supposed Brantford Beauty, like many other large bitches that have been extensively exhibited, was barren. She will be bred once more to Beaufort's Black Prince and then return to England if no one here secures her before then. Mr. Winchell thinks that the only reason mastiffs are not as popular as formerly is because of the poor specimens offered for sale. It is the same with good mastiffs as with good horses—there is always a demand for the best and the supply is rarely equal to the demand.

As we go to press this week on Monday instead of Tuesday, a number of late communications and letters must lie over.

The Rhode Island Fair Association, which holds its second dog show at Cranston, R. I., Sept. 18 to 21, is preparing for an entry of 800, which, from the inducements they will offer, they confidently expect to poll. Their premium list of \$3,500 is a large one, especially when the entry fee is only \$1.50. Kennel prizes of \$15 will be offered for the more important breeds, with \$12 for the challenge and \$12 and \$8 in open classes in the principal breeds, and \$10 and \$5 in the other classes. A more liberal classification will be set forth than last year, and possibly a third prize will be given in several breeds, as puppy classes will not be much thought of, and this will make room for more important exhibits. Mr. Fred. Otto will assist as superintendent. Messrs. Davidson and Mortimer are down to judge, but other judges are yet to be chosen. The committee on the kennel department is composed of good and tried men. They are: Walter J. Comstock, who heads the list, and we know how well he filled his office last year; Charles C. Gray, a well-known setter man; C. Fred. Crawford, of Foreman & Plantagenet fame; John H. Congdon, the owner of King Lud and other well-known bulldogs; R. L. Keack, who loves all dogs, and especially bull and Irish terriers; and Sam H. Roberts, who loves a setter and shows it in his capital articles on field sport in the *Providence Journal*, for which he sometimes does not receive full credit. Such a committee begets confidence, and as the dogmen are always in favor of shows in connection with fairs, there is little doubt a bumper entry will be forthcoming. Last year there were 110,000 visitors at Cranston, and the trotting there is always exciting. Judging of the dogs will be done under the canopy of heaven, as a year ago, and as our informant writes, "and with competent judges selected, we expect even the angels to look down and smile their approval."

## ANSWERS TO CORRESPONDENTS.

There is no charge for answering questions under this head. All questions relating to ailments of dogs will be answered by Dr. T. G. Sherwood, a member of the Royal College of Veterinary Surgeons. Communications referring to other matters connected with Kennel Management and dogs will also receive careful attention.

J. N. A., Toledo, O.—Watch our advertising columns. We do not advise where to buy.

B. M. W., Erie, Pa.—We do not know who owns the English setter Benjamin Harrison, in New York. If Mr. R. O. Pennell owns a valuable dog we are not aware of the fact.

A. R. E., Worcester, Mass.—We have no idea what the W. K. C. catalogues from 1877 to the present date will cost. Mr. Thos. H. Terry, 59 Liberty street, New York, may be able to inform you.

T. S., Providence, R. I.—Beagle, Diamond Krueger is by Royal Krueger (3,813, Vol. V.) out of Betty, by Rock II. out of Bett, by Racer out of Sara; Rock II. by Rustler out of Vic; Royal Krueger by Bannerman (4,609, Vol. III.) out of Cora (4,832, Vol. III.), by Dodge's Rattler out of Scioto; Bannerman by champion Marchboy out of Dew-drop.

M. N., Wileford, R. I.—1. English setter Mack III. was owned by Chas. E. Glass, Newcastle, Pa., whelped Dec. 24, 1884, and by Blue Dick (3,324, Vol. III.) out of Buckeye Belle (3,597, Vol. III.) Nell IV. is owned by the same person. Whelped March 1, 1889, by Blue Druid (4,594, Vol. III.) out of Mollie Rake, by Rake (212, Vol. I.) out of Melissa (5,113, Vol. III.). 2. Registration in the A. K. C. S. B. confers no further privilege than the insertion of the name and pedigree of your dog in the *Gazette* and stud book for current month and year. You must pay 50 cents for an extended pedigree. We can give you whatever information you require, however, without charge.

W. P. McK., Amsterdam, N. Y.—I have an Irish setter bitch, 2½ yrs. old, which whelped a litter of puppies April 8. She was in the best of health till about two weeks ago, when she began refusing to eat, only eating a little at a time and seldom. About the same time she began weaning the puppies, and for the last four or five days has not been near them. In the meantime the bitch was reduced to a mere skeleton. The symptoms are looseness of bowels, eyes at times matted and dull-looking, nose at times normal and then very feverish, with no inclination to eat or drink or move around. Have given her oil a couple of times as physic, and feed her beef extract and cod liver oil. Cannot determine what the trouble is by my description? Ans. Examine the teats to see that they are not swelled and that there are no abscesses forming. Give five grains of sub-gallate of bismuth every four hours. Feed on raw meat principally.

## Hunting and Coursing.

### FIXTURES.

Oct. 23.—New England Beagle Club, at Oxford, Mass. W. S. Clark, Linden, Mass., Sec'y. Nominations close Oct. 1.  
Oct. 29.—National Beagle Club. Geo. Laick, Tarrytown, N.Y., Sec'y.  
Nov. 7.—Northwestern Beagle Club. Louis Steffen, Milwaukee, Wis., Sec'y.

### HUNTING AND COURSING NOTES.

Mr. Bradbury, of the Maybrook Kennels, expects to get a capital brace of greyhounds over shortly. One is a noted winning bitch whose name we are not at liberty to mention, and the dog is a two-year-old by Page Boy, who, we believe, is by Peasant Boy, and is said to be a clinker. This kennel evidently means to take a commanding position in greyhounds on the bench. They already have such good ones as Southern Belle, who is coming into good form; Miss Dollar III., Dakota and others. Mr. Bradbury, however, will not neglect the coursing interests of the Eastern Coursing Kennel, and will train his dogs out West this fall, probably in Colorado, as he likes the country better there. He will take out Royal Crest, Drytime, who is in great shape just now; Southern Belle, Dakota, and the new ones, if he gets them.

The first coursing meeting ever held at Butte, Montana, took place April 29, at the Athletic grounds, under the auspices of the Butte Coursing Club. The sport jumped into popular favor at once and prospects for future meetings are very bright. The coursing was inclosed and the hares used were from California. Thomas Bowie officiated as judge and "California Jim" Kyle handled the slips and, considering the greenness of many of the dogs did his work well. The stake was not decided on the above date. Mr. Geo. H. Macdougall, who was an earnest spaniel man when he resided in the East, is the secretary of the club, and to him in no small degree is due the success which attended the meeting. Mr. Macdougall has worked hard for the past two years to bring about a coursing meeting.

## Trap-Shooting.

All ties divided unless otherwise reported.

If you want your shoot to be announced here send in notice like the following:

### FIXTURES.

May 29.—Massachusetts State Shooting Association's tournament, under auspices of Hingham Gun Club, at Hingham.  
May 29-30.—Big Four Gun Club tournament, at Sheldon, Iowa.  
May 29-30.—Janesville (Wis.) Shooting Club, third annual tournament; targets and live birds.  
May 29-30.—Muncie (Ind.) Gun Club tournament.  
May 30.—Harrisburg (Pa.) Shooting Association tournament.  
May 30.—Eastern New York League tournament, at Canajoharie, N. Y., under the direction of the Canajoharie Gun Club. Charles Weeks, Sec'y.  
May 30.—Central New York Trap-Shooters' League, third tournament, at Utica.  
May 30.—Nitro Gun Club's second annual tournament, at West Kingston, Pa.  
May 30-31.—Central New York Trap-Shooters' League tournament, at Rochester.  
May 30-31.—Mountain Gun Club tournament, at Mahanoy City, Pa.  
May 30-June 1.—Interstate Manufacturers' and Dealers' Association fifth tournament, and second annual tournament of the Michigan Trap-Shooter's League, under the auspices of the Valley City Gun Club, Mason. \$300 added money.  
June 4-9.—Illinois State Sportsmen's Association tournament, at Chicago. W. L. Shepard, Sec'y.  
June 5-7.—Iowa State Sportsmen's Association's tournament, at Independence, Iowa.  
June 5-7.—Wilmington (Del.) Rod and Gun Club tournament.  
June 7-9.—Oregon State Sportsmen's Association's tournament, under auspices of Willamette Gun Club, at Portland, Oregon.  
June 11-16.—New York State Sportsmen's Association for the Protection of Fish and Game, thirty-third annual tournament, at Utica, N. Y., under auspices of Oneida County Sportsmen's Association.  
June 12-14.—Kansas State Sportsmen's Association's fifth annual tournament, Topeka, Kansas. J. C. Clark, Sec'y.  
June 12-14.—Atlantic City Rod and Gun Club, three days' tournament. Address E. G. Griscom, Sec'y, Atlantic City, N. J.  
June 14-16.—Sportsmen's Association of the Northwest's tenth annual tournament, under auspices of Tacoma Rifle, Rod and Gun Club, at Tacoma, Wash.; \$1,500 added money; open to the world. E. E. Ellis, Sec'y.  
June 16.—Boiling Springs Gun Club, Rutherford, N. J. Mixed race at 100 blackbirds, \$5 entry, 15 entries or over, 5 money, open to amateurs only.  
June 19-21.—Chamberlin Cartridge and Target Company's first annual tournament, at Cleveland, Ohio. \$1,000 added money.  
June 20-21.—Belfast (Me.) tournament, under the management of Belfast Gun Club. Chas. R. Coombs, Sec'y.  
June 26.—Union Gun Club tournament in conjunction with monthly team shoot of New Jersey Trap-Shooters' League, at Springfield, N. J.  
June 27-28.—Interstate Manufacturers' and Dealers' Association's sixth tournament, under the auspices of the Elwood Gun Club, at Elwood, Ind. Elwood Gun Club will add \$200.  
June 28.—New England Shooting Association championship tournament, under the auspices of the Colt Hammerless Gun Club, at Hartford, Conn.  
June 28-29.—Binghamton (N. Y.) Gun Club's first annual tournament, H. W. Brown, Sec'y.

Third Day, May 24,

was really the first pleasant day of the week, the sun shining bright and clear all day. The attendance of shooters was not quite as heavy as on the preceding two days, although there were from nine to ten squads of six men each in each event. The shooting was extremely spirited, the principal fight being between Heikes, Gay, Rike, Parmelee, and Fulford, who were close up to one another in the race for the three days' average money. During the afternoon there were at least 1,500 spectators on the grounds, and of these fully 100 were ladies.

The day's average money was won in order as follows: Heikes, 95.15; Gay and Rike, 93.93; Hunter and Parmelee, 92.13; McMurchy, Fulford, Clegg and Money, 90.90; Bartlett and Connor, 90.30.

In contest No. 6 at 25 targets the ten extra merchandise prizes were won as follows: Rike, Money, Elliott, Parmelee, Van Dyke, F. S. Mead, Angier, Dow, A. E. Mead, Haddock.

Winners of cash prizes for first, sixth and eighth highest averages during three days, shooting at 495 targets: Heikes, 95.55, \$5; Gay, 94.14, \$12; Rike, 93.75, \$10; Parmelee, 93.13, \$3; Fulford, 92.92, \$3; Van Dyke, 91.73, \$8.

Special merchandise prizes for first to sixth average winners: Heikes, Gay, Rike, Parmelee, Fulford, R. Van Gilder. Heikes special prize for making best average in three days.

The money was all caused to congratulate themselves on their success. The traps worked to perfection, the targets were thrown consistently, no favorites being played and the money was paid out promptly.

Frank and Arthur Mead, Rogers and Sommers Van Gilder were the prime hustlers from start to finish, and to this quartette is due the splendid running of the affair, not a hitch or flaw occurring during the entire three days. Frank McCarty looked after the proper placing of the targets on the score boards. The scorers were Charles E. M. Mohr, chief scorer; Kyle Jenkins, M. H. McCormick, Theo. Mitchell, L. M. Moses and J. M. Logan.
